PREFACE.

The rapid growth of our country, which within a few years has definitely taken its place as one of the great powers of the earth, and is now universally recognized as such, presents every year a new and interesting chapter of history; and the most gratifying feature of it is the fact that so little of it is war history and so much is industrial and intellectual development. The American citizen who wishes to make himself familiar with these successive chapters, and realize to what a great republic he belongs, must read something that sums up, in a clear and concise form, the results of the various forces whose workings are seen only in a fragmentary way through the daily press.

To learn what our country accomplished in the year just closed, one should first read the article “United States,” then look over the article “Congress,” reading such portions as to him are most significant; then a careful reading of the “Financial Review” will enlighten him as to the great business movements, with their causes and consequences. Then, if he is inclined to ask “What is the use of all this wealth?” let him run through the article “Gifts and Bequests,” and learn to what noble uses tens of millions of American dollars are devoted every year. The articles on the “Farmers’ Congress” and the “National Grange,” together with the paragraphs on the agricultural colleges in the State articles, will show what is done for the advancement of the business of agriculture. And a special article this year on “Ship-Building” gives much hope of the revival of that important industry, which has been almost a lost art with us for forty years. The progress in jurisprudence is shown in the passages recording decisions in the Supreme Court of the United States and in those of the several States. The growth of religious life, and the efforts to spread the Gospel in missionary fields, may be seen in the articles on the various religious denominations, which are full of significant facts and statistics.

For the year’s movement in the progressive sciences, the reader may consult the articles “Astronomy,” “Chemistry,” “Medicine,” “Metallurgy,” “Physics,” and “Physiology,” all of which are subdivided and subheaded, so that any specific subject may be turned to at once. If he is interested in the work of the artists, he will find their record for the year under the title of “Fine Arts.”

In the domain of invention and experiment, the most interesting results are set forth, with illustrations, in the articles “Aerial Navigation,” “Submarine Boats,” and “Wireless Telegraphy.” To know what has been accomplished in exploration, the reader should turn to the articles “Archeology” and “Geographical Progress.” The former has some very curious illustrations.

There is always something problematical and interesting in a country that has recently been the seat of war, and few readers will fail to be interested in the account of present conditions in Cuba, South Africa, and the Philippines. Of the agencies that make for peace among the nations, are the Bureau of American Republics, the International Conference, the Sanitary Conference, and the various international
treaties, all of which are duly recorded. The troublesome question of the Alaska boundary is on the way to a peaceful and satisfactory solution, as may be seen by a glance at the article “Alaska.” The great cables that underlie the oceans and connect continent with continent, and with the isles of the sea, serve still further to prevent international misunderstandings and bring about speedy agreements. This volume contains an article on the projected American cable across the Pacific, and one on the completion of British cable connection all round the world, illustrated with a map. Still another agency of peace and good-fellowship is the international exposition. We present an account of that which closed recently in Charleston, beautifully illustrated, and a forecast of the Louisiana-Purchase Exposition.

The Carnegie Institution, just founded, which is the largest single transaction for advancement of education this year, is described; and the reader who wishes to trace the whole story of education in our country can do so by turning to the article “Libraries” and the various articles on the States.

Narratives of the great misfortunes of the year may be read under “Earthquakes and Volcanic Eruptions” and “Strike of the Coal-Miners.”

The Canadian articles have been carefully prepared by an eminent Canadian author, and one of them, “Manitoba,” includes the strange story of the Donkhobors.

The list of eminent persons, in various professions, who passed away in the year, and whose careers are recorded in the pages devoted to “Obituaries,” is large. In our country it includes the actors Neil Bryant, Annie Clarke, Harry Eytinge, Ada Gray, Daniel H. Harkins, Edwin Knowles, Sol Smith Russell, William Henry West, and Eliza Young, with the musicians Camilla Urso and George William Warren; the artists Albert Bierstadt, Thomas Nast, and Lily Martin Spence; the authors Charles Kendall Adams, Elbridge S. Brooks, Junius Henri Browne, William Allen Butler, Mary Hartwell Catherwood, Edward Eggleston, Thomas Dunn English, Paul Leicester Ford, Alfred Hudson Guernsey, Bret Harte, Frank Norris, Thomas E. Osborn, and Francis Richard Stockton; the clergymen Michael Augustine Corrigan and Eugene Augustus Hoffman; the educators John Henry Barrows, Thomas Gallandet, Alice Freeman Palmer, and Henry A. P. Torrey; the journalists Edwin Lawrence Godkin and George Hughes Hepworth; the jurists Noah Davis, David Ayres Depue, Horace Gray, and George Hoadly; the naval officers James Edward Jouett, Lewis A. Kimberly, William Thomas Sampson, and Thomas Oliver Selfridge; the physicians William Tod Helmuth and James Patterson Kimball; the scientists Alpheus Hyatt, Henry Morton, John Wesley Powell, and Ogden Nicholas Rood; the soldiers Wade Hampton, Francis J. Herron, Franz Sigel, and David Sloane Stanley; and the statesman Thomas Brackett Reed. The death losses of foreign countries included the artists Benjamin Constant, Thomas Sidney Cooper, Jules Dalou, and James Tissot; the authors Philip James Bailey, Aubrey De Vere, Alice Durand, Samuel Rawson Gardiner, Annie Hector, and Emile Zola; the clergymen Newman Hall, Joseph Parker, and Archbishop Temple; the scientists Frederick A. Abel, Alfred Cornu, Pierre Filhol, John Hall Gladstone, and Rudolph Virchow; the soldiers Christian Botha, Mariano Escobedo, and Lucas Meyer; the statesmen Marquis of Dufferin, Earl of Kimberley, Liu-Kun-Yi, Prince Münster, Lord Paunceforte, and Koloman Tissa; Emil Holub, the explorer; Fred Krupp, the industrialist; George Rawlinson, the Orientalist; and Cecil Rhodes, the politician and promoter.

The volume is illustrated somewhat more fully than usual, and it closes with a topical index.

New York, February 18, 1903.
CONTRIBUTORS.

Among the Contributors to this Volume of the Annual Cyclopædia are the following:

Oscar Fay Adams,
Author of A Dictionary of American Authors, etc.

Bailey, Philip James,

THE ANNUAL CYCLOPÆDIA.

ABYSSINIA, an empire in eastern Africa, known also as Ethiopia. The ruler, whose title is Negus Negusti, meaning King of Kings, is Menelek II, born in 1842, originally King of Shoa, who established himself on the throne, with the aid of arms furnished by the Italians, after his predecessor, Johannes II, had been slain in a battle with the dervishes of the Egyptian Mahdi. Menelek signed on May 2, 1889, the treaty of Ucciali under which Italy laid claim to a protectorate over the whole of Abyssinia, which claim was abandoned after the defeat of an Italian army at Adowa, and in the convention of Adis Abeba, signed Oct. 29, 1896, the independence of Abyssinia was recognized by Italy, and Abyssinia recognized as Italian territory the country north of the Mareb, Belesa, and Muna rivers and a strip of coast 180 miles broad in front of the Abyssinian tableland. The Government of Abyssinia is feudal, each ras, or governor, ruling his province and having his separate military force. The regular army, consisting of these contingents, numbers about 150,000 men, all of whom should be mounted, and many of whom now carry, instead of spear and shield, the Grau rifles surrendered by the Italians or imported magazine rifles. At Adis Abeba, his capital, the Negus Menelek has 7 batteries of field-artillery and revolving cannons which were captured at Adowa. The area of Abyssinia is estimated at 150,000 square miles, the population at 5,000,000. The people rear cattle, sheep, goats and cultivate barley, durra, wheat, hops, and tobacco for their own cultivation. The hides and skins, civet, coffee from wild shrubs, gum, wax, ivory from the Walega and Gallia countries, and some gold are exported. Iron is mined by the natives and forged into knives, axes, and spears. American cotton cloth is the largest article of import. The imports at Harar in 1900 were estimated at 3,822,850 and exports at 2,991,600 Maria Theresa dollars. The French have constructed a railroad from the port of Jiboutil to Harar, 186 miles. Harar is a town of about 30,000 inhabitants, mostly Mohammedan, situated on an exceedingly fertile plateau. The railroad is destined to carry all the trade of eastern Abyssinia to Jiboutil, depriving the British port of Zeila of the share it now has and taking away much of the trade of Aden. Before the railroad was finished an international syndicate, composed in part of English capitalists, obtained a large interest in its affairs. The French Government, jealous of foreign influence, determined to keep the control of the line in French hands and prevent the construction of a branch line to Zeila, as proposed by the British members of the syndicate. Accordingly an arrangement was made on Feb. 6, 1902, whereby the colony of Jiboutil, with the approval of the French Government, agreed to guarantee interest on the company's capital to the amount of 500,000 francs per annum. To enable the colony to carry out this agreement the French Chamber voted to grant to Jiboutil an annual subvention of 200,000 francs for fifty years. Eventually the French railroad will be built through to Adis Abeba, the Abyssinian capital. Jiboutil will be made a first-class naval station. Harar products sent over the railroad to Jiboutil are exempted from all duties excepting the tithe, which is levied on all crops. British concessionaires have obtained from Menelek the right to work gold-mines on the banks of the Baro river. The telegraph to connect Adis Abeba with Massowah was begun in the summer of 1902. In June Ras Makonen, the nephew of the Negus and his principal general, went to England with Col. Harrington, the British diplomatic representative in Abyssinia, and M. Ilg, Menelek's Swiss minister, to represent the Negus at the coronation of King Edward VII. Subsequently, he paid a visit to the United States, accompanied by CountCONSTANTINE to secure the recognition by the Sultan of the Abyssinian Church as an independent body. The adherents of the Abyssinian Church at Jerusalem have hitherto comported themselves as the Armenian patriarch, since the Coptic creed is nearly allied to the Gregorian. In their claim for ecclesiastical independence they have been supported by Russia.

ADVENTISTS. L Advent Christians.—The Advent Christian Association and General Conference of America in 1800 adopted a Declaration or Conclusive Statement of its Fundamental Principles, in which, after expressing its belief in God, Jesus Christ, and the Holy Spirit as held by the orthodox churches generally, it set forth its distinctive doctrine of "conditional immortality" to the effect that man, created for immortality, had forfeited this birthright by sin, in consequence of which death had passed upon all the world; and that men could become partakers of the divine nature and live forever only through faith in Jesus Christ; that death is a condition of unconsciousness to all, which will remain unchanged until the resurrection at Christ's second coming, when the righteous will receive everlasting life and the wicked will be punished with complete extinction; and that salvation is free to all who in this life and age will
ADVENTISTS.

accept the conditions imposed of turning from sin, repentance, faith in Christ, and a life of consecration—"thus excluding all hope of a future probation or of universal salvation." Belief in the visible and personal second coming of Christ to the earth, his reign here forever, and the renewal of the earth to be forever free from sin and death is further expressed. Christ's appearance at his coming being indicated in Bible prophecy, is believed to be near, and the proclamation of this truth to be the great duty of the hour. The statistics of the denomination have not been systematically compiled. A committee was appointed in 1900 to prepare an annual of denominational statistics. It secured returns from 32 out of the 60 conferences, and some local and scattered items in addition, and has published as the summary of the condition of these bodies the following totals: Number of ordained ministers, 716; of licensed ministers, 112; of churches, 646, with 23,590 members; of Sunday-schools, 241, with 11,870 enrolled members. Four publishing societies—the Advent Christian Publishing Society, Boston; the Nigerian Advent Christian Publishing Society, Mendota, Ill.; the Pacific Advent Christian Publication and Mission Society, Oakland, Cal.; and the Southern Advent Christian Publication Society—issue each a weekly religious newspaper, and a monthly periodical is published at Worcester, Mass., and quarterly at Boston, Mass., and Sunday-school periodicals and helps as well as a considerable number of denominational books are published at the house in Boston.

The American Advent Mission Society was organized in 1895, primarily to labor among the freedmen in the South, but now includes foreign and domestic departments. In the foreign field it supports in whole or in part 8 laborers, with 15 native workers, and several free laborers at Nanking, Wuhu, and Han Shan Hsien, and several substations in China and in India, where a publishing house has been established at Bangalore, with a selling and lending library. Literature is printed at this establishment in 7 languages, and is distributed by agents in 15 centers and other places. The work of the society in England has also increased, with the sending of a self-supporting, Portuguese missions are maintained in the Cape Verde Islands and in Taunton, Mass. Mission schools are sustained at Nanking and Wuhu, China, and in India. The society is also aiding 10 or more workers in the home field, besides assisting several conferences in their mission work. The home missions are largely in charge of the Western and Southern Home Mission Boards. A Church Extension fund is operated in connection with this society. The Advent Christian Helper's Union, organized in 1894, is a woman's society auxiliary to the mission society in its foreign work. The Woman's Home and Foreign Mission Society, organized in 1891, works through the mission societies, churches, etc., in home missions, but carries on foreign mission work on its own account, principally in India, where it supports several schools, orphanages, 3 missionaries, and about 20 workers. It publishes the All Nations Monthly, Rockland, Me. The young people are organized into the Young People's Society of Loyal Work, looking after the welfare of the general Eastern and the general Western societies, which have together 116 local societies with about 5,000 members. The educational institutions are Mendota College, Mendota, Ill., founded in 1893, for both sexes, with 4 departments and 4 courses of study, and the Boston Bible School, established in 1897, and incorporated in 1902. The Loyal Workers' Institute is a course of reading to be pursued at home.

II. Life and Advent Union.—The distinctive doctrines of this branch of the Adventists include the extinction of the wicked at death and the resurrection of the just to everlasting life. It holds a general conference in each year at the meetings—in Maine, Connecticut, and Virginia—and quarterly conferences in some places. The Life and Advent Missionary Society and the Young People's Life and Advent Missionary Society are organizations for carrying on home-mission work exclusively. A considerable number of books, with the Herald of Life, the newspaper organ of the denomination, are issued from the publishing house at Springfield, Mass. Fifty-one ministers are registered on the rolls of the General Council, with about 24 churches; and there are other ministers whose names have not been enrolled. The number of members is not given in the reports of the body, but is estimated to be about 3,500.

III. Seventh-day Adventists.—At the Seventh-day Adventist General Conference of 1901, a new constitution was adopted and important changes were made in the organization of the church. Among these it is considered that one of the most important changes was the grouping of the State conferences into union conferences, each representing a definite district or number of States, to take over a part of the work of the General Conference, and among which many of the functions and duties hitherto performed by it and its liabilities and assets were to be distributed according to their local relations and strength. Six of these union conferences were constituted in the United States, one in Canada, one in Europe, and one in Australasia. This change was accompanied with a readjustment of the affairs of the General Conference Association, the legal arm of the General Conference. Steps were taken late in 1901 to apportion the liabilities of this association to the union conferences according to the institutions within their borders and their ability to pay. The plan adopted contemplated the creation of a legal corporation within the territory of each conference for the transaction of legal business and the transfer to such corporations by the General Conference Association of whatever institutions and church property it was holding in India. The assumption by them of the corresponding liabilities, in such a way that the General Conference Association should be relieved of a large share of its financial obligations and they should be assumed by those union conference organizations within whose borders the assets are located, whether in the form of church buildings, school properties, or otherwise. This arrangement was accepted by most of the union conferences. The General Conference Committee was likewise reorganized to meet the new conditions in February, 1902, with such reorganizations as seemed called for of the Mission Board, the trustees of the Foreign Mission Board (constituting the legal corporation), the educational department, the educational department, the Sabbath school department, the General Conference Association, the Auditing Committee, committees on German and on Scandinavian work in North America, and transportation agencies.

The European General Conference was organized July 23, 1901, and embraces two union conferences—the German and the Scandinavian—together with the British and Central European
Conferences and the Oriental mission field. Each of the union conferences includes three duly organized local conferences, besides unorganized mission territory. At last reports 60 ministers and about 100 other workers were employed within its territory, with about 7,500 Sabbath keepers, from whom a tithe of nearly $50,000 a year was received. A mission training school, at a health institute, a food factory, and an industrial school are located at Friedensau, Germany, where the conference was held; a health institute has been established in Denmark; and publishing houses are sustained in Norway and Sweden.

The summary of the statistics of the Church in all parts of the world for the year ending Dec. 31, 1901, includes footings from the union and State and local conferences and missions as follow: Atlantic Union (9 conferences and mission), 8,430 members; Canadian Union (4 conferences, etc.), 1,563 members; Southern Union (8 conferences, etc.), 2,500 members; Lake Union (5 conferences, etc., and the church at Battle Creek, Mich.), 19,889 members; Northwestern Union (5 conferences, etc.), 11,791 members; Southwestern Union (6 conferences, etc.), 10,144 members; Pacific Union (9 conferences, etc.), 8,864 members; German Union, 3,818 members; Scandinavias, 9,059 members; British Union, 992 members; Central European Union, 492 members; Oriental missions, 236 members; Australasian Union Conference (7 state conferences or missions), 2,833 members; and the many missionaries in South America and missions in Mexico, the West Indies, Central and South America, India, Japan, China, South Africa, and the islands of the sea, of which 25 are enumerated, 4,337 members; total, 75,158 members, showing an increase of 2,429 from the previous year. Other footings of the table are: Whole number of laborers (553 ministers, 340 licentiates, 611 missionary licentiates), 1,081; of churches, 2,011, with 80,356 members; of companies, 356, with 5,239 members; of isolated Sabbath keepers, 3,583; amounts of tithes, $678,028, showing an increase for the year in this item of $66,369. The Seventh-Day Adventists have several publishing houses in the United States, including the one at Battle Creek, Mich.; other publishing houses located in the countries of Australia, issuing periodicals and books in several languages; a large sanitarium at Battle Creek, Mich., and other sanitariums in the United States and many other countries, a number of educational institutions in America and abroad.

IV. The Church of God.—This branch is the result of a separation from the Seventh-Day Adventist Church, which took place about 1865, on account of differences respecting certain points of doctrine and practise. The number of members is estimated at about 6,000. It has a sanitarium (controlled by a stock company) at White Cloud, Minn., and an orphan asylum at Renwood Park, Iowa. The meetings are mostly held in schoolhouses, so that the value of church property is estimated to be not more than $2,000; while the cost of the sanitarium was about $20,000. The General Conference was incorporated in 1869, and usually meets at Stanberry, Mo., where the denominational publishing house is situated, and where 3 periodsical and large editions of tracts are published. At the eighteenth annual Conference, held at Stanberry, Mo., in November, 1876, 60 members were added and expenditures of $2,865. Resolutions were adopted expressing belief "in the personal coming of Christ, the absolute mortality of man, the resurrection of the dead, a judgment at which the kingdom on earth and the perpetuity of God's moral law, the Ten Commandments, including the fourth, which requires the observance of the seventh day of the week as the holy Sabbath of the Lord," as the truths which distinguish the denomination as a people, and directing that these subjects be made paramount in all the denominational publications and preaching. Another resolution declared that the purpose of the General Conference include works of benevolence and charity.

V. The Churches of God in Christ Jesus (or Age-to-Age Adventists as they are popularly known) are a group of churches that look for the final restitution of all things which God hath spoken and the actual establishment of the kingdom of God on the earth with Christ as king; and for the literal resurrection of the dead, with immortality to the righteous and the final destruction of the wicked. In the absence of officially published statistics, it is estimated that they have 182 organizations worshiping in their own buildings and nearly as many in other rooms, with Sunday-schools maintained wherever there is an organization, and about 5,000 members. The business is transacted by the State or district conferences.

AERIAL NAVIGATION. All the recent comparatively successful attempts at navigating the air have been by means of the development and improvement of dirigible balloons; little has been done to carry forward the splendid experiments of Maxim and De Lorme (see Annual Cyclopaedia for 1897, p. 4). The idea of a spindie-shaped balloon, sustaining passengers and machinery, and impelled by a wheel composed of vanes or fans of canvas at one end, both of its extremities, is not new, and such an invention was mentioned in a letter written by Francis Hopkinson to Benjamin Franklin as early as May 24, 1784. Rufus Porter exhibited models of such a machine in New York and Washington in 1835-40 which flew rapidly and were capable of sustaining themselves for a considerable length of time; but his large machine, its balloon 100 feet long and 16 feet in diameter, was a failure. He used steam as his motive power.

Giffard, Tissandier, Renard.—The first successful dirigible balloon of the present day is a Giffard, which was built in 1852, and used as a propelling power a high-pressure 3-horse-power steam-engine with a small boiler, together weighing about 500 pounds and providing enough power for an airplane. The balloon was spindie-shaped, 3.66 diameters (144 feet) in length, and attained a maximum speed of 6.7 miles an hour. Twenty years later M. Depuy de Lôme employed manpower in the impulsion of a balloon 115 feet long and capable of carrying 10 or 15 men, 7 of whom furnished the power, and attained a speed of something more than 6 miles an hour. M. Gaston Tissandier adopted the electric storage-battery, coupled with a dynamo-electric machine, as a source of power. He constructed for the exhibition of 1851 a model, 11 feet long and 4 feet in diameter, filled with hydrogen, and drove it at the rate of about 10 feet per second (about 7 miles an hour), as a maximum. With his brother, M. Albert Tissandier, he built another, 91 feet long and 29 feet in diameter, fitted with a Siemens dynamo, driving a screw nearly 10 feet in diameter, and supplied with a current from an accumulator of 368 volts and 3,000 amperes, and able to lift about 400 pounds. This machine, carrying two inventors, made at various times from 7 to 9 miles an hour for an hour or two together.

Meser, Renard, and their experimental ballooners like their rivals, in Paris, also constructed a some-
what similar machine, 165 feet long and 27½ feet in diameter, impelled by a battery invented by M. Renard, a dynamo, and a screw 7 feet in diameter. This apparatus at various times in 1884 went from 12 to 15 miles per hour. The motor gave out about 5 horse-power, and the machine was able to take any course desired in a calm, and even to contend against a slight breeze. Brazil's air balloon made a number of voyages, occasionally to distant points, sometimes returning to its point of departure. Its car and impelling machinery constituted one of the most interesting of the exhibits of the French Government at the Paris Exposition of 1889.

Count Zeppelin.—New interest was awakened in the summer of 1900 by the successful ascents made by Count Zeppelin at Lake Constance. His employed in these experiments an immense balloon, consisting of 17 cylindrical gas-bags confined in a cylindrical case with conical ends, 420 feet long and 39 feet in diameter. Beneath this was suspended a frame supporting 2 aluminum cars 20 feet in length, one forward and one aft, connected by speaking-tubes, for the crew and machinery. Two rudders, one forward and one aft, served to steer the craft, which was driven forward or backward by 4-bladed screw propellers 3½ feet in diameter, 2 geared to each motor. The power was furnished by 2 16-horse-power Daimler benzine engines, weighing 715 pounds each, and 1 placed in each car. The ship was made to travel in a horizontal or an inclined plane by means of a weight sliding along a cable beneath and parallel to the longest axis of the balloon shell. When it was desired to descend the forward end of the balloon was thrown upward by sliding the weight aft; when a descent was to be made it was thrown downward by sliding the weight forward. When the weight was at the exact center the ship was in equilibrium and maintained a horizontal course. The first ascent was made July 2, 1900, with 5 persons in the car. After one 1,200 feet the ship traveled 32 miles in seventeen minutes in a prescribed direction, and was then forced to descend on account of an accident to one of the rudders. On Oct. 17 the ship remained in the air for an hour at an average height of nearly 2,000 feet; it traveled the 6-mile circumference of a circle, making noticeable headway and remaining in perfect control against a 7-mile wind. After completing its evolutions it alighted gracefully and gently to the surface of the lake where its balloon shed was placed.

Santos-Dumont.—In 1901 much attention was called to the experiments of M. Alberto Santos-Dumont, a young Brazilian resident in Paris; especially when on Oct. 19 he succeeded in winning the prize of 100,000 francs offered by M. Henri Deutsch, one of the members of the Aero Club, in April, 1900, to the navigable balloon that, starting from the Aero Club Park, at St. Cloud, should steer around the Eiffel Tower and return to the point of departure in less than half an hour. Even before his arrival in Paris in 1897 Santos-Dumont had experimented with aeronautics, and on July 4, 1898, made a successful ascent from the Jardin d'Acclimatization in the smallest spherical balloon that at that time ever had been made, 18 feet in diameter. At the same time he was constructing his first dirigible balloon, the Santos-Dumont No. 1. This was in the form of a cylinder with conical terminations, 80 feet long and about 6 feet in diameter. The suspended basket carried a 2½-horse-power gasoline motor operating a screw propeller. The ascent of this balloon, from the Jardin d'Acclimatization, Sept. 29, 1898, almost resulted in disaster. It rose to the height of 1,200 feet, showed itself to be absolutely dirigible, and delighted the spectators with its marvelous evolutions. Suddenly it was seen to collapse and the wreckage with the aeronaut came tumbling to the earth. The air-pump supplying the small interior air-ballon, designed to keep the outer envelope always swelled out, had proved insufficient, and under the weight the whole thing folded upon itself. Fortunately the mass of wreckage acted as a parachute, and M. Santos escaped much larger, and launched May 11, 1899, showed the same defects, and after an unsuccessful trial was abandoned, and work immediately begun on No. 3, which embodied many innovations. The inner air-ballon was dispensed with, although he has used it in No. 4 and the later models. It was cigar-shaped, 90 feet long and 11½ feet in greatest diameter. There was no netting about the silk tissue, but a strong belt was sewn into the lower part of the balloon on either side to which short pieces of wood were attached. From them was suspended the so-called "keel," a long bamboo pole which supported the basket and other apparatus. A 4½-horse-power petroleum motor worked a 5-foot propeller giving 2,500 revolutions a minute. A rudder of bamboo and silk with an area of about 25 square feet was used to guide the ship. At each end of the balloon was fastened 50 pounds of ballast controlled by guys. When the aeronaut wished to rise he let out the stern guy, and 50 pounds of ballast fell astern, throwing the bow end of the balloon upward at an angle of 25 or 30 degrees. To descend it was only necessary to let out the bow wire and draw in the stern weight. On Nov. 13, 1899, a-
AERIAL NAVIGATION.

Ascending from Vaugirard he sailed to the Champs de Mars, and, after circling the Eiffel Tower several times, laid a straight course for Auteuil, and thence to the maneuver grounds at Bagatelle, where he safely landed. In No. 4 he improved on No. 3 by making his balloon less clumsy, 95 feet long and 9 feet in diameter, and by dispensing with the suspended basket. The 7-horse-power motor and the other mechanism was fastened directly to the keel, a long framework of bamboo strengthened by wires, and the inventor managed the machine from a bicycle seat fastened to the keel. The machine was completed in August, 1900, and made numerous short ascents during the Paris Exposition of 1900, notably on Sept. 19, in the Bois de Boulogne, in the presence of the International Aeronautic Congress. Balloon No. 5 was made by inserting into No. 4 a cylindrical piece sufficient to make its total length 109 feet. A 60-foot keel, framed of pine and piano-wire, supported a 16-horse-power motor with its appendages and a basket car for the aeronaut. With it, July 12, 1901, ascending from the Aero Club Park, he crossed the Seine to the Longchamps race-track, took the air-ship ten times around the track, and then sailed to the Trocadero, and after a slight delay, caused by an accident to the rudder, went round Eiffel Tower, back to Longchamps, and thence across the Seine to Aero Park. The following day was set for an attempt for the Deutsche prize. The start took place in the presence of the club members at nineteen minutes to seven in the morning. The Eiffel Tower was doubled at five minutes to seven, but a strong current of air caught the ship shortly after the turn, driving it toward Longchamps, where he landed in the gardens of Baron Rothschild. On Aug. 18 he made another attempt, but this time his balloon collapsed and the whole structure with its operator fell to the roof of the Trocadero Hotel. His new machine, No. 6, ellipsoidal in form and carrying a 20-horse-power motor, was built upon practically the same lines, and on Oct. 19, 1901, succeeded in capturing the coveted prize. The trip from St. Cloud to the tower was made in nine minutes, and the return trip, against the wind, in twenty minutes and thirty seconds. M. Deutsche's 100,000 francs were generously distributed by the victor among the poor of Paris and all the assistants who had contributed to his success. Soon after his success in Paris he was summoned to Monte Carlo by the Prince of Monaco, there to attempt the crossing of the Mediterranean Sea. He made a successful ascent on Jan. 23, 1902, taking with him his friend M. Aimé, and sailing about the bay and proceeding more than a mile seaward. On Feb. 14, while making his fifth trip across the bay the guide-rope caught in the screw. With the intention of freeing the entangled tackle, M. Santos threw his balloon into a perpendicular position, whereupon the petrolume began to escape from his motor. The aeronaut, fearing an explosion, pulled the emergency rope, tearing a great rent in the silk envelope, and the gas rapidly escaped, causing the balloon to descend into the sea. A steam-launch belonging to the Prince of Monaco's yacht picked up M. Santos with all possible speed; and the disabled balloon, which did not sink, was taken in tow and conveyed to land. This balloon, No. 6, with some slight alterations, was brought to the United States in July, 1902, and ascended from Brighton Beach by Mr. Edward C. Boice in his ascent on Sept. 30, 1902.

Stanley Spencer.—On the afternoon of Sept. 19, 1902, ascending from the Crystal Palace in London, Mr. Stanley Spencer steered a navigable balloon of his own invention over Dulwich, Herne Hill, Clapham Junction, Victoria Bridge, and the southwest of London to Ealing, and finally to Harrow—in all, a distance of about 30 miles, or about three times the longest distance ever attained by Santos-Dumont. While in the neighborhood of Herne Hill, Mr. Spencer caused the air-ship to perform numerous evolutions—darting downward, as though falling to the earth; suddenly arresting the descent, and again rising. At Ealing, which was reached at five o'clock, an hour after the start, similar maneuvers were gone through over the principal thoroughfares. The course was then altered to north-east, and a safe landing was effected near Harrow. The machine was at all times under perfect control, and at the end of the trip lighted so lightly "that a child might have been under it without being hurt." This ship, built by the Mesr, Spencer, differs very radically in some respects from the Santos-Dumont type, and is de-
AERIAL NAVIGATION.

The main point of difference lies in the wooden screw, constructed on the Hiram Maxim system, which is fixed in front of the body of the machine and pulls or sucks it forward through the air, instead of propelling it from the rear, as in the Brazilian's air-ship. The framework is entirely of bamboo, lashed and bolted to one another, and, with the exception, of course, of the motor and steering-board, there is practically no metal on the whole machine. The result of this is shown by the scales. The total weight, with everything fixed, is under 300 pounds, the frame accounting for 125 pounds of this. The car is novel, inasmuch as the place of the usual basketwork is taken by bamboo cross-bars and netting. The framework—which is 45 feet long—is in 3 parts, for convenience in transit. The driving-power is furnished by a Simms petroleum motor of 35 horse-power. The gas-bag is 75 feet in length, and is not covered with netting, it being found difficult to enclose properly a balloon of elongated shape. When the aeronauts—the vessel will carry two light-weights—desire to descend, air is pumped in from the ground, thus forcing the gas from the car as the gas is allowed to escape, in order that the balloon may always remain taut. Automatic valves release gas should the pressure become too great. The envelope is made of three coats of special varnish, one outside and two in. By means of this it is believed that the fabric itself will be undamaged by either the gas within or the air without. On Oct. 20, M. de Bradsy made another successful trip of 26 miles, ascending at Blackpool, Lancashire, and descending near Preston. A strong breeze was blowing when he ascended. When he reached a height of about 1,000 feet he made several evolutions against the wind, and finally sailed away in the direction the wind was blowing.

Severo and de Bradsy.—Aside from many minor accidents to balloonists and some deaths in various parts of the world, two shocking accidents mark the year's experiments in Paris. Several Augusto Severo, a member of the Brazilian Congress and an enthusiastic aeronaut, made an ascension May 12, 1902, from the aerodrome at Vaugirard in his huge ship La Paix, in the presence of his family and a large party of friends. All seemed to go well, the breeze from the south-east suitably toward Issy, whence the party were to follow in automobiles to witness the descent. Fifteen minutes later, at an altitude of 1,500 feet above the Avenue du Maine, opposite the Rue de la Gaîté, the balloon suddenly turned, was enveloped in a flash of flame, followed by a terrific explosion, and Severo and his machinist Bachet, who had ascended with him, were dashed with the car to the earth and instantly killed. The explosion was probably caused by the ignition of escaping hydrogen gas from the balloon at one of the nozzles, but the exact cause never will be known. In general appearance La Paix resembled the ships of Santos-Dumont. The gas-bag, 94 feet long and 40 feet in diameter, had a capacity of 70,000 cubic feet. The framework of the car was of steel tubing and bamboo and carried two petroleum motors, one of 16 horse-power at the bow and one of 24 horse-power at the stern, of the Buchet type. There were 6 screw propellers, one at the stern of the balloon, another at the stern, and a third at the stern of the car, two others working laterally at the right and left and steering the ship by the helm in the ordinary sense of the word, and a sixth screw designed to aid in ascent or descent, as might be required. The mechanical parts were carried very little below to the gas-holder, and the motor at the stern was very near the automatic valve designed to let off the excess of hydrogen as the envelope expanded through the rarefaction. On Oct. 13 Baron de Bradsy Labonn and his assistant, M. Morin, were killed at St. Cloud through the breaking of the wires that held the suspended car and motors to the gas-holder. The de Bradsy ship was cylindrical with conical terminations, 100 feet long and 20 feet in diameter at the thickest part. A light wooden framework running around the balloon supported on steel wires a frame 70 feet long of steel tubes. It carried a car 16 feet long, suspended 10 feet below the envelope of the balloon, which guarded it against risk of fire from the 16-horse-power petroleum motor. The frame weighed 300 pounds. The air-ship was propelled by a screw 12 feet in diameter, and had a vertical screw placed beneath the car to aid in ascending and to keep the ship afloat, as it was built to displace exactly with the aeronauts its own weight of air. The rudder had a surface of 5 square yards. A notable machine in the car as the gas is allowed to escape, in order that the balloon may always remain taut. Automatic valves release gas should the pressure become too great. The envelope is made of three coats of special varnish, one outside and two in. By means of this it is believed that the fabric itself will be undamaged by either the gas within or the air without. On Oct. 20, M. de Bradsy made another successful trip of 26 miles, ascending at Blackpool, Lancashire, and descending near Preston. A strong breeze was blowing when he ascended. When he reached a height of about 1,000 feet he made several evolutions against the wind, and finally sailed away in the direction the wind was blowing. M. Emmanuel Aimé, the expert, in describing the ascent and the cause of the accident, writes as follows: "As the air-ship advanced slowly, at an altitude of 200 meters, turning round and round as it went, sometimes advancing, sometimes moving backward, swinging to port and to starboard, in spite of the rudder, to which M. Morin held the tiller, and, in spite of its propelling screw, which was under the direction of M. de Bradsy, it was only too easy for the spectators to perceive that it was drifting at the mercy of the wind. In reality, though the air-ship obeyed neither rudder nor propelling screw, it obeyed only too well the disas trose action of the ascensional screw, the perturbing influence of which would have sufficed to paralyze the effect of both the propelling screw and the rudder, even if the motor had been strong enough to resist the light breeze from the south-east. The ascensional screw turned vertically under the car at a rate of 500 revolutions per minute and made the air-ship swing round at a rate of about one turn per minute. Under these circumstances the propelling screw and rudder were powerless. What was necessary was a second vertical screw, turning in a contrary direction to the first, to neutralize the tendency to rotation. M. Bradsy, however, had to give up the idea of making these changes on account of the extra weight it would have entailed. In spite of the recent augmentation in volume, there was no lifting power was still too feeble to allow of any addition to the motor. The ascensional screw provided another, and still more disastrous effect, which did not escape the attention of those versed in aeronautics. From the Place de l'Opéra it was plainly visible that under the influence of this screw the axis of the balloon, obliged to turn by the resistance of the air, ceased to be parallel to the axis of the car, and that, in consequence, the steel wires which fastened the car to the balloon underwent a tension which tested their solidity."

The next day after the strain had worn the wires from their fastenings and caused the fatal termination of the ascension.
Stevens, Lebaudy, and Others.—Other experiments have been made in 1902 by Leo Stevens with a ship that he has christened The Pegane. It is a gas-bag, cylindrical with conical ends, 22 feet in diameter and 86 feet long, with an inside air-bag 20 feet long. The framework suspended 12 feet below is 25 feet long and weighs over 1,000 pounds. The motors 350 pounds. The propeller, consisting of 2 blades 72 feet long, is placed at the forward end of the ship. On either side of the gas-holder is what is called an aerodynamic parachute 56 feet long, which is supposed to open out in descending and steady the ship.

Several private trials have been made of an airship, the Jupiter motors, by Paul and Paul Lebaudy and an engineer named Julliot. On Nov. 13, 1902, it is said to have made a speed of 25 miles an hour against a light wind and to have landed, its whole crew, readily and promptly. The following details of its construction have been given to the press:

"The Lebaudy balloon is similar in appearance to that of M. Santos-Dumont. It is 443 yards long and 12 yards in diameter. The car is 53 yards long and can hold 3 persons. The propeller is driven by a motor of 40 horsepower."

The only ascents of dirigible balloons so far made in America were those of Leo Stevens's Pegasus and the Santos-Dumont No. 6 at Manhattan and Brighton Beaches, New York, respectively on the afternoon of Sept. 30, 1902. Mr. Edward C. Boice, in the Santos-Dumont, after rising gracefully to a height of 800 feet circled the Brighton Beach Hotel and then took a straight course for Sheepshead Bay, directly against an 8-mile breeze. He had complete control of his machine, and for about 3 miles kept a comparatively horizontal course, when a gust of wind blew a suspended rope against the propeller, with which it became entangled, and he was forced to descend. Mr. Stevens was less successful. His ship had previously made two unsuccessful attempts at flight, and was still unruly. After some evolutions he sailed 3 miles in the direction of Coney Island. He lost the handle-bar with which he controlled the propeller, and was left without motive power, and was again used by the men, under similar meteorological conditions, the route being over Teltow, Potsdam, Lehnin (13 miles west of Potsdam), Döberitz (100,000 and 65. To the point where the landing was effected. Here on two successive days, with a change in the wind, practically the same course was covered, with one balloon flying, the balloon remaining in service for forty-one hours in all. On July 27, 1902, Capt. Eric Unger of the engineer corps of the Swedish army traveled more than 540 miles in a balloon in fourteen hours and a half, descending near Novgorod, Russia. On Sept. 19, while attempting, in the presence of King Oscar, at Stockholm, to cross the Baltic to Germany and the south of Europe, his balloon exploded, and he and his companion fell more than 2 miles. The wrecked balloon acted as a parachute and both escaped unhurt. On Sept. 22, 1902, Count de la Vaullaz, accompanied by M. Castillon de Saint-Victor, M. Laignier, of the French navy, M. Hervé, the engineer whose patent "devisor" plays such a prominent part in the experiments, and Duhaut, the mechanic, started from Pau and landed again at les-Flots, near Montpellier, in his balloon Méditerranee II, in a second attempt to cross the Mediterranean. The balloon, which was provisioned for several days, was escorted by the tor
poc-destroyer Épée, and was attached to a floating buoy or "deviator," which kept it at a uniform height of 100 feet above the water and, to a certain extent, made it possible to regulate the direction of the flight. Some 200 pigeons were used to keep up communication with the shore. At ten o'clock on the morning of Sept. 22 the balloon was sighted by the captain of an Italian vessel 25 miles southeast of Palavas. Eventually, however, a contrary wind caused the attempt to be abandoned, and the balloon was brought to earth at Marseilles, between Cete and Agde.

At the meeting of the French Academy of Medicine held in Paris in August, 1902, Dr. Naugier asserted that he had made experiments demonstrating that a balloon ascent acts on the human system as a powerful tonic, causing such a multiplication of the red corpuscles of the blood that the condition persists for many days after an ascension. He further stated that five such excursions, each of 30 hours' duration, would be more beneficial to an anemic or a consumptive than a sojourn of three months in the mountains, and that he should request the municipal council to provide a large balloon capable of taking into the upper air daily 50 patients or children who are too poor to afford a change of climate.

AFGHANISTAN, a monarchy in central Asia, lying between Russian Turkestan and British India. The reigning Ameer is Habibullah Khan, born in 1872, who succeeded his father, Abdur Rahman Khan, in 1901. The area of the country is estimated at 215,400 square miles, the population at 4,000,000. The revenue is uncertain and fluctuating. Although the rule of Abdurrahman was more energetic and systematic than that of his predecessors, the hakims, or governors, and other officials practise extortion and peculation. The cultivators pay to the Government from a tenth to a third of the produce, according to the amount of irrigation. The Indian Government grants to the Ameer an annual subsidy of Rs 180,000. Abdurrahman is said to have founded the most beautiful and spacious of the modern European models, consisting of 37,000 infantry, 7,000 cavalry, and 350 guns. In the arsenal at Kabul are manufactured machine rifles, cartridges, and breech-loading field and horse-guns. The landing grounds and legumes are winter crops, and rice, millet, and corn are grown in summer. The land is cultivated by the owners or by tenants who pay rent in kind or who hold it on the métayer system. Agricultural laborers are free men who work for hire, or serfs. Asafetida is gathered in great quantities and exported to India. Castor-oil and madder are also exported, and preserved fruits, which are consumed largely in the country, as well as fresh fruits, in which Afghanistan abounds, including apples, pears, apricots, peaches, quinces, grapes, figs, plums, silk, sheepskin coats, fabrics of camel's hair and cashmere, rugs, and rosaries are manufactured. The trade with Bokhara and Russian territory is growing, while that with India and Persia shows no increase. Exports from India to Kabul in 1901 were valued at Rs 299,053, and imports into India from Kabul at Rs 187,530. The exports from British India to Candahar were Rs 214,316, and imports from Candahar into India Rs 353,281. The imports from India included in 1901, in addition to those above named, were £67,000 worth of skins and furs. The exports from Afghanistan to India are fruits and nuts, wool, silk, hides, spices, grain, ghi, asafetida and other drugs, vegetables, tobacco, cattle, and horses. The trade with Bokhara is about 4,000,000 rubles each way.

The internal peace of Afghanistan was threatened by a complication of intrigues in the months preceding the ceremonial installation of the Ameer Habibullah on March 29, 1902. Mohammed Ismail, son of Jashak Khan, who contested the throne with Abdurrahman, was suspected of designs on Afghan Turkestan in cooperation with other exiles in Russian territory. Habibullah's cordiality toward the Hadda Mullah, whose influence nearly embroiled Afghanistan and India, on the occasion of the frontier troubles in 1897, was one of the manifestations of a desire to conciliate the fanatical element and put forth prominently the spiritual attributes of Afghan sovereignty. Bibi Halima, the widow of the late Ameer and mother of Mohammed Umar Khan, was dissatisfied because Habibullah did not consult her in political affairs, as he was enjoined to do in his father's will. The new Ameer's younger brother, Nasrullah Khan, was at variance with him also. Mutinies occurred among troops that had not been paid. The Ameer appointed a council to assist him in the administration of the country. The council took place without serious disturbance. The Hadda Mullah went to Kabul, where a new code of laws was promulgated by the Ameer was submitted to him for revision. The Ameer gave permission for political refugees to return to Kabul, but withdrew it in deference to the opinion of Umar Khan, Nasrullah Khan, and others. The Ameer's Council of State was composed of leading members of the various tribes. Another step in the direction of organized government was the appointment of a person learned in Afghan customs and Moslem law to assist each of the provincial governors in the administration of civil and criminal justice. Cases of importance are referred to the Ameer and the Council of State at Kabul. The soldiers received their pay, which was in arrears since the death of the late Ameer. A plan for the reform and reorganization of the army was adopted. The pay of men in active service was increased, and at the same time the strength of the regular army was increased. Two points on routes leading from India into eastern Afghanistan were fortified and permanent garrisons established.

ANGLICAN CHURCHES. Statistics. — The statement of the 11th report on the Church of England for the year ending Easter, 1901, reported for the Church of England Year Book shows that the contributions for general purposes and for parochial purposes exceeded those of the preceding year by about £7,000, and reached a total of £7,728,134. The preceding year had shown an increase of £800,000; but reference was made in the statement to circumstances that might have justified the expectation of some falling off. An increase of £48,000 in the contributions for the maintenance of primary schools was perhaps the most noteworthy item, and was in fact six times the total increase for the year; so that on the whole there had been some falling off in other items. The contributions to foreign missions was £262,056; the local contributions to the support of the clergy had been £282,684; and £168,797 had been raised by the central and diocesan societies for the assistance of the clergy and China. £605,040 had been contributed for general home missions. £505,040 for philanthropic work. and £1,170,390 for elementary education. As a whole, the gifts for
parochial purposes were about two and a half times the size of those for general purposes—or £5,342,394, as against £2,235,741. Other contributions to general charities from Church sources, of which the tables in the Year-Book take no notice, were, it is represented in the Church Times, well maintained. No account is made in the tables either of contributions, such as those to the Bible Society, the London City Mission, etc., in which non-conformists cooperate. Of the various items in the budget, gain was shown in 7 and loss in 12.

The income of the Bishop of London’s fund (to provide for the spiritual needs of the poorer parts) for the past year had amounted to £28,795, against £26,744 in the preceding twelve months. The bishop at the annual meeting in behalf of the fund named £50,000 a year as the sum required for the carrying out of the work undertaken by it.

The Annual Report of the Church Pastoral Aid Society for 1902 shows that during the year grants had been made in the total amount of £60,494 for 750 curates, 154 lay assistants, and 192 women workers in 985 parishes, containing 161,000 communicants. The amount of contributions called forth locally had steadily risen, except in a single year, during the past ten years from £30,568 in 1893 to £53,785 in 1898. The committee had been able to extend the work of the society in two directions during the year, namely, in the application of a gift of £10,000 for the relief of impoverished clergy, partly according to the discretion of the committee, partly according to the discretion of native clergy, 374; of native lay teachers, 7,927; of native Christian adherents, including catechumens, 290,225; of native communicants, 85,353; of baptisms, 20,617; of school children, 6,202, with 135,137 pupils; of hospital beds, 1,713; of in-patients, 13,871; of visits to out-patients, 786,642. Among the missionaries were 84 qualified doctors, 14 of whom were women.

The Centenary Volume of the society, published during the year, contains a history of its rise and progress together with particulars of its various missionary and educational work. The society received no attention from the bishops, its list of vice-presidents in 1889 included the names of 120 bishops. Thirty-seven of its missionaries, 3 of them Africans, were of its benevolent.

On May 6, Sir John Kennaway, Earl, M., P., presiding. The year’s receipts for general purposes amounted to £2,821,000, an increase of £12,500. While legacies and interest were less than in the previous year, there had been an increase of about £20,000 from voluntary contributions. Expenditures had been reduced by £2,000, and had really been £15,000 less than the estimate: and the deficit of £27,000 was less than had been feared. The society’s work could now be done on the present scale, without an increase of £50,000 a year in income, after making up the deficit. The Church in Japan had adopted a revision of its constitution, and had before it a revised translation of the Thirty-nine Articles; and its clergy and laymen sat in synod and voted with the English bishops and clergy. Native clergy preponderated in the synod of Ceylon, which was about to elect its own bishop, under the constitution granted in 1886—a power to be exercised for the first time by any modern Church body in which natives predominate. The Church in Ceylon corresponded with the Chinese bishops for 27 pastors and 2,400 teachers and elders, put up its own church buildings, and sent its own missionaries into foreign parts. In New Zealand and Canada, the society’s work among the Maoris and red Indians was being transferred to the colonial churches. Some of the most interesting cases among the 9,584 adult and 11,007 juvenile baptisms of the past year were the first four converts in the Eskimo mission at Cumberland Sound and the first pygmy from the great African forest. The following declaration of the position of the society was embodied in the report:

"The Church Missionary Society has its own distinct principles—the principles of the apostolic age of the English Reformation, of the evangelical revival—and on those principles it stands, and intends by the grace of God to stand. It maintains, and will maintain, its just independence—not independence of the Church or of its constituted authorities, but the reasonable independence of a body of loyal Churchmen banded together for the preaching of Christ in the world. At the same time, it declines to be turned aside by groundless and unworthy suspicions from the ancient practise of friendly intercourse with other societies, whether within the Church of England or within the wider range of Protestant Christendom; and it rejoices to see what its founders would have rejoiced to see, that we and other Anglican Church Societies have had the ‘blessing which the Lord gave’—the Church of England as a body, and its episcopate in particular, fostering the missionary enterprise."

The following approximate statistics of the missions for 1901-02 were presented to the meeting:

- Number of stations, 558;
- Of European missionaries, 1,935, including 421 ordained clergy, 148 laymen, and 1,374 lay workers;
- Of native clergy, 374;
- Of native lay teachers, 7,927;
- Of native Christian adherents, including catechumens, 290,225;
- Of native communicants, 85,353;
- Of baptisms, 20,617;
- Of school children, 6,202, with 135,137 pupils;
- Of hospital beds, 1,713;
- Of in-patients, 13,871;
- Of visits to out-patients, 786,642.

Among the missionaries were 84 qualified doctors, 14 of whom were women.

The receipts for 1901 of the Society for the

**Society for the Propagation of the Gospel.**

The receipts for 1901 of the Society for the...
ANGLICAN CHURCHES.

Propagation of the Gospel in Foreign Parts ag-
gregated £206,796, being £258,063 more than
were received in 1900. The whole of the sum sub-
scribed to the Bicentenary fund, £84,027, would
be available for mission purposes, owing to the
abolition of the monopoly as it had come to
hand. The sums had been temporarily invested
or placed on deposit at once, and the entire ex-
penseces of the fund would have been met by the
expenses out of the dividends. The number of
ordained missionaries, including 11 bishops, on
the society's list, was 753; of whom 251 were in
Asia, 199 in Africa, 46 in Australia and the Pa-
cific, 166 in North America, 94 in the West In-
dies and Central and South America, and 37
chaplains in Europe. Of these, 127 were natives
laboring in Asia and 55 in Africa; and there were
also in the various missions about 3,000 lay teach-
ers, 3,200 students in the society's colleges, and
40,000 children in the mission schools in Asia and
Africa. It was represented in the general
introduction to the report that the bicentenary
commemoration had drawn many people to help
the society who had not hitherto done so.

A special meeting of the Standing Committee
of the Society was held on March 21, to consider
a request from the General Synod of the Epis-
copal Church in Ireland that it forbid the connec-
tion of any of its agents with party organiza-
tions, "as required by its own rule of law." The
reference in this last clause is to instructions is-
ued in 1706, which are bound up with the report
of each year's work. The Standing Committee
recommended to the diocesan bishops of Ireland
the words of a minute adopted in 1900, that the society had no
power over the opinions or convictions of the missionaries whom it maintained; that it did
not select the clergy whom it employed, and so long as they held the license of their respective
bishops, the society was bound not to remove them.
"The only alternative would be that the society should assume a spiritual jurisdiction, to
which it can justify no claim. The instructions given at the very foundation of the society to
the missionaries to which the resolution of the synod refers represent the conviction of the soci-
ety as to the ideal which all Christian people
should aim at. The Standing Committee assure
the synod that in its work both at home and
abroad, the society has worked hand in hand with
the Church; but the society for the Propaga-
tion of the Gospel is an independent body.

At the meeting of the union held Dec. 3,
1901, a resolution was adopted expressing the opinion that in view of the continuance in the
Church of practises and doctrines which are both
illegal and contrary to the spirit of the Reforma-
tion, "further legislation is urgently required in
order to secure a reasonable conformity to the
law of the Church and the realm."

An address issued by the Church Association
in July, in answer to an appeal in behalf of the
ritualists, bore the heading, "Now that the war
is over, the Protestant question must come first."
Representing that the union had already
issued a political pruning of party dis-
tinctions. They sincerely hope that it may en-
able the friends of the society in Ireland to con-
vince the Church that the Society for the Propa-
gation of the Gospel is not a party society. But
the Standing Committee assure the synod that they
will be most careful to bring under the not-
tice of missionaries placed on the list the instruc-
tions of the year 1706.

The Women's Mission Association for the
Promotion of Female Education among the Heathen,
in connection with the Society for the Propaga-
tion of the Gospel, had received £11,583, showing
an increase of £911. The balances had risen from
£4,904 to £5,073. A steadily growing de-
mand for missionaries, and especially for quali-
fied teachers, was observed in India. A large in-
crease of work was expected in the dioceses of
Bombay and Madras. In Burma the standard of
education was rising, and the demand for it in-
creasing. The association also appealed for offers
of service to meet the needs of Japan, South
Asia, and Madagascar.

The Melanesian Mission.—The work of the
Melanesian Mission had been carried on at the
time of its anniversary meeting in November,
1901, for fifty years with steady and growing suc-
cess, with the aid of sailing and steam vessels
plying from island to island. The general fund
for the past year had been the highest on rec-
ord, and the subscriptions to the fund for the
provision of a more suitable vessel, which was
greatly needed, had reached £13,000, a sum
which was, however, not all adequate. It was
shown that in the fifty years of its operation the
mission had worked a complete revolution in the
region. When Bishop Selwyn began his work
Melanesia was entirely heathen, whereas there
were now 12,000 baptized Christians in the is-
lands.

Voluntary Societies.—The object of the Na-
tional Protestant Church Union is defined in its
annual report for 1902 as being "to promote the
principles of the Reformation as set forth in the
Prayer-Book and Articles of the Church of Eng-
lard." The president is Mr. W. D. Crudace:
Prebendary Webb-Peploe is the chairman; and
among the vice-presidents are the Bishop of Dur-
ham, the Bishop of Sodor and Man, and Bishops
Peronne, Ingham, Marsden, and Royston. The
work of the union is largely educational in its
character, and as a part of it a steady growth
in the number of lectures and general meetings
and the number of the places of meeting per
year. The intention of the council is announced
to publish a History of the Church of England,
by the Rev. Charles Hole, and a reissue of Dr.
Vogan's True Doctrine of the Eucharist; and a
Manual of Christian Doctrine is in hand. A
number of recent appointments by his Majesty's
Government are cited as showing that the in-
creased activity of the Church Union has not been without effect in the selection of
men for ecclesiastical preferment.

At a meeting of the union held Dec. 3,
1901, a resolution was adopted expressing the opinion that in view of the continuance in the
Church of practises and doctrines which are both
illegal and contrary to the spirit of the Reforma-
tion, "further legislation is urgently required in
order to secure a reasonable conformity to the
law of the Church and the realm."

An address issued by the Church Association
in July, in answer to an appeal in behalf of the
ritualists, bore the heading, "Now that the war
is over, the Protestant question must come first." Representing that the union had already
issued a political pruning of party dis-
tinctions. They sincerely hope that it may en-
able the friends of the society in Ireland to con-
vince the Church that the Society for the Propa-
gation of the Gospel is not a party society. But
the Standing Committee assure the synod that they
will be most careful to bring under the not-
tice of missionaries placed on the list the instruc-
tions of the year 1706.

The Women's Mission Association for the
Promotion of Female Education among the Heathen,
in connection with the Society for the Propaga-
tion of the Gospel, had received £11,583, showing
an increase of £911. The balances had risen from
£4,904 to £5,073. A steadily growing de-
mand for missionaries, and especially for quali-
fied teachers, was observed in India. A large in-
crease of work was expected in the dioceses of
Bombay and Madras. In Burma the standard of
education was rising, and the demand for it in-
creasing. The association also appealed for offers
of service to meet the needs of Japan, South
Asia, and Madagascar.

The Melanesian Mission.—The work of the

time of its anniversary meeting in November,
1901, for fifty years with steady and growing suc-
cess, with the aid of sailing and steam vessels

traditional which went to make the eucharist an occasional and exceptional service, it was not to be followed. Loyal English Churchmen were bound not to forego celebration because there might happen to be none to communicate with the priest. They knew that the desire for a greater unity now showing itself on all sides. As one step toward union the adoption of a single catechism by the non-conformist bodies was to be welcomed, and similar hopes were encouraged by signs among the members of the Established Church of Scotland. The Church of England was but two provinces of the Western Church, isolated, unhappily, by circumstances for which it was by no means solely responsible, but whose members could not consistently rely themselves of the obligations which the part owed to the whole. If the authorities of the Church would but acknowledge that the act of uniformity was dead and buried, and take on their own initiative such steps as the Church required, they would be far wiser than if they waited till Parliament was willing by a definite act to sanction their action. The number of enrolled associates of the union was now 12,463, 2,017 new and 3,048 having joined during the past year. Of these, 77 were clergy-men. Three American bishops had become members. Satisfaction was expressed in the annual report with the result of the Fulham Conference, "which can hardly fail to remove existing misconceptions as to the exercise of the sacrament of penance and to promote the cause of peace."

The Liberation Society.—At the annual meeting of the Council for the Liberation of Religion from the Patronage and Control of the State, May 7, the treasurer reported that the receipts for the year had been £4,813, and the expenditures £4,622. The report of the secretary mentioned as evidences of an awakening interest in the religious life of the English Church an increase in the number of meetings and lectures, and the preaching, at the instance of the Manchester and district branch of the society, of liberation sermons by 300 non-conformist ministers in the northwestern district. The action of the society with reference to the tithe rent-charge and the education bill was reviewed. The chairman, Principal Hutton, of Paisley, said in his address that they were not proposing terms with the state Church. They had been passing through a crisis in which new questions had divided them, but they knew their principles were sound and had still the permanent moral forces which fought for them. They must hold that the abolition of state churchism was one of the greatest of political reforms in the age of the Church to which they constantly pressed to recall themselves. Resolutions were passed in favor of the passage of the convoca-tional Bill and in support of the Government education bill. Lord Nelson, moving the adoption of the report, expressed the hope that when the education bill had passed, the animosity which had been aroused by the bill would pass away. He thought it would be a good thing if committees of Churchmen and dissenters could be formed to discuss the four bases of intercommunication suggested at the last Lambeth Conference. The Bishop of Truro, presiding, thought that when the educational controversy was over and the bill had passed, non-conformists would feel that they had raised a flag which was without a staff and had shown unnecessary heat. One thing that came out very sharply from the contest was that Churchmen had stood up boldly for parents' rights to choose the religious education of their child, and that if they threw over their apostolic succession, the speaker thought, they would weaken the Church of England very much indeed, and make it less easy for their non-conformist friends to unite with them. What they had to do was not to overthrow the apostolic succession, but to make it a greater reality. The council of the society was considering how it could carry out the resolutions passed at the last Lambeth Conference with reference to discussions between Churchmen and dissenters.

The Society of the Sacred Mission, of which the purpose is to promote the increase of candidates for the ministry and aid in their efficient training, "offers a free and thorough education and maintenance during training to all who will give themselves up wholly to the service of God and his Church, in holy orders or lay work, in foreign missions or at home." At its annual meeting in November, 1901, it had about 40 candidates, and 3 new members being received during the past year.
ANGLICAN CHURCHES.

Liverpool in September on a charge of holding antitrinitarian meetings calculated to cause a breach of the peace. Refusing to find sureties and give bonds to keep the peace, he was sentenced to imprisonment for three months. The incarcerated prelate demurred greatly among the antitrinitaries. Mr. Kensit, senior, sent petitions for his son's release to the Home Secretary and other members of the Government. He asserted that his son was not a notorious offender. Judge Sanders condemned his words as blasphemous and dangerous. In a memorial to the Home Secretary the Council of the Church Association characterized the imprisonment as a grave scandal and a menace to liberty of speech. In answer to a memorial signed by 100,000 persons, the Home Secretary said that the case was one in which he could not interfere. The Baptist Union, by resolution, asked for an investigation into the case, in which it affirmed there was reason to believe that there had been a grave miscarriage of justice. Mr. Kensit went to Liverpool to visit his son in prison, and a deputation was made in Birkenhead against the Weylifite preachers, in which he was hit upon the head with a chisel. Pneumonia supervened, from which he died, Oct. 8. His son was afterwards released by order of the Home Secretary, when he declared that he would take his father's place at the head of the movement he had organized. Steps have been taken to erect a memorial to Mr. Kensit as a "defender of Protestant truth."

Convocation of Canterbury.—The Convocation of Canterbury met in its first group of sessions for the year on Jan. 26. In the upper house the appointment was advised of a joint committee to consider the best methods of approaching the Jews resident in the kingdom, and whether any special spiritual provision should be made for Jewish Christians during the first years of their conversion. A resolution of the lower house protesting against a proposal to legalize marriage with a deceased wife's sister was adopted, with a request that the archbishop and bishops use all means at their disposal to prevent any measure with that object from being passed. The meeting adjourned until the 12th of February. In the meantime a special prayer in regard to the supply of candidates for holy orders was referred to the joint committee on special prayers and services. In the lower house the subject of the procedure of the confirmation of bishops was discussed. The following resolutions on the subject of ecclesiastical dilapidations were adopted: 1. That in the interest of the Church of England, and with a view to relieving the distress arising from the diminished income of the clergy at the present time, a general insurance fund to deal with dilapidations ought to be established. 2. That each incumbent who is liable should be required to contribute an annual payment to this fund upon some suitable basis. 3. That it is desirable that this annual payment should include a small sum to be lodged in the name of the incumbent as a guarantee fund against damage accruing through neglect or waste, to be returned with interest, if not required to the incumbent at the termination of his incumbency. The resolutions further advised that the central management of the proposed insurance fund be placed in the hands of the ecclesiastical archdiocesan, archdeaconal, or parochial repair fund established to assist the clergy, in case of necessity, in raising the contributions levied upon them. The opinion of the house was expressed that in any rearrangement of the position of voluntary schools, it was desirable that public aid given to them should be applicable to their general maintenance, without any allocation of funds to the support of secular as distinguished from religious training. Moreover, the archbishops and bishops were requested to take steps for the provision of a prayer for the supply of candidates for ordination.

In the House of Laymen the discussion on the subject of the lay franchise was continued from a previous group of sessions, and a resolution relative to the initial lay franchise was adopted, "that an equal number of parochial representatives of every ecclesiastical parish or district attached to an old or new parish church in the diocese (including the district remaining ecclesiastically attached to the old parish church of an ancient parish church which had been ecclesiastically subdivided) shall be elected by such of the persons of full age, resident in the ecclesiastical parish or district, as declare themselves in writing to be members of the Church of England and of no other religious body, and are not legally and actually excluded from full communion, and are of the male sex." Other resolutions relate to the details of the scheme, the election of representatives to the diocesan council, etc. In view of difficulties between this house and the House of Laymen of the Convocation of York with reference to the initial lay franchise, a joint session of the two houses was asked for. The "Convocations of the Clergy" bill, in the form in which it had been read a third time in the House of Lords, was approved, with the expression of a desire for its speedy enactment into a law.

At the meeting of Convocation May 1 both houses discussed the education bill and passed resolutions giving a general approval to it. Approval was given in the lower house in detail to the arrangements made at the confirmation of the Bishop-elect of Worcester, which, it was represented, were on the lines suggested in the second report of the Committees of Church and State on the Confirmation of Bishops. The resolutions appended to the report of the joint committee on the position of the laity were discussed, without preparing a special prayer. The resolutions declare that it is desirable that a national council should be formed fully representing the clergy and laity of the Church of England; that the definition of powers to be entrusted to the council in reference to legislation, of the qualifications of electors, and of the method of electing and summoning its members should be determined by a joint meeting of the members of the two convocations with the provincial houses of laymen, with a view to its receiving statutory authority: that this council should consist of 3 houses, the first that of bishops, the second that of representatives of the clergy, whether official or elected, and the third of elected communicant laymen; that the acceptance of the three houses, sitting together or separately, should be necessary in order to constitute an act of the body; and that nothing in the resolutions was intended to interfere with the position of the convocations as provincial synods of the clergy. The report stated that the committee had come to the conclusion that the study of the apostolic and primitive constitution of the Church as it is set forth in Holy Scripture; and that during the first three centuries showed clearly the coordinate action of clergy and laity as integral parts of the whole body of Christ, and it was added: "It appears to us that the creation of
a representative assembly in which clergy and laity should be coordinated under episcopal authority would be a wise reversal, not only to old Anglican tradition, but to those primitive Church principles which our national Church always desires to follow. We observe that such a course has been universally adopted by the sister and daughter churches of the Anglican communion. We observe also that the Established Church of Scotland, in which a powerful General Assembly, consisting of clergy and laity, has existed from the first years of the Reformation, shows that such an arrangement is perfectly compatible with establishment. Such an assembly in this country, working, as it must necessarily do, in harmony with the Crown and with Parliament, would, in our opinion, do much to promote that effective service to, and representation of, the religious life of the nation which it is the object of establishment to secure. Such an assembly would not stand alone. It would lead to the development of local organizations in our parishes and dioceses which would subserve the general object of making all members of the Church more conscious of their rights and duties and of the resolutions of the Committee on Clerical Poverty and Clerical Charities were adopted. They assert the importance of obtaining very general support for the Queen Victoria Clergy fund and the diocesan funds affiliated with it, and the desirability of introducing the custom of Easter offerings and collections for the benefit of the clergy into every parish; declare that no scheme for the elimination of the poverty of the clergy can be satisfactory that does not make provision for a considerable diminution in the number of poorly endowed benefices where the area and population are also small; advise the institution of diocesan boards of clergy and laity to promote the union of small benefices in suitable cases; and make other recommendations of measures intended to remedy the evils of clerical distress. A resolution was passed in the House of Laymen deprecating the tendency to pervert Sunday into a day of pleasure-seeking and idleness.

At the session of the Convocation in July the upper house discussed the report of the Committee on Clerical Poverty. This report embodied the position that this position was necessary, and offered some recommendations, among which were those for the institution of sustentation funds and for unions of benefices. In the report of the Committee the position of the laity in the councils of the Church was resumed. Resolutions were adopted urging Parliament to pass "an enabling act empowering the two convocations to reform themselves and to sit together"; that "it is desirable, without traversing in any way the historic position and rights of convocations, that a representative assembly of laymen, duly elected, and possessing statutory authority, shall be formed in each of the two provinces, and so associated with the convocations that in either province the archbishop shall summon the House of Laymen to consult and debate with the houses of Convocation, and that the two archbishops, acting together, shall, as occasion requires, gather all the houses of the provinces for a joint session as a national Convocation, in order to consider the powers and constitution of the contemplated national council and the education bill were subjects of discussion.

Convocation of York.—At a meeting of the House of Laymen of the Convocation of York, April 3, the resolution adopted in 1901 proposing that the lay franchise should be open to all rate-payers was reconsidered and rescinded from this step was intended to bring the action of the house into harmony with that of the House of Laymen of the Convocation of Canterbury. The house further expressed its cordial approval of the Government education bill, but urged the elimination of the permission clauses. Another resolution expressed general satisfaction with the licensing bill of Mr. Ritchie, without binding the house to agreement in every detail.

The houses of the Convocation of York met April 30 and May 1. Resolutions were passed giving general approval to the education bill. A resolution of the lower house having reference to the distress among the clergy suggested the institution in every diocese of an annual Clergy Sunday, on which collections should be made in aid of the various clerical charities, and recommending the stimulation and encouragement of local effort to make the net income of every beneficed clergyman not less than £200. Another resolution on the part of the Church to impress upon all Churchmen the perpetual obligation "to do their utmost, by prayer, word, and example, to promote the cause of peace by implanting the great principles of justice, charity, and mutual respect throughout the world"; and further expressing a strong sense of the responsibility which will rest upon the Church in this matter, was adopted.

Joint Meeting of the Two Convocations.—A joint meeting of the two convocations, including both Houses of Laymen, was held in the Church House, Westminster, in July. The subject of the lay franchise was discussed at length and the opinions of the body were expressed by resolution: "that the electors should be of full age and have been baptized and confirmed, and should declare in writing that they are bona fide members of the Church of England;" and that the representatives elected by them should in addition to these qualifications be communicants.

Report on the Position of the Laity.—The report of the Joint Committee on the Position of the Laity sketches historically the share of the laity in the councils of the Church, showing that their importance in ecclesiastical councils began to diminish after the Council of Nicaea until under the medieval papacy it was almost eliminated. In the East the emperor embodied, at least in theory, the functions of the laity, in the West the Pope absorbed these with those of the episcopate, though in remote regions, such, for instance, as England before the Conquest, the share of the laity still remained great. The Conquest introduced a change, separating the clergy from the laity, and the Reformation did nothing to restore to laymen that direct share in ecclesiastical matters which had once been theirs. The supremacy of the king was gradually transferred to Parliament, always an imperfect substitute, and most imperfect now that Parliament has ceased to consist wholly of Churchmen. Recent political changes have impaired the parochial organization of the Church and deprived the laity of the influence in the parish which they had in the middle ages, and of Laymen. In the late Reform the present position, then, is a disorganization not far removed from chaos. "The time has come for the creation of a repre-
sentative assembly which shall be coordinated under the prudential authority of the bishop. This would be a
wise reversion not only to old Anglican tradition, but to those primitive Church principles which our national Church always desires to follow.

The committee therefore present as their first resolution "that it is desirable that a national council should be formed, fully representing the clergy and laity of the Church of England; and that it might be
in the consecration of a bishop. The bishop-elect, however, on legal advice, declined to present himself for consecration pending the decision of the judges. In the argument on the application for a mandamus in the Court of King's Bench, Feb. 3, the Attorney-General undertook to show that the confirmation was a mere form, and was intended to be so; and that it might be dispensed with altogether, and had been. In fact, the elections by the cathedral chapters had been pronounced in an Irish statute of Elizabeth "colors, shadows, and pretenses of election, serving to no purpose, and seeming also derogatory and prejudicial to the King's prerogative royal." The statute had been repealed, but the fact had not; and the Attorney-General insisted that beyond the points of the validity of the election and the identity of the person elected, no objection of any kind could be entertained. It was urged on the side of the opponents of confirmation that even if it were shown that the vicar-general's court did not deal with contentious business, it would still be his duty, when the case became ripe, to consider the question of the election of a bishop. If the court refused to grant the mandamus in this case there would be no discretion in anybody to refuse to confirm and consecrate the royal nominees; he could answer the questions in the ordination service. He might even become a member in some other church, and still the archbishop would have no choice. The decision of the court of the Lord Chief Justice Alverstone, Feb. 10, denying the application. The view was sustained that the public citation of objections to the confirmation of a bishop is not a real proceeding. It was shown, in substance, that never since the statute of Henry VIII had there been any "practise" of hearing objections to the appointment of bishops on the ground of doctrine, and that for two hundred years before that date no such normal practise existed as the objections contended for. The court, however, expressly guarded itself against deciding that no objection could be raised, or to which the archbishop or vicar-general could decline to entertain. Thus, it could not be held that an objection involving a question of identity, as that the wrong man was put forward the whole time of the objection that involved a question of the genuineness of the documents produced should be considered. Thus it might be a good ground of objection that the bishop-elect had a right to appeal to the House of Lords, but the Council of the Church Association, after consideration, decided not to make it. The consecration of Dr. Gore as Bishop of Worcester took place Feb. 22, and his enthronement Feb. 24.

The Second Fulham Conference. An account was given in the Annual Cyclopaedia for 1900, page 25, of a meeting designated familiarly as a "Round Table Conference," which was called by the Bishop of London, Dr. Creighton, at the suggestion of the London Diocesan Conference, of representative men of both of the great parties into which the Church is divided, which met at Fulham Palace in October, 1900, and discussed the subject of The Doctrine of the Holy Communion and its Expression in Ritual. The suggestion of the same kind was made by the London Diocesan Conference in 1901 to Bishop Ingram of London, and the conference was called to meet at Ful-
ANGLICAN CHURCHES.

15

ham, Dec. 30 and 31, 1901, and Jan. 1, 1902. The subject presented to the consideration of the second conference was that of Confession and Absolution; and in his letter of invitation the bishop suggested that there be four sessions, at which the discussion might proceed on the following lines: 1. The meaning of our Lord's words (in St. John xx. 22, 23; St. Matthew xviii, 13), and their use in the ordinal as affecting the conception of the priesthood. 2. The practise of the Church (a) in primitive times; (b) in the middle ages. 3. The meaning of the Anglican formulas and the limits of doctrine and practise to which they allow. 4. Practical considerations—(a) the treatment of penitents; (b) the special training of the minister. The members of the conference were selected by the bishop, according to his own declaration, "with the greatest care, in order that all schools of thought in the Church should be adequately represented." They included Lord Halifax, as the representative of extreme High Churchmanship; Mr. R. M. Benson; Principal V. S. S. Coles, of the Pusey House at Oxford; Professor Moberly, of Christ Church, Oxford; Mr. L. M. Posthumous; Canon Body, Dr. Mason, and Professor Swete, holding an independent position; Dr. Childe; Principal T. W. Drury, of Ridley Hall; Dr. Gee, Principal of College; Mr. Thomas Milne, and Dr. Stillingfleet; Canon Frederick Smith and the Rev. Dr. Wace; Canon Lyttleton; and Dr. Strong, Dean of Christ Church. The Rev. Dr. Wace, who was also chairman of the first session, was not present at the opening of the conference, and prepared the report, which was published under the authority of the bishop. The general results of the conference are comprehensively stated in the summary of conclusions verbally communicated by the chairman to the bishop at the close of the last session as they are given by the bishop in the introduction to the volume embodying the report as follows:

"On the bishop entering, the chairman reported to his lordship the general results of the conference. He stated that a practical agreement had been reached on some important points, but that grave divergence remained on others. With respect to the first subject proposed to the conference, he said, it was generally agreed that it would be well to retain our Lord's words in St. John's gospel, 'Whosoever sins ye remit, they are remitted unto them, and whosoever sins ye retain they are retained,' are not to be employed any more as the formula for absolution by the clergy, but as a commission to the whole Church, and as conveying a summary of the message with which it is charged. It is, therefore, for the Church as a whole to discharge the commission, which she does by the ministration of God's Word and sacraments, and by godly discipline. But the members of the conference agreed that the discipline of private confession and absolution can not be shown to have existed for some centuries after the foundation of the Church. It grew, in fact, out of the gradual principle, perhaps about the fifth century, of the 'godly discipline' of public penance, referred to in our communion service as existing in the primitive Church. In view of the meaning which the conference agreed was to be assigned to the words of our Lord in St. John, the formula of ordination in our ordinal could not be regarded as in itself inculcating the duty of private confession, and the fifth century, of the 'godly discipline' of public penance, referred to in our communion service as existing in the primitive Church. In view of the meaning which the conference agreed was to be assigned to the words of our Lord, the conference was not agreed as to the extent to which they encouraged it. On the practical question there was a deep divergence of opinion in the conference, some members holding that the practise of confession and absolution ought to be encouraged, as of great value for the spiritual and moral life of men and women, while others were deeply convinced that its general encouragement was most undesirable, that it should be treated as entirely exceptional, and that the highest form of Christian life and faith would dispense with it and discourage it."

Incense and Reservation in the Diocese of London.—The Bishop of London explained his policy in regard to incense and the reservation of the sacrament in an address to his diocesan conference in May. On taking up his work he had addressed a letter to 40 churches the ritual of which had been open to question, and had received ready answers from all, showing how long incense had been used in them (from five to forty years), and affirming that in all of them the laity were in accord with the clergy. He next wrote to 39 churches the usages of which seemed counter to the Lambeth opinion. He recognized the claim to special consideration, saying that "it would be impossible to define uniform limits within which, in exceptional cases, these usages might be permitted, but had found it impossible. He said also that if he did not propose any direct steps against the continuance of a modified use of incense and manner of reservation, such as had already been agreed upon in private conversation, but as bishop he would be prepared to any service when incense was ceremonially used, nor would he visit any church in which the limits privately agreed upon were transgressed. He thought the true policy was not to disturb existing arrangements. There were now only 8 churches which he could not visit officially because the sacrament was reserved in the open church and there was an occurrence of incense on Sunday. All the others had conformed to his wishes entirely. A working method had been attained on this difficult question, and he intended to pursue the same policy during the coming year.

The Church Congress.—The Church Congress met at Northampton, Oct. 7. The regular meeting was preceded by a session for young men which was addressed by the Archdeacon of Manchester, the president of the Girls' Friendly Society, and others. The Bishop of Peterborough was being still laid up in hospital, and the president, the Bishop of Leicester presided and delivered the opening address. In the discussion of the first subject, Home Reunion, Bishop Boyd Carpenter, of Ripon, considering the three suggested methods of surrender of all the other churches to one confederation, and reorganization as all practicable, pleaded as the only remaining alternative for cooperation between the churches for their common end. Prof. Collins affirmed that reunion could come only on the basis of the apostolic succession. Canon Hensley Henson, whose sermons on Communion and Co-operation with Nonconformists and addresses on the same subject, had attracted much attention and excited comment, maintained that in order to secure anything like practical reunion the non-episcopal churches must be frankly acknowledged. Earl Nelson defended episcopacy as a historic heirloom to be handed down to the children of the Church. Dr. Coops of Perth (Australia) and Victoria (Hong Kong) and others showed how reunion had been practically secured in the colonies and on the mission field through interdenominational recog-
nition. Other subjects treated in the papers read and the discussion were: The Duty of Worship, its Ideal, and the Adequacy of the Prayer-Book Services; The Miracles and the Supernatural Character of the Gospels (as to which Prov. Swete spoke upon the Miraculous Conception, the Incarnation, and the Resurrection, and Prof. Sanday sought for a definition of a miracle); The Sermon on the Mount in its Application to Modern Life; The Maintenance of Religion in the Home under the Changed Conditions of Modern Life; The Position and Responsibility of the Clergy and Laity in Relation to Modern Criticism and its Influence on Theology, both as Students and as Teachers; Religious Work among Sailors; The Direction of Individuals in Spiritual Matters (in which the subject of confession was brought up); The Observance of Sunday (at a women's meeting); Grievances arising out of the Exercise of Patronage, the Alteration of the Mode of Conducting Services by the Incumbent, and the Continuance in Office of an Inefficient Incumbent; The Church and Working Men; Prayer, its Obligations, its Conditions, and its Results; The Duty of the Church in regard to Education, in the discussion of which the Bishop of Hereford advocated the establishment of equitable and friendly relations with nonconformists, and insisted as fundamental principles in education that fair dealing as between citizens of different denominations required an efficient school within reach of each child, managed by a committee of which the members were appointed or by Board, and the religious denomination to which the parents belong; that the expenditure of public money be under public control; and that small schools be not needlessly multiplied, that being contrary to efficiency and economy; and laid down a scheme conforming to those principles. The Bishop of Coventry defended the attitude of the Church in opposing undenominational management of the schools, and was followed by other speakers to a like effect. Earl Spencer criticized the provisions of the Government's education bill, which did not give genuine public control over the expenditure of public money, and laid emphasis on the strong feeling which prevailed in the country upon the subject. The Causes and Recommendations for the Supply of Candidates for Holy Orders from Oxford and Cambridge were the subject of papers by the rector of Exeter College, Canon Hicks of Manchester, the Rev. R. B. Garnett, and Canon W. Johnstone. The subject of Church reform was considered in papers on (a) the lay franchise, qualifications of electors and elected; (b) houses of laymen—their constitution and work; and (c) reformed Convocation and a national synod.

The Irish Synod.—The financial reports made at the meeting of the synod of the Episcopal Church in Ireland showed that a considerable decrease had taken place in the revenue of the Church from voluntary sources. A diminished income was feared from mortgages and land, but the dioceses were now in much better position to meet such reductions. They had already entered into possession of the profits of communications to the extent of £800,000, with £200,000 more to accrue in a not distant future. In respect to the question of a Roman Catholic university, the Primate observed that Ireland was not large enough for two really great institutions of learning, and that the correspondents of the synod subscribed a petition for the establishment of a university of Ireland.

In the synod, the duty of the Church in relation to religious instruction in the intermediate schools, and to the general conduct of the state system of primary education, was discussed. The archbishop and bishops were requested to enter into communication with the Board of Trinity College with reference to the position of the Church of Ireland toward the divinity school.

A declaration by the archbishop and bishops was issued to the synod reminding members of the Church of the increasing misuse of the term Catholic to describe those only who acknowledge the supremacy of the Pope. The matter was declared to be "not a mere question of words or names. If we now surrender our title of membership in the Catholic Church we give up an important point in that faith which was once for all delivered to the saints."

The General Synod of Canada.—The General Synod of the Church of England in Canada met in Montreal, Sept. 3. The Primate, Archbishop Machray, being ill, Archbishop Bond, of Montreal presided. Canon Matheson, of Winnipeg, was elected prolocutor of the lower house. The business of the Synod was introduced by the passage of a canon organizing the mission work of the Church under a board for the whole Dominion. The Ecclesiastical Prov. of the Province of Canada was decided at its session in September, 1901, to merge its Mission Board into that of the General Synod if it would take over the responsibilities of the provincial board. The organization of a denominational board was effected, and the Rev. N. L. Tucker, of Vancouver, British Columbia, was appointed its general secretary. A canon was passed by the House of Bishops absolutely barring any divorced person from remarriage during the lifetime of a former partner, but was defeated by the adverse vote of the laity in the lower house, although the clergy of that house were overwhelmingly in favor of it. Triennial meetings of the synod were decided upon, with double the former diocesan representation, making the largest representation of any diocese eight of each order under public control; for the appointment of a committee to consider the question of a change of the name of the church—the name Church of England in Canada being considered too insufficiently descriptive. After some discussion, the consideration of the question was postponed. Committees were appointed to prepare drafts of the extra prayers recommended by the synod, conditions of the Church in Canada, to be submitted to the next meeting of the synod for adoption as an appendix to the Prayer-Book. No alterations in the body of the Prayer-Book was contemplated. Authority was given permitting the optional use of the Revised Version of the Bible at the services of the Church. A minute was adopted, to be brought before all the synods and convocations of churches in the communion, with a view to the discussion of it in the Pan-Anglican Conference in 1907, contemplating the extension of the diocesan and the making of it a sufficient order. In the bishop's pastoral as read to the conference all the members were called upon to increase their interest in missions, in the sanctity of the Lord's Day, in the study of the Bible, in family worship, and in Sunday-schools.

The Synod in Japan.—The seventh General Synod of the " Holy Catholic Church in Japan," (the Nippon Rikyū), met at Hiroshima April 10 to 15. A course of procedure introduced by the English and American bishops for the election of a Japanese bishop was almost
Evidences are discovered in increasing number of the former existence of a dense population considerably advanced in civilization in Arizona. They are found in the ruins of large buildings and of cities, some of which are estimated to have had 100,000 inhabitants, and in the remains of irrigation works. Traces of large irrigation canals are described as being numerous in certain districts. One 32 miles north of Phoenix, supplied from the Rio Verde, passes for nearly 4 miles through an artificial gorge cut to the depth of 100 feet in the rock; it then divides into 4 branches, 1 of which is more than 40 miles long, and all together would measure 120 miles in length. This system supplied a region of about 1,600 square miles. These and other similar works are said to have been constructed with great engineering skill. The remains of the walls of one of the cities, called Los Muertos, may be traced for many miles; and an immense quantity of buried bone dust is one of the remarkable features of the site. The ruins supposed to be of another large city, on the other side of Salt river, cover an area of 28 miles by 12; and the remains of the structures, of stone and mortar, are fast marked by the holes in which the timbers were inserted. Marks have been found of volcanic eruptions and of other changes that have occurred since these cities were inhabited and the irrigation canals were constructed, and the period is supposed to have long preceded that of the cliff-dwellers.

Dr. Henry M. Baum, president of the Records of the Past Society, of Washington, D.C., has affirmed that during a two months' tour among the ruins of the cliff-dwellers he hardly averaged 10 miles in any one of the cliff-dwelling districts without coming across some of their habitations, and that he saw enough dwellings to accommodate 2,000,000 people. He expresses himself convinced that the cliff-dwellers and the mesa and valley dwellers were all of a contemporaneous civilization which dates earlier than the heavy lava overflow in the southwest. "The pottery, stone implements, and skulls found in these three classes of sites indicate that the Indians lived in the area during the whole length of the postglacial period. It is quite evident that the vast civilization of the entire country was extinguished by a flow of lava," of which the evidences are abundant throughout the entire region.

In the exploration of 20 mounds along the shores of Perdido, Pensacola, and Choctawhatchee Bays and Santa Rosa Sound, on the northwest coast of Florida, due to Queenstown to receive instruction under Father Fuller, of the Cowley Brotherhood. Ten of the students were confirmed in November, 1901: 2 had been previously confirmed, and 2 had withdrawn. The 12 confirmed students early in 1902 began the work of preparing their brethren for confirmation, each of them being given a provisional catechist's certificate.

The West Indian Church Mission to South Africa has been maintained by Cadrington College, Barbados, since 1835, and is manned entirely by men of color, partly by natives and partly by men sent out from the West Indies, who have been trained at Cadrington College. At a meeting held in London in its behalf, Bishop Ingraham, late of Sierra Leone, gave an account of its work in the Rio Pongo, and of the interest taken in it by the people of the West Indies.

ARCHAEOLOGY. United States.—A professorship for the study of American antiquity, with a competency of 6,000 francs for its maintenance, has been founded in the College of France by the Duke of Loubat.
was pronounced absurd, and it was maintained that the bones were marked by incrustations of the hardness betokening antiquity, and that the character of the surrounding deposits pointed in the same direction. The author believed that the discovery was genuine and the bones were those of a Pleistocene man, and argued that they had been covered at one time by an accumulation of at least 35 feet of river loess. In a paper by Dr. Alex Hrdina, who had examined the skeleton, the bones were described as quite hard and porous, not sufficiently chalky to mark a blackboard, fully preserving their structure, and showing no trace of fossilization. Considering anthropologically, all the parts of the skeleton, and the skull in particular, approached closely in every character of importance the average skeleton of the present Middle States Indian.

Mexico.—Early in the year a most important and interesting discovery was made in the heart of the Mexican capital. It consisted of the unearthing of a large temple and many idols, only two squares from the great central plaza, or what is called the Zocolo. The temple proved to be the Aztec house of many gods and seems to have been loudly on a map projected by the Mexican archæologist Señor Batres, representing the ancient city of Tenochtitlan, or Mexico, as it existed when first seen by the Spaniards in 1519. This map shows the city as an island intersected with canals running nearly at right angles, corresponding to the present streets of the city. After great research Señor Batres succeeded in locating to his own satisfaction the public buildings, palaces, and temples of the Montezumas on this map, in each case giving his authority for so doing. The great temple, or teocalli, on the top of the pyramid of which the Mexicans sacrificed their thousands of victims to the war-god, is shown nearly in the center of the island city representing Tenochtitlan, the site of which at the present day is occupied by the great cathedral and plaza. Back of the great temple Batres located a much smaller one, which he said was called Coateocalli, meaning in the language of the Aztecs "the house of many gods." He gave as his authority for the existence of this temple Father Duran, who wrote that the palace of the Aztecs was built upon its site. Known record was left of the existence of this temple, but by searching through the municipal archives, a reference to an ordinance regarding the supply of water, under date of Oct. 27, 1710, in which reference was made to the property owned by the Aztecs family on the corner of Relox and Cordobanes Streets, and consequently he there located his temple of the many gods. As the corner was occupied by a fine old building, it was not supposed that any trace of the old temple could be found, even if Batres were correct in his location of it.

Last winter the work of renovating, or practically rebuilding, the edifice occupying the corner was undertaken for the purpose of furnishing suitable quarters for the offices of the Department of Justice. Capt. Diaz, son of President Diaz, had charge of the work, and it is due chiefly to him that the discoveries were made. While his workmen were leveling the patio, or central courtyard of the edifice, preparatory to putting down a paving cement, they came in contact with some solid stone work, which proved to be a flight of stone steps leading down below the surface. Diaz, appearing just in time, ordered the men to stop work with the steps, cautioning them to use their tools carefully. The trench was opened the entire length of the patio, and at the farther end, scarcely 2 feet below what had been the surface of the patio, the men came upon what appeared to be a round, smooth rock, which might have been taken for an ordinary boulder. This rock proved to be a sculptured monolith weighing several tons, representing a tiger recumbent, or an ocelot ready to spring. Further excavating brought to light another great rock sculptured to represent a serpent's head, which corresponded with two others previously discovered, and which it is said formed the corner pieces of the wall that surrounded the great teocalli, within which dwelt 7,000 Aztec priests.

After these two huge monoliths were removed from the trench, the excavating was continued till the base of the steps was reached, 13 feet below the level of the present city, where they rested on a solid foundation which, being the base of the temple, is without question the level of the former city. This proves that the present city of Mexico is 13 feet above the city of the Aztecs that was destroyed by the Spaniards.

Near the foot of the temple many small objects were found, such as idols, remains of idols, incense guns, spears, etc., and it is claimed that they had been thrown down from the temple and left there by the Spanish iconoclasts. These were all carefully cleaned and preserved for the study of Señor Batres, after which they will be placed in the National Museum of Mexico. The stumps of two trees that evidently had grown from crevices in the stones near the foot of the temple show that they were allowed to remain in ruins after its destruction several years, otherwise the trees would not have grown there. Then came the final covering up of the temple with the trees, and the building of the edifice above at its present level.

The weight of the tiger that was found is 4 tons, and it measures 2 meters 30 centimeters long, 1 meter 5 centimeters wide, and 24 centimeters in height. Its mouth is open, showing huge teeth and a part of its tongue. Its great round eyes add to its ferocious look. It is well modeled, with its tail properly coiled round it on one side, as the animal is often seen in nature. On each side of the head and neck is a mane resembling somewhat the pendant part of the head-dress on the Egyptian Sphinx. On its under side are vestiges of paint, showing that the animal was originally painted with red and yellow in spots, to carry out the imitation of the American tiger more perfectly. Cut in its back is a cylindrical cavity about 18 inches in diameter and 5 inches deep. The sides and bottom of this cavity are sculptured with representations of Aztec figures or warriors parallel with the steps, and the serpent's head represents the reptile with its mouth open and its upper lip rolled up over
its forehead, disclosing the upper jaw with great husks projecting down over the under lip. It is said that there were four of these heads, one in each corner of the great wall around the teocalli, and the design corresponds to similar heads graven on the Aztec calendar stone. On the under surface of the heads Señor Batres thinks he has deciphered a hieroglyph which he calls teocalli, the date of the foundation of the great teocalli.

Among the other relics unearthed was a curious little idol cut out of a piece of volcanic rock, about 10 inches in height. The workmanship is rather crude, but decidedly interesting, representing a head with scarcely any body, intended evidently to be in a sitting posture with folded arms across the chest. The incense gum which was found resembled pieces of bone, but upon being carefully cleaned of the earth in which it had been buried all these centuries, it burned upon the application of a lighted match and gave off the proper perfume. Several large stones are sculptured to represent skulls or death's heads. They were fashioned with long wedge-shaped projections at the back, evidently for the purpose of holding them in place in some form of a skull-cap, the decorative part of which they formed. The work was rather rudely done, and a coat of white paint, still preserved on some of them, added to their horrible aspect. An interesting relic was a foot of a colossal statue in baked clay. The piece showed the toes perfectly modeled, with the edge of the sandal beneath and the knots of the thongs holding it over the instep of the foot, as worn at the present day by the Mexican Indians. Other smaller pieces of this statue were found, such as a piece of the knee showing a bit of the ornamented dress; and in handling them one could easily imagine the great war-chief in full regalia as he of Mexico because the Spaniards did not rebuild upon the foundations of the city they destroyed with the material at hand after the destruction, as would be supposed, but brought material from elsewhere and built upon the ruins. Cortez compared the city, as he first saw it with its canals and little islands, with Venice. When he retook the city after he had been driven out the destruction took place. It may be that the Spaniards had no intention of rebuilding the city after the heroic defense made by the Aztecs, in which they left their countless dead and dying stern about to breed pestilence in the air. The great temples and massive palaces were destroyed by the victors, after which Cortez withdrew to Coyocan on the mainland. Later he built his palace at Cuernavaca, which still exists, and while his lieutenants were subjugating the surrounding districts he devoted much time to filling portions of the land granted him, where it is said he planted the first sugar-cane brought to the American continent.

The evidence is to the effect that the ruined city of Tenochtitlan was abandoned to the survivors of its terrible conquest, who stalked about the ruins, eking out an existence the best way they could for many years before the reconstruction was begun. A building is shown on the stumps of the two trees unearthed at the base of the temple. The Franciscans built a little mission church where the cathedral is to-day, and it is known that the church was not begun on this site till a century later.

In the year Prof. Marshall H. Saville, of the American Museum of Natural History, completed the four years of explorations in Southern Mexico planned by the museum, the funds for which were supplied by the Duke of Loubat. The first two seasons of these years were spent in explorations among the famous ruins of Mitla, where Mr. Saville made important discoveries and surveys. The last two seasons' work were devoted to explorations in the State of Oaxaca. Early in the year Prof. Saville went to Mexico City, where he fitted out this last expedition, assisted by the Government archeologist, Señor Batres, an arrangement having been made with the Mexican Government by which Prof. Saville is allowed to retain a certain number of his finds. The expedition fixed its headquarters at Oaxaca, which is near the extensive remains of Xoxocotlan and Cuilapam, centers of culture of the ancient Zapotecans, a powerful Indian tribe who had developed a high state of civilization, but differing in many important respects from that of the Aztecs of the valley of Mexico, and the Mayas of Yucatan. Three months were spent in making the excavations and studies, during which huge burial mounds were opened, disclosing the tombs of the ancient inhabitants. The tombs were found in a good state of preservation, some with sculptured lintels and doors closed with huge stone slabs, and long drains for the purpose of drawing off water that might accumulate in them. Within were found noteworthy objects of great archeological value, which afford a vivid glimpse of the culture of the ancient and little known people.

Not far from the places where Prof. Saville carried on his explorations is a range of hills on which, at an elevation of about 7,000 feet above the sea, are the remains of a great fortified city whose builders are lost to history, to which the name of Monte Alban has been given. It is thought that this may have been the capital of the old Zapotecan Empire. The entire section of the country about is thickly dotted with
mounds indicating that at one time the country was densely populated by an industrious people. The mounds vary in height from 6 to 75 feet, some of them being in the form of a pyramid, while others are rectangular, and a few circular. Many have been plowed over, and thus their original outlines are destroyed. Statues appear buried in many places and the plows too have wrought havoc and destruction among many of them.

A peculiar feature of the tombs were the cemented floors, in some instances these being one above the other, and indications of a structure on top of the whole. In some of them a flight of stone steps led upward to the platform or floor above. The tombs were of stone neatly dressed, covered with stucco, which had been painted red. The lintels over the entrances consisted of a stone slab, the outer part also painted red. Above the lintel were stucco decorations, sculptures, and hieroglyphics, and sometimes funeral urns of terra-cotta were found. One of which Prof. Saville found in front of a tomb in a large mound in the excavations of the ruins at Cuitlapam, and was allowed to bring away. It was in pieces, which have been carefully put together, and is now in the Museum of Natural History, New York. In one of the explorations made by carrying a trench through the entire mound a tomb was found with the characteristic cemented floors and adobe construction of the other mounds, with a door sealed with large stone slabs. The facade of the front wall was in the form of a frame in which were five terra-cotta funeral urns. One in the center had a death's head on each side of it, made of stucco. The inside of the tomb was covered with food vessels, incense burners, and the remains of skeletons. Niches in each side of the walls also contained human remains. All the bones and skulls were painted red. There were several detached heads on the floor, which had been cut off. The walls of the chamber had been covered with plaster, but in the lapse of the time since they were built, probably on account of earthquakes, too, the greater part had fallen off. The plaster had been decorated with paintings in various colors, which had not altogether lost their brightness, although only traces remained. Over these bright-colored decorations a thin coat of stucco had been laid, upon which in black outlines was painted a series of human figures in the costume of the ancient people. One of the most important features in this and many of the other tombs was the hieroglyphic inscriptions found on the stone door lintel and wall chambers in form of writing entirely different from any here-tofore found in Mexico, and the first ever found in Zapotecan territory.

At Cuitlapam, 7 miles southwest of Oaxaca, 7 large chambers and a like number of small stone graves were uncovered. The excavations of the mounds were especially striking on account of the jadeite ornaments and other votive offerings found. They embraced beautifully carved breast ornaments, necklaces, beads, earrings, miniature idols, and various symbolic figures. Also fragments of mosaic work were found, the most interesting of which are two small circular mirrors made of bits of highly polished hematite cemented to thin disks of pottery. A significant point brought out by these discoveries is the fact that they fully confirm the writings of the old Spanish historians who have described the strange and elaborate burial customs of the Zapotecs, and also that the great underground tombs were used as ossuaries, or places reserved only for the deposit of the bones of the dead, and not for burial. After a certain lapse of time when the flesh had decayed, the bones and heads were painted red, and with elaborate ceremony they were placed in the tombs with food and incense. One problem is definitely settled as to the character of the mounds; the rectangular ones were found to be burial places and contained the most important tombs, but the pyramidal ones were temple structures.

While Prof. Saville was carrying on his excavations and explorations among the ruins of Xoxocotlan and Cuitlapam, Señor Batres went to the ruins on Monte Alban. These have been known to exist many years and have been visited by American and foreign scientists, but Señor Batres through his government position was able to make many new and most important discoveries. Monte Alban rises to a height of about 1,200 feet above the valley of Oaxaca where the other remains are found. Its sides and top have been cultivated by the natives for years. A great central courtyard embracing many acres between quadrangular mounds, which, besides containing temples, may have served for defense, is used as a corn-field. The mounds were arranged in a systematic order around this great court, and Señor Batres spent much time superintending the work of clearing the mounds of the brush and trees that covered them, employing many Indians from the surrounding towns. At the base of a great mound where excavations had been previously made by other explorers, including Prof. Saville, he rescued sculptured images the existence of which was known at three of the corners, and by their location discovered one at the fourth corner at the base. An important discovery was made in one of four pyramidal mounds, the remains of which stand in a row down the middle of the great courtyard, which is now turned into an Indian corn-field. The first object encountered was a sculptured, rectangular column of porphyry, 4 meters in height, 200 centimeters across the face, and 40 centimeters across the sides. On the face of this monolith
is an elaborate figure with a death's-head, evidently the portrait of a dead monarch. On one side are figures supposed to be two priests, with several rows of hieroglyphs, and on the other side a single priest with more hieroglyphs. The back is covered with hieroglyphs. But the greatest discovery was the find of a pot of jade objects in the mound. The jade resembles Burmese jade, and has never yet been found on this continent, while the jar containing the jade is of evident Maya origin. Pieces of similar jade have been found in other parts of Mexico, and they have been regarded by many as evidence of the former communication of the aboriginal races of Mexico with the Chinese, but scientists still believe that jade may yet be found in its native state somewhere in Mexico. The specimens found at Monte Alban are beautiful in color, elaborately carved, and highly polished. One piece is about as large as the palm of the hand, of a rich deep blue, graven to represent a human face, said to resemble that of a Chinese.

During the work of clearing and in some minor excavating, many great slabs of stone with carving upon them were removed. Some represented men, some animals, and some were covered with hieroglyphs. The slabs usually covered the tombs, and one represents the figure of a monarch, sitting upon a throne and wearing a royal headdress, sitting on some high place with the sign of speech extending from the mouth, with a row of hieroglyphs following. The stone is 3 meters in length and 2 meters in width.

It is the opinion of Señor Batten that the ruined city was the sacred city of the people who built it. The area cleared is 3 kilometers in length by half a kilometer in width, and mounds of less importance cover the surrounding mountains, but there have not yet been touched. These so far uncovered appear to be the bases of the great structures that surrounded them, and the remains of these structures or temples have been found on some of them. Excavations and explorations of these remarkable ruins are to be continued during the season of 1903.

South America.—The remains of the Calchaqui, a South American Indian race with characteristics much like those of the Northern Pueblo Indians, were examined and described by the Spanish in the sixteenth century. They had the object of exploration by Dr. Juan B. Ambrosetti. Their monuments are found over a territory in the Argentine Republic stretching 900 miles from north to south, and about 200 miles from east to west. Their houses, constructed like those the remains of which are found in Colorado and Arizona, were built in the valleys and on the mountains to a great height. Several of their villages have been explored by Dr. Ambrosetti, who has recovered from them a large number of articles of various kinds in stone, copper, bronze, turquoise, gold, and silver.

England.—The excavations at Silchester on the site of a large Romano-British city which has been identified with the Calleva or Calleva Atrebatum of the Antonine Itinerary, have been carried on continuously, by the aid of the Silchester Excavation Fund, since 1886. The area of 100 acres, enclosed by the remains of the Roman wall, nearly 2 miles in circumference, has been explored steadily and systematically till only a fractional part remains, and the foundations of the houses and public buildings have been traced more and more fully and with more precision from year to year. The new information gained each year has been largely in extension and addition to that already obtained, and the work has been little marked by sensational novelties of discovery. An area of two acres in the northern half of the town was examined in 1901. One of the houses had been enlarged after it was built to nearly double its former size, and presented two features that were specially remarked upon. One was the foundation of an almost perfectly circular room, and the other was the evidence that the house was half-timbered. Wattle work and plaster had been combined, and large pieces showed the routs in the plaster formerly traversed by the osiers or small branches which held its substance together. The work resembled that which has been found in neighboring houses, and has perhaps been traditionally followed from the days of the city's prosperity to the present. This half-timber work—familiar in such medieval cities as Brunsewick and Hildesheim—seems to have been widely prevalent; and remains have been found of Germano-Roman work—clay filling in a half-timber construction—on the Danube which presents a likeness to what has been found at Silchester. In a long room in one of the houses were a number of large jars; another room in an old hut this room were also masses of bones of fowls, pheasants, and other birds. It is not easy to conjecture the height of these houses. The walls were about 10 inches thick and mostly of flint and rubble, and being of such material can not have been very lofty.

The recent architectural discoveries at Stonehenge were described in a paper on that subject read to the members of the Royal Institute, Jan. 20, by Mr. Detmar Blow, who with Dr. Gowland superintended the excavations which were made in October, 1901, for Sir E. Antrobus, owner of the estate. The author pointed out that the great monolith called the leaning stone was the largest in England, Cleopatra's Needle excepted. It was one of the pillars of the highest trilithon, and stood behind the altar-stone, near which it leaned at an angle of 65 degrees. Half-way up it had a fracture one-half across it, and the weight of stone above this was a dangerous strain upon it. It had now been brought to a vertical position. One Roman coin and one George IIII penny were found quite near the surface. Nails by the Spanish in the sixteenth century, and by the Americans in 1886, 1887, and 1888, have been driven into the stone and bluestone of which Stonehenge was built and discovered. The flints found were used for the softer sarsens and bluestones, and the handhammers and mallets used to break them, the deduction had been made that the building belonged to the Paleolithic period. All authorities agreed that it was the work of a highly civilized people. The construction was one of a stone development, and the surface of the stone was finished much like that of granite. The design of the pillars was, in Mr. Blow's opinion, evolved from the shapes of the flint instruments used by the workman, to which his hand had grown accustomed. Each pillar had a bold entasis in its elevation, and in its plan foreshadowed the column. With the aid of illustrations the author described the method by which the leaning stone had been raised in the work of restoration and the setting process by which the implements, etc., had been handled. The stone had generally been supposed to be of the bronze age till these implements were discovered, and this was believed to be the only occasion on which the implements of man were of service to the stone building where they were used. In the discussion of the paper, Sir Norman Lockyer remarked that the conclusion was justified from
the evidence obtained that the sarsen stones were erected in the Paleolithic times—that was to say, before the age of bronze or, at all events, before bronze had been used for any ordinary kind of work in that part of England. Before the excavations were begun in 1886, C. F. Petrie and J. E. S. Thompson had been occupying themselves with Stonehenge from a slightly different point of view. They had been very anxious to determine its age, and it had been found impossible, to get certain astronomical data from Stonehenge, owing to its position, than from other ancient monuments. A number of astronomical data presented by the speaker supported the conclusion that Stonehenge was a solar temple and was used for observation in the height of summer. From their observations he and Mr. Penrose came to the conclusion that the avenue which was associated with the sarsen stones was laid down about the year 1680 B.C. Such temples as Stonehenge were erected in the very first flush of civilization, in order that the people should be able to fix the time for performing agricultural operations. It seemed certain that we had in Stonehenge a temple for determining the length of the year by observing the rising of the sun on its longest day; while in other parts of England there were temples for observing the sun not on June 21st, but early in May and early in August.

In the course of excavations for a new road in Enfield, England, a layer of dark soil from two to six feet in breadth was brought to the surface, in which many fragments of pottery and jewelry were embedded. Several coins were found and dated to the periods of Trajan, Claudius, Aelius, and Commodo. About a half-mile from the site of these discoveries a statuette was found lying on the ground. The dark color of the stratum in which the principal relics were found is supposed to have been due to burning.

Three papers relating to underground structures, chambers, and dwellings were read at the last meeting of the British Association. Some souterrains existing in the northeast corner of Ireland were described by Mr. William J. Fennell as being very numerous, and were regarded as showing the primeval architecture of the country. A souterrain might be defined as a subterranean place of refuge, and, in that sense only, a dwelling. The entrance was either naturally difficult of approach or cunningly hid, and the interior was generally long, low, narrow, and winding, and the presence of frequented paths long known as "difficulties," through which only one person could pass at a time, and then only by creeping. Nothing was found in them to indicate that they had been used for burial. They were not burrows, but vaulted chambers connected by passages, well defended, and built of dry masonry walls and roof, and after used and covered up by earth, and eventually hidden by vegetation. The exterior covering was always very thin. The construction was invariably of rough unhewn stones from the neighborhood, and the roof was formed by the overhanging of one stone on another. The barriers were formed of walls, rising from the foot almost to the roof, then a space of 12 or more inches to the next wall, which descended from the ceiling to within 15 inches of the floor. They led in some cases to a long, low tunnel 16 or 18 inches high, with a similar barrier at the other end. No two souterrains were alike in plan; some were straight, or almost so, with chambers branching out, and others extremely short, while others were considerably more than 100 feet long. One example was mentioned of a two-story building, entered from the field level to the upper floor, and from that to the lower one.

Three subterranean chambers cut in a bed of Thanet sand were described by Mr. George Clinch as having been discovered during the excavations for a sewer at Waddon, near Croydon. They were partly filled with fallen sand, but in each chamber a compact mass of very decayed pottery and Romano-British pottery were found. They were distinguished by various characteristics from British and Irish subterranean structures, and on the Continent of Europe the most similar chambers were those at Palmella, Portugal, which Cartailhac had ascribed to sepulchral purposes in the latter part of the polished-stone age. Similar chambers had been noticed in Brittany and elsewhere, and the subterranean houses at Mycenae were identical in plan, though different in dimensions and material. Southeast and east of Waddon were many hut circles which had been attributed to the Neolithic age. They had marks of entrance on the east and southeast side, and exhibited general resemblance in dimensions and plan with the Waddon chambers. The Waddon discovery was therefore of some importance as evidence for the size, shape, and plan of prehistoric dwellings, the vaulted roofed roofs reproducing in general form the interlaced boughs, benders, and wickerwork of the ordinary surface hut, and the lateral passage the doorway of the Neolithic dwelling. The general idea of interment within a house survived during the bronze age.

In the third paper certain primitive underground habitations were described by Mr. David MacRitchie as typical of a class of structures apparently existing at one time throughout the British Isles, though the greater part of the specimens now remaining were found in Ireland and Scotland. The occurrence in two of these dwellings of a number of dressed stones with Roman ornamentation which had been used in their construction indicated that they must have been built after the arrival of the Romans in Britain. Their use as places of human abode was obvious, because they contained domestic utensils, such as hand-mills and personal ornaments, as well as the broken bones of animals used by man as food. In a few instances they had a fireplace, but this was exceptional, as they were so well protected from the cold that an oil-lamp would suffice to keep them comfortable. From their characteristics, therefore, they quite justified the name of "earth-house," which was given to them in the Nicene living popular speech. They varied considerably in appearance, but most of them had their roofs about a foot or two below the surface of the
ARCHEOLOGY. (FRANCE.)

ground; entrance was gained from above by one or more downward-sloping passages. They were built of rough, undressed, unmortared stone, the walls gradually converging until they met in a "cyclopesan" or "false" arch, completed by a large flagstone laid across. In some cases their very dimensions suggested the traditional belief that they were built for a dwarfish race; but Peff. Boyd Dawkins, in the discussion, answered that their size had no direct relation to the size of the people, as it was necessary that they should be restricted in size to place difficulty in the way of the enemy.

During the demolition of the old Bluecoat School, in Newgate Street, London (the Christ's Hospital of Lamb's essay), pieces of the Roman wall, the existence of which was well known, were laid bare. The wall ran along the west end of the Gray Friars' Cloister, and was about 10 feet high. The masonry, which consisted of six courses, was in excellent preservation. Close by formerly stood an archway, known as the New Gate, which spanned a narrow lane where a broad and level thoroughfare now runs. The New Gate was the great gates of London, and was so called, as Stow records, from its having been "lattier built than the rest."

France.—While etchings executed with much spirit and originality by the West European cave-dwellers of the latter Paleolithic age have been well known for many years, the first discovery of engravings and pictographs on the wall by M. E. Riviere in 1893. An account of another discovery of similar engravings was published in the Comptes Rendus of the French Academy of Sciences for Nov. 20, 1901, by MM. Capitan and Breuil. It embraced 109 figures of the Magdalenian epoch engraved on the vertical walls of the cave of Combrailles near Eyzies in the Dordogne for 100 meters on each side of the passage. They begin about 15 or 20 centimeters from the ground, and reach to an average height of 1.50 meter, often extending to the roof, which is from 1 to 2 meters in height. The figures are for the most part deeply engraved in the rocks, but in some of the designs are merely scratched; and they are often covered by layers of stalagmite, which is sometimes thick enough to obliterate them. In some cases the cuttings have been reinforced, and occasionally replaced, by black pigment. In some instances the surface of the rock has been described around the contour of the figure, particularly of the head, so as to throw it into slight relief. The style of the engravings agrees completely with that of the etchings on bone and antler of the Magdalenian stages, and is such as to make it seem certain that they were drawn by men familiar with the living animals. The animals pictured are represented separately, intermingled, or in groups. Among them are horses of two distinct types. One type is marked by a massive head with a convex nose, a mane short and stiff or long and erect, and a tail similar to that of ordinary horses. Evidences that some of these horses were domesticated appears in the representation of halters upon them or of cords round the muzzle, and a covering of some sort seems to have been thrown over the backs of two of them. Horses of the other type are of more elegant shape, with small heads, slender legs, short and erect mane, and a tail similar to that of domestic cattle, and a third kind suggests certain African antelopes. The difference between the reindeer, of which there are two figures, and the wild deer of Europe, of which there are three, is clearly marked. The mammoth is represented by 14 drawings. Some are entirely covered with hair; others have less hair, it being shown on the under side of the body, on the head, and occasionally around the mouth. The tusks are always strongly accented, and the feet are very distinctly drawn. The details of the form of the ears are indicated in two of the figures. The only approach to the representation of a human face is a kind of irregular circle within which two eyes are marked and marks are made for the nose and mouth. Among the simple signs described by the authors as occurring with the engravings are three roof-like designs somewhat complicated, a double contoured lozenge in the body of a horse, some marks resembling the letter M, semicircles, etc., and a group of small cups. Comparisons are made between some of these designs and those found in the Mas d'Azil cave. The author's paper is only a preliminary one.

Sketches and paintings upon the walls of prehistoric caves in the Dordogne have been the subject of several communications to the French Academy of Sciences. Messrs. Capitan and Breuil have visited the cave of La Mouthe, and have found paintings in red ochre upon the wall of the cave of Font de Gaume. The pictures comprised 80 figures painted in red ochre and manganese black, 49 of which are bisons. They are all engraved, and some of them the surface of the rock has been scraped. Many of the designs were found covered with a thick layer of stalagmite. The original of the figure of a running bison reproduced in connection with an article on the subject by Mr. A. C. Haddon (Nature, Sept. 4, 1902) is 1 meter (or 3 feet) long and 80 centimeters (or 26 inches) high. It is entirely painted in a brown color with a red tint on the forehead. These are the first frescoes recorded in France, the engraved designs published by M. Emile Riviere in 1893 from the cave of La Mouthe being rarely colored, and then only partly so. An analysis of the coloring matters employed by the paleolithic painters, made by M. Henri Moissan, shows the colors composed of oxides of iron and manganese in varied proportions. In a paper presented to the Academy July 26, M. Emile Riviere marked the distinction between the drawing of the rock by M. M. Capitan and Breuil, and the pictures he had discovered in the cave of La Mouthe in the Dordogne. The sketches at La Mouthe are nearly all engravings of greater or less depth, or shallow markings made by scraping and scratching the rock. Traces of paint were found on two of the figures. One of them represents a ruminant, in which the contour of the hind limbs is colored a blackish brown, especially at the level of the joints and hoofs, and the left flank is marked with ten spots of the same color, in a line from the shoulder to the upper part of the thigh. The other design is a kind of hut, the form of which is designated by a scraping of the rock rather than by an engraved contour line. The color has been laid on upon a part of the scratches in bands nearly parallel and alternately clear and dark, and is much less deep than in the figure of the ruminant. This is said by Mr. Haddon to belong to a drawing of an imitation of primitive man. Without saying whether he regards these drawings as of the same age with the paintings of the Font de Gaume, M. Riviere believes that they are certainly Paleo-
lithic, Magdalenian, and of the Quaternary geological period. The prehistoric artist who figured them, say M. Rivière and Mr. Haddon, was the contemporary of the reindeer and of the mammoth whose portraits he depicted.

Among the latest and most recent finds of remains of prehistoric man are two skeletons—one of a young man and an older woman—unearthed in the excavations carried on by the Prince of Monaco in the Cave of Grimaldi, near Mentone. They are believed by Dr. Verneau, of Paris, to be paleolithic. The skeletons lay side by side, the woman's body being doubled up, while the young man's head was concealed in a mass of ashes. The skulls are of the dolichocephalic or long-headed type.

**Scandinavia.**—A runic inscription copied from a stone which was found in 1817 near Ringerike, Norway, has been deciphered by Prof. Sophus Bugge, and found to relate to America. The stone was lost a few years after it was found, and also was a drawing made of it; but a copy of the drawing from which Prof. Bugge has made his version was preserved in the museum at Bergen. Apparently only a part of the inscription has been recovered, of which Prof. Bugge’s version, translated, reads: “They came out (from the ocean) and across great stretches, and needing clothes to dry themselves and food, away toward Vinland and on the ice in the uninhabited region. Evil can take away joy, so that one dies early.” The inscription is interpreted as the epitaph for a young Norwegian from Ringerike, who had been wrecked with his companions, and after wandering over the ice had finally died near the coast of Vinland. The character of the ruins indicates that the epitaph was cut between 1010 and 1030—that is, within half a century of the discovery of the Western Continent by the Northmen. It is therefore the earliest document known to us containing a reference to America.

**Rome.**—On April 2, Signor Boni, director of excavations in the Forum, discovered a prehistoric tomb, believed to date approximately from the eighth century B.C., containing a dolium, of black ware full of calcined bones: several reticulated egg-shaped vases, a bowl, and a cup with horned handles like those found in the terracotta of the bronze age. The tomb was situated in the bed-clay, about 12 feet below the level of the Sacred Way opposite the Regia, and close by the Temple of Antoninus and Faustina. The discovery is believed by Signor Boni to illustrate his theory that the founders of Rome were buried under a part of the Forum, and that their remains, when found, would prove to have been cremated, according to the custom of the ancient Aryans. A resemblance of the reticulated vases of the tomb to netted gourds, and the likeness of the funeral urn to a conical hat roof are taken as evidences of date from a primitive period. The tomb is the most ancient of a series of linked in the chain of Roman history as illustrated by an almost continuous series discovered by Prof. Boni within the precincts of the Forum down to the eighth century A.D.—constituted of the cippus under the Black Stone, the Rostra, the ritual pits, the massive republican drains far surpassing the Cloaca Maxima, the underground gallery for scene-shifting, the Lacsus and the Pons Juturnae, the Sacred Way (Via Sacra), the Heroon of Cesar, the Regia, the house of the Vestals, the Basilica Emilia, the Church of Santa Maria Antiquus, and others relics of less importance, but fitting well into the succession.

While excavating a tunnel under the Quirinal to afford a passage between two quarters of the city, a large chamber lined with sculptured marble, of the period of the decline, was discovered. Among the carvings were panels illustrating the cult of Bacchus. In one of these panels are the heads of a faun and a bacchante, and of a bearded man of the type of Dionysos, with a basket of fruit beneath the figures. In another is a similar group, with a burning altar shaped like a wheat-sheaf in the place of the basket. A thysrus, the Bacchic symbol (a rod of fennel topped with a pine-cone and bound with a fillet), forms an accessory. Below the female head is a lyre. A third group is a variation, on the same theme; and a fourth, a more vigorous composi-
table, which, notwithstanding the gracefulness of its design, exhibits in its violation of natural characteristics unmistakable marks of decadence, and a tax-relief which seems to represent a rustic origin. To Alme Vesper, the most important find in the Nymphs, at Vari, in Southern Attica, greatly surprised scholars with its fragmentary parts, which were five inches under the soil, where it was supposed to have been buried. Another find of the exploration were old Corinthian and proto-Corinthian pottery in abundance, with many vases in proto-Corinthian style, terra-cotta figurines, and small objects. Although finely wrought, additional parts of colossal figures that had been found two years before: a stone head of an Amazon from a high relief in Pentelic marble; a woman's gold ring with a stone containing a legend in raised letters; an onyx gem of a horse engraved upon it; several ancient Greek inscriptions, one of them at least as old as the sixth century B.C., and the local Greek alphabet; 200 terra-cotta lamps, with representations and inscriptions on them, of dates ranging from the sixth century B.C. to the fifth century A.D., and numerous other articles. In the explorations of the ancient city, following indications furnished by Pausanias, the excavators found the theater in the first year (1896), Piraeus in the second, the agora and the fountain of Glauke, and identified the temple of Apollo in the third year; and they were now having to do with structures which he knew nothing of, but which he had indicated among the ground at the time of his visit." A trench made during the past season in the theater opened up a confusing number of walls, which are believed to have belonged to two buildings, the Greek and the Roman. A great number of marble fragments, mostly architectural, were found in the trench, pieces seeming to belong to a large building containing a head of Medusa in high relief, and a marble head of a youth, "which is not only the best head found at Corinth, but is a real prize, and would be an ornament to any museum."

Part I of Investigations at Assos by the Archeological Institute of America, published by a committee of the institute and edited by Francis H. Bacon, contains the introduction maps, history of Assos, account of the expedition plans, photographs, and drawings of the agora, stoas, and Bouleterion, with inscriptions and lists of names of the agora. The second and third parts are about to appear together, and the fourth and fifth parts will complete the work.

The excavations began in 1879 by Dörpfeld and Milchöfer on the site of the great temple of Athene at Tegae in Arcadia are now being continued by the French school at Athens under the direction of Dr. Mendel, and with considerable results. Fragments have come to light of the sculptured boar hunt described by Pausanias in his itinerary, who names Scopas, of Paros, as the artist. The torso of a woman with a short chiton is assumed by Dr. Mendel to have belonged to the Atalanta; a head very much damaged is a remnant of the Hercules, and a part of one of the hounds has been discovered. A beautiful head, excellently preserved, is attributed to the statue of Hygieia, which according to Pausanias was next to that of Athene. A few small bronzes similar to those of the excavations in Olympia and the American in the Heraeum of Argos have also been unearthed. The Annual Report of the Society of the Promotion of Hellenic Studies mentions the mentioned excavations of Mr. Arthur Evans on the site of Knossos in Crete; interesting discoveries made by Mr. Hogarth at Kato Bakro; the undertaking by the British school at Athens of the exploration of a promising Mycenaean site at Pa-
leokastro, near Sitia, in eastern Crete; the establishment of a British school at Rome on the same lines as the school at Athens; satisfactory precautions for the preservation of the Codex Xenias of Aristophanes, which was practically complete, and on the publication of the report of the important excavations undertaken by the British school at Athens on the island of Melos; and work done in the library.

The extensive excavations which the French Government has been making in Delphi since 1892 are reported to be approaching completion. The most important work done recently has been the laying bare of the Pythian stadium. It is nearly 178 meters in length and from 25 to 29 meters wide. The course had to be excavated on the very sides of Mount Parnassus, at a cost of which the accounts are still extant. It has been found that at the starting-place small depressions were cut out, where those who participated in the races stood till the signal was given. Starting-places for 18 runners were provided. An inscription, supposed to be of the fifth century B.C., directs that “No wine shall be brought into the temple of Evdomonas (the god of the racers); but if it nevertheless be, then he for whom it is brought shall appease at the god with a sacrifice, and pay five drachmas, of which the informer shall receive one-half.”

A special organization has been formed in Berlin for the excavations at Miletus. Funds have been secured for buying the whole peninsula on which the city stood. The newly acquired territory includes all the western half of the old city, together with portions of the necropolis, the “sacred way” that led up to the temple of Apollo, the entire hill on which the theater was situated, the harbor, at the entrance of which two colossal lions of marble have been found, the recently uncovered market-place, some large public halls, and some fine Roman fountains.

Several entirely unknown poems from the fifth book of Sappho have been discovered by Dr. Schubart, of the Egyptian section of the Royal Museum of Berlin, in papyri recently added to the collection there. The manuscript dates from the late second or early third century B.C., which have been deciphered, one describes the author comforting a departing pupil, and another is addressed to a former pupil who had removed to Lydia. Several new metrical combinations appear in the poems.

The Grecian Government has been presented by Konstantin Karapanos, the discoverer and excavator of Dodona, with the articles found there, including bronze statues, bronze reliefs, inscriptions, temple utensils, and records of questions put to the oracle. The collection derives heightened interest from the fact that the temple and oracle of Dodona flourished from early times down to Roman days.

Crete.—In a short account of his excavations in Crete given at the annual meeting of the Society for the Promotion of Hellenic Studies (Hellenic Society), Mr. Arthur Evans said that there were four distinct lines of walls of the palace of Knossos. He described the various chambers and frescoes and the complicated system of underground communication. A considerable number of very interesting frescoes—of the same school as those of Melos—were also discovered. Many bits of naturalistic foliage and lilies were found, and scattered portions of sculpture of the previous year’s discovery had been satisfactorily pieced together. Amongst the art treasures of Crete to which Knossos has contributed in the past century are the marble beauty and ornament of the little Minoan pottery—seal impressions of a primitive style, some with cryptographic inscriptions; clay tablets with the linear script, developed from a pictorial prototype and not derived from the earlier types. There is also the economic history of those ancient days to some extent disclosed by a series of accounts. The excavations allowed an approximate reconstruction of a Minoan street, some of the houses being, it might be said, of a surprisingly modern character, and displaying a highly advanced civic development. The height of the houses enabled one to realize the description of the island as “hundred-citied Crete,” and pointed to a congested population. The statuary was remarkable, and bronze wire was used for hair.

In the more detailed accounts of his work, Mr. Evans refers to the results of the previous season’s excavations as having included the uncovering of the eastern wing of the palace of Knossos, which seems to have been mainly reserved for state and religious functions, business, and storage, a great central court, and beyond it to the east a part of what seemed to be the royal residential quarter. At the close of the last season’s work a staircase had come to light here leading down by a triple flight to a hall with double tiers of colonnades, and beyond it a larger columnar hall or megaron. On the upper level north of these ran a corridor beneath which another corresponding passage of lofty dimensions had now been cleared out, originally lit by a large window opening on the light-well of the larger hall. The clearance of this was marked by the discovery of a very extensive deposit of inscribed clay tablets, largely of a position previously discovered, which included about 100 perfect documents dealing with palace accounts. A large portion of these tablets dealt with percentages, and made it evident that the decimal system was in use. Thus 3 of these tablets, of which facsimiles were exhibited to the Oxford Philological Society, each bore 3 or 4 numerals, the sum of which (though the numbers themselves varied) was 100. With these were several large clay impressions of what is supposed to have been a royal signet ring, exhibiting a goddess and her attendant the goddess, the matrix had been found the year before in another building. The spacious chamber bordering on this corridor, which has been named, from the frequent occurrence of these figures, “The Hall of the Double Axes,” had at its eastern end a double portico facing both south and east. A doorway in its southern wall led to a finely paved court, beyond with the articles found there, including bronze statues, bronze reliefs, inscriptions, temple utensils, and records of questions put to the oracle. The collection derives heightened interest from the fact that the temple and oracle of Dodona flourished from early times down to Roman days.
was indicated by azure wreaths and coils of dotted spray on a white ground. In the figure of the upper part of an elegant lady in a yellow jacket and light chemise, the flying tresses and outstretched arm suggest violent action. Another fresco fragment shows a more rude admiration of the figure in the act of springing from above and seizing the horns of a galloping bull. With the remains of a series of frescoes exhibiting female toreadors found toward the close of the previous season's excavations it was possible to reconstitute a complete panel of one of these fresco designs. "The whole is a tour de force of ancient circus shows. A Mycenean cowboy is seen turning a somersault over the back of a charging bull, whose horns in front clinge a girl in boy's costume, while another girl performing behind, with outstretched hands, seems to wait to catch her as she is tossed over the monster's back. The fallen body of a man beneath another bull brings out the grimmer side of these Minoan sports." A private staircase opening from the north wall of the newly discovered hall leads up by a double flight to upper rooms, which are on the ground level by the central court and of the originally discovered buildings on its west side. They are, however, isolated by the intervention between them and the great central court of a larger area than the fact that apparently no means of access. A passage opening on the west side of the hall leads to what appears to have been the most secluded part of the residential quarters of the palace, the rooms on the levels of the halls of the Colonnades and of the Double Axed. At one point in these apartments were the remains of what appeared to be a wooden staircase, the upper part of which was choked with broken seal impressions. One of these impressions, "only a fragment," bears part of the impress of a Babylonian cylinder, "thus supplying direct proof of correspondence with the East." Mr. Evans remarks especially upon the elaborate drainage system of this quarter of the palace: "The well-paved floors are underlaid by quite a network of stone channels, in places crossing each other at different levels, and roomy enough to allow a man to crawl along them. A succession of stone shafts leads down to these fresh water conduits, which apparently penetrated with a latrine, of which a curious and in some respects very modern example also occurs on the ground floor. In another part of the palace a vast cistern and a line of supporting drain-pipes have been found of a most advanced form, provided with stop-ridges." In another quarter south of this group of chambers were smaller rooms, in which parts of two boards of inscribed tablets were found. One of these contained lists of persons indicated by the man-sign, the other referred to the armorv, the exhibits, besides the linear characters of the inscriptions, outlining characters of swords. The pottery of this and the adjoining region gave some new illustrations of the prehistoric writing of Crete. Another magazine contained vases in the earliest palace style, some of which were painted with very naturalistic lilies. In an adjoining chamber was a kind of domestic shrine, which is thus described: "On a small dais, beside a tripod of offerings, and with a miniature votive ax of statenite before her, rose a painted terra-cotta figure of a goddess, pillar-shaped below according to the old religious traditions, and with short hair, but in front of her stood a male votary holding out another dove. That a goddess was associated with the palace cult of the double ax further appears from a gem on which a female divinity is seen bearing this symbolic weapon in her hand." In the basements of one of the eastern terraces and below the level of the later palace were found remains of another magnificent construction which was still earlier than the structure called funerary. In it were vases of the Kamares class, some with lid designs in white, a miniature vase of gold and porcelain, and a miniature pilaster of glazed terra-cotta with doves perched on the roof. In another basement, not far away from this one, and at a slightly lower level, was found a mosaic of small porcelain plaques, which seems, as described by Mr. Evans, to have represented "scenes disposed in various zones, recalling the subjects of Achilles's shield—the walls and houses of a city, a vine and other trees, warriors with bows, spears, and throwing sticks, besiegers and defenders, and various animals. But the most surprising part of all is the houses of which the city is composed. Fragmentary as are their remains, it has been possible to reconstitute about a score of these. The varying character of the structure—stone, timber, and plastered rubble—is evident, and the apparent lack of provision for passage between these prehistoric structures should thus be recovered to us intact from the guls of time, is the altogether modern character of some of their features. Here are three storied rooms of semi-detached kind showing contiguous doorways) with windows of 4 panes, or double windows of 3 panes each, which seem to show that the inmates of these houses had actually some substitute for glass." The part of the eastern side of the great paralelogram in which the halls of the Colonnades and the Double Axed are situated showed that it was a building of 3 stories. The limits of the palace on the eastern slope of the hill are said by Mr. Evans to have extended themselves beyond all anticipation, but much denudation has taken place. Among the finds are remains of a large architectural fresco with realistic imitation of veined marble, and stone jars more capacious than any previously brought to light. A stone spout jutting out of the face of the wall, connected by a conduit with an oil-press above, explained their purpose and the manner in which they were filled. Farther down were massive lines of supporting drain-pipes here the outer eastern boundary of the palace. In the small but well preserved Mycenean settlement excavated by Miss Boyd at Gournia, sacrificial vases, bronze saws, and other implements, and anti-Mycenean fetishes and idols have been brought to light; and through the excellent preservation of some of the buildings a sensible addition has been made to our knowledge of Mycenean domestic architecture.

The excavations of the Italian Archeological Mission at Phaestos, under the direction of Prof. Halbherr, have been practically completed after three seasons of work. The architectural lines of the palace here are described as being "incomparably more striking" than those of Knossos. The pavement of the agora is traversed by some curious slightly raised diagonal lines, and the agora terminates on the north in a broad series of stone steps. To the west is another imposing flight of stone steps on her head, while in front of her stood a male votary holding out another dove. That a goddess was associated with the palace cult of the double ax further appears from a gem on which a female
but in the center is a great stone pier which apparently served no structural purpose. The other apartments show a fundamental similarity in plan with that of Knossos. The central court or quadrangle is unusually imposing. Both Knossos and Pheastos seem to have been inhabited from the remotest prehistoric times; but after both were burned in the Mycenaean age, they were used in a time of great splendor. Another Mycenaean palace has been discovered by Prof. Halbherr at Hagia Triada, a few miles west of Phaistos. It stands on a hilltop overlooking the plain through which the river Le- thaeus flows to the sea. The excavations, only begun, have yielded results full of promise. Among them are more tablets with pre-Hellenic inscriptions, two frescoes, one of a wood scene and the other of a sumptuously arrayed Mycenaean lady, and a vase decorated with 26 figures in relief of a procession of a band of warriors headed by their chief.

At Palaeoastro, at the extreme east of the island, Mr. R. C. Bosanquet has discovered two cemeteries of the Kameses epoch, in which a most remarkable form of pottery is found—the Levant (packing the bones, cleaned by previous interment, in chambers) is shown to have been in vogue before the Mycenaean age, some Mycenaean pottery is found in the same graves; of which is of a type intermediate between the ordinary dwelling and the great palaces.

The belief is maintained by Mr. Evans that in Crete the double ax was used in part as a symbol associated with a divinity known to the Greeks as the Cretan Zeus, which in its original character was essentially a sun or light god. It was in itself an object of worship as the ductiform of the divinity with which it was associated. On a Mycenaean gem from east Crete, found by Mr. Hogarth, votaries are actually seen in the act of adoration before it. The fresh discoveries, moreover, confirmed the view that though a male divinity was also represented, at times in warrior guise on the sigetids and seal impressions of the palace, the most prominent place was taken by a goddess who from her lion-guardsians might be regarded as a prototype of the Latin Rhea-Cybele, though in other aspects of her personality she is closely paralleled in the goddesses of the Thracian Apollon, Persephone, or Ariadne. Evidences of the cult of the double ax were also remarked in the palace shrine described by Mr. Evans. The whole result of the excavations at Kamares, Mr. Evans said, had been to come out in a remarkable way the underlying element of truth in ancient tradition. In his account given at the meeting of the British Association Mr. Evans spoke of clay cups having been found with ink inscriptions, "a new departure in the prehistoric script." He also described some modern features in the mosaic representation of a Minian street: and ivory figures of youth, as displaying naturalistic details not found again in such work until the age of the Italian Renaissance. Below the Mycenaean palace had been found remains pertaining to what seemed to have been an earlier royal dwelling going back into the third millennium B.C., in which were beautifully painted vases, some of eggshell-like fabric, and some embossed in imitation of metal-work. The Neolithic stratum under the whole site was productive of more stone implements, pottery, and primitive images of clay, followed by the tridacna, and pointing to a prehistoric intercourse with the Indian Ocean.

In an account of his excavations in the Ditean cave, given before the Anthropological Institute, May 27, Mr. D. G. Hogarth expressed the belief that the cave was undoubtedly the one that was the seat of the legendary birth of Zeus. It stood near a lake bed which had a subterranean outlet. The cave was exceedingly rich in remains, but little evidence existed in it of Mycenaean or pre-Mycenaean times, nearly all the remains being subsequent to the Mycenaean period. The skulls found were clearly of sacrificed animals. The honor of Dicte had been largely usurped by the cave of Ida, but Dite showed a variety of ancient objects of the stone age—symbolical axes of fractional size, and others—a massive Mycenaean wall, and a few specimens of Hellenic and Roman work. Mr. Hogarth said he had excavated another settlement at the end of the Dictean cave, the little wasted settlement of Zachro. In two caves he had found human bones, and what seemed to be cists like those of the Egean islands of the prehistoric period. In one cave he had lighted on five burials. One cist burial was untouched, and included a new kind of pottery more regular than the Neolithic pottery. The vases tended to show the existence of a prevailing culture following the Neolithic period. In connection with an address by Mr. Evans, a lecture was given by Prof. Boyd Dawkins on the Animal Remains of the Cave, dean of neolithists, and one of the men who led to inferences of its high antiquity. Among the skulls discovered was one of an ox to which the author found no exact parallel. He had therefore disposed of it as at least a member of a distinct species, to which he gave the name of Bos Criticus. Another skull, in some respects varying from all existing specimens, he inferred to be that of a domestic boar. The preservation of these skulls, apparently for ornamental purposes, was a singular note of modernity in prehistoric times. Prof. Dawkins could not state the precise or approximate date of any of the specimens sent him by Mr. Hogarth. Describing the human skulls, he said that the teeth were wonderfully small, and some of them decayed, and these and other circumstances led to the inference that they belonged to a highly developed civilization. Decayed teeth were, unhappily, a mark of an advanced culture. The skulls found at Dicte were, said Mr. Evans, of the oldest skulls of Attica and Asia Minor. The people interred in this case were, the author thought, cognate with the Iberian race, long-headed, probably non-Aryan, and stretching back to the Neolithic age. Prof. Petrie noted correspondences from Egypt, as in the hanging of skulls as ornaments, with what had been said of Crete.

Bosnia.—Very fruitful excavations have been made among the remains of prehistoric lake-dwellings on the River Save, near Dolina, north-east Bosnia. Four dwelling-houses built on piles have been laid bare and the burial-place belonging to the settlement has been examined. In it were found a number of bronze and urns. Among the articles recovered are objects of pottery, utensils of staghorn, weapons of bronze and iron. ornaments of bronze, silver, gold, and amber, seeds and bones. It has been possible, by the aid of these houses, to determine the architectural construction of the pile-dwellings with a hitherto unusual accuracy. A boat 5 meters long was found lying 9 meters below the floor of a pile-dwelling the tridacna are assigned to two different periods, of dates included in the first millennium before Christ.

Palestine and Syria.—The first report of the new American school in Palestine, Novem-
BAR. 1901, describes the establishment of the institution, and the beginning of excavations at Sidon, under the first director, Prof. C. C. Torrey, of Yale. A Greek necropolis was explored, and yielded results of importance. At Jerusalem students of the school will have access to several valuable libraries, including the Greek Patriarchal Library, with a great store of manuscripts, the Dominican Library, and the Franciscan Augustianum, and Latin Patriarchate libraries. The Roman Catholics were doing much in Jerusalem to encourage archeological and linguistic studies. Three museums had lately been opened, one of them by the Turkish Government, containing the finds of Dr. Bliss in his excavations for the Palestine Exploration Fund.

Excavation was actively pursued in Palestine and the East in 1902, under English and German auspices. The operations included work begun by the English Palestine Exploration Fund, under Mr. J. McAllister, at Abu Shusheh, which has been identified by M. Clermont-Ganneau as the site of the Biblical Gezer, near Rambleh, on the edge of the plain of Sharon; explorations by Austen at Joppa, and by Weingarten at Tell el-Far'a; excavations at Esdraelon; excavations to be begun by Germans at the ancient Migdidd; the exploration and restoration by the government of Jupiter Heliospolitanus at Baalbek, and the neighboring smaller temples, which has been going on for two years and will require a year longer; excavations by the same expedition of some smaller but interesting ruins in the Lebanon, on the edge of the Bekâ, in the same general region. The same expedition was also exploring the ruins of Palmyra, Gerash, Amman, and other comparatively little known sites east of the Jordan, for the purpose of a more thorough study and comparison of Syrian and Roman architecture and antiquities. The Germans have also been excavating at Miletus, at Pergamos, and at Babylon, and contemplate the excavation of a little known Babylonian ruin mound, apparently of great antiquity, south of Nippur, between the Tigris and the Euphrates.

At the annual general meeting of the Palestine Exploration Fund, June 17, Major-Gen. Sir Charles Wilson delivered an address on The Recent and Proposed Excavations of the Fund. The work of the past year, he said, had been mainly the excavation of grounds in the Valley of Jotha, and had thrown light on many ancient sites. The excavations revealed remains of pre-Israelitish times from 1700 B.C., and the successive periods down to Byzantine times. Painted ware and Mycenaean pottery were found in this region, and specimens of early Greek ware as well as Assyrian and Babylonian objects. The chief site was probably to be identified with Gath. Remains were also found of a town which had been abandoned in prehistoric times; and relics of subsequent periods were discovered there. Statues were found of Demeter and Berenice, and pottery and other fragments of the third or fourth centuries B.C., which had been imported into Palestine. Two inscriptions in Greek characters were discovered, one of them divided into 7 columns, and a translation from Hebrew into Greek, the Greek characters of which were read from right to left. Many tablets were commemorative of important events, as of birth or marriage, and these were symbolic references. Few of the caves examined by Mr. McAllister seemed to be earlier than the Seleucid period. Some of them contained remains of a population distinct from that of the towns.

The pottery began with the pre-Israelite or Amorite period, and furnished specimens similar to those discovered by Prof. Petrie in Egypt. The painted pottery or sherds presented Mycenaean features, though they were not supposed to be Mycenaean in origin. In the Jemar period the Phoenician and Mycenaean influences seemed to have disappeared. The names of the potters—all of a tribal character—were found on many of the pieces of Jewish pottery. After the Jewish period a distinct growth of beauty in form and design is shown. Few completed statuettes of later times were found; but some of these were of fine workmanship and form. One of the great caves had been used as a columbarium after its original purpose had been abandoned.

Under the auspices of the Vienna Academy of Sciences, Dr. Sellin, professor in the Evangelical Theological Seminary in Vienna, began excavations in March, 1902, in a mound near the village of Tanaak, one day's journey from Jaffa, and three days from Jerusalem. His report relates the discovery of four castles or fortresses. In the middle were the ruins of an Arabian castle. On the east was a castle of the period of King Solomon, on the northwest a castle of a late Israelite period, while on the west was found a castle of pre-Israelite or Canaanite date. All the castles had been plundered before they were destroyed, so that no valuables were found, but objects of stone and clay and weapons were recovered by the aid of which the dates of the various buildings were approximately fixed. The

![A HITTITE INSCRIPTION HITHERTO UNKNOWN TO SCHOLARS.](image-url)

Canaanite castle, the oldest of the number, was built of unhewn blocks of stone, which showed no marks of the chisel. Inside of it lay fragments of images, such as are mentioned in the Bible, and also a number of small ornaments made of stone and earthenware, mostly representing beetles, scorpions, and other insects, and bearing inscriptions. There were, too, some rude weapons. The second building in date had suffered considerably, but enough remained to show that it belonged to the class called Solomon castles. In both buildings, idols, vessels, and other objects appertaining to religious rites were found, such as a sacrificial pillar of stone, with an opening for libations, a stone altar, and an earthenware altar in the form of a throne, adorned with cherubim and lions. The cherubim, of which these are the only existing representations, and the human heads with the bodies of lions, and wings. The late Israelite castle appears to have been a fortress only. The Arabian castle displays more architectural skill than the other. Vessels and lamps were
found in it, and inscriptions of a religious character. Human remains buried with vessels containing inscriptions were found beneath the ruins of all the castles. A cemetery for children seems to have existed here, in the Sinaitic castle. Prof. Sellin attaches most importance to the excavation of this Canaanite castle.

A stone, belonging to a gentleman residing in the city and bearing Hittite inscriptions, has only recently been first made known to Europeans. An illustration of the inscriptions is given in the figure on page 29.

Babylonia.—The German Oriental Society reports of the results of the latest expedition sent out by it to the East the discovery of 400 inscribed clay slabs in the center of the ruins of Babylon. Two of these have been deciphered—one comprising a large part of a Babylonian compendium, or dictionary, of the cuneiform characters; the second tablet contains a litany which was chanted by the singers of the temple of Esagila on the return of the god Marduk to his sanctuary.

The discovery of a square courtyard surrounded by walls in the south quarter of the city of Babylon is reported by Dr. Kaltenev. The southernmost wall is described as being remarkable for its architecture and its elegance. It is faced with glazed tiles, ornamented with flowers and tracery. When the tiles that had fallen to the ground were replaced, a beautiful design was revealed. Bricks composed of enamels and glass-based work, which were apparently part of a mosaic pavement, were found in the courtyard, together with coins, fragments of inscriptions on stone, and a broad slab bearing a picture of the Babylonian idea of hell. From the great elegance of this courtyard Dr. Kaltenev believes that it was a part of the palace of Nebuchadnezzar. A building about 60 feet wide and 160 feet long is supposed by the discoverer to have been the throne room of Nebuchadnezzar. Exact opposite the door is the niche in which the royal throne stood. On both sides and on the northern front of the hall were richly colored ornaments in good preservation. No inscriptions of special significance are mentioned.

Egypt.—The review of the work of the society, the report of the Egypt Exploration Fund for 1901 gives a prospectus of the work done during the season and those of other nationalities. Among these is the discovery at Elephantine or Assouan, reported by Prof. Sâyce, of an Aramaic papyrus, with two ostrakas, relating to loans of money contracted by Jews settled in that district during the Persian epoch. The Aramaic texts are said to contain some fresh words and to throw light on Biblical Aramaic. The discovery by Mr. Evans at Knossos, in Crete, of an alabaster lid inscribed with the name of the Hyksos King Khyan, coupled with the occurrence of the same name on a lion of Bagdad now in the British Museum, seems to show that that ruler was a personage of great importance. The monuments of no other Pharaoh have so wide a range. Some examples of a curious kind of lamp, discovered in two places, have been placed in the Cairo Museum. It consists of a small bowl pegged into a saucer, and provided with an extinguisher. It was probably used by a person who heated his means of a wick. A Berlin papyrus, published by a German professor, contains a Hesiodic fragment about the wooing of Helen, of whose suitors Ulysses was so sufficiently distinguish, by which Petrie has established a succession of remains of pottery. Having to deal in his latest season's work with a site which contained, in successive layers, the remains of all distinguished, of successive kings of the first Egyptian dynasty, and
below these the remains of several continuous prehistoric periods, he devised a plan of classifying the whole mass by a card catalogue. He then tabulated his results, and obtained a sort of chronological scheme by means of which the development in the fashionable of pots may be followed from a period far anterior to Menes through successive prehistoric strata into the continuous line of kings of the first dynasty.

A description and translation are published by Jules Nicole, of Geneva, in the Archiv für Papyruskunde of a fragment of a papyrus on which are written questions and answers concerning the surgical operations, showing how surgical examinations were conducted in Egypt eighteen centuries ago. Its contents, so far as they have been preserved, indicate that a fair knowledge of anatomy existed; and the subject is treated from very like a modern point of view. The questions are such as might be properly asked in a medical school of the present day. Another article by Prof. Otto Gradenwitz, of Königsberg, cites two documents from the Berlin papyri, giving evidence that banks existed in Egypt, and traded in gold and silver, and in the sale of merchandise. The form of these drafts is more complicated than present forms; but "they amounted simply to orders to pay a certain sum of money to a certain party at a certain place, and to charge the same to the account of the undersigned."

Cartaghesina.—The excavations made during the past twenty-five years on the site of ancient Cartaghesina, by Dr. L. Delaporte, and published by Mr. J. Tryon, P.R.H., on the Blue Nile, contains the ruins of several Christian temples. It was visited by Col. Stanton, governor of Khartoum, who began preparations for exploring, and is about to be photographed. At Naga, 80 miles north of Soba, are extensive ruins, including 5 temples of Roman architecture with avenues of figures of Paschal lambs leading up to them. Hieroglyphic inscriptions were found, and the composite capitals at both places bore the figure of the cross. The naves say that similar ruins are spread all over the country. Sculptured rocks and temples are to be found 80 miles east of Khartoum, and temples are said to be known as far away as Darfur.

Central Asia.—A number of manuscripts said to have been found in Chinese Turkestan, in the desert north of a caravan route between Gōmra and Khōtān, which were offered to the attention of archeologists several years ago, have been a subject of investigation by M. A. Stein, and have been found by him to be fraudulent. Mr. Stein, who is engaged in archeological explorations in Chinese Turkestan, has just discovered the manuscript of the Chinese Turkestan of the Beilage of the Aligemeine Zeitung, No. 130.

Africa.—Results of six years' systematic explorations among the prehistoric remains between the Zambesi and Lineup, in the central part of Africa, are given in the book of R. A. Hall and W. G. Neal, entitled The Ancient Ruins of Rhodesia. Nearly 200 ruins were investigated by the authors and Mr. George Johnson, under grants from the chartered company. More than 500 tombs, citadels, enclosures, chains of forts, gold workings, and terraced slopes are reported from various districts covering a total area of at least 115,000 square miles, not one-tenth part of which has as yet been thoroughly explored. Structures are found among these ruins of earlier and of later dates, and the authors have classified them under four epochs, one of which case periods range from 1000 or possibly 2000 n. c. down to the advent of the Mohammedan Arabs and the Portuguese. The buildings of the first period, as at the Great Zimbabwe, are marked by great solidity and superior workmanship. The massive walls of dry masonry rest upon the bed-rock, and are often 15 to 17 feet thick at the base. They are skilfully built, and are ornamented with various decorative patterns. These are ascribed to the South Arabian Himyarites by Theodore Bent, Dr. Schachtier, and Mr. A. H. Keane. The structures of the second period are less substantial than these, and are inferior to them in other respects, and are assigned to the Phoenicians. They are built upon the other monuments or constitute extensions to them, and also occur by themselves in the districts farther removed from the eastern coast. One class of structures are recognized as slave pits. Extensive terraced slopes in the Inyanza and Mount Ruaha districts resemble some of the Yemen uplands. Other finds are represented in quartz crushers, gold-smelting works, gold crucibles showing gold in the flux, and massive gold objects, beads, bangles, plates, wire, pegs, nails, ferules, etc., which have characteristics of the monuments of the first period. "All the branches of the goldsmith's art were practised by them," the authors say, "including gold wire-drawing, beating gold into thin sheets, plating iron and bronze with gold, and burnishing." The conditions all go to indicate that the South Arabian Himyarite occupation of this region was a settled one.

ARGENTINE REPUBLIC. A brief general account of Christian antiquities in the Soudan awaiting exploration has been published by Mr. John F. Robinson, of Soba, on the Blue Nile, on the ruins of Soba, which contains the ruins of several Christian temples. It was visited by Col. Stanton, governor of Khartoum, who began preparations for exploring, and is about to be photographed. At Naga, 80 miles north of Soba, are extensive ruins, including 5 temples of Roman architecture with avenues of figures of Paschal lambs leading up to them. Hieroglyphic inscriptions were found, and the composite capitals at both places bore the figure of the cross. The naves say that similar ruins are spread all over the country. Sculptured rocks and temples are to be found 80 miles east of Khartoum, and temples are said to be known as far away as Darfur.

ARGENTINE REPUBLIC, a federal republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 30 members, 2 from each province and 2 from the federal district, and a House of Representatives, numbering 86, 1 to every 20,000 inhabitants. One-third of the members of each house is elected every two years. The President and Vice-President are elected by direct popular vote for six years. The President of the republic, inaugurated on Oct. 15, 1896, is Gen.
ARGENTINE REPUBLIC.

Julio A. Roca. The Vice-President is Norberto Quirino Costa. The Cabinet at the beginning of 1902 was composed as follows: Minister of the Interior, Joaquin Gonzalez; Minister of Foreign Affairs, Dr. Amaneco Alcorta; Minister of Finance, Dr. Maximo Avelino; Minister of Justice and Public Worship, Dr. J. Sert; Minister of War, Col. Pablo Riccheri; Minister of Marine, Capt. O. Betheder; Minister of Agriculture, Dr. W. Escribano; Minister of Public Works, Dr. Emilio Civit.

Area and Population.—The area of the republic is 1,113,840 square miles, that of the 14 provinces being 822,800 square miles and that of the territories 490,880 square miles. The total population was estimated on Dec. 31, 1900, at 4,794,144, being 7.4 to the square mile, and on Dec. 1, 1901, the increase for the year was estimated at 100,000. There were about 50,000 Argentineans living or traveling in foreign countries. The number of Indians was about 30,000. The number of marriages registered in 1900 was 28,103; of births, 173,719; of deaths, 88,656; excess of births, 85,063. The number of immigrants arriving in 1900 was 105,932, comprising 63,143 Italians, 20,383 Spaniards, 3,100 French, 2,119 Russians, 2,924 Austrians and Hungarians, 1,883 Syrians, 760 Germans, 431 British, 355 Swiss, and 395 English. The total immigration since 1856 was 2,670,293. In 1901 the number of arrivals was 160,000 and of departures 112,000. Buenos Ayres, the capital, had on July 1, 1901, a population of 326,298. The next largest city is Rosario, with 112,461 inhabitants, and after it La Plata, which has about 61,000, and Tucuman, with 60,000 inhabitants. Education is free, secular, and compulsory. There were 3,035 public and 1,075 private primary schools in 1899, with 13,103 teachers and 326,752 scholars; 16 Government lyceums, with 450 teachers and 4,103 scholars; and 2 national and 3 provincial universities, with over 3,000 students.

Finances.—The revenue of the National Government in 1900 was $36,532,346 in gold and $63,962,000 in paper, and the expenditure was $25,819,979 in gold and $94,271,310 in paper. Under the conversion law of 1899 paper dollars are redeemable in gold at 44 per cent. of their par value. The revenue for 1901 was estimated at $37,901,000 in gold and $62,300,000 in paper, and expenditure at $26,627,175 in gold and $92,460,805 in paper. The actual receipts were $35,249,736 in gold and $62,300,000 in paper, and the expenditures were $32,836,857 in gold and $91,160,227 in paper. For 1902 the estimated receipts were $40,013,347 in gold and $64,290,000 in paper. The revenues collected in gold are $30,000,000 from import duties, $3,000,000 from export duties, $2,765,000 from port and navigation dues, $440,000 from consular dues and fines, and $3,937,474 from debt services. The expenditures for 1902 were reckoned at $32,438,189 in gold and $96,190,813 in paper. The estimates under the several heads were: $2,600,000 in paper for Congress, $13,941,222 in paper for the Interior Department, $300,381 in gold and $1,165,729 in paper for foreign affairs and worship, $7,67,102 in paper for the Ministry of Finance, $25,904,124 in gold and $12,093,810 in paper for the public debt, $12,066,164 in paper for justice and education, $15,675,000 in paper for the Ministry of War, $3,185,000 in paper for the Ministry of Agriculture, $300,000 in gold and $10,600,100 in paper for public works, $3,496,371 in gold and $1,327,400 in paper for pensions, and $1,300,000 in gold and $1,300,000 in paper for extraordinary purposes.

The foreign debts on July 1, 1901, amounted to $286,894,301 sterling, consisting of $245,437,44 of national loans outstanding, $31,384,147 of provincial loans and other debts assumed by the Federal Government, and $10,148,310 of consolidated internal debt. The funded debt at the same date amounted to $17,837,500 in gold and $384,438,833 payable in paper. On April 1, 1902, the external debts amounted to $380,451,205 in gold and $97,863,000 in consolidated internal debt to $89,016,833 in paper and $17,837,500 in gold. The municipal indebtedness is $24,566,422 in gold. The paper money in circulation on Jan. 1, 1901, amounted to $291,004,556. The mint up to Dec. 31, 1897, had coined $31,716,545 of gold, $2,805,840 of silver, $2,748,375 of nickel, and $62,704 of copper coins.

The Army.—The standing army consists of 1,240 officers and 7,297 men. The war strength of the regular army is about 30,000 of all ranks. There are 471,912 men enrolled in the National Guard, of whom the younger members receive two months of military instruction. A law authorizing compulsory military service was passed by Congress in 1901.

The Navy.—The Argentine naval force consists of the new coast-defense armors-clads the Libertad and Independencia, of 2,336 tons, having a speed of 14.5 knots, 8 inches of armor, and a battery of four 9.2-inch quick-firing guns; the old coast-guards Andres and Plata; the central-battery ship Almirante Brown, of 4,267 tons, having 9 inches of side armor and carrying 10 5.5-inch and 6 4.7-inch quick-firing guns; the Garibaldi, of 6,840 tons, and Puertorredon, of 6,882 tons, carrying 2 10-inch rifles and 10 6-inch and 6 4.7-inch quick-firing guns, and the San Martin and Gen. Belgrano, of 6,882 tons, the former armed with 4 8-inch, 10 6-inch, and 4 4.7-inch quick-firing guns, the latter with 2 10-inch rifles and 14 6-inch and 2 3-inch quick-firing guns, all cruisers having 6 inches of armor and a nominal speed of 20 knots, built originally for the Italian Government; the 9 de Julio, 25 de Maio, and Buenos Ayres, strongly armed and swift second-class cruisers built in England; 5 converted cruisers of 3,403 to 4,218 tons, purchased from Italian and Spanish steamship companies; the English-built destroyers Corrientes, Missiones, and Entre Rios; the 18 small vessels, built in 1899, exceeded the contract speed of 26 knots, and the one built to replace the Santa Fe, which was lost; and 12 first-class and 10 second-class torpedo-boats.

Commerce and Production.—There are over 15,000,000 acres in cultivation, yet that is only 6 per cent. of the available land. Wheat in 1901 covered 8,449,375 acres, on which 2,871,440 tons were grown; the yield of flax from 1,518,380 acres was 390,000 tons; and the corn-crop was in the neighborhood of 2,000,000 tons. The wool-clip of 1902 was valued at $40,000,000, the wheat-crop at $120,000,000, the corn-crop at $100,000,000. The quantity of sugar produced in 1899 was 103,112,000 tons, four-fifths of it in Tucuman province. Alfalfa is grown extensively for feeding-stock. There were 89,000 acres of vineyards in 1900. The number of cattle in 1900 was estimated at 28,400,000. The wool-clip of 1901 was 250,000 tons. Coal and petroleum are found, and some gold is mined on the slope of Mount Aconcagua. The cattle-hide and wool of 1900 having been 2,112 ounces. The existence of foot-and-mouth disease in Argentina put an end to the exportation of live stock to Great Britain. In May, 1902, 2,254,040 in gold and $1,300,000 in paper for extraordinary purposes.
ARGENTINE REPUBLIC.

for the reopening of British ports to Argentine

The value in gold of the imports in 1900 was $113,485,000, and of exports $154,900,000. Imports of live animals were $304,271; alimentary substances, $10,453,000; beverages, $7,277,861; textile fabrics and clothing, $37,557,947; mineral and other oils, $4,194,342; chemical products, $1,708,594; dyes and colors, $805,727; lumber and wood manufactures, $7,040,854; paper, $2,926,206; leather and manufactures thereof, $1,244,784; iron and steel and their manufactures, $19,634,051; other metals and manufactures thereof, $3,343,172; earthenware, china, and glass, $8,983,370; tobacco, $3,147,161; other articles, $3,321,533. The exports of animals and animal products were valued at $71,253,986; of agricultural products, $7,428,356; of forest products, $3,508,915; of mineral products, $232,222; of products of the chase, $990,594; of other products, $1,138,439. There were $38,209,757 of duties collected from the imports and $58,163,777 of the exports. The exports of wool were 101,113 tons; of sheepskins, 57,593 tons; of wheat, 1,029,676 tons; of corn, 713,248 tons; of beef, 60,706,555; and of Chilean species were $7,206,555, and exports $3,480,840. The commerce was distributed among the principal countries as follows:

Navigation.—The number of vessels entered at Argentine ports during 1900 was 12,917, of 6,193,783 tons. At Buenos Ayres 1,257 vessels, of 2,110,206 tons, arrived from overseas. The merchant fleet of the republic in 1900 comprised 135 sailing vessels, of 39,798 tons, and 101 steamers, of 40,374 tons.

Post, Phones, and Telegraphs.—There were 23,585 miles of railroad in operation in 1900, capitalized at $326,616,661 in gold. The gross earnings in 1898 were $4,394,109; expenses, $1,910,458, for the year 1899 was 17,998,961; tons of freight, 12,719,297. The length of telegraph lines in 1900 was 37,584, with 58,626 miles of wire. The postal traffic in 1899 was 242,018,000 pieces of mail matter; postal receipts, $17,492,395; postal and telegraph expenses, $30,735,570.

Political Affairs.—The old controversy between the Argentine Republic and Chile which several times they have threatened to settle with arms, regarding the limits of their territories in Patagonia, was at last by mutual agreement submitted to the arbitration of Great Britain. The agreement was concluded on Sept. 22, 1898, and the British Government appointed the boundary commissioners, but before they could begin their task differences arose as to the basis of arbitration and each government sought to impose conditions. To improve their respective cases Argentina promoted emigration into parts of the territory in controversy and in other parts Chile constructed roads, though both had agreed to preserve the status quo. Negotiations were continued, and in 1900 the arbitration was suspended. After the breach Chile made fresh proposals, which were amended by the Argentine Republic, and in this shape were accepted by Chile. The convention was signed by the plenipotentiaries on Dec. 25, 1901; but even then the Argentine Republic declined to adhere to a provision in the protocol requiring each contestant to withdraw all police from the disputed territory. The chief points of the protocol were: (1) Chile renounced the contention that the existence of artificial roads in Ultima Esperanza, one of the regions in dispute, was a proof of continued occupation; (2) the Argentine Republic and Chile both agreed to retire their police from the disputed district; (3) the disputed district would, pending arbitration, be guarded in such way as the Argentine Republic and Chile should mutually agree; (4) difficulties arising in the course of negotiations for such agreement should be referred for immediate decision to the British arbitrators. The Argentine Government consented to withdraw its police from Ultima Esperanza on receiving an assurance from Valparaiso safeguarding the rights that Chile was believed to have infringed. The act submitting the whole matter to British arbitration was finally signed at Buenos Ayres on Jan. 6, 1902. The dispute as to the ownership of Patagonia first arose in 1843 when Chilean imports of seal and walrus oil at the seaport of Punta Arenas on Magellan Straits and laid claim to the whole interior. The Argentine Republic protested against the presence of the Chileans at Punta Arenas and asserted its right to all Patagonia. The controversy remained open till 1866, when a treaty was signed by which both parties agreed to accept the boundaries by which the Spanish divided the provinces when their rule ceased in 1810. Such official Spanish delimitation could not be found; but there were old maps in which Patagonia was marked as Chilean territory, and accordingly Chile asserted a claim to the entire country. The Argentine Republic did not recognize this claim, but took no steps to establish its own alleged rights until Chile became involved in a war with Peru and Bolivia, when, as the price of non-intervention the Argentine Government exacted from Chile a treaty dividing Patagonia. The line of division was drawn along the line running along the highest peaks of the Andes, which divide the watershed. The highest peaks are near the western coast; the main range of the Cordilleras carried on the Patagonian coast, forms the water-parting, runs through the middle of Patagonia. The treaty of 1881 was drafted without the advice of geographical experts and without knowledge of the existing international boundaries. The Chileans construed it as giving to Chile the main western watershed, and drew the line at the principal divide of the waters. The Argentines took the crest of the great chain of the Andes that was thrown up in a later geological period as the boundary, and assigned to Chile only the steep Pacific slope. Col. Sir Thomas Hungerford Holdich, one of the appointed commissioners, went to South America soon after the protocol was signed to explore with a staff of assistants the territories in question. The boundary post at San Francisco south of the Puno de Atacama, the district which United States Minister Buchanan awarded to the Argentine Republic, had to be fixed by the British commissioners as well as the frontier in Patagonia, where the districts of Lake Lacar and the Argentine settlement of 26 de Octubre needed special examination. A treaty was signed at Ultima Esperanza and the territory between Lake Nahuel Huapi and 52° of south latitude. The basins of these Patagonian lakes are claimed by
ARGENTINE REPUBLIC.

The development of the disputed Rectangle as far as it has gone so far, has been accomplished thus far mainly by Argentinians, to whom the country is more accessible than to the dwellers beyond the Impassable Andes, and who have been stimulated by political motives to substantiate by actual possession their claim to the valleys of the Pacific watershed, into which, out of 9 principal ones, they have gradually intruded since 1881. While the dispute as to the conditions of arbitration and the basis of the respective claims was still acute the two governments resumed the belligerent preparations which have created financial embarrassment on both sides for many years. In 1900 an understanding was reached between President Roca and President Errazuriz of Chile not to increase further the military and naval powers of their respective countries. This private agreement ended when President Errazuriz went out of office, and was not renewed with President Riesco. The rivalry of the two nationalities for future influence and empire prompts each one to a struggle for military and naval primacy in South America and for political prestige. This struggle is not likely to end until the basic question of the boundary is settled, yet when that phase of it is past it will be unlikely that either country will go beyond its definite and distinct sphere to seek a cause of war. Chile having purchased 2 torpedo-boat destroyers and ordered an armored cruiser in the United States, the Argentine Government decided in the beginning of April to order 2 new war vessels in Italian yards, to cost $5,000,000 in gold apiece, which should be defrayed out of the general revenue in two years. This decision was in accordance with the avowed policy of the Government to maintain a marked naval superiority over Chile, which on its part adopted the policy of keeping its naval armament equal, but not superior, to that of Argentina, so that in case of arbitration involving disarmament or limitation of armaments the arbitrator would find that Chile had pursued a purely defensive policy. Such a competition involved a naval extension that could be changed only by the bankruptcy of one Government or the other. The mediation of the British representatives was offered to bring about an arrangement preventing additional constructions and diels that were being built equally between the two countries. Except upon the sea the danger of a collision between the war forces of the two republics is remote, the two being far removed from each other, because the great Andean chain forms an effective obstacle against a direct military invasion from either side. The total expenditure for naval construction incurred by the Argentine Government amounted to $30,000,000 in currency, which it was proposed to distribute over three years in equal portions. To meet this extraordinary demand a part of the money was to be obtained from the National Bank, which was in liquidation, and the remainder to be raised by contributions from lotteries, a duty on real-estate transactions, and some increase in internal taxes. At the time when the two additional armored cruisers were ordered there were 2 already building in Italy, to be ready for sea in September, 1903. The total cost of the 4 cruisers is close upon $25,000,000 in gold, and they entail heavy annual disbursements for maintenance. Chile endeavored to exact from the Argentine Government a declaration that it would in no event intervene in affairs on the Pacific coast. By giving moral support to the contentions of Peru and Bolivia in their disputes with Chile regarding the restored possession of Isabella of the Santa, Argentina has to some extent undermined Chilean influence in those countries, where Argentina will not grant to her rival a free hand that would make Chile the dominant political power in South America. Political primacy and domination of the continent is the prize for which the rival powers may wager a conflict that would permanently humble and weaken the loser and result in the destruction of one navy or the other, the payment of a heavy money indemnity, the annexation of the whole of Patagonia by the victorious power, and in the event of Argentinian success the restoration to Peru and Bolivia of the ports and nitrate fields seized by Chile in 1879.

The Argentine Government refused to give a pledge to maintain absolute neutrality in existing and future questions on the Pacific coast, but gave an assurance that it had no wish to intervene in affairs on the Pacific, provided Chile fulfills her treaty obligations toward Peru and Bolivia. The Minister of Foreign Affairs died suddenly on May 5, and Valentín Virasoro was appointed to fill the vacancy on May 8. The Minister of Finance expected the ordinary revenue to be sufficient to cover expenditure and further reduce the floating debt. Additional taxation expected articles of luxury, not those of prime necessity, and unless extraordinary expenditure occurred it would not be enforced. Regulations were issued requiring statements to be made to consuls regarding the country of origin and the cost of manufacture of goods shipped to Argentina, but on complaint of merchants that these were vexatious they were recalled. Both the Argentine Republic and Chile had made preparations of such warlike character that an outbreak of hostilities might occur after the award of the arbitration tribunal. The Peruvian question might be the cause, but in any event the work of the boundary commission would have gone for naught. Therefore the British representatives conveyed a hint that unless means were taken to prevent the bankruptcy of the Argentine Republic, there was some chance that the Emperor of the Argentine Republic would withdraw from the dispute. A treaty was drawn up the preamble of which contained declarations of the Argentine minister to Chile, and treaties which were accepted by the Chilean Government as a pledge not to disturb its possession of the Peruvian and Bolivian territories occupied by the Peruvian Government, which were accepted by the Argentine Government as a pledge not to disturb its possession of the Peruvian and Bolivian territories occupied by the Peruvian Government, which were accepted by the Argentine Government as a promise on the part of the Peruvian Government to seek further territorial aggrandizement. A protocol constituting King Edward of England general arbitrator, one for the cessation of existing orders for ships and for the equalization of armaments within twelve months, and one recognizing the principle of non-interference with the existing boundaries of the neighboring republics, Chile to retain all rights conferred by treaties, were signed on May 27 at Santiago, and on May 28 a treaty of general arbitration in case of future difficulties was signed, also a protocol for the limitation of naval armaments and one for the demarcation of the frontier after the award of the arbitration tribunal by a technical commission to be appointed by the arbitrator. The first article of the treaty of general arbitration binds the contracting parties bind themselves to submit to arbitration every difficulty or question of whatever nature that may arise between them, pro-
ARGENTINE REPUBLIC.

vided such questions do not affect the precepts of the respective constitutions of the two countries, and that they be settled through direct negotiations. The exception of questions affecting the constitutions of the republics may be made to cover almost any question in which national ambition or animosity finds a cause of war. This is, however, a necessary legal restriction of arbitration when adopted by constitutional governments, although a similar clause was delayed for several years, the ratification of the treaty of arbitration between the Argentine Republic and Italy. The British Government has been particularly interested in the preservation of peace between the Argentine Republic and Chile on account of the amount of British capital stated in both countries. In the Argentine Republic, aside from government securities, there are nearly £193,000,000 of foreign money invested, about 75 per cent. of it English, and in Chile the proportion of British capital is larger. The agreements were approved by the Senates of the two republics without much discussion, but, in both Houses of Representatives there was a cavil and obstruction, but not enough opposition to prevent their acceptance after a further intercalation. In this agreement to the limitation of armaments on receiving a distinct assurance that the Argentine policy was one of absolute neutrality in questions on the Pacific coast. The last formally authenticated act of the United States was that of September 22, 1895, in breaking the embargo by a treaty signed on July 31. The Argentine Chamber approved the agreements without modification, and on Aug. 12, 1895, the Chilean Chamber.

Besides high taxation, necessitated by the war-like preparations that have been carried on intermittently for ten years, the failure of civil and criminal justice in Argentina operated to deter enterprise and depress the economic situation. President Roca, in his message to Congress, said that the standard of the judiciary had degenerated through a quarter of a century without any determination being shown on the part of the Legislature to mitigate this crying evil. The system of indirect taxation by which the bulk of the burden is laid on the poorer classes. Thousands of immigrants have left Argentina where they found how difficult it is to make a living. Land taxation is of the highest degree, and a result is that great blocks of fertile land lie unimproved and uncultivated. A transitory cause of economic depression in 1902 was the failure of the harvest in 3 great provinces. Notwithstanding the agreement with Chile to restrict armaments, the budget called for a national expenditure of $7,000,000, reckoned in gold, besides $25,000,000 of provincial expenditures and the municipal charges. The grain harvest in Argentina is always uncertain. In 1900 the wheat exports were 2,900,000 tons, in 1901 only 1,000,000 tons, and in 1902 they dropped to 600,000 tons. Minor causes which aggravated the economic crisis were the closure of British ports to Argentine sheep and cattle, overproduction of sugar in Tucuman, and an excessive crop of grapes in Mendoza and San Juan. Quarantine restrictions between the Argentine Republic and Brazil also tended to hinder trade. The revenue fell off until the Government was confronted with a shortage of money. In framing the budget for 1903 the Government made a retrenchment of $16,500,000 on the finance bill for 1902 and reduced taxation by $15,000,000, chiefly in order to meet unforeseen expenditure the National Bank, which owes the Government $50,000,000, placed $5,000,000 of its bonds in the hands of the Government.

ARKANSAS. (See under United States.)

ASTRONOMICAL PROGRESS IN 1902. 35

The astronomical discoveries of the year (from October to October) have in some respects surpassed those of any of its predecessors, characterized by great activity, especially in the departments of variable stars and spectroscopic binaries.

In looking over the year's work, one is confronted with the fact that, though astronomy is the oldest of the sciences, it is still in the experimental stage, and probably will be for centuries. The impressive fact must constantly be borne in mind by the reader that he is standing face to face with numbers, magnitudes, velocities, and distances which no stretch of thought can comprehend. All countries that possess the means for astronomical research made gratifying progress during the year, and this is emphatically true of the United States.

Daylight Astronomy.—This is exemplified only in observing the Sun, about which astronomers know but little. When his disk is observed with a telescope of contrasted aperture, the eye is protected against his terribly penetrating heat and light by colored glass and other devices, it presents a mosaic of pores, spots, faculae, and coronas; and when his disc is completely covered by the Moon during a total eclipse the chromosphere, prominences, streamers, and Bailey's heads, all of which bid defiance to investigation. We are no wiser than we were the ancient astronomers as to the cause of these phenomena. All we know is that he rotates on his axis in about twenty-six days, and has also a motion of translation, whether tangential or orbital is unknown. This progressive motion was immediately inferred when his rotation was known. This hypothesis has been confirmed by both telescope and spectroscopy. In our age the direction is toward the constellation Hercules, but the center around which the Sun and planets and satellites are revolving is unknown. This motion is about fifteen miles a second. A new result in this is that it would have been, after the lapse of a few centuries to produce a perceptible change in the appearance of stars and constellations. The point toward which we are now moving is in a condition in which great blocks of fertile land lie unimproved, and cultivated. A transitory cause of economic depression in 1902 was the failure of the harvest in 3 great provinces. Notwithstanding the agreement with Chile to restrict armaments, the budget called for a national expenditure of $7,000,000, reckoned in gold, besides $25,000,000 of provincial expenditures and the municipal charges. The grain harvest in Argentina is always uncertain. In 1900 the wheat exports were 2,900,000 tons, in 1901 only 1,000,000 tons, and in 1902 they dropped to 600,000 tons. Minor causes which aggravated the economic crisis were the closure of British ports to Argentine sheep and cattle, overproduction of sugar in Tucuman, and an excessive crop of grapes in Mendoza and San Juan. Quarantine restrictions between the Argentine Republic and Brazil also tended to hinder trade. The revenue fell off until the Government was confronted with a shortage of money. In framing the budget for 1903 the Government made a retrenchment of $16,500,000 on the finance bill for 1902 and reduced taxation by $15,000,000, chiefly in order to meet unforeseen expenditure the National Bank, which owes the Government $50,000,000, placed $5,000,000 of its bonds in the hands of the Government.

The three most trustworthy determinations of the present solar apex are as follows: New-
Astronomical Progress in 1902.

Comb, right ascension 18h 28m, declination north 35°, or near Alpha Lyra. Kapteyn, right ascension 16h 39m +20°, brightness 9.2. Campbell 18h 28m +20°; velocity 12.4 miles a second.

To elucidate the spectroscopic process by which it is hoped the direction of the Sun's motion may be determined, the following facts must be borne in mind. If a star is not moving toward or from the solar system, or we toward or from the star, the spectral lines of hydrogen, sodium, iron, etc., will occupy precisely the same positions that are experimentally observed in the chemist's laboratory. If the lines in the spectrum of the star occupy positions slightly toward the red end of the spectrum, that star is either moving from the Earth or the Earth from the star, or both from each other. On the other hand, if all the lines are moved slightly toward the violet, that star is either moving toward the Earth or the Earth toward the star, or both toward each other. If the lines from all the stars in a certain region of the sky are moved toward the violet, it furnishes strong evidence that the Sun with his family of planets is moving in that direction, or that all the stars in the region are moving in our direction—an improbable supposition.

If the spectral lines from stars in a certain direction are moved toward the violet, the theory demands that the lines from stars in the opposite direction will be moved toward the red. Prof. See thinks this may be the case.

The Zodiacal Light.—The cause of this strange light is one of the most inexplicable mysteries of the heavens. It is very doubtful if its cause will ever be explained; perhaps, however, to announce that it is beginning to attract the attention it deserves. For its investigation no instrument, unless it be the spectroscopic, can be used. Though the area of the light is large, it is too faint for telescopic observation, and the hope that the spectroscopic can deal intelligently with it is almost a forlorn one. So faint is it that the light from the planets Venus and Jupiter are sufficient to obliterate it. It is also too faint to attract popular attention, but no one less necessary to be investigated. It is a broad beam of light seen in the west above the place where the Sun has set as soon as twilight is ended, and in the morning sky before dawn appears. It is conical, 25 degrees broad at the base, and often near the zenith, where it narrows to a blunt point. Some observers think they have seen it extend from horizon to horizon. In some countries it is seen only during the 3 spring and autumn months, in the west in spring, and in the east in autumn. This, if true, is an important fact associated with the meteoric-ring hypothesis. At the Lowe Observatory, in southern California, 3,500 feet above tide-water, it is visible the year round in the west; but, owing to obstruction by the San Gabriel mountains, it is never seen in the east except from the top of Mount Lowe, one of its highest peaks.

Several plausible theories have been advanced to explain the cause of this light, but in the writer's opinion they are not worth recording. The writer is of the opinion that the zodiacal light is due to the reflection of sunlight from the coma of tails of comets. No comet gathers its tail to itself, but as a part, a large part, of the process has been going on since the creation. This hypothesis demands that the cometic ring extend far beyond the earth, if not to Neptune's orbit, its diameter being 500,000 miles.

The Gegenschein is another mysterious light, in several respects more so than the zodiacal light, with which it seems to be associated. Prof. Barnard has made it a systematic study for fifteen years. He finds that it exactly opposes the Sun, therefore on the meridian at midnight. He has traced what he calls the zodiacal band, extending from it to the evening and morning zodiacal cones, 3 or 4 degrees broad, and it can be seen, except where it crosses the Milky Way, in June and December. The writer never saw it in New York, but in California was surprised at its brilliance.

Mercury.—The exact diameter of Mercury has always been considered beyond the limits of accurate measurement. Recently, from a long series of micrometer determinations with the 2-inch telescope at the Naval Observatory, Prof. T. J. J. See has deduced a mean diameter of 5.9895, with a probable error of only 0.0096. There was no appearance of an atmosphere or evidence of any markings on his disk. This gives the diameter of the planet about 3,000 miles.

Jupiter.—Prof. See has recently completed a series of daylight observations to determine more reliable values of Jupiter's diameter with the same telescope. They were made when he was at the distance of 5.20 (the Earth's distance from the Sun being 1) with the following result: Equatorial diameter 37.646°, polar 35.222°, corresponding to 88,151 and 82,473 miles respectively. Since last report Prof. See has subjected Saturn and his rings to a long series of micrometric measurements with the following results: Equatorial by night, 76,586; by daylight, 74,172. External diameter of rings, 121,848. External diameter of dusky ring, 111,969 miles respectively.

Bolides.—Since the last report several of these strange celestial visitors have suddenly appeared and as suddenly vanished—where from and where gone is a fathomless mystery. They are also called fire-balls and meteors. That they are identical with the fall of meteoric stones is generally conceded; but that they are even remotely connected with what are called shooting stars is in the highest degree improbable. During the month of November, 1833, and the 14th in 1866 a bolide was seen, though countless millions of the microscopic meteors were seen over a large portion of the earth. Neither has ever been seen to reach the Earth. The writer well remembers the celebrated one of 1860. In Niagara County, New York, he rose to give a lecture, when instantly the room was lighted to the brilliance of a sunny day, and the light disappeared as quickly as a flash of lightning. It was first seen in Colorado in broad daylight, and last seen over the Atlantic Ocean. Whether it ever reached the Earth is not known. Its velocity was from 12 to 15 miles a second.

The object in calling the reader's attention to this subject is to describe the appearances of 3, among several others, on as many different dates which have appeared in the past twelve months. On Dec. 16, 1901, a remarkably bright one was seen in England, in the constellation of Perseus. It moved north almost at a right angle to the ecliptic, and disappeared beneath the pole-star. On Nov. 13, 1901, one was visible over a large portion of, and the path remained visible a short time when a dotted streak of light appeared, finally assuming a faint nebulous cloud. The most remarkable of the three passed over the west coast of New South Wales at 9th 35m., rising on Jan. 7, 1902, visible over a region 300 miles in length. It first appeared in the con-
Astronomical Progress in 1902.

The ring completes a revolution round the Sun in about thirty-three years and a quarter, thus causing the Earth to pass through it every year in a new place, and once in about thirty-three years through the dense place. The shower in 1833 surpassed all its predecessors.

Prof. W. H. Pickering says that the observation of the Leonids, as the shower is called, appears to indicate that the 33.25 year period must be abandoned, on the ground that since 1098 the length of the period has been thirty-four years. Remembering that brilliant displays were seen in 905, 1002, 1022, and 1062, it seems possible that it will yet return in November, 1902, but unfortunately there will be a full moon. If it does appear it will be just one thousand years since it was first recorded in history.

Another notable shower of meteors occurs every year on Aug. 10 whose elements agree with those of Swift's comet of 1862, having a period of one hundred and twenty-three years. A fine display was seen in Europe on Aug. 10, 1902. They are called Perseids, because they appear to radiate from the constellation Perseus.

Distances of the Stars.—The grandest and most difficult problem man ever attempted to solve is to ascertain the distance of a few of the brighter stars. The problem has not yet been solved with the desired accuracy. One element of doubt is the Sun's distance from the Earth, which has engaged the attention of astronomers for at least three thousand years. The procedure resorted to is briefly as follows: The velocity of light is assumed to be 180,000 miles a second, as a year contains 31,556,926 seconds, the product of these two numbers will give the number of miles corresponding to a "light year." A star having a parallax of 1" is distant 3.26 light years. The parallaxes of the stars, however, are, with perhaps a single exception, much less, and the less this is the greater its distance. If the light year of a star having a parallax of 1" be divided by the assumed parallax of any other star the result gives the distance in light years. Suppose the parallax of the star to be 0.5", then \( \frac{1}{0.5} = 0.65 \) years—that is, the light has been more than six years in reaching us, moving at a velocity equal to seven times round the Earth in one second. The nearest known star is Alpha Centauri, whose parallax is not quite 1". It is distant about 3.3 light years. All this, however, depends on the correctness of the computation of the parallax, an assumption seldom if ever trustworthy. The following list comprises the best determination:

Proper Motion.—In common parlance the stars are called fixed stars; but, strictly speaking, there is not a fixed star in the universe. Every one is attracted and swayed by the others and in all directions. Their apparent motion, though very rapid in miles, is, from their great distance, exceedingly slow. The proper motions of several thousand have been determined with great exactness, both in right ascension and declination, and catalogued. Proper motion is not applied to motion of stars in the line of sight, as they appear absolutely stationary.
It would be natural to suppose that the brighter stars and their proper motions the greater, but this seems not to be the case, or at least it often fails. The most rapid proper motion in the sky is that of two stars invisibly to the naked eye. Groombridge 1830, a star of the sixth magnitude, has long been called the runaway star. It has a proper motion amounting to 7" a year, which would carry it around the sky in one hundred and eighty-five thousand years. Its velocity is thought to be 200 miles a second. The latest and most rapid known is that of an eighth-magnitude star in the southern sky. Its proper motion is 8" a year, or sufficient to carry it across a space apparently hidden by the diameter of the moon in two hundred and fifty years, or, in miles, round the earth in eighty-three seconds. The latest record of Groombridge 1830 is from the Lick Observatory Bulletin, No. 4, which gives the proper motion of the star as 7.05" a year. This adopted parallax of 0.14", would denote a velocity perpendicular to the line of sight of 150 miles a second. The Bulletin gives the radial velocity (in line of sight) as 59 miles a second. The above-mentioned parallax of the star gives its distance as 23½ light years. The same Bulletin confirms the variability of Delta Orionis in the line of sight, discovered by M. Dehervé. The results from three photographs are +3 kilometers a second, +51, and —69. A large variation has been discovered in the radial velocity of Omicron Persei. The range of variation in this star and in Eta Orionis are the largest yet discovered among spectroscopic binaries with one dark component. The well-known Algol variable Delta Librae exhibits a considerable variation in the line of sight, proving that it is a double star, which has never been seen with a component. Ten spectrographs of the dog-star were obtained between December, 1901, and March, 1902. The value, combined with others previously made, gives its parallax as 0.21", making its distance in light years nearly twice as great as was formerly supposed.

**Binary Stars.**—Recently 300 binary systems have been discovered. This work is still progressing and many more may be engaged in it. The sky is covered with them, but they were never suspected until the invention of the spectrooscope and the application of photography.

Binary stars are divided into three classes: 1. Telescopic, where both components are visible. 2. Spectroscopic, where only one is seen, the other being too close to be visible in any telescope, but both being bright and each giving a spectrum. 3. This class of binary stars, unlike those of No. 2, give but one spectrum, one component being incapable of giving a spectrum. Stars of No. 1 are both seen with the telescope to revolve round each other, but always in a plane perpendicular, or nearly so, to the line of sight. The spectral lines of the approaching star will all be slightly moved toward the violet end of the spectrum, and those from the receding star toward the red, thus causing the lines of hydrogen, sodium, helium, iron, etc., from each star to be vividly and broadly, and double, and vice versa. When there is no to-and-fro motion the lines are single. The behavior of stars of the third class is quite unlike those of No. 2. If the star is single or a binary with one component dark. If it is single its spectral lines will never move or be double, but if it is a binary the lines will be seen to vibrate periodically toward the red and the violet. The dark sun revolving round the bright one periodically sways the bright one to and fro by its attraction.

If the reader will turn back a few lines and re-read what is said about the radial motions of Delta Orionis, Omicron Persei, Eta Orionis, and Delta Librae, he will be able to comprehend how the periodic motions of stars to and from the Earth is ascertained. The following is a list of a few recently discovered stars moving in the line of sight:

Y Lynæs | 12.8° | 6.8° |

The discovery of radial motion in the trigonometric system of the pole-star excites the admiration of all who are able to appreciate its significance. Prof. W. W. Campbell, director of the Lick Observatory, has, from observation secured since 1899, shown that the velocity of the center of mass of the binary has varied from —11.8 kilometers a second in 1899 to about —13.5 kilometers a second at the present time. It varied from —18.0 a second in 1896 to —11.8 a second in 1899. A reversal has therefore taken place. The period of the binary system 24° 230° 14.3° deduced in 1899 satisfies recent observations.

The pole-star has a companion visible through small telescopes, and was formerly considered a telescopic binary. Lately the spectrocope has determined the faint telescopic component to be a spectroscopic binary with a period of about fifteen years.

Much interest attaches to Mizar, which is a telescopic binary and a spectroscopic trinary. It is the middle star in the handle of the Great Dipper. From observations made in March and April, 1901, W. W. Campbell estimates that one star in every five or six is a spectroscopic binary, yet up to the present time not more than 40 are known.

Five Algol stars—viz., Y Lupus, X Carinae, RR Centauri, Beta Lyrae, and U Pegasi—revolve with their components in contact.

**Nebulæ.**—Since Sir William Herschel's day many thousand nebule have been discovered. They are now searched for by photography, which by long exposure reveals what no visual telescope can. At the Paris Observatory 23 new ones have recently been discovered, and many at the Cape Observatory and at the Arecipa station of Harvard College Observatory in Peru, and a great many have been discovered that escaped the eyes of Sir John Herschel and others. One of those discovered at the Cape was by one hour's exposure depicted on a photograph plate. In fact, it is a double, consisting of two spindle-shaped nebulae side by side, or one right over the other in one place only. This was previously discovered at Arecipa.
Dr. Hartmann, in a Berlin astronomical publication of Feb. 27, 1902, describes experiments made with the Potsdam photographic refractor, with two different spectroscopes, one having a flat-glass prism of 60° and 3 of 63°. The exposures were from 2700 to 27,000. The velocity of the nebula, General Catalogue, 4590, was first determined from measurements of the line Hα and Hγ, which were very satisfactory. Their motions in the line of sight were:

\[
\begin{align*}
G. C. & = 4590 = 10.5 \text{ kilometers a second.} \\
4590 & = 40.6 \\
\text{New} & = 7037 + 4.9
\end{align*}
\]

The great nebula in Orion has been subjected to a similar spectrographic analysis, and the result indicates a motion in the line of sight by using the Hα and Hγ, amounting to + 6, + 43, and + 28 kilometers a second. The results of measures made by three experts are, as might be expected, somewhat discordant, because of the faintness of the nebula.

**Double Stars.**—During the past one hundred years the search for double stars has been systematic, and determinations of their positions have constituted an important division of sidereal research. In the past thirty years 4000 double stars have been discovered, all by a few astronomers. In 1902 several hundred new ones were found. Nearly 12,000 double stars are now known.

If two stars are found by the telescope to be excessively close to each other, in which after several years a slight motion of the pair is observed, the same is called an optically double. If motion of revolution is detected, it is called a binary. A few trinary systems are known, of which the

tele-star is an example. Prof. Hussey, of the Lick Observatory, has discovered that Burnham's double star 168 is a trinary, one component being an exceedingly close double, the distance being less than 0.4". The companion is a spectroscopic double, which, however, not visible to the telescope. The telescope sees two, the spectroscopic deals with three. The following short list includes a few of the most interesting spectroscopic binaries, of which 400 are known:

<table>

</tbody>
</table>

The vast difference between the periods of the first and last will not escape notice. To separate members of the double stars, eye-pieces magnifying from 1,000 to 5,000 diameters are used. Prof. Hussey, examining some well-known double stars, found 5 of them triple, 4 as close as 0.9", and one only 0.9", the closest spectroscopic binaries yet discovered.

A large variation is shown in motion in line of sight of Omicron Persei. Its range of variations was found to be 1". The refractor, however, discovered among spectroscopic binaries that have a dark component. The well-known Algol variable Delta Librae also exhibits considerable variation in radial velocity. Ten spectra of the equinoctial system were obtained between December, 1901, and March, 1902, which give for the epoch 1902.06 a velocity in line of sight of — 6.57 kilometers a second. This result, combined with that obtained by Vogel and Strömgren, — 10.6, for the epoch of 1890.09, gives a parallax of 0.21" for the system. Gill's value from heliometer measures is 0.37". The following are moving the most rapidly:

**Comets.**—There was a dearth of comets in 1902, contrasting strangely with the number (10) seen a few years ago. Comet (a) was discovered by Prof. Brooks at Smith Observatory, Geneva, N. Y., April 14, in the constellation Pegasus, and in the same telescopic field as was that of Feb. 23, 1883, also discovered by him. The position and rate of motion were such that it was constantly in the Sun's twilight. The few observations made indicated that it was moving in a parabolic orbit, at a time interval of the first and last time. Comet (b) was discovered on July 22 by John Grigg, of New Zealand, but, from places too roughly givin and long delay by mail, it was not seen elsewhere. Comet (c) was discovered by Prof. C. D. Perrine at the Lick Observatory on Sept. 1. It was very faint, about 4° in diameter with a tail 30° in length. Its discovery place was right ascension 214° 17′ 49′, declination north 34° 38′ 47′, or in the constellation Perseus.

A finding ephemeris of Swift's comet 1895 II is published, and astronomers are searching for it by both photography and telescope, with but little prospect of success, its position relative to the Sun and Earth being unfavorable for visibility. It occasionally makes the nearest approach to Jupiter of any of the periodic. When this event next occurs its orbit will be greatly changed, perhaps to a very long period, or even to a parabola. Mr. Schulhof estimates the uncertainty of the time of perihelion passage at only three days.

Among the comets that have returned to perihelion unobserved is Finlay's of 1886, an especially interesting one from its supposed connection with Lexell's comet. E. Swift's comet, having a period of 5,855 years, has also returned without detection, much to the disappointment of astronomers, as there is some reason for supposing it to be identical with Di Vico'slost comet. One of Barnard's comets is also in the same category, having escaped detection at two apparitions.

**Minor Planets.**—The search for these bodies (called also asteroids and planetoids) is still prosecuted with vigor, resulting as heretofore in their rapid discovery, but more especially since the employment of photography. It is supposed that nearly all as bright as the tenth magnitude have been discovered. Their diameters in miles vary through wide limits. The mean diameter of the four largest—Ceres, Pallas, Juno, and Vesta—according to Prof. Barnard, is 285 miles. Ceres is the largest of the whole family, 477 miles. The smallest, as measured in No. 435, the celebrated Eros, 15 to 20 miles.

Minor planets are not searched for all over the sky, as are comets, but at certain declinations of the equator. The following have been discovered since the last report:
Astronomical Progress in 1909.

No. 526, Natalia, was discovered by the late Prof. Keeler in 1890, with a 3-foot reflector. It is the faintest of all the family, and is of the twentieth magnitude.

Nearly 30 others have provisional letters assigned to them, some of which, no doubt, will be found to be identical with some previously discovered. A few have been seen but once, so provisional numbers were withheld until further investigation. It is safe to assume that 600 of these little worlds have been discovered. The most distant of the minor planets is 279 Thule. The nearest is 435, Eros, which occasionally approaches nearer to the Earth than any heavenly body except the Moon.

No. 475, Ocillo, has a southern declination of 61°. Its daily orbital motion amounts to the enormous sum of 2,300"; or did when in perihelion, and it is the nearest to the Sun of any of the family except Eros. It was found depicted on a photographic plate by Steward, at the Harvard College Observatory at Arequipa, Peru.

Variable Stars.—The search for stars that vary in brightness is to most astronomers a pleasing pastime. The high interest attaching to their discovery and subsequent investigation into their periods and fluctuations in brightness has led many astronomers to devote their lives to the fascinating work. The number discovered since last report is so great and varied that amateurs have taken up the subject, as no expensive instruments are needed, and are assisting the astronomers in their further discovery and investigation.

Many explanatory theories have been advanced to account for their variation. There are three hypotheses: 1. Those that vary equally (though different for different stars) from maximum to minimum, and vice versa, varying as regularly as the changes of the Moon. This variation is called Algol variables. 2. Those that vary intermittently, or fitfully without any regard to periodicity, sometimes to invisibility. 3. Temporary stars, which burst out in an instant, surpassing even Jupiter in brilliance, as did the recent outburst in Perseus, the brightest since the notable one of 1872.

Algol variables are reasonably accounted for by supposing they are periodically occluded by an opaque object, which partially eclipses them, and this accounts for all that is observed by the telescope and spectroscope.

The hypothesis meets with general acceptance among astronomers.

To explain the cause of the fitful variables and the sudden outbursts of the temporaries no theory worth recording has been promulgated.

The number of variables now known is more than 2,500, and further discoveries are being made at a rapid rate. One astronomer asserts that one star of every four is a variable. The statement seems extravagant, but he doubtless included the minute spectroscopic variation of many, caused by their slight motion to and from the earth in the line of sight. In their discovery and the investigation into the cause of their variation photography is doing good work, of which the following is one example among hundreds: Prof. E. C. Pickering, describing the discovery of a remarkable variable star, says in Circular No. 65, it was found that a photograph on glass of the region in which Brooks's comet was discovered on April 14, 1902, had been taken at the Harvard Observatory on April 5. This was superposed on another taken on March 7, 1900, resulting in the discovery of a new variable of the Algol type in R. A. 21° 55.2", declination north 43° 52'. The true period of the new variable is about 31.304 days. It retains its full brightness for twenty-eight days, its photographic magnitude at maximum being 8.8. About a day before minimum it begins to diminish, attaining the magnitude 9.0 at 1.03" before minimum. 9.5 at 0.94", 10.0 magnitude at 0.84", 10.5 at 0.71", 11.0 at 0.56", and 11.5 at 0.42".

The light remains nearly constant for more than half a day, with the minimum magnitude 11.6. The period of the variable is more than three times that of any other yet discovered, and the duration of minimum (two days) is double that of S Cenari, the next in length. These results have been obtained from an examination of 388 plates, taken between 1868 and 1877.

Prof. Robert Innes, in his revision of the Cape catalogue, discovered 4 new variables, all, in one respect at least, very interesting. One designated 29, 1900, Appodia, varies from 5.6 magnitude to invisibility. Its period has not been ascertained, but the periods of the other three are from three hundred and sixty to four hundred days, and they diminish in brilliance to invisibility, suffering periodically a total eclipse.

Dr. Anderson, who makes the discovery of variables a special line of work, calls another new one 77, 1901, Herculis. Soon afterward A. Stanley Williams discovered one with the designation 78, 1901, Cygni. It is of the Algol type. Its normal brightness is tenth magnitude, but after 3° 2" it diminishes to the twelfth, at which it remains for fifty minutes. In 4° 10" it recovers its usual brightness.

Harvard College Observatory Circular No. 54 gives a list of 64 new variables, the greater part being southern stars discovered by the presence of bright hydrogen lines in their photographed spectra.

Mira Ceti is considered the most remarkable of all the variables. It was discovered to be a variable star more than three hundred years ago. When at its maximum brightness it shines as a second-magnitude star, but it dwindles down to the 9th magnitude. Recent investigation shows that it is not an Algol star. In the little globular cluster surrounding Omega Centauri 125 variables are visible. Omega itself being one of them, with a period of only six hours and twelve minutes. Another remarkable variable is Eta Argus, often invisible to the naked eye, but in 1836 and 1843 it surpassed in brightness every star in the sky except Sirius. The shortest known variable is U Pegasus = 4° 28" 8', the longest is R Carinae = thirty-seven or thirty-eight years.

Stellar Photography.—Prof. E. C. Pickering has for many years been taking celestial photographs. He has a library of glass, so to speak, of more than 30,000 plates, all numbered, dated and their right ascensions recorded, packed away in the order of right ascension, so that a plate of any locality in the sky can be found in a moment. In his fifty-sixth annual report for 1901 is the statement that the number of
photographs taken with the several telescopes and the use of plates 29,908. The annual production is about 5,000. In the examination of these plates Mrs. Fleming recently discovered two new variables, three stars having peculiar spectra, and the presence of bright lines of hydrogen in the spectrum of U Andromeda. By examination of the plates of the region of the new temporary star in Perseus it was ascertained that if the star existed two days before its sudden outburst it must have been fainter than the twelfth magnitude.

One of the marvels of celestial photography which transcends what we are accustomed to see in astronomy is the rapid formation of the nebulosity ring surrounding the new temporary star Nova Persei. Assuming its parallax to be 0.5" and the radius of the ring as photographed at the Yerkes Observatory to be 6", it results that the radius must be 66,000,000,000 miles, and formed at the rate of 6,000 miles a second.

A Gift.—Prof. Pickering, director of Harvard Observatory, has received an anonymous gift of $20,000 for the benefit of the observatory. As the donor has named no restrictions, the director proposes to do with half of it in erecting a wing to accommodate the rapidly increasing stock of negatives and astronomical books. The building is to be fire-proof and of a size to hold the plates that will accumulate in many years.

Prizes.—The gold medal annually given by the Royal Astronomical Society of England has been bestowed on Prof. J. C. Kapteyn, of Holland, for his paper on the existence of the central group of stars. The Cape Catalogue, measurements of its celestial photographs and researches in stellar parallax. The Mrs. Jackson Gwilt bronze medal was awarded to Rev. Dr. Anderson for his discovery of the two Nova Auriga and Persei and many ordinary variables. Each medalist will also receive a bronze medal from the Astronomical Society of the Pacific as heretofore, including Dr. W. R. Brooks and Prof. C. F. Perrine, who will each be the recipient of the latter medal.

AUSTRALIA, COMMONWEALTH OF

A federation of the three British colonies of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania, proclaimed at Sydney, New South Wales, Jan. 1, 1901, after the enabling act passed by the British Parliament on July 9, 1900, after New South Wales, Victoria, Queensland, South Australia, and Tasmania by a popular referendum had voted to federate. In August, 1900, Western Australia also decided to enter the union as an original state, for which provision was made in the act of confederation. The legislative power is vested in a Federal Parliament, consisting of a Senate of 36 members, 6 from each state, and a House of Representatives. The senators are in each state elected for six years by popular vote on a single ticket, except in Queensland, which is divided into 2 districts. One-half of the Senate is renewed every three years, but in case of a deadlock between the Senate and the House of Representatives the Senate must be dissolved and an entire new Senate elected. The number of members in the first House of Representatives is 75, of whom New South Wales elected 26; Victoria, 23; Queensland, 9; South Australia, 7; Western Australia, 5; and Tasmania, 5. The legislative period for the House of Representatives is three years unless it is prorogued. Any five members qualified in each state to vote for the popular branch of the state Legislature may vote for Senators and Representatives in the Federal Parliament, which has power to enlarge, but none to restrict, the franchise so defined. To be elected a member of either house of Parliament, one must be a natural-born British subject or naturalized for five years, a qualified elector of his own state, and a resident in the Commonwealth for three years. The states reserve all legislative powers not specifically delegated in the Constitution to the Federal Parliament, which has power to legislate on commerce, railways, shipping, lighthouses, statistics, marriage and divorce, emigration and immigration, currency, banking, weights and measures, conciliation and arbitration in industrial disputes, and certain other matters. The executive authority vested in the King is exercised by a Governor-General on the advice of a Federal Council of State. The Governor-General is the Earl of Hopetoun. The Council of Ministers appointed at the establishment of the Commonwealth was composed as follows: Prime Minister and Minister for External Affairs, E. Barton; Attorney-General, A. Deakin; Minister for Home Affairs, Sir W. J. Lyne; Treasurer, Sir George Turner; Minister of Trade and Commerce, C. C. Kingston; Minister of Defense, Sir John Forrest; Postmaster-General, J. G. Drake.

Area and Population.—The area of the states forming the Commonwealth and their population, exclusive of aborigines, according to the census of 1901 are given in the following table:

<table>
<thead>
<tr>
<th>Original State</th>

</tbody>
</table>

The total population of New South Wales was 1,359,537, comprising 713,794 males and 645,743 females. This includes the aborigines, of whom there were 3,906 males and 3,244 females; total, 7,240. There were 9,750 Chinese and 1,151 half-castes. The number of Chinese arriving in 1900 was 75, while 570 departed. The immigration by sea in 1900 was 65,783, and the emigration 67,198, making the net immigration 1,585. Between 1891 and 1901 the increase of population was 227,303, the natural increase from excess of births over deaths being 229,752. The population of Victoria, according to the census of March 31, 1901, consisted of 603,903 males and 597,015 females. The annual rate of increase since 1891 was only 0.43 per cent., compared with 2.83 per cent. in the preceding decennium. The population is three times as thickly settled as in New South Wales, averaging nearly 14 persons to the square mile, and 66 of the population in towns, Melbourne having 493,956 inhabitants; Ballarat, 48,410; Bendigo, or Sandhurst, 43,112; Geelong, 23,440; Warrnambool, 6,600; Castle-
AUSTRIA, COMMONWEALTH OF.

maine, 7,900; and Stavell, 5,400. The number of immigrants who came by sea in 1900 was 82,157, comprising 53,559 males and 28,598 females. The emigration for the same year was 83,884. Since the opening of the Western Australian gold-fields there has been an excess of emigration, which was 14,547 in 1896, 6,454 in 1897, 3,789 in 1898, 1,563 in 1899, and 1,427 in 1900.

Queensland shows an annual growth in population in ten years of 2.7 per cent. The population on March 31, 1901, comprised 280,092 males and 223,174 females. There were 9,313 Chinese, including 530 females; 9,227 Polynesians, including 671 females; 930 East Indians and Cingalese, including 12 females; 1,557 males and 230 females of other colored races; and 3,902 male and 2,906 female aborigines, exclusive of those living in a migratory or savage condition. Of the three divisions of Queensland the southern contained 323,380, the central 63,919, and the northern 110,957 inhabitants. The number of immigrants in 1900 was 36,348, inclusive of 1,085 Chinese and 1,760 Pacific islanders; the number of emigrants was 55,433, inclusive of 807 Chinese and 996 Pacific islanders. In 1899 the state capital had 119,428 inhabitants on March 31, 1901, inclusive of suburbs. Charters Towers had 20,976; Rockhampton, 19,661; Townsville, 15,500; Ipswich, 15,246; Gympie, 14,431; Toowoomba, 14,087; Maryborough, 12,900.

The population of South Australia showed an increase for the ten years of 1.3 per cent per annum. It was composed of 184,432 males and 175,182 females. In the northern territory there were 4,890 persons, most of them Chinese coolies, and only 436 of them females. The population of Adelaide, the capital, was about 100,091, inclusive of suburbs. The immigration by sea in 1900 was 31,094, and emigration 30,417.

The population of Western Australia consisted of 112,004 males and 70,459 females. Perth, the capital, contained 36,190 inhabitants; Fremantle, 20,359. The population continues to increase through immigration, mainly from the older colonies. In 1900 the number of immigrants was 24,921, and of emigrants 19,921, giving a net increase of 5,000.

The annual increase of population in Tasmania between 1901 and 1901 was 1.0 per cent per annum. The population on March 31, 1901, consisted of 89,624 males and 82,561 females. Of the total population 136,629 were born in Tasmania, 12,520 in other states of Australia, 18,415 in Great Britain and Ireland, 773 in Germany, and 484 were Chinese. The number of immigrants in 1900 was 23,086. The recorded emigration was 22,574, but about 3,000 departures are believed to have been unreported. Hobart had 24,654 inhabitants in 1901; Launceston, 18,022.

The movements of population in the several states in 1900 was as follows:

Federal Finances.—In the budget presented in the House of Representatives on Oct. 8, 1901, the revenue for the year ending March 31, 1902, was estimated at £10,330,750, and the expenditure at £9,339,743. The revenue from customs and excise was estimated at £26,909,000, of which £26,909,000 are collected on stimulants and narcotics and the balance from import duties of three kinds—fixed, ad valorem, and composite. New South Wales was expected to pay £2,360,000 of the customs and excise duties; Victoria, £2,410,000; Queensland, £1,490,000; South Australia, £265,000; Western Australia, £200,000; and Tasmania, £270,000. The remainder of the revenue is derived from the postal and defense services, yielding £2,320,750. The expenditure on Commonwealth services was estimated at £3,024,106, leaving £6,315,637 to be returned to the states, which receive severally the following amounts: New South Wales, £1,922,491; Victoria, £1,092,303; Queensland, £961,513; South Australia, £570,256; Western Australia, £656,958; Tasmania, £592,250. The receipts of the Commonwealth for the year ending June 30, 1902, were £113,304,800, of which customs and excise yielded £9,398,300, postal receipts £2,578,700, and miscellaneous sources £17,800. The expenditures of the Federal Government were £3,851,300, leaving £7,373,500 to be distributed among the states.

Commerce and Production.—The value of the foreign trade of the several states in 1900 is shown in the following table:

The area cropped in New South Wales in 1901 was 1.18 per cent of the total area of the state. Few farms exceed 500 acres. The number of holdings on March 31, 1901, was 69,439, covering 46,856,577 acres which the Government had alienated, and 128,034,958 acres occupied on pastoral leases. The state allows settlers to select land for £1 an acre to be paid in instalments upon 940 acres in the eastern, and up to 2,500 acres in the central districts. The wheat-crop of 1901 was 16,173,711 bushels, from 1,530,609 acres; the corn-crop, 6,292,745 bushels, from 206,041 acres; the potato-crop, 84,505 bushels. There were 2,343,138 acres cultivated. The produce of tobacco was 1,934 per cent per cent. The area of crops, 1,184,118 tons, from 22,114 acres; of wine, 891,190 gallons, besides 11,170 gallons of brandy, from 8,441 acres of vineyards; of table fruits, 4,214 tons. There were 14,151 acres of pastures. The sheep population was 3,811,991 sheep, 1,983,116 cattle, 481,417 horses, and 256,577 hogs. The forests cover one-fourth of the state. The timber reserves and state forests is 5,946,555 acres.

The gold production of New South Wales in 1901 was 270,724 ounces, value £921,582. The quantity of silver-lead ore and metal mined in 1900 was 438,938 tons, valued at £2,513,874. Of silver 774,203 ounces, of the value of £90,243, were produced. The value of copper produced was £243,301. The quantity of coal mined in 1900 was 5,507,497 tons, valued at £1,668,911; in 1901, 5,968,426 tons, valued at £2,178,929. The wool exports in 1900 were 221,295,084 pounds, valued at £23,342,612. The value of gold coin exported was £3,389,822; of coal, £1,273,034; of frozen and preserved meat, £285,757; of hides and skins, £756,528; of tallow, £454,505; of leather, £243,500. The total imports of New South Wales in 1900 the value of £9,293,117 came from Great Britain, £11,512,085 from Australasian colonies, £1,095,154 from other British possessions, £2,357,901 from the United States,
and £2,562,154 from other foreign countries. The imports by land amounted to £3,480,085, and exports to £2,549,139. Of the total exports, £1,874,827 were home products and £2,291,026 foreign products.

Of the total area of Victoria the Government has alienated 3,200,000 acres, leaving 6,300,000 immediately available for agriculture. In 1901, the area under crops was 3,255,000 acres, and the area under grass was 1,719,000 acres for pastoral purposes. The timber and water reserves, including state forests, have an extent of 4,892,000 acres; auriferous lands, 1,544,110 acres. The area under crops in 1901 was 3,925,000 acres, of which 2,071,000 acres yielded 17,847,000 bushels of wheat, 502,000 acres yielded 67,000 tons of hay, 365,000 acres yielded 3,952,000 bushels of oats, 59,000 acres yielded 1,215,000 bushels of barley, and 39,000 acres yielded 123,000 tons of potatoes. There were 226,000 acres of meadows, 30,000 acres of vineyards, and 57,000 acres of orchard and garden. The gold output in 1900 was 607,407 ounces, valued at £3,169,628, the number of miners employed being 29,035. In 1901 the gold production was 789,562 ounces. The total value of imports in 1900 Great Britain furnished £7,055,026, Australasian colonies £5,679,200, India £465,367, Ceylon £173,392, Canada £81,858, New Zealand £338,911, and foreign countries £3,543,124, of which £1,161,880 came from the United States, £775,056 from Germany, £292,563 from Java and the Philippine Islands, £329,734 from Denmark, £302,738 from France, £199,631 from Belgium, £84,302 from China, and £180,220 from other countries. Of the total value of exports Great Britain took £918,398, Australia £2,709,310, India £216,100, Ceylon £572,574, Canada £11,000, other British possessions £1,482,423, and other foreign countries £2,600,649, of which £370,785 went to France, £239,735 to Germany, £203,245 to Belgium, £120,138 to the United States, £170,424 to China, £47,493 to Java and the Philippines, and £32,521 to other countries. The imports of wool in 1900 were £1,287,677 in value; of cotton goods, £1,041,523; of woolen goods, £707,458; of iron and steel, £293,768; of live stock, £207,904; of sugar, £260,342; of lumber, £206,173; of coal, £336,360; and of tea, £370,090. Of oil, £310,178; of all other goods, £10,128,909. The exports of wool were £4,217,018 in value; of gold coin and bullion, £4,132,061; silver, £420,001; wheat, £4,189,935; the wheat export being £392,480; of live stock, £705,619; of frozen meat, £411,451; of hides, skins, and furs, £300,673; of leather and harness, £344,729; of clothing, £173,799; of tallow, £174,985; of sugar, £118,964; of tea, £148,729; of all other goods, £3,705,505. The quantity of wool exported, one-fifth coming from other parts of Australia, was 102,205,956 pounds.

In Queensland the Government still owns 411,928,560 acres, or 97 per cent. of the area of the state, having alienated 13,323,524 acres outright and 2,585,996 acres conditionally on the payment of instalments. Government lands can be purchased for the conditions of residence or improvement on the payment of 13s. 6d. an acre in 20 annual instalments, or, with such conditions, in homesteads of 160 acres for 2s. 6d. an acre, payable in 10 instalments. It is also possible to lease agricultural land for twenty years up to 1,589,375 acres. The annual rent of 2s. 6d. per acre, payable in 21 instalments, the annual rent being 3d. an acre per annum. Half the surface of the state is forest. Scrub lands can be leased for thirty years at 3d. an acre on condition that the scrubber clears and fence his run. Squeetters already occupy 225,000,000 acres of the public domain. The live stock in 1900 consisted of 3,938,788 horses, 4,078,191 cattle, 10,339,185 sheep, and 12,187 pigs. There were 2,456,047 bushels of corn harvested from 122,974 acres, and 1,790,000 bushels of wheat from 79,304 acres. The area under sugar-cane was 108,535 acres, yielding 92,554 tons of raw sugar. The output of coal in 1900 was 497,132 tons, valued at £173,705. The production of gold was 963,189 ounces, valued at £2,871,709; of tin, 1,123 tons, value £74,041; of copper, 384 tons, value £23,040; of silver, 112,990 ounces, value £12,712. Lead, bismuth, wolfram, manganese, molybdenite, and antimony are mined also, and opals and other precious stones. The importation of textiles and clothing in 1900, £4,353,572; of metals and metal manufactures, £2,357,933. Of the total exports £3,100,700 came from Great Britain, £5,101,066 from Australasian colonies, £2,357,124 from the United States, £1,052,392 from British possessions outside of Australia, and £439,934 from other countries. Of the exports £5,498,128 went to Great Britain, £3,271,056 to Great Britain, £432,596 to British possessions, £2,506 to the United States, and £966,604 to other countries.

The area of South Australia is 578,361,600 acres, and only 344,740 acres had become private property up to Jan. 1, 1901. Freeholds and leaseholds together amounted to 93,383,621 acres. There were 3,279,406 acres under crops in 1901, of which 1,913,247 acres produced 11,253,146 bushels of wheat. Orchards occupied 16,001 acres; vineyards, 20,158 acres. The quantity of wine made was 1,388,847 gallons, of which 476,546 gallons were exported. The live stock consisted in 1900 of 166,790 horses, 214,761 cattle, and 5,235,220 sheep, exclusive of the northern territory, where there were 12,802 horses, 257,067 cattle, and 48,057 sheep. The value of copper exported in 1900 was £371,950; of copper ore, £32,526. The total mineral product was valued at £431,289. The exports of wool were valued at £2,003,391; of gold, £737,238; of tea, £301,302; of rubber, £1,225,904; of raw jute, £188,000; of tea, £1,128,909. The exports of wool were £4,217,018 in value; of gold coin and bullion, £4,132,061; of silver, £420,001; wheat, £4,189,935; the wheat export being £392,480; of live stock, £705,619; of frozen meat, £411,451; of hides, skins, and furs, £300,673; of leather and harness, £344,729; of clothing, £173,799; of tallow, £174,985; of sugar, £118,964; of tea, £148,729; of all other goods, £3,705,505. The quantity of wool exported, one-fifth coming from other parts of Australia, was 102,205,956 pounds.

Agriculture has made rapid progress in Western Australia, yet only 201,946 acres out of a total area of 624,600,000 acres were in cultivation in 1900. In 1901 there were 74,130 acres under wheat, 8,480 under barley and oats, and 104,104 acres in grass. The area alienated in 1900 was 48,957 acres, making altogether 6,619,284 acres in the hands of private owners. Grapes for wine and table were planted on 3,245 acres. The live stock in 1901 consisted of 4,800 horses, 3,333,617 sheep, 2,431,861 cattle, and 2,431,861 sheep. There were 2,561 leases of gold-mines in 1900. The number of miners employed was 10,060. The gold output was 1,380,550 ounces of gold. The annual output of copper was 249 tons and of concentrated copper ore, 846 tons, together valued at £33,937. From 103 tin-mines were obtained 670 tons of ore and eight tons of ore, valued at £37,050. There were 71 coal-mines operated.
value of gold exports, which reached £2,461,368 in 1899, was £3,799,124 in 1900. Other exports in 1900 were pearl shells of the value of £360,513; pearl oyster £326,320; timber, £438,461; wool, £270,718; skins, £54,109. Of the total imports £2,743,505 in value came from other Australasian colonies, £2,257,746 from Great Britain, £279,699 from other British possessions, £232,035 from the United States, and £487,302 from other countries; of the total exports £2,208,419 went to Great Britain, £1,125,338 to Australasian colonies, £214,766 to other British possessions, £175 to the United States, and £243,366 to other countries.

Of 18,778,000 acres, the area of Tasmania, 4,834,944 acres had up to Dec. 31, 1900, been sold or granted to agricultural settlers, leaving 11,943,056 acres still the property of the Crown, consisting mostly of forest and mineral lands. There were 19,422 persons engaged in agriculture and 1,881 in pastoral pursuits in 1901. The area leased as sheep-runs was 1,206,794 acres. The area under crops in 1901 was 224,352 acres; under grass, 306,180 acres. The yield of wheat, from 51,825 acres, was 110,421 bushels; of oats, from 45,073 acres, 1,405,813 bushels; of potatoes, from 23,065 acres, 83,662 tons; of hay, from 61,541 acres, 163,618 manifold, the live stock being 1,638,956 sheep, and 68,291 pigs. There were 420 licenses on Jan. 1, 1901, for gold, 441 for tin, 29 for coal, 229 for silver, and 102 for copper mines.

The value of gold exported in 1900 was £207,162; of silver and silver ore, £252,080; of copper ore, £201,960; of tin, £270,988; of wool, £241,214; of timber and bark, £71,618; of hops, £19,870. The output of silver and copper ore was 446,436 tons, valued at £1,583,404. The duty levied on imports is on the average 22.44 per cent. The imports of textiles were £240,632 in value in 1900; of hardware, £131,129; of sugar, £114,499; of machinery, £112,044. Of the total value of imports £290,722 came from Victoria, £20,973 from South Australia, £51,944 from New South Wales, £204,904 from other British possessions, £226,603 from Great Britain, and £29,696 from foreign countries: of the exports £888,000 went to Great Britain, £513,161 to New South Wales, £208,813 to Victoria, £109,088 to other British possessions, and £810,855 to foreign countries.

Irrigation.—The stock growers of Australia have been relegated in the older colonies to the semiarid regions, and part of these have been reclaimed for agriculture by irrigation. The colonial governments and private individuals have given attention to securing a water-supply by artificial means for animals, great numbers of which have perished in years of unusual drought. The water-supply has already been increased by artesian bores to such an extent that millions of sheep and cattle are thriving on lands where grazing was formerly impossible. In all Australia on Jan. 1, 1900, there were 1,639,127 horses, 267,432 cattle, and 79,024,733 sheep. By Jan. 1, 1901, the Government of New South Wales had completed the sinking of 82 wells, of which 56 flowed spontaneously; 18 required pumps, and 8 water failures. The daily supply from these wells is 32,700,000 gallons. It was necessary to drill 4,467 feet in the rainless district west of the mountains in northern New South Wales, and 745,000 gallons a day. The Kenmare well, on the arid northern plains, supplies 2,050,000 gallons from a depth of only 1,682 feet. The well at Pera, 1,202 feet deep, gives 300,000 gallons a day, and here and wood, £39,008; wheat, and sugar-cane have been grown experimentally by irrigation, as well as vegetables and pineapples and other fruits, proving that the soil of the waterless plains of Australia possesses every element of fertility except moisture and offers great prospects for agriculture through irrigation wells. On the desert route from Wamaring to Milparinka 7 artesian wells now supply 2,300,000 gallons a day. Further north borings have given satisfactory results. Besides the Government borings private individuals have sunk a great number of wells, yielding in the aggregate a supply of 45,000,000 gallons a day. In Victoria borings have not been generally so successful. Many proved dry, and in many wells that were struck the water was salty and worthless. Nevertheless, success has on the whole repaid the efforts in that state. A remarkable settlement at Mildura, on the river Murray, is peopled by 4,000 emigrants from the British Islands, who in thirteen years have invested over £1,000,000 in the cultivation of vineyards, orange groves, and fruit farms and hops, from 624 acres, 966,679 pounds. One of the most important products is fruit, which was exported, fresh and preserved, to the amount of £279,988. The live stock on Dec. 31, 1901 was 31,921 cattle, 163,618 manifold, the live stock being 1,638,956 sheep, and 68,291 pigs. There were 420 licenses on Jan. 1, 1901, for gold, 441 for tin, 29 for coal, 229 for silver, and 102 for copper mines.

The value of gold exported in 1900 was £207,162; of silver and silver ore, £252,080; of copper ore, £201,960; of tin, £270,988; of wool, £241,214; of timber and bark, £71,618; of hops, £19,870. The output of silver and copper ore was 446,436 tons, valued at £1,583,404. The duty levied on imports is on the average 22.44 per cent. The imports of textiles were £240,632 in value in 1900; of hardware, £131,129; of sugar, £114,499; of machinery, £112,044. Of the total value of imports £290,722 came from Victoria, £20,973 from South Australia, £51,944 from New South Wales, £204,904 from other British possessions, £226,603 from Great Britain, and £29,696 from foreign countries: of the exports £888,000 went to Great Britain, £513,161 to New South Wales, £208,813 to Victoria, £109,088 to other British possessions, and £810,855 to foreign countries.

Irrigation.—The stock growers of Australia have been relegated in the older colonies to the semiarid regions, and part of these have been reclaimed for agriculture by irrigation. The colonial governments and private individuals have given attention to securing a water-supply by artificial means for animals, great numbers of which have perished in years of unusual drought. The water-supply has already been increased by artesian bores to such an extent that millions of sheep and cattle are thriving on lands where grazing was formerly impossible. In all Australia on Jan. 1, 1900, there were 1,639,127 horses, 267,432 cattle, and 79,024,733 sheep. By Jan. 1, 1901, the Government of New South Wales had completed the sinking of 82 wells, of which 56 flowed spontaneously; 18 required pumps, and 8 water failures. The daily supply from these wells is 32,700,000 gallons. It was necessary to drill 4,467 feet in the rainless district west of the mountains in northern New South Wales, and 745,000 gallons a day. The Kenmare well, on the arid northern plains, supplies 2,050,000 gallons from a depth of only 1,682 feet. The well at Pera, 1,202 feet deep, gives 300,000 gallons a day, and here and wood, £39,008; wheat, and sugar-cane have been grown experimentally by irrigation, as well as vegetables and pineapples and other fruits, proving that the soil of the waterless plains of Australia possesses every element of fertility except moisture and offers great prospects for agriculture through irrigation wells. On the desert route from Wamaring to Milparinka 7 artesian wells now supply 2,300,000 gallons a day. Further north borings have given satisfactory results. Besides the Government borings private individuals have sunk a great number of wells, yielding in the aggregate a supply of 45,000,000 gallons a day. In Victoria borings have not been generally so successful. Many proved dry, and in many wells that were struck the water was salty and worthless. Nevertheless, success has on the whole repaid the efforts in that state. A remarkable settlement at Mildura, on the river Murray, is peopled by 4,000 emigrants from the British Islands, who in thirteen years have invested over £1,000,000 in the cultivation of vineyards, orange groves, and fruit farms and hops, from 624 acres, 966,679 pounds. One of the most important products is fruit, which was exported, fresh and preserved, to the amount of £279,988. The live stock on Dec. 31, 1901 was 31,921 cattle, 163,618 manifold, the live stock being 1,638,956 sheep, and 68,291 pigs. There were 420 licenses on Jan. 1, 1901, for gold, 441 for tin, 29 for coal, 229 for silver, and 102 for copper mines.
Vast tracts of arid land, with a sparse population, have left little evidence of past civilizations. The area is sparsely populated, with a few small towns and settlements scattered across the vast expanse. The climate is hot and arid, with little rainfall, making agriculture challenging. The primary industries are livestock farming, particularly sheep and cattle, and mining, with significant deposits of gold, coal, and other minerals. The transport infrastructure is primarily composed of railroads, with a network of rail links spanning the country, facilitating trade and communication. The development of the rail network has been crucial in integrating the different regions of the country.
cable, the branching off at Norfolk island, was laid before the end of March, 1902, and a few days later the section from Norfolk island to Fiji was in place. From Fiji it was carried to Fanning island, where it joined to the cable laid from West Coast inlet, British Columbia.

**Defense.**—The military forces of the 6 states forming the Commonwealth had a total strength of 23,638 men, of whom 1,902 were paid, 14,291 partly paid, and 7,670 unpaid. New South Wales had in 1900 a regular force of 726 men, volunteer forces numbering 8,506, of whom 2,300 received some payment, and reserves and rifle clubs numbering 3,004 men. Victoria had a permanent force of 396 men, 3,404 militia, and 3,884 volunteers. In Queensland every able-bodied man is by law liable to military duty, and besides a regular force of 300 men there are about 2,500 militia who receive pay while undergoing drill, 1,280 volunteers to whom uniforms and arms are furnished, and 4,000 citizens organized in rifle clubs and provided with arms and ammunition by the state. South Australia has a defense force of 136 officers and 2,826 men, including reserves, besides which there are 1,017 members of rifle clubs and 353 armed police who may be called out for military service in an emergency. Western Australia has 5 battalions of rifles and 3 batteries of volunteer artillery, and 1 battery of permanent artillery stationed at Albany, the total force numbering 135 officers and 2,961 men. Tasmania has a volunteer defense force of 2,729 officers and men. Major-Gen. E. T. H. Hutton, commander of the military forces of the Commonwealth, reported to Sir John Forrest, Minister of Defense, that the total number of troops available was 29,571, consisting of 15,470 men in the garrison corps and a field force of 14,101 men with 60 guns. It was proposed to increase the latter to 29,748 men on the war footing, giving a total of 44,218, the field force to consist of 6 brigades of light horse and 3 brigades of infantry, with field-artillery and engineers in the latest approved proportion. The geographical position of Australia renders it less liable to attack than most parts of the British Empire, but Australian interests outside of Australia are peculiarly open to foreign interference.

It is impossible for an expedition from an enemy's base in Asia, Africa, or Europe to land in Australia unless the force has first been defeated. Nevertheless, it is important to guard against raids made for the purpose of extorting an indemnity, destroying commerce, or obtaining coal. Therefore the security of the naval bases must be insured, and arrangements are necessary to concentrate the available troops at any threatened point. Hence the early extension of the railroad into Western Australia is desirable. A military college for the training of officers, the development of rifle clubs, and the establishment of arsenals for the manufacture of arms and ammunition are recommended, and the sum of £500,000 is required to provide arms and complete the equipment of the field and garrison troops. The abolition of some of the military and volunteer payments and the absorption of their members into other corps, in conjunction with a heavy curtailment of the naval force, provided a way for a reduction in the military expenditure. The proposed petition to Parliament by the ministry. Proposals for military contributions toward the cost of imperial defense have not been well received in Australia. The Australian community, with the Parliament, expect that the Government will contribute according to their population is regarded as a species of taxation without representation. The financial limitations imposed by the Constitution preclude the Commonwealth from undertaking its full share of the defense of the Empire, but the Australians will equip themselves to defend their own shores.

The chief ports of Australia are fortified, and forts have been built at Thursday island, and King George Sound, at the expense of the imperial and colonial governments. In the beginning of 1902 there were 12 vessels of the British royal navy stationed in Australasia, with headquarters at Sydney. Besides these there are the vessels built for Australasia under the Australasian naval force act of 1887, 2 cruisers of 2,575 tons and 2 torpedo gunboats of 735 tons, for which the Australasian colonies pay £23,000 a year as interest on the cost of construction and £91,000 for maintenance on condition that these vessels be not withdrawn in war time. But they have become obsolete, and other schemes are under discussion. The British Admiralty propose the abolition of the entire Australian fleet and the payment of an increased cash subsidy by Australia toward the cost of the imperial navy. In Australia opinion favors the formation of an Australian fleet that shall form part of the imperial navy and be under the command. The government on the Australian station, a scheme recommended to the Commonwealth Parliament by Capt. Crosswell, naval commandant in Queensland.

The Commonwealth Parliament. - The Federal Parliament, as well as the parliaments of the principal states, was dominated to a great extent by the Labor party, which was represented by some of the ablest politicians and could control legislation, although it has not an actual majority.

The approval of Parliament was obtained for the principle of a fair day's wages for a fair day's work, a day of eight hours and a minimum wage, which was already fixed at 7s. a day in New South Wales, where the state Government undertook to give public employment to all laborers who could not obtain that rate from private employers. That Australia must be a white man's country was one of the prime demands upon the Commonwealth Parliament, because all colored and other colored laborers are allowed to enter Australia in numbers they will soon demoralize the labor market. The Chinese were already effectively excluded. A resolution to this effect was passed by the state governments. Parliament was asked to exclude and expel Kanakas, Hindustanis, Japanese, and all others of alien race. The sugar growers of Queensland declared that their industry would perish if they were not allowed to employ Kanakas, who performed labor that white men could not be called upon to do, and who were kindly treated and able to save considerable sums out of their wages. The exclusion law against the Kanakas ordered the deportation of those already in Australia, disregarding the guarantees given to them and making no provision for getting them a living on their return to the islands from which they came. A law excluding Japanese was passed, although the conductors of the pearl-shell fisheries in Torres Strait threatened to remove their fleets to Dutch New Guinea and continue pearl mining with Japanese divers outside of the 3-mile limit. The Premier of Queensland suspended the use of the primary Act, so far as it affects the pearl-shell fisheries, pending an inquiry. The earliest law against colored labor was one insisting that in carrying out contracts, the Asian labor should be employed. This roused a protest from steam-
ship owners and a remonstrance from the Indian Government when applied to land sailors on mail-steamer. The emigration restriction act, which became law in the beginning of 1901, is so worded that it can be used to exclude any immigrants, white as well as colored, British-born as well as alien. No person shall be allowed to land in Australia who, when asked to do so, refused to state whether he or any customs officer—fails to write out at dictation and sign a passage of 50 words in a European language dictated by the officer. The only exceptions are Australians returning from abroad, ambassadors, soldiers, and seamen in the British service, and crews of trading vessels during their stay in port. Any person found at large contrary to the provisions of the act may be fined £50 or imprisoned for six months. The act was enforced only against Hindus, Japanese, and other colored immigrants.

The principal subject of discussion in Parliament during the early months of 1902 was the tariff, which was intended by the Government to provide revenue in the first instance, but to have a decided protectionist incidence. The free-traders in the House of Representatives were strong enough to abate the protectionist features, and the result was in most cases a compromise between the proposals of the Government and those of the Opposition. Thus the duty on Oregon timber used in mines was lowered from 1s. to 6d. per 1,000 feet, and that on boots and shoes was reduced one-half to 30 per cent. ad valorem. New Zealand timber was placed on the free list. An import duty of 14s. a gallon was placed on spirits, a reduction of 1ls. on domestic brandy and 12s. 6d. on domestic whisky and rum. Wines above 40 per cent. of alcoholic strength paid the same duty as imported spirits. Instead of 30 per cent. an import tax of 12s. per cent. was imposed on machinery. Imported cottons and linens were taxed only 5 per cent. of their value. Kerosene was made free, and the tea duties collected hitherto by the colonial governments were abolished, entailing heavy losses of revenue to some of the states. The protected manufacturers of Canada complained of the effect of the tariff, and were discarding the yards of manufacture, but the Government made no attempt to discriminate in favor of part of the empire, lest it should come into conflict with the desire of the Commonwealth to promote the dignity of its own manufactures. A clause was adopted for suspending duties in cases where they led to the formation of trusts or combinations. After much discussion as to the policy and constitutionality of the measure it was decided that imports by the governments of the states should be dutiable. The Senate made amendments in over 100 duties, reducing the rates in all cases. The House of Representatives accepted half the amendments, the less important ones, and sent the bill back to the Senate, which abandoned some of its proposals, but repeated its request as to the others. This raised a constitutional question. The Federal Constitution empowers the Senate to ask the House of Representatives to make amendments in bills dealing with taxation. The Governor-General, as such, had not been considered was regarded by some as an assumption of coordinate powers with the House over money bills. The House of Representatives therefore, and the Senate, as such, had not been considered, made the reservation that it should be without prejudice as to its constitutional powers. In regard to the remaining items some reconstructions were made, and the tariff bill was finally passed by the Senate on Sept. 9. An electoral bill was passed providing for woman suffrage. Proportional representation was rejected by the Senate. All colored aliens were disqualified. The bill to establish a Federal High Court, consisting of the Chief Justice and four other judges, was not passed. The Senators examined various sites for the future Federal capital, but deferred the final site to the in- tense cost of land and buildings involved. It was decided that in the mean time Parliament should sit alternately in Sydney and Melbourne. Lord Hopetoun requested an additional allowance to provide for the extra cost of keeping up residences in both capitals. Parliament voted £10,000 to recoup him for his expenses in entertaining the Duke of York, but rejected the Government bill to grant a supplementary allowance of £5,000 a year in addition to the annual salary of £10,000 pending the selection of a permanent capital. The postponement of this selection was considered a breach of the Constitution by the ministers, who intended to make the question the first business of the next session. Inasmuch as the salary of the Governor-General is fixed in the Constitution and can not be increased during the continuance in office of a Governor-General, such an amendment would be unconstitutional. Besides, it is the present policy of the Australian governments to reduce expenses. The salaries of the state governors have been cut down, and the members of the state parliaments are to be reduced in number, especially in the legislative councils. Lord Hopetoun, who as Governor-General and when he was Governor of Victoria has spent more than his salary, sent in his resignation to the Colonial Secretary when Parliament declined to increase his pay, and it was accepted. Before he entered upon the Governor-Generalship the agent-general for New South Wales led him to expect that an extra allowance would be voted to enable him to reside in Sydney when Parliament was not sitting. Statemen of some of the other colonies were in favor of such a dual residence, and the New South Wales Parliament passed a resolution that he should have an allowance of £10,000 in addition to his salary for the purchase of a house. Hence Lord Hopetoun considered the action of the Commonwealth Parliament a breach of promises that had been held out and derogatory to the dignity of his office, and the sovereignty. Before selecting his successor Mr. Chamberlain asked to have a provision made for the maintenance of Government houses in both Sydney and Melbourne, and Parliament agreed to allow the next Governor-General £5,000 per annum. Meanwhile Lord Tennyson was appointed acting Governor-General, and sworn in on July 17. After returning to England Lord Hope- touin was advanced in the peerage by having conferred upon him the title of Marquis of Linlithgow.

Subjects of legislation to be considered at the next session are a decimal coinage system based on the sovereign, a bill dealing with industrial disputes, and a banking law which would render unlikely a financial crisis. Old-age pensions can not be dealt with by the Commonwealth Parliament at present. State property connected with the transferred services will be valued and an agreement made for the transfer of the property and interest at the rate of 3½ per cent. For public works the Federal as well as the state legislators made appropria-
tions exceeding the Government estimates, though none of the bills was registered in the New South Wales. The Governor was held at Sydney in the middle of May. Mr. Barton went to England to take part in the conference of colonial ministers that was to be held in connection with the coronation. During his absence the Attorney-General acted as Premier of the Commonwealth. The Commonwealth Government prepared to take over the administration of British New Guinea. It is proposed that the northern territory of South Australia be transferred to the Federal Government, which will complete the railroad from Adelaide to Port Darwin, selling land to pay the cost.

New South Wales. The Legislative Council had 62 members in 1901, who are appointed for life. There are 125 members in the Legislative Assembly, who are elected in as many districts by the votes of all male British subjects of full age who have resided one year in the state and three months in the district. The Governor at the beginning of 1902 was Vice-Admiral Sir Harry Holdsworth Rawson, appointed Jan. 20, 1902. The Cabinet of the beginning of 1902 was composed as follows: Premier, Colonial Secretary, and Minister of Railways, John See; Colonial Treasurer, Thomas Way; Attorney-General, Minister of Justice, Bernard Ringrose Wise; Secretary for Lands, William Patrick Crick; Secretary for Public Works, Edward William Sullivan; Minister of Public Industry and Labor, John Perry; Secretary for Mines and Agriculture, John Kidd; Vice-President of the Executive Council, Francis Bathurst Sutton; without portfolio, James Hayes and Walter Bennett.

The net revenue of the Government for the year ending June 30, 1900, was £2,970,677, of which taxation produced £2,618,966, land revenue £2,110,076, Government services £4,992,521, and miscellaneous sources £244,014. Of the revenue from taxation the import and excise duties made £1,736,574, and the stamp-duities, land and income taxes, and licenses, £881,692. The net expenditures were £2,888,977, of which £2,102,784 were for railways and tramways, £725,521 bill for which was incurred to build railroads, tramways, telegraphs, sewerage, waterworks, and irrigation works, amounted on June 30, 1900, to £65,332,983, paying the average interest of 3.63 per cent., 2.35 per cent. being returned in the profits of the public works, which yielded 3.45 per cent. of their capital cost. Further loans amounting to £19,630,135 were authorized.

The State Assembly met on May 28. Social legislation had the first place in the ministerial program. A women's franchise bill was passed, and a bill for municipal reform. The question of reducing the Assembly to 94 members is to be submitted to a referendum. Parliament has instituted a compulsory arbitration court. The first sittings of the court were to be devoted to the establishment of a minimum rate of wages, the limitation of the hours of labor, and the regulation of child labor. The whole industrial union or the company employing on an average 50 employees per month is entitled to register as an industrial union of employers. Each industrial union on registration becomes a body corporate and has a common seal and perpetual succession. As soon as the act went into effect the trade-unions already in existence applied for registration with enthusiasm. The employers reluctantly and with hesitation also formed industrial unions—the pastoralists, the mine owners, merchants, manufacturers, and masters of the various trades. The provisions of the act placing the control of every business in the hands of a court made it a matter of necessity for employers to take steps to be represented in the court, which consists of a judge of the Supreme Court nominated by the Governor as the Governor as the Governor and by the Governor from lists submitted respectively by a body of delegates from the trade-unions and a body of delegates from the industrial unions of employers. On June 28 the Act was passed, but the act is yet, if either employers or employees fail to nominate delegates the Governor may appoint on the tribunal such persons as he may see fit. When technical questions arise before the court the court may appoint 2 assessors representing employers and employed respectively. The court has power to hear and determine any industrial dispute or industrial matter or any application under the act brought before it by an industrial union. A person not a member of a union can come into court for the remedy of a grievance sustained through a decision of the tribunals, but an industrial dispute where one of the parties is not a member of an industrial union can only be referred to the court in the discretion of the registrar. Any person entitled to refer a dispute or to apply for an order of the court goes to the registrar, who summons all parties to attend. The court has full power to compel the attendance of witnesses, the production of books and papers, etc. The suspension of work by a strike or a lockout without reference of the dispute to the court entails a fine of £1,000 or two months' imprisonment or a dismissal of an employee for belonging to a union or because he is entitled to the benefit of an award subjects an employer to a penalty of £20. The court has power to prescribe a minimum rate of wages in any particular trade; to direct that unionists shall be employed in preference to non-unionists; to appoint a tribunal to determine whether an employer may employ non-unionists; to declare any regulation, custom, term of agreement, condition of employment, or dealing whatsoever in relation to an industrial matter to be a common rule of the industry affected and to direct in what way and to what extent such common rule shall be binding upon all persons engaged in that industry, whether they are before the court or not. Any union disobeying an order of the court is liable to a penalty of £500 and any individual to one of £5, and the court may specify the persons to whom such penalty shall be levied. The property of a union is insufficient to satisfy the award the individual members are liable up to £10. The power of the court includes all or any matters.
relating to the wages, allowances, or remunera-
tion of any persons employed or to be employed
in any industry; to the hours of employment,
with the wages of employees and the mode, terms, and conditions of employ-
ment; to the employment of children or young
persons or of any person or persons or any class
of persons in any industry; and the dismissal of or
refusal to employ any particular person or per-
sons or class of persons; to any established cus-
tom or usage of any industry, either general or in
any particular locality; to the interpretation of
any industrial agreement. The court may regu-
late its own procedure in every respect. It
may admit and call for such evidence as it
thinks to be the best available, whether strictly
legal evidence or not. Costs may be assessed on
either party, though each party must pay the
attorneys and agents whom it employs. The
court may dismiss a proceeding where it thinks
that the matter should and can be amicably set-
tled. It may bring before it as parties any per-
sons it thinks proper. It may sit in any locality
and may call in the aid of expert assessors and
compel the presence and testimony of any wit-
nesses it sees fit to call. The president of the
court has extensive powers of settling all prelimi-
ary matters in the case. A final decision of a dispute may be disposed
of by any schedule.

Victoria.—The 48 members of the Victorian Legislative Council are elected for six years by f	b
frontiers or king's officers of property rated at £25
year, and members of the learned professions. The Legislative Assembly has 95 members elected
for three years by universal male suffrage. The number of voters for the Council in 1901
was 130,672; for the Legislative Assembly, 276,
314. The Governor is Sir George SYDENHAM
Clarke. The ministry constituted in September,
1901, was composed as follows: Premier, Treasur-
er, and Minister of Labor, A. J. Peacock;
Chief Secretary and Minister of Railways, W. A.
Trenth; Attorney-General, Sir Samuel GILLOTT;
Minister of Agriculture, J. Morrissey; Minister
of Public Instruction, W. Gurr; Minister of
Land, D. J. DUGGAN; Minister of Public Works
and Health, W. M. McCulloch; Solicitor-General,
J. H. R. Park; Attorney-General, G. W. KNIGHT; Min-
ter of Railways, J. B. Burton; without portfolios, R. McGregor
and E. J. Crooke.

The public revenue in the year ending June 30, 1901, amounted to £7,400,856, of which £2,854,592
came from taxation, £3,008,521 from rail-
roads, £886,061 from posts and telegraphs,
£885,283 from Crown lands, and £493,426 from
other sources. Of the tax revenue £1,973,216
were derived from customs, £329,377 from ex-
ter, £108,222 from the land tax, £126,478 from
duties on estates of deceased persons, £18,060 from
a duty on bank-notes, £170,600 from the
stamp-duty, £43,968 from tonnage dues, and
£215,071 from the income tax. The Govern-
ment expenditure was £7,253,136, of which £2,835,998
was for the public debt, £2,801,384 for railways,
£539,869 for other public works, £521,918 for
posts and telegraphs, £655,579 for public in-
struction, £320,118 for pensions, £99,610 for
charitable institutions, £312,759 for police and
prisons, £201,611 for defense, £95,032 for cus-
toms and harbors, £98,879 for Crown lands,
£194,560 for mining and agriculture, £171,838
for the courts, £268,821 for government
expenses, and £301,842 for other purposes.

The funded debt on June 30, 1900, amounted to
£4,268,808, of which £36,740,813 were bor-
rowed for railways, £885 for water-
works, £778,775 for state school-buildings, and
£2,518,376 for various public works. The aver-
age interest on the debt is 3.83 per cent. The
local debts in Victoria amount to £10,639,396.
The local revenues in 1901 were £2,473,056, and
expenditures to £1,602,737.

The ministers offered their resignations col-
lectively in November, 1901. No immediate ac-
tion was undertaken until, in the letter that
last presented they proposed to withdraw their
resignations on the ground that circumstances
had altered. They were therefore retained in
office. A popular agitation impelled the ministry
to go further than was intended in framing a
measure for reducing expenditure on Parliament.
The Labor party alone in Victoria, as in New
South Wales, opposed the reduction of the num-
ber of representatives or the curtailment of their
salaries, on the ground that it would weaken the
representation of the working classes. The Gov-
ernment brought in a bill reducing the number
of members in the Assembly and the Council, and
limiting the ministers to 6. The qualification
of voters for the Legislative Council was altered
to simple registration as a ratepayer. Adult
suffrage for both sexes was proposed, and provi-
sion was made for a dissolution of both houses
after a joint session has failed to settle a dead-
lock. To meet a deficit of £252,000 in the year's
account a loan of £250,000 at 3 per
cent. was raised locally at the issue price of 94.
After the assemblage of the state Parliament on
May 27 the ministers resigned in their resigna-
tions. Mr. IRVINE, who led the victorious Oppo-
sition, formed a new Cabinet on June 8 as fol-
ows: Premier and Attorney-General, Mr. IRVINE;
Treasurer, Mr. Shiels; Solicitor-General, Mr. DA-
VIES; Minister of Railroads, Mr. BENT; Minister
of Education and Health, Mr. REID; Minister
of Public Works and Agriculture, Mr. TAVENER;
President of the Board of Lands, Mr. MCKENZIE;
Minister of Mines, Mr. CAMERON; Chief Secret-
ary and Minister of Labor, Mr. MURRAY; without
portfolios, MESSRS. McLEOD, KIRTON, PIT,
and SACHSE. The new Cabinet proposed to re-
duce the number of members in the Assembly
from 95 to 50 and in the Council from 48 to 28
and the number of ministers to 7. Provision was
made for the settlement of the railway debt so that in the Federal Constitution. These pro-
posals were satisfactory to Parliament, but
when, in view of a probable deficit of £260,000,
the ministers proposed a reduction of the duties on the public service they encountered a fierce oppo-
sition. The railroad men threatened to strike if Parliament approved the retrenchment scheme.
On Sept. 9 the Cabinet was defeated in the As-
sembly by 44 votes to 33 on the proposal to re-
duce salaries. The ministers appealed to the
country. The dissolution caused the factories
act and the decisions of wages boards fixing the
wages in many trades to lapse, thereby increasing the trade-unionists. The Government wished to
prolong the operation of the temporary act for another year, but the Legislative Council insisted
on discussing the whole subject. A commission
was appointed to consider legislation of a per-
manent character. Meanwhile were empowered to fix minimum wages in the various trades. Employers who paid less were liable to a penalty. Nevertheless, they often evaded the act by various subterfuges.

Queensland.—The Legislative Council has 42
members, nominated for life. The Legislative
Assembly consists of 72 members elected by the
ballots of all males of full age who have lived six months in Queensland. Property
owners and lessees of pastoral lands can vote
in every district in which they have lands. There were 97,739 electors on the registers in 1901. The Governor is Major-General Sir Herbert Charles Chermoise, appointed in 1902. The Cabinet at the beginning of 1903 consisted of the following: Hon. A. B. McMillan, Secretary for Mines, Chief Secretary, and Vice-President of the Executive Council, Robert Philip; Attorney-General, A. Rutledge; Secretary for Agriculture, D. H. Smulian; Secretary for Education, J. F. C. Forson; Secretary for Public Instruction, John Murray; Secretary for Public Lands, W. B. O’Conell; Secretary for Railways and Secretary for Public Works, John Leathy; Treasurer, Robert Cribb; without portfolio, George Wilkie Gray.

The revenue of the Government during the year ending June 30, 1901, was £4,357,345; expenditures, £4,414,428. Of the revenue £1,365,844 were derived from customs duties on imports, £201,106 from stamp duties, £141,108 from excise and export duties, £96,614 from a duty on dividends, £51,625 from licenses, £2,921-927 from rent of pastoral lands, £263,303 from other rents and sales of land, £1,246,794 from railways, £310,353 from posts and telegraphs, and £415,100 were for interest on the public debt, £310,511 for public instruction, £1,050,132 for operating railways, £376,191 for post and telegraphs, £118,312 for public land administration, £33,141 for the Department of Agriculture, £194,894 for the Colonial Treasurer’s Department, £88,792 for endowments to municipalities and divisions. The expenditure during the year was £1,212,020, for railways, rivers and harbors, telegraphs, water-supply, defense, etc. The revenue for 1902 was estimated at £5,908,600, exclusive of £325,724 received by the Commonwealth, and expenditure at £3,887,890. The public debt on Jan. 1, 1901, amounted to £36,906,414.

The Queensland Government announced the intention of reducing the number of ministers and of members of the Legislature. An act enabling the Government to repurchase estates suitable for dairying for the purpose of cutting them up into small holdings for close settlement supplements a previous measure dealing with agricultural lands. Another act enables the state to grant special homesteads areas adjoining the leases previously made in Queensland, as in other states, for advanced to farmers, the loans to be expended only on improvements under official supervision. When the Kanaka exclusion bill was passed by the Commonwealth Parliament Premier Philip, in the interest of the sugar-planters, made an appeal that it should be reserved for the approval of the Imperial Government, but the Governor-General, on the advice of the Commonwealth ministry, signed it nevertheless. The planters of Queensland in their effort to defeat the purpose of the Labor party to exclude alien races so angered their opponents that they nearly lost the protective duty on sugar that was given in compensation for the cessation of Kanaka labor. The Commonwealth Parliament is pleased that no white laborers can be employed in the tropical lands if colored laborers are employed on the same plantations. The general election in Queensland took place in March, the Government party elected 38 members and the Opposition 30, of whom 24 are representatives of the Labor party. The sugar-planters are determined not to employ white labor so long as they can retain their blacks.

In five years the federal law requires Queensland to deport all Polynesians to the places from which they originally came. The state Government decided that when conditions on shore render it unsafe for islanders to land at their old bounties they shall again go back to Queensland, although from the beginning of 1902 the Federal Government ceased to issue licenses authorizing the employment of additional Kanakas.

Farmers who are now white or who grow sugar are entitled to a bonus of £2 a ton from the Federal Government. The planters have received the protective duty of £2 5s. a ton, the promise of which made them eager to enter the federation, yet they are willing to see the union dissolved if they cannot obtain the repeal of the exclusion act, which the Labor party of southern Queensland was most influential in carrying through with the support of labor politicians of other colonies, but against the wishes of the Queensland Government. The state Government is involved in the financial success of the sugar industry, having advanced £500,000 under the sugar-works guarantee act of 1893 to farmers for the erection of mills, most of whom are in arrears and have kept going by further advances. Other undertakings for which the great debt of Queensland was incurred have proved unremunerative, so much so that £1,500,000 of the £1,500,000 interest due on such debts had to be made good in 1901 out of the general revenue. With the protective duty and the bounty the prospect of raising sugar-cane with white labor is promising, but high prices at which uncultivated land suitable for sugar is held by the owners deters small farmers from entering the field. The smaller industry of pearl-shell fishing can probably be carried on by white fishermen, as it was once. Neither the officials nor the people consider it a benefit to Queensland now, because the capitalists engaged in it are absentees and the Japanese divers take their wages back with them to their own country.

South Australia.—The Legislative Council consists of 24 members, one-third of whom are replaced every three years by the votes of freeholders, lesseholders, and householders occupying premises rated at £25 a year. The House of Assembly contains 54 members, which number will be reduced to 39 by universal suffrage. The franchise was extended to women in 1894. The number of registered voters in 1900 was 153,268. The Governor is Lord Tennyson, appointed in 1899. The ministerial council at the opening of 1902 was composed as follows: Premier and Chief Secretary, J. G. Jenkins; Attorney-General, J. H. Gordon; Treasurer, R. Butler; Commissioner of Crown Lands, L. O’Loughlin; Commissioner of Public Works, R. W. Foster; Minister of Education and Industry, T. H. Brooker.

The state revenue for the year ending June 30, 1901, was £2,824,212, and the expenditure £2,346,677. For 1902 the revenue was estimated at £2,586,758, of which customs produce £612,000; estimated expenditure, £2,602,701. Besides customs, railroad receipts, internal revenue, posts and telegraphs, and lands furnish the main part of the public receipts, and the chief items of expenditure are interest on the debt and the operating expenses of railroads and other services, only 10 per cent. being devoted to administration, courts, police, and defense. The public debt on June 30, 1901, amounted to £28,131,880, more than half of which was borrowed to build railroads, telegraphs, and water-works. The railroads yield a net profit of 3½ per cent.
Under the new Constitution of South Australia the members of the Legislature were reduced nearly one-half, which, on May 15, 1856, on the recommendation of Mr. Colenso, showed no change in the relative strength of parties except a slight loss in the Labor party. The Cabinet, reduced to 4 members by the change in the Constitution, was reconstituted at the end of March as follows: Premier and Chief Secretary, J. G. Jenkins; Attorney-General and Minister of Education, J. H. Gordon; Treasurer and Minister of Lands and Agriculture, R. Butler; Commissioner of Public Works, R. W. Foster. The revenue of South Australia was affected more severely than that of the other colonies by the causes that operated unfavorably in all, the drought and the fall in the prices of metals. The wheat yield was small and railroad receipts declined. The budget showed a deficit of £30,000, which had to be met by the issue of treasury bills. In order to balance the budget for the coming year the Government proposed additional taxation of incomes and new stamp-duities in conjunction with economies in railroad administration and the public service.

Western Australia.—The Legislative Council has 30 members, elected for six years by freemen and holders possessing property of the value of £100, householders occupying premises worth £25 a year, ratepayers assessed for £25 a year, or holders of leased land who pay rent to the Government £10 a year. The Legislative Assembly contains 50 members, elected by persons of either sex who are twenty-one years of age and residents in the place of residence of the members in the district. The Governor is Sir Arthur Lavely. The ministry in office at the beginning of 1902 was composed as follows: Premier and Attorney-General, G. Leake; Colonial Treasurer and Colonial Secretary, F. Illingworth; Minister for Works, Cornthwaite H. Rason; Minister for Lands, Adam Jameson; Commissioner of Railways, W. Kingsmill; Minister of Mines, H. Gregory.

The revenue for 1900 was £3,010,005, and the expenditure £2,858,654. Of the revenue customs products increased, as did the general duties, which include mainly from railroads, the post-office, mining licenses, and leases of public lands. The debt on June 30, 1901, amounted to £12,708,430, requiring the payment of £1,250,000, or about £5,977 0s. 6d. from the sinking-fund. The general election took place in January after the assumption of the premiership by Mr. Leake, whose electoral promises included the reduction of the number of members in both houses of the Legislative, electoral reform, a board of management for the goldfields, a water scheme, the establishment of a harbor trust, a factories act, and new railroad construction. After the death of Mr. Leake a new ministry was formed on June 30 as follows: Premier and Attorney-General, Mr. James; Commissioner of Railways, Mr. Kingsmill; Minister of Mines, Mr. Gregory; Commissioner of Crown Lands, Mr. Jameson; Director of Public Works, Mr. Rason; Colonial Secretary and Treasurer, Mr. Gardener. Western Australia was exempt from the drought which affected the other states. The gold product for 1902 increased notably. The state revenue in 1902 was £3,088,045. Immigration increases, and, although, as usual, immigration advances steadily. The water-works to supply Coolgardie were completed before the end of 1901.

Tasmania.—The Legislative Council numbers 19 members, elected for six years by possessors of freehold or leasehold property worth £10 or £30 a year respectively and by professional practitioners and holders of academic diplomas. The House of Assembly consists of one member elected for three years by British subjects resident in the state for twelve months. There were 9,430 electors for the Council in 1901 and 11,286 electors for the House of Assembly. The Governor is Sir A. E. Havelock. The Cabinet consisted in the beginning of 1902 of the following members: Premier and Attorney-General, Sir N. E. Lewis; Chief Secretary, G. T. Collins; Treasurer, B. S. Bird; Minister of Lands and Works, E. Mulcahy.

The revenue for 1900 was £1,054,980, and expenditure £993,731. Of the revenue £494,218 came from customs. The revenue for 1901, including the sum retained by the Federal Government, was estimated at £865,071, and expenditure at £835,000. The public debt on Jan. 1, 1901, amounted to £8,511,005, of which £2,527,032 pays 3½ per cent. and the rest 4 per cent., the whole having been raised to construct railroads and other public works.

The transfer of the customs to the Commonwealth reduced the revenue of Tasmania, while it cheapened many commodities for the people. New taxes on incomes and inheritance duties on land tax on estates worth over £10,000, and additional stamp-duities were not sufficient to equalize revenue and expenditure, in spite of drastic economies. The Government proposed not only to reduce the number of members in the Legislature, but to amalgamate the two chambers, 10 members to be elected on the Council franchise and 20 on the Assembly franchise.

British New Guinea.—The governments of Queensland, Victoria, and New South Wales, which jointly guarantee the cost of administering British New Guinea within the limit of £15,000 a year, have had a voice in the affairs of this territory, which was proclaimed a British protectorate in 1887 at the solicitation of the Queensland Government. It embraces the southeastern end of the island of New Guinea, and has an area of 99,540 square miles, containing a native population of about 350,000. The Europeans number 1,000, including gold-digging, cattle, shelling, sandalwood collectors, storekeepers, officials, and missionaries. The Commonwealth Government has proposed to provide £200,000 per annum for the next 10 years to defray the expense of administering the territory, and on this condition the Imperial Government is prepared to resign the control of the administration. The present head of the local administration, who has the title of Lieutenant-Governor, is George Ruthven Le Hunte. Congregationalist, Roman Catholic, Wesleyan, and Anglican missionaries in different sections have done something to instruct and elevate the natives. Coconut groves have been preserved and extended, and trade with Europeans is increasing. Still savagery and cannibalism render the island unsafe for whites. Tobacco and coffee have been planted by Europeans. It is unlawful to acquire land from natives or to supply them with liquor or firearms, but land can be purchased from the Crown for 2s. 6d. an acre. The revenue in 1900 was £13,831, and expenditure £19,315. Alluvial gold is mined with machinery. There are about 200 diggers in the field, as well as miners. Tobacco and hardware are imported from Queensland and New South Wales. Treepang, copra, gold, pearls, sandalwood, and tobacco are exported. The value of imports for the year 1900 was £72,286, and of exports £56,167. Pearls and treepang collecting are the principal
source of profit to white adventurers on the New Guinea coasts, and for these occupations native laborers are recruited. These laborers have in many cases been starved, defrauded, and ill treated, causing them to run away, entailing upon them severe punishment, which has resulted in fights from which the whites have suffered. At some parts of the coast, the natives are still addicted to savage raids and cannibal feasts, to which two white gold-diggers fell victims in February, 1901, and the missionary James Chalmers and his party in the April following. Late in the same year 20 persons were murdered and devoured on the Waria river. The Government staff is too small to afford protection over an immense territory or to mete out punishment. The Church of England mission, with a European staff of 26, has immediate control over 15,000 natives, and 1,000 children attend 14 schools. Under the teaching of missionaries the natives become ashamed of cannibalism, and though there are lapses among converts, the influence of civilization spreads rapidly among the people, who have considerable natural intelligence. While cannibal raids are still as frequent as ever in Dutch New Guinea and on the border, in British territory they grow less every year. The different mission stations have apportioned the territory among themselves. The Anglicans on the northeast coast have the region that was the latest to be opened up, but which on account of the gold 7,787,000 has become the center of interest to the whites.

AUSTRIA-HUNGARY, a dual monarchy in central Europe, composed, under the fundamental law of Dec. 21, 1867, of the Empire of Austria and the Kingdom of Hungary, inseparable constitutional monarchies, hereditary in the male line of the dynasty of Hapsburg-Lorraine and in the female line in the event of the extinction of the male line. The legislative power in affairs common to both monarchies, namely, foreign relations, military and naval affairs, with the exception of the national territorial armies, common finance, commercial and railroad affairs concerning both monarchies, the customs tariff, the coining, and the administration of the occupied Austrian territories, are exercised by committees of the legislative bodies of both monarchies, called the Delegations, which meet alternately in Vienna and Budapest, the Austrian and Hungarian heads of the Delegations being elected by lot from 20 members from each of the upper houses and 40 members from each of the popular chambers, elected by the representatives for each annual session. Each Delegation meets and votes separately, and in case of a disagreement the two Delegations come together and decide the matter by a joint vote. The common ministers are responsible to the Delegations and may be impeached for unconstitutional or illegal acts. The Emperor of Austria and King of Hungary is Franz Josef I, born Aug. 18, 1830, proclaimed Emperor of Austria on Dec. 2, 1848, when his uncle, Ferdinand I, abdicated in consequence of a revolution; crowned King of Hungary on June 8, 1867, when the ancient constitutional rights of the kingdom were restored. The heir presumptive is the Emperor-King's nephew, the Archduke Franz Ferdinand, born April 21, 1865, son of the late Archduke Karl Ludwig and the Princess Amalia, daughter of the King of Naples. The ministers of the whole monarchy at the beginning of 1902 were as follows: Minister of Foreign Affairs and of the Imperial House, Graf Max Anton Althann-Meran; Count Kephir von Kriehammer; Common Minister of Finance, Benjamin de Kallay.

The Common Budget.—The expenditure for common affairs in 1899 was 328,954,000 crowns (1 crown = 4 forint = 20.3 cents). The revenue from customs was 116,888,000 crowns; contribution of Austria, 145,474,000 crowns; contribution of Hungary, 946,990,000 crowns. The preliminary accounts for 1900 make the total expenditure 337,348,000 crowns, of which 124,950,000 crowns were obtained from customs; of the remainder Austria paid 138,335,000 crowns and Hungary 73,065,000 crowns. The approved estimates for 1901 make the total expenditure 337,000,000 crowns, customs yielding 125,039,000 crowns of this sum, leaving Austria to provide 136,979,000 crowns and Hungary 82,319,000 crowns. For 1902 the sanctioned estimates of expenditure amount to 355,181,000 crowns, 3,517,048,000 crowns for ordinary and 4,127,018 crowns for extraordinary purposes, appropriated as follows: 10,651,062 crowns for ordinary and 283,955 crowns for extraordinary expenses of the Ministry of Foreign Affairs, making a total of 10,734,357 crowns; 275,988,019 crowns for ordinary and 20,019,103 crowns for extraordinary expenses of the army, making 295,977,222 crowns; 30,891,000 crowns for extraordinary expenses of the navy, making 46,890,200 crowns; 4,174,307 crowns for expenses of the Ministry of Finance; 217,790 crowns for the Board of Control; 7,902,000 crowns of extraordinary expenditure for the military occupation of Bosnia. The customs revenue for 1902 was estimated at 116,341,390 crowns; revenue from the Government departments, 6,191,677 crowns; matricular contributions of the two halves of the monarchy, 254,640-067 crowns. The Ausgleich negotiated in 1867, fixing for ten years the proportional contributions of the two monarchies to the common expenditure and adjusting the customs and the financial relations in general, was continued provisionally after its expiration, no agreement having been reached as to a new arrangement. A joint commission in November, 1899, arrived at a compromise according to which Hungary should pay 3,344 by committees of the legislative bodies of both monarchies, called the Delegations, which meet alternately in Vienna and Budapest, the Austrian and Hungarian heads of the Delegations being elected by lot from 20 members from each of the upper houses and 40 members from each of the popular chambers, elected by the representatives for each annual session. Each Delegation meets and votes separately, and in case of a disagreement the two Delegations come together and decide the matter by a joint vote. The common ministers are responsible to the Delegations and may be impeached for unconstitutional or illegal acts. The Emperor of Austria and King of Hungary is Franz Josef I, born Aug. 18, 1830, proclaimed Emperor of Austria on Dec. 2, 1848, when his uncle, Ferdinand I, abdicated in consequence of a revolution; crowned King of Hungary on June 8, 1867, when the ancient constitutional rights of the kingdom were restored. The heir presumptive is the Emperor-King's nephew, the Archduke Franz Ferdinand, born April 21, 1865, son of the late Archduke Karl Ludwig and the Princess Amalia, daughter of the King of Naples. The ministers of the whole monarchy at the beginning of 1902 were as follows: Minister of Foreign Affairs and of the Imperial House, Graf Max Anton Althann-Meran; Count Kephir von Kriehammer; Common Minister of Finance, Benjamin de Kallay.

The Common Budget.—The expenditure for common affairs in 1899 was 328,954,000 crowns (1 crown = 4 forint = 20.3 cents). The revenue from customs was 116,888,000 crowns; contribution of Austria, 145,474,000 crowns; contribution of Hungary, 946,990,000 crowns. The Emperor of Austria and King of Hungary is Franz Josef I, born Aug. 18, 1830, proclaimed Emperor of Austria on Dec. 2, 1848, when his uncle, Ferdinand I, abdicated in consequence of a revolution; crowned King of Hungary on June 8, 1867, when the ancient constitutional rights of the kingdom were restored. The heir presumptive is the Emperor-King's nephew, the Archduke Franz Ferdinand, born April 21, 1865, son of the late Archduke Karl Ludwig and the Princess Amalia, daughter of the King of Naples. The ministers of the whole monarchy at the beginning of 1902 were as follows: Minister of Foreign Affairs and of the Imperial House, Graf Max Anton Althann-Meran; Count Kephir von Kriehammer; Common Minister of Finance, Benjamin de Kallay.
AUSTRIA-HUNGARY. 53

The Army.—The common army consists of 15 army corps, composed, with some exceptions, each one of 2 divisions of 2 brigades of infantry, 1 brigade of cavalry, 1 brigade of artillery, and 1 section of train. There are 62 brigades of infantry and 3 brigades of rifles; 5 cavalry divisions, with 18 brigades of cavalry; and 14 brigades of artillery, and 14 mountain-batteries. The 102 regiments of infantry are drawn from as many recruiting districts, in addition to which the Tyrol and Vorarberg furnish 4 regiments of Tyrolian jägers, 3 districts of the Adriatic littoral furnish marine troops, and 4 districts of Bosnia and Herzegovina furnish regiments which are incorporated in the Austro-Hungarian army. The infantry have the Mannlicher rifle of the model of 1895, of 8-millimeter caliber, with a maximum range of 500 meters; and 8 regiments of cavalry, consisting of 15 regiments of dragons, 16 regiments of hussars, and 11 regiments of uhlans, are armed with sabers and repeating carbines. The field-artillery, consisting of 14 regiments of corps and 42 regiments of divisional artillery, have guns of tempered bronze, those of the field-batteries having a caliber of 9 centimeters, the mountain guns a caliber of 12 centimeters. The effective strength for 1901 of the common army was 3,597 superior and staff officers, with 2,736 men; 1,697 officers and 7,135 men attached to the military establishments; 8,428 officers and 161,602 men in the infantry of the line; 1,019 officers and 16,536 men in the Tyrolian jägers and rifle battalions, 1,890 officers and 45,906 men in the cavalry; 1,047 officers and 25,536 men in the field-artillery; 422 officers and 7,786 men in the fortress-artillery, organized in 6 regiments and 3 separate battalions; 495 officers and 8,445 men in the pioneers, of which 1,047 officers and 1,490 men forming 1 regiment of 12 companies of railroad and telegraph troops; 79 officers and 2,364 men in the hospital corps; 417 officers and 13,931 men attached to the depots; 2,415 officers and 20,996 men forming 38 infantry regiments, and 246 officers and 4,231 men forming 6 cavalry regiments and 3 squadrons of Austrian Landwehr—total, 2,601 officers and 25,088 men, and 2,239 officers and 20,996 men forming 28 infantry regiments and 390 officers and 4,231 men forming 18 cavalry regiments of Hungarian Honved—total, 2,629 officers and 25,927 men. Total peace strength, 26,070 officers and 333,808 men, with 63,424 horses and 1,048 guns. The annual contingent of recruits for the common army is 103, 100 men; for the Austrian Landwehr, 10,000 men; for the Hungarian Honved, 12,500 men. The Landwehr and Honved, in which the period of service is twelve years, are called out for instruction only. The term of active service is three years in the common army and seven years more in its reserve. In addition to the recruits taken for active service, both the common army and the separate national armies have lists of substitutes or Ersatz troops who can be called out to fill any vacancies that occur. All who are called out in the common army or in the Austrian or Hungarian national army are not inscribed in the Ersatz reserves are enrolled in the Landsturm and may be called out by the Emperor-King's order to fill gaps in either the common army coin or the Landwehr of their own country, but Austrians may not be ordered to fight beyond the frontiers of Austria nor Hungarians outside of Hungary without a special legislative act of their Parliament.

The Navy.—The Austro-Hungarian navy is small, being designed principally for the defense of the Adriatic seaboard; but it is kept in a high state of efficiency. The Custoza, Erzherzog Albrecht, and Tegetthoff, of 5,900 to 7,400 tons, engine to steam 14 knots, are iron-clad battleships, with broadside batteries, built between 1872 and 1876, which have been refitted and re-armed with powerful batteries of 11-inch, 10-inch, 94-inch, and smaller guns. Kaiser Max, Don Juan de Austria, and Prinz Eugen, of 3,600, 3,600, and dating from the same period, have a heavy armament, and are good for coast defense, but too slow and not sufficiently protected to figure in the line of battle. The turret-ship Erzherzog Rudolf, of 6,000 tons and 12-inch armament, having a speed of 16 knots, and armed with 3 12-inch, 6 44-inch, and 2 24-inch guns, was built in 1887; and in the same year the 5,100-ton armored cruiser Zeligowin Stefanie, of 5,100 tons, with 9-inch armament, carrying 2 12-inch, 6 6-inch, and 2 24-inch guns, and having a speed of 17 knots. The Monarch, Empire, Vienna, and Budapest, of 5,000 tons, with 10.4 inches of Harvey armor, engines of 8,000 horse-power making 17 knots, 4 9.4-inch guns in their fore and aft turrets, 6 5.9-inch quick-firers in casemates, and 14 inch quick-firers, launched in 1895 and 1896. Of the same type improved are the more powerful Habsburg, Arpad, and Babenburg, launched in 1900, 1901, and 1902, having a displacement of 8,300 tons, 8.6 inches of Krupp armor, engines of 11,000 horse-power, and a main armament of 3 9.4-inch guns in turrets and 12 6-inch guns in casemates. Three new battle-ships have been begun which will have a displacement of 10,000 tons, 10 inches of armor, engines of 14,000 horse-power, and an armament of 3 11-inch and 14 6-inch guns. The armored cruiser Maria-Theresa, of 5,200 tons displacement, has a belt of 4-inch armor, engines of 9,000 horse-power capable of steering 19 knots, and an armament of 2 44-inch quick-firers and 11 Quick-firers. Of improved design is the Kaiser Karl VI, launched in 1900, displacing 6,100 tons, protected with 10.6-inch plates, having engines of 12,000 horse-power capable of making 20 knots, and armed with 2 9.4-inch guns and 8 5.9-inch quick-firers. Greater speed, dirigibility, cruising radius, and weight and energy of fire are to be attained in a cruiser of 7,400 tons which will have 8.7-inch armor and engines of 12,300 horse-power, and besides the fore and aft guns will carry 10 6-inch quick-firers. The protected cruisers Kaiserin Elizabeth and Kaiser Franz Joseph, launched in 1899, can make 19 knots with engines of 9,000 horse-power, and carry also the 2 9.4-inch breech-loaders, with 6 6-inch quick-firers. There are 6 protected cruisers of earlier construction, 4 coast-guards, 12 torpedo-boat, 4 monitors on the Danube, and a formidable flotilla of torpedo-boats, consisting of 32 of the first, 31 of the second, and 8 of the third arm. The personnel of the navy in 1901 consisted of 563 officers, 130 cadets, 15 paymasters, 62 surgeons, 157 engineers, 94 mechanics, 173 employees, and about 8,000 sailors for loros.

Commerce and Production.—The special imports into the Austro-Hungarian customs terri-

---

This text continues with a detailed description of the military and naval forces of Austria-Hungary, particularly focusing on the army, navy, and related aspects of national defense and infrastructure.
tery, which includes Bosnia and Herzegovina, were valued at 1,064,600,000 crowns in 1900, and the imports of the same amounted to 1,045,000,000 crowns. The imports of raw cotton were 144,156,000 crowns in value; of coal, 112,317,000 crowns; of wool, 88,880,000 crowns; of silk, raw and manufactured, 74,250,000 crowns; tobacco, 55,551,000 crowns; machinery, 51,975,000 crowns; hides and skins, 49,468,000 crowns; coffee, 48,100,000 crowns; flax and jute, 45,972,000 crowns; books and prints, 39,045,000 crowns; copper, 35,510,000 crowns; eggs, 27,405,000 crowns; wine, 24,922,000 crowns; corn, 19,009,000 crowns; hogs, 8,327,000 crowns; wheat, 4,212,000 crowns; rye, 897,000 crowns; lard and bacon, 366,000 crowns. The exports of lumber and wood manufactures were 224,295,000 crowns in value; of sugar, 150,511,000 crowns; of eggs, 99,202,000 crowns; of linseed, 89,560,000 crowns; of cattle, 61,768,000 crowns; of horses, 54,945,000 crowns; of glass and glassware, 52,733,000 crowns; of barley, 52,733,000 crowns; of malt, 20,802,000 crowns; of gloves and shoes, 40,873,000 crowns; of glazed manufactures, 41,087,000 crowns; of coal, 23,050,000 crowns; of poultry, 21,387,000 crowns; of barrel staves, 18,626,000 crowns; of goose feathers, 18,872,000 crowns; of beans, 15,876,000 crowns; of hops, 14,210,000 crowns; of beer, 12,154,000 crowns. The values in crowns of the imports from the principal countries in 1900 were as follow:

The area under cultivation in Austria in 1900 was 28,243,198 hectares, of which 10,824,551 hectares were under farm crops, 7,127,327 acres in meadow and pasture, 9,777,815 hectares planted with forest trees, 371,242 acres in gardens, 242,063 acres in vineyards, and 106,445 acres covered with fish ponds and lakes. The yield of wheat from 1,065,000 hectares was 14,741,000 hectoliters; of barley from 1,234,000 hectares, 20,925,000 hectoliters; of oats from 1,899,000 hectares, 37,021,000 bushels; of rye from 1,707,000 hectares, 19,026,000 hectoliters; of pulse from 285,000 hectares, 3,144,000 hectoliters; of buckwheat from 164,000 hectares, 2,158,000 hectoliters; of corn from 385,000 hectares, 6,825,000 hectoliters; of other cereals from 9,000 hectares, 1,570,000 hectoliters; of potatoes from 1,168,000 hectares, 1,170,000,000 quintals; of sugar-beets from 240,000 hectares, 52,282,000 quintals; of other beets from 173,000 hectares, 2,648,000 quintals; of wine from 253,000 hectares, 5,313,000 hectoliters; of hops from 19,000 hectares, 90,000 quintals; of tobacco from 3,700 hectares, 53,000 quintals; of hemp from 33,000 hectares, 52,000 quintals; of flax from 72,000 hectares, 227,000 quintals. The production of coal in Austria in 1900 was valued at 47,195,000 florins; of lignite, 56,317,000 florins; of pig-iron, 41,152,000 florins; of lead, 2,361,000 florins; of silver, 1,954,000 florins; of zinc, 1,582,000 florins; of copper, 796,000 florins; of bronze, 769,000 florins. The total product of the mines was valued at 116,727,240 florins; value of furnace products, 49,987,000 florins. The production of coal in 1899 was 109,025,000 crowns; of lignite, 215,299,000 crowns; of iron ore, 18,944,000 crowns; of salt, 3,302,000 crowns; of graphite, 336,000 crowns; of silver, 39,573 kilograms; of copper, 8,111 kilograms; of zinc, 67,415 kilograms; of iron, 10,092,067 crowns; of lead, 106,503 crowns; of quicksilver, 5,104 crowns. The value of fish caught in 1900 was 1,584,298 florins in summer and 1,076,853 florins in winter fishing. The production of beer in 1899 was 19,573,547 hectoliters; of alcohol, 1,538,189 hectoliters. In Hungary the crop of wheat in 1900 from 3,664,000 hectares was 41,432,000 crowns; of barley from 1,808,000 hectares, 12,382,000 crowns; of oats from 1,982,000 hectares, 11,061,000 crowns; of rye from 1,118,000 hectares, 10,733,000 crowns; of pulse from 893,000 hectares, 3,008 crowns; of buckwheat from 25,000 hectares, 167,000 crowns; of corn from 2,968,000 hectares, 37,174,000 centners of beans, 15,876,000 crowns; of hops, 14,210,000 crowns; of beer, 12,154,000 crowns. The values in crowns of the imports from the principal countries in 1900 were as follows: | COUNTRIES | Imports | Exports |
The exports of flour were 156,628,000 crowns in value; of cattle, 92,361,000 crowns; of wheat, 4,451,000 crowns; of rye, 47,807,000 crowns; of eggs, 34,497,000 crowns; of wine, 32,336,000 crowns; of corn, 31,744,000 crowns; of oats, 30,465,000 crowns; of hops, 26,606,000 crowns. Of the imports 21.93 per cent. were raw products and 78.05 per cent. manufactures, while of the exports 60.78 per cent. were raw products and 39.22 per cent. manufactures. Of the imports 79.51 per cent., 823,834,033 crowns, came from Austria, and 7.55 per cent. of the exports, 949,759,655 crowns, went to Austria. From Germany the value of 54,533,198 crowns was imported, and exports to Germany amounted to 141,200,927 crowns. The imports from Great Britain were 15,956,251 crowns in value, consisting mainly of cotton cloth and tobacco; the value of exports to Great Britain, consisting principally of wheat flour and barley, was 28,031,318 crowns. The largest commercial intercourse, after these countries, is with Servia, France, Switzerland, Italy, and Roumania.

Navigation.—The number of vessels entered at Austrian seaports during 1909 was 107,580, of 1,514,100 tons. Of these 1,340,107 tons were entered at Venetian ports, 102,100 tons, and 1,053,107 tons, and 97,100 tons respectively at Austrian and Italian ports. Of the vessels 88 per cent., with 90 per cent. of the tonnage, were Austrian, Italy having the next largest percentage, and then Greece. At the port of Trieste 8,489 vessels, of 2,184,927 tons, were entered, and 8,487, of 2,106,289 tons, were cleared. The Austrian commercial marine on Jan. 1, 1900, comprised 12,059 vessels of all kinds, of 934,444 tons, with 32,416,251 crowns, or 1,052,947 crowns at the end of the year. At the Austrian ports there were 199 steamers, 190,620 tons, 154, of 198,322 tons, were ocean vessels, 1,453, of 22,651 tons, were coasters, and 11,002, of 22,458 tons, were fishing vessels and other small craft.

At Hungarian ports 19,223 vessels, of 2,223,302 tons, were entered and 19,218, of 2,220,723 tons, were cleared during 1909. At Flume were entered 10,739 vessels, of 1,081,151 tons; cleared, 10,732, of 1,084,329 tons. The commercial fleet of Hungary on Jan. 1, 1901, consisted of 61 ocean vessels of 62,639 tons, 62,639 tons, and 223 fishing vessels, etc., of 332 tons; total, 438 vessels, of 69,397 tons, of which 78, of 56,391 tons, were steamers. Post and Telegraphs.—There were 11,700 miles of railroad in Austria on Jan. 1, 1900, of which 4,713 miles were Governement railroads, 1,868 miles were private lines operated by the Government, 4,998 miles were owned and operated by companies, and 62 miles were foreign railroads. The number of passengers carried in 1899 was 142,296,000; tons of freight, 114,512,000; gross receipts, 230,387,000 florins; expenses, 193,412,000 florins; capital cost, £244,915,000.

In Hungary the total length of completed railroads on Jan. 1, 1901, was 17,108 kilometers, of which 13,406 kilometers were Governement railroads, and 3,661 kilometers were operated by companies. The number of passengers in 1899 was 64,412,000; tons of freight, 42,577,000; gross receipts, £11,472,000 sterling; expenses, £6,222,000; capital, £112,356,000.

The number of letters and postal cards that passed through the Austrian post-office during 1909 was 1,055,791,710; samples and printed matter, 137,625,510; newspapers, 107,738,700. The receipts were 87,718,310 crowns, and expenses were 85,111,819 crowns.

The number of letters and postal cards that passed through the Hungarian post-office was 319,770,000 in 1900; newspapers, 115,994,000; samples and printed matter, 51,906,000; money orders, 1,768,000; orders for delivery of goods, 1,465,794,000 sterling; registered letters and parcels, 20,016,000. The receipts of the postal, telegraph, and telephone services were 47,103,000 crowns; expenses, 30,614,000 crowns.

The total length of telegraph lines in Austria in 1900 was 24,480 miles, with 107,750 miles of wire. The number of messages in 1900 was 19,067,176. There were 298 telephone exchanges and 106 interurban circuits, with a total length of 79,750 miles of wire. The number of conversations in 1900 was 95,592,568. The telegraph lines of Hungary had a total length of 22,924 kilometers, with 114,831 kilometers of wire. The number of messages in 1900 was 14,370,849. There were 65 telephone exchanges, with 45 interurban circuits and connections with Vienna and Berlin. The total length of telephone wire was 74,093 kilometers. The number of conversations was 37,301,558.

The Triple Alliance.—The alliance between Germany, Austria-Hungary, and Italy, which expires in May, 1903, was prolonged in its original form for a further period of six years by a new treaty signed at Rome, April 26, 1902. A dual alliance between Germany and Austria-Hungary, arranged in a conference between Prince Bismarck and Count Andrássy in 1873, bound each of the contracting powers to come to the assistance of the other with its military and naval forces in case of an attack on both sides at the same time, an attack of France and Russia against Germany, to be regarded as an attack of Russia and Italy against the Austro-Hungarian dominions. There existed previously the Dreikaiserbund between the Emperors of Germany, Austria-Hungary, and Russia, an understanding reached in 1873, which the entente cordiale between France and Russia unsettled. Nevertheless the first German Emperor was reluctant to consent to the Austro-German military pact, deeming it incompatible with his political and family relations to the Emperor of Russia. After it was carried through Prince Bismarck always insisted that good understanding with Russia was an essential element of German policy, and after the dual alliance was expanded into a triple alliance by the adhesion of Italy, this military pact was uniformly spoken of as purely defensive, a guarantee of peace, an insurance against any disturbance of the existing equilibrium. When the relations between Italy and France became strained in consequence of the French occupation of Tunisia, Italy was easily persuaded to abandon her position of isolation and join, in 1883, the alliance of the central powers. Italian Irredentism in respect to the coast provinces of Austria thereby received a check and ceased to be a danger to the peace of Europe. A tariff war with France further estranged Italy from her former ally. The terms of the dual alliance were after a time disclosed to the public, but those of the tripartite treaty have always been kept secret, though it may be inferred that Germany can only call upon her allies for active assistance in the event of a double attack, but will assist if necessary either one of them which is attacked from one side only. The Egyptian strain of taxation and the likelihood that Italy would receive compensation on the Adriatic, the only field for national expansion, for any sacri-
AUSTRIA-HUNGARY.

offices she might make for her allies, has caused a considerable revulsion of public feeling at times in Italy. But never again did the successors of Crispi abandon the alliance which he formed. A better feeling toward France and better trade relations did not alter the policy of the Italian government. In 1898, however, led that Government, before the alliance was renewed for twelve years on May 6, 1891, to press for favorable commercial terms. The complaints of Italians regarding the excessive burden of the military and naval armaments that Italy has kept up in her ambition to maintain her position among the great powers drew from the responsible statesmen of the allied powers the admission that the treaty does not compel Italy to mobilize any specified number of army corps or to bring her armed strength up to any particular standard. When the Franco-Russian entente cordiale matured into the dual alliance between the French Republic and Russia as an open rejoinder to the triple alliance, stress was laid on the pacific nature and conservative purpose of the dual alliance by its authors and its value in insuring peace as a counterpoise to the triple alliance, and those concerned in the latter reiterated their peaceful intentions. Just as the continuance of the political friendship and dynastic intimacy between Germany and Russia did not preclude the conclusion of the Austro-German alliance and subsequent Dreibund, an agreement made later between Austria and Russia to maintain the status quo in the Balkans was held to be perfectly compatible with the obligations of Austria toward her allies. In the same principle, when a rapprochement was attained in the spring of 1902 between Italy and France by an agreement on the part of the latter to respect the Italian sphere of interest in Tripoli, this separate understanding was not regarded as inconsistent with the fresh renewal of the triple alliance. Italy urged the need of advantageous terms for Italian products in the new commercial treaties as a necessary condition to her preserving the military strength that makes her alliance valuable to her allies. She made or assured guarantees without any such stipulations being embodied in the treaty of alliance, which the successive German Chancellors have averred is not so related with. Count von Bülow likened the triple alliance to an insurance company rather than to an association for profit, and repeated the declarations that it is pursued against peace, that it entails no obligations on the members to maintain their military or naval forces at a prescribed level, and that it is no artificial combination, but corresponds to a natural and historical balance of power, tending now even more than in the beginning to the preservation of the peace of the world, since the political combinations of the present go beyond the limits of Europe and the basin of the Mediterranean, the interests of the great powers embrace the whole world, and none of them can wage war in Europe without reflecting on far-reaching hazards in other quarters.

Count Goluchowski, when announcing on the meeting of the Delegations in May the approaching prolongation of the triple alliance, spoke of the fulfillment of its aim and an assistance in the fulfillment of its task and of the extension of such political arrangements for the maintenance of the status quo to extra-European countries as a proposition. A Japanese treaty guaranteeing the integrity of China and Korea, just as the Austro-Russian entente insures the integrity of the Balkan countries, Special agreements made by individual powers belonging to the different groups concerning specific interests which affect them alone, as evidenced by the confidential relations existing between France and Italy or the satisfactory development of Austro-Russian relations resulting from the secret conference of 1897, are not opposed to the general principles which brought about the union of the principal groups. The agreement of France to respect Italy's aspirations in Tripoli, and perhaps also to intervene in no way to frustrate her ambitions in Carniola and Istria and in Albania, Italy leaving to France a free hand in Morocco, deploys all its forces, and practically ends the Anglo-Italian Mediterranean agreement, leaving England without a supporter for her claims to a share in the division of Morocco and with no ports save her own as naval bases from which to conduct operations in the Mediterranean unless she shall enter into a similar alliance with Spain. It was England herself who caused the defection of her ally and the Franco-Italian rapprochement when in bargaining over protectorates and spheres of influence in various parts of the world she conceded to France the Hinterland of the latter, which France has used to purchase the friendship of Italy and the isolation of England in the matter of more vital interests, probably by resigning the French claim to the division of Italy. It is said that in connection with the old treaty Italy entered into an engagement to send in the event of an aggressive war on Germany and Austria, an army corps to take up a position with the German army on the Rhine and an army corps through Hungary to be placed under the command of King Carol of Roumania and to invade Bessarabia alongside of Austrian and Roumanian troops. These obligations are supposed to have been omitted from the military agreements and plans of campaign adopted when the new treaty was signed, which itself was officially stated to be identical with the original treaty of alliance, and like it is to be kept secret, although the Austrian and Italian governments are believed to have made up for the setback by increased armament. The idea that a political alliance can subsist concurrently with a commercial war has been repudiated by Hungarian statesmen more outspokenly than questions. Count von Bítlow likened the triple alliance to an insurance company rather than to an association for profit, and repeated the declarations that it is pursued against peace, that it entails no obligations on the members to maintain their military or naval forces at a prescribed level, and that it is no artificial combination, but corresponds to a natural and historical balance of power, tending now even more than in the beginning to the preservation of the peace of the world, since the political combinations of the present go beyond the limits of Europe and the basin of the Mediterranean, the interests of the great powers embrace the whole world, and none of them can wage war in Europe without reflecting on far-reaching hazards in other quarters.

As to the practical application of the military convention, the danger of such wars as it contemplates is much more remote now than when
AUSTRIA-HUNGARY.

57

it was originally concluded. The French people do not yield to the despotic rule of the Hapsburgs in their lost provinces, yet the impulse of revenge no longer stirs the nation, since Germany has given up the attitude of truculent provocation for one of studied courtesy, which the French Government is constrained by national feeling to receive but coolly. No more have the Italians abandoned their aspirations for the unredeemed Italian lands and the shores of the Adriatic, nor does the Hapsburg monarchy cease to contemplate the prospect of an Austrian port on the Mediterranean, nor has Russia resigned her secular ambition to hold the seats of the Eastern Empire or given up the role of guardian of all the Slav peoples. The chance, however, of a new war over the Eastern question seems less likely than a peaceful division if the Turks are to be driven out of Europe. Germany from the start refused to support the ambition of Austria. When the triple alliance was new Bismarck declared that to Germany the Balkan peninsula was not worth the bones of a Pomeranian grenadier. A collision of the great Continental armies in central Europe over Alsace, Luxembourg, Belgium, the Germans of East Prussia and Austria or any other question seems impossible. So well protected are the frontiers, so destructive the modern weapons, so enormous the forces that an attack would be like national suicide. The renewal of the triple alliance was followed by a meeting of the German Emperor and the Czar, who was visited by the President of the French Republic in return for a journey to the German Empire. The Czar paid a visit to the Czar and stopped in Berlin, but did not go to Vienna.

The Ausgleich.—The acrimonious conflict between the Austrian and Hungarian governments over the renewal of the Ausgleich, which has been kept up almost uninterruptedly for six years, reached a critical stage in the summer of 1902, when negotiations were broken off until the Emperor intervened between the two Prime Ministers. Dr. von Kőrber gave warning that Austria had made the last concessions in regard to the autonomy of the Hungarian Parliament still insisted on its demands. The Austrian Reichsrath, which came to a deadlock six months before over the language question and was brought into working order again only by a threat from the Prime Minister to suspend the Constitution, gave the Government united support in its insistence on the Austrian views, and it was the general feeling that in the concessions already offered Austria sacrificed her interests to such an extent that the Ausgleich when concluded on such terms would be the last one. The danger of an immediate disruption of the customs union seemed to be averted. Meanwhile the continuance of the deadlock placed Austria-Hungary at a disadvantage in respect to the negotiations with other nations for the new commercial treaties, for until the fiscal relations of the two halves of the monarchy were settled there was no adequate basis for these negotiations. The discussions over the tariff involved many technical questions. In the main the Hungarians desired to protect their agriculture by the imposition of high duties on foodstuffs and raw materials, while the Austrians wanted to be protected against arbitrary interpretations by the Hungarian authorities that would give an unfair advantage to the industries of Hungary which the landing of foreign goods in Vienna through the domestic market from the Austrian manufacturers by granting subsidies, remitting taxes, and allowing discriminating railroad rates in contrast to what the Austrians hold to be the spirit of the customs union. Austria is a strong party in favor of an independent customs territory, and in Austria the idea of the economical separation of the two monarchies has taken root, though the real country man's effort would be required to adjust business to such a condition.

Austria.—The legislative authority for the empire is vested in the Reichsrath, but each province possesses a large measure of autonomy and has its Landtag to legislate on all matters not reserved by the Constitution for the Reichsrath, which has general authority to legislate on all matters concerning rights, duties, and interests that are common to all the lands represented in the Reichsrath. The Reichsrath is composed of a Herrenhaus an an Abgeordnetenhaus. The Herrenhaus contains 14 princes of the imperial family, 27 heads of the territorial families, 5 cardinals, 6 prince-bishops, and 140 members nominated for life. The Abgeordnetenhaus contains 425 members elected for six years—85 by large proprietors, 118 by towns, 21 by chambers of commerce and trade councils, 129 by rural communities, and 72 by priests and Catholic monks. The general male population paying 4 florins in direct taxes or otherwise qualified. The ministry in office at the beginning of 1902 was composed as follows: President of the Council and Minister of the Interior, Dr. E. von Kőrber; Minister of National Defense, Graf Zeno von Welsersheim; Minister of Finance, Dr. E. Ritter Böhm von Bawerk; Minister of Railroads, Dr. H. Ritter von Wittek; Minister of Justice, Baron A. Spens von Booden; Minister of Public Instruction and Worship, Dr. W. Ritter von Hartel; Minister of Commerce, Baron G. von Call von Cullmbach and Rosenberg; Minister of Agriculture, Baron K. de Giovanelli; without portfolios, Dr. A. Rezek and Dr. Leonard Pietak.

Area and Population.—The area of Austria is 115,003 square miles. The population according to the census of Dec. 31, 1900, was 26,150,597, or 226 to the square mile. The increase in ten years was 2,214,802, or 9.04 per cent of the previous population. The area of the individual provinces and their population in 1890 and 1900 are given in the following table:

The number of marriages in 1900 was 214,214; of births, 637,938; of deaths, 635,880; excess of births, 300,058. The number of Austrian emigrants who sailed from German and Dutch ports in 1900 was 94,611, of whom 91,788 were destined for the United States, 178 for Brazil, and 131 for the Argentine Republic. The population of the chief towns on Dec. 31, 1900, was as follows: Vienna, 1,674,937; Prague, 201,589; Lemberg, 159,987; Graz, 138,080; Trieste, 134,143; Brunn,
109,346; Krakau, 91,323; Pilsen, 88,079; Czernowitz, 67,022; Linz, 88,781.

The budget for 1902 was esti-
mated at 1,685,906,357 crowns, from the follow-
ing sources: Reichsrath and Council of Min-
isters, 1,705,936 crowns; Ministry of the Interior, 2,358,411 crowns; Ministry of Justice, 1,563,137 crowns; Ministry of Agriculture, 2,109,922 crowns; Ministry of Justice, 2,654,558 crowns; pensions, 2,674,854 crowns; state debt, 1,246,500 crowns; debt administration, 1,600,000 crowns; sale of state property, 1,078,352 crowns. The total expenditures for 1902 were estimated at 1,985,17,944 crowns, distributed as follows: Imperial Household, 9,300,000 crowns; Imperial Cabinet Chancellery, 179,338 crowns; Reichsrath, 2,688,569 crowns; Supreme Court, 49,724 crowns; Council of Ministers, 3,098,028 crowns; contribution to common expenditure, 268,478,177 crowns; Ministry of the Interior, 68,033,678 crowns; Ministry of Defense, 60,823,851 crowns; Ministry of Instruction and Worship, 7,000,269 crowns; Ministry of Agriculture, 291,813,310 crowns; Ministry of Commerce, 36,109,922 crowns; Ministry of Agriculture, 1,705,936 crowns; Ministry of Commerce, 130,413,080 crowns; Ministry of Railroads, 242,392,720 crowns; Ministry of Agriculture, 46,999,062 crowns; Ministry of Justice, 71,935 crowns; Board of Control, 400,800 crowns; pensions, 60,276,080 crowns; subventions and donations, 16,618,110 crowns; state debt, 353,913,528 crowns; debt administration, 1,504,045 crowns. Extraordinary expenditures amounting to 562,000,000 crowns for railroad construc-
tion and similar objects will be spread over five years ending with 1905. The total receipts of the Government in 1899 amounted to 932,713,000 florins, or 1,865,550,000 crowns, and expenditures to 970,401,000 florins, or 1,940,602,000 crowns.

The national debt on June 30, 1901, amounted to 3,621,157,782 crowns, including a floating debt of 13,017,062 crowns. The annual charge for inter-
terest and amortization of the general debt falling to Austria's share was 189,028,360 crowns.

Policy and Legislation. — The Pan-Ger-
manic propaganda has been openly carried on in Austria with funds collected in Germany. The extremists of the German Liberal party, es-
pecially the politicians who have borne an active part in the war of languages, those representing German constituencies in Bohemia, go to the length of advocating the annexation of German Austria, and Bohemia and other of the Slav lands as well, to the German Empire. Those who dream of a greater Germany expect to ab-
sorb the Italian coast provinces also so as to make Germany a Mediterranean power, and in the north Holland and Flanders and the Baltic provinces of Russia. In 1902 an earnest cam-
paign was begun among the Saxons of Transy-
via, who are abstracting under the present Mag-
nyarizing policy of the Hungarian Government, which proceeded to repress the agitation with more energy than the Austrian Government has shown. The loss of the Austrian Empire in Austria, the conversation of Roman Catholics to the Evangelical creed, is purely political in its origin and intent, yet numerous German pastors have gone to the Holy See to protest against the fact. The Aus-
trian authorities have taken no energetic steps to abate the German demonstrations, merely regarding them as a phase in the race and language con-
lict, calling for no interference with either the
German or the Czech agitators except when they come to blows. Since the Austrian Government refrains from repressing the treasonable utter-
nances of its own citizens it can not call upon
Germany to take action against those who in-
spire and aid and abet them from over the border. Therefore Count Goluchowski could describe the
attitude of the Prussian, Saxon, and Bavarian
governments as perfectly correct. In March the
Pan-Germanic group in the Reichsrath created a
scandal by offering cheers for the Hohenzollerns.
The Pan-Germanic League, after setting on foot
the German agitation in Transylvania, encoun-
tered such resistance that the movement was
abandoned. The Germans and the Young Czechs
in the Reichstag several times had violent alter-
cations. The suggestion of a commercial alli-
ance of European nations to carry on a general
tarf war against the United States had its ori-
gin among the Pan-Germans. The pearl-button
and several other peculiarly Austrian industries have been seriously affected by the starting of
competing establishments in America. In Ger-
many the official and the general popular opinion
was antipathetic toward the machinations of
the Pan-Germans in Austria. After the words were recalled that if Austria did not exist it
would have to be invented. A conflict about
a high school at Cilli recalled the animosities
between Slava and Germans. The town is com-
p
ded of a German population, but it is the cen-
ter of a district in which the Slovenes greatly
predominate. It was proposed that instruction in
the Slovene language, which was used in the
schools of the lower classes, be discontinued there and
transferred to some other town. When this mo-
tion was defeated by a majority consisting of
Czechs, Poles, and German Ultramontanes, the
German People's party and other factions of the
Germans declared war on the Slava. The minis-
try found a way of solving this difficulty by
granting the Slovenes satisfactory compensa-
tion and to the Germans their demand, which was in accord with the principles of the lan-
guage ordinances which the Czechs asked to
have reenacted. When another question of the
sort was brought up in the Reichsrath before
this one was settled, the Germans on being de-
feated in the vote made a riotous uproar which
broke up the sitting. The nation's attitude in
Bohemia rendered the proceedings of the Land-
tag quite sterile. The Czechs demanded the rec-
ognition of a Bohemian constitution, the Ger-
mans the establishment of German as the state
language.

In the early part of the year occurred labor
riots in Trieste, which were brief, but of an ex-
traordinarily violent character because of the
intervention of anarchists of the Italian type.
The stokers on the Austrian Lloyd steamships
having struck work, the trade-unionists of the
city, who have a united labor association, threat-
ened a general sympathetic strike, which was
speedily set in motion, first by the workmen in
the shipyards, then by the employees on the
street-cars and the railroads, and finally by the
gashouse workers. All traffic and business
stopped. The union leaders warned the strikers
against violence, but agitators induced some of
them to enforce the destruction of works and throw-
ing missiles into premises where production was
going on and to attack the residence of the
Statthalter. The police and military proceeded
to suppress violence with iron hand and in
turn attacked furiously. The result was that
the troops used their firearms twice, killing and
wounding 40 rioters, while numerous injuries were inflicted with bayonets. Many arrests were made, and the Government justified the severity of the measures taken on the ground that the disturbances were revolutionary. Among the persons arrested were well-known anarchists.

Hungary.—The legislative authority is vested in a Parliament consisting of the House of Magnates and the House of Representatives. The House of Magnates is composed of 17 royal archdukes, 55 ecclesiastical dignitaries, the 10 banerets of the kingdom, the Count of Presburg, the 2 keepers of the crown, the 2 presidents of the administrative court, the president of the royal table of Budapest, 3 delegates of the Diet of Croatia-Slavonia, the Governor of Fiume, 7 princes, 169 counts, and 49 barons sitting as hereditary members, 50 members nominated for life by the King, and 27 members elected by the House of Magnates. The House of Representatives consists of 413 members elected for five years or the duration of Parliament by the counties and towns of Hungary and 40 delegates.

THE NEW HUNGARIAN HOUSES OF PARLIAMENT—THE FRONT ON THE DANUBE.

elected from among its own members by the Diet of Croatia-Slavonia.

The Council of Ministers constituted on Feb. 25, 1899, was composed as follows: President of the Council, Koloman Szell; Minister of National Defense, Baron Geza Fejervary; Minister of Finance, Dr. Ladislaus de Luca; Minister of Worship and Public Instruction, Dr. Julius de Wlassics; Minister of Agriculture, Dr. Ignatius Daranyi; Minister of Croatia-Slavonia, Ervin de Cseh; Minister of Justice, Dr. Alexander Ploss; Minister of Commerce, Dr. Alexander Hegedus; Minister of the Imperial Cabinet, Count Emanuel Szcheny.

Area and Population.—The area of the Hungarian dominions, including Croatia and Slavonia, is 322,310 square miles. The population enumerated in 1921, 1900, was 15,092,282, an increase of 7,42,994 since 1890. Hungary proper, with an area of 108,258 square miles, had 15,050,904 inhabitants, 153 to the square mile; the town of Hungary, having an area of 8 square miles, had 38,129; Croatia and Slavonia, with an area of 16,73 square miles, had 2,397,249, or 149 to the square mile. These figures do not include the population in active military service, which numbered 114,811, making the total population of Hungary 19,207,103.

The number of marriages in 1900 was 160,687; of births, 766,673; of deaths, 531,189; excess of births, 237,484. The number of emigrants in 1900 was 54,767, of whom 41,230 passed through German ports and 13,447 through other European ports. The population of the principal towns on Dec. 31, 1900, was as follows: Budapest, 732,322; Szeged, 102,991; Szabadka, 82,122; Debrecen, 75,006; Pozsony, 65,867; Zagreb, 61,092; Hodmez-Vasarhely, 60,883; Keckesemét, 57,812; Arad, 56,200; Temesvar, 53,033; Nagyvarad, 50,177.

Finances.—The revenue of the Hungarian Government in 1900 was 1,042,023,000 crowns from ordinary and 155,015,000 crowns from extraordinary sources; total, 1,197,038,000 crowns. The revenue for 1901 was estimated at 1,056,582,267 crowns, and expenditure at 1,056,556,417 crowns. The estimated revenue for 1902 was 1,088,870,018 crowns, of which 1,035,200,008 crowns were from ordinary and 51,069,410 crowns from extraordinary sources. Of the ordinary revenue 218,000 crowns were from pensions, 2,510,331 crowns from state debts, 201,466 crowns from restitution of loans to various portfolios, 331,392 crowns from redemption of advances from guaranteed railroads, 2,000 crowns from the Ministry of Finance, 7,915,915 crowns from the Ministry of the Interior, 604,365,837 crowns from the Ministry of Finance, 279,290,840 crowns from the Ministry of Commerce, 58,579,910 crowns from the Ministry of Agriculture, 5,358,413 crowns from the Ministry of Worship and Instruction, 1,797,909 crowns from the Ministry of Justice, and 598,415 crowns from the Ministry of National Defense. The ordinary expenditures were estimated at 992,204,074 crowns, transitory expenditures at 34,300,047 crowns, investments at 66,184,382 crowns; total expenditure, 1,080,740,083 crowns. Of the ordinary expenditure 2,300,000 crowns were for the civil list, 179,338 crowns for the Cabinet council, 1,553,018 crowns for Parliament, 72,640,293 crowns the Hungarian contribution to common expenditure, 41,325 crowns for pensions charged to common expendi-
ture, 20,593,597 crowns for Hungarian pensions, 290,997,781 crowns for the national debt, 27,956,407 crowns for the maintenance of the railway service, 6,156,266 crowns for the purchase of forage, and 3,896,849 crowns for the relief of the distressed farmers. The total of the national expenditures for the year 1901 amounted to 2,319,433,265 crowns.

Protest in Croatia. - The Board of the Croatian Commercial Association in Slavonia called a meeting to consider the recent measures of the Austrian Government. The representatives of the association, who were present in large numbers, deplored the restrictions imposed on commerce and industry. They declared that the recent measures were calculated to benefit only the larger industrialists and that the smaller industrialists would suffer severely. They also condemned the recent measures as being contrary to the principles of the Austrian Constitution.

The undersigned have joined in the protests of the agriculturalists of Slavonia against the recent measures. The undersigned have asked the Government to reconsider its measures and to take steps to alleviate the difficulties of the small farmers. The undersigned have also asked the Government to reconsider its measures with regard to the agricultural interests.

Politics and Legislation. - Under the pressure of the Chamber of Deputies, the Government decided to consider the proposals of the Chamber. The Chamber of Deputies passed a resolution condemning the measures of the Government as being contrary to the principles of the Austrian Constitution. The Chamber of Deputies also passed a resolution condemning the measures as being contrary to the principles of the Austrian Constitution.

The undersigned have joined in the protests of the Chamber of Deputies against the recent measures. The undersigned have asked the Government to reconsider its measures and to take steps to alleviate the difficulties of the small farmers. The undersigned have also asked the Government to reconsider its measures with regard to the agricultural interests.
The American Baptist Year-Book for 1902 gives the following statistics of the regular Baptist churches in the United States: Number of associations, 1,691; of churches, 44,453; of ministers, 30,561; of members, 4,289,063; of baptisms during the year, 207,515; total amount of contributions, $14,136,105; value of church property, $21,143,600. An increasing trend was shown for the year of 11 associations, 494 churches, 35,377 members, 10,280 baptisms, $347,905 in contributions, and $1,243,500 in value of church property. A slight gain is also shown in the aggregate of contributions per capita and increase of 2,011 Sunday-schools, 3,838 teachers, and 48,649 pupils.

The Baptists have in the United States 9 theological seminaries, with 74 teachers, 1,018 students, real estate valued at $1,165,538, and $2,759,556 of endowments; 103 universities and colleges, with 1,220 professors, 28,020 students, $17,984,798 of property, and $18,297,470 of endowments; and 91 academies, with 737 teachers, 12,907 students, $4,723,022 of property, and $1,301,115 of endowments.

One hundred and seventeen newspapers and periodicals are published in affiliation with Baptist churches.

The members of the Baptist churches in the United States are thus classified according to sectional and racial affiliations: Northern Baptists, 1,059,753; Southern white Baptists, 1,026,716; Southern black Baptists, 207,000. Compared with similar returns for 1901, these figures show gains in one year of 3,700 Northern Baptists, 21,339 Southern white Baptists, and 10,742 Southern black Baptists. That growth, however, be made for probable inaccuracies in the count of the negro Baptist.

The seventy-eighth annual meeting of the American Baptist Publication Society was held in St. Paul, Minn., May 22 and 23. The receipts for the year from sales in the publication department had been $304,755. In the missionary department $114,610 had been received from churches, individuals, income from invested funds, and bequests, exceeding the receipts of the previous year by $5,092; yet through the increase of missionary work and the enlargement of beneficence an additional deficiency of $6,622 had been incurred, making the total indebtedness $35,047. The receipts for Bible work had been $11,941. In addition to these amounts there had accrued to the missionary department $10,300 in annuity funds, and $40,000, a special gift, from an anonymous donor. The total receipts during the year from all sources had been $350,981. More of the books published by the society had been sold during the past year than in any previous year of its history. Among the publications of

BAPTISTS. Baptist in the United States.

American Baptist Home Mission Society.

The seventeenth anniversary meeting of the American Baptist Home Mission Society was held in St. Paul, Minn., May 24 and 26. Although the year had closed with a nominal debt of $13,629, it was regarded as having been one of exceptional prosperity. The total receipts had been $614,223, of which $4,212 had come from Sunday-schools and $2,262 from Young People's Societies. The receipts from legacies had been $78,348; $8,150 had been added to the permanent fund; and $40,553 to the conditional fund. While $67,776 had been put into enlarged facilities for the schools. The expenditure had been greater in consequence of the enlargement of both educational and missionary work; of it $207,065 had gone for missions and $110,229 for education. Within the last five years 175 churches which had been aided by the society had become self-supporting. The church at Monterey, Mexico, was approaching that point, and the church at Santiago, Cuba, had voluntarily assumed a part of the support of its pastor. Twelve hundred and seventy-eight missionary laborers and teachers had been supported wholly or in part by the society, viz., 45 in the Middle and Central States, 229 in the Southern States, 878 in the Western States and Territories, 10 in Canada, 20 in Mexico, 1 in Alaska, 6 in Cuba, 2 in Porto Rico. Six hundred and two missionaries and 13 teachers had labored among the foreign populations (French, Scandinavian, and German), 56 missionaries and 210 teachers among the colored people, the Indians, and the Mexicans; besides 7 day-schools for the Chinese, 1 day-school in Utah, 2 in New Mexico, 1 in Cuba, and 2 in Porto Rico; in all, 46 schools. Steady progress had taken place in the general character of the work done in the schools receiving the support of the society. Special emphasis had been placed upon industrial training at several of the schools, and it was believed that superior work in this line was being done. Eighty churches had been aided during the year by gift or loan, or both. The amount of money in the gift fund available for the erection of meeting-
houses had been $25,511, and this had been distributed among 74 American Baptist Missionary Union.—The eighty-eighth annual meeting of the American Baptist Missionary Union was held in St. Paul, Minn., May 21 and 22. The financial receipts of the year from all sources had been $886,518, of which $385,285 had come in the form of donations and $115,561 through the woman's societies. These receipts had been sufficient to meet the appropriations for the year's work, and to afford a surplus of $2,840 to be applied to the reduction of the deficit of $38,279 brought over from the year before. One hundred and seventy-eight missionaries were employed. The missions in heathen lands returned 112,000 members, and those in "nominally Christian" lands 117,000 members, and 192,923 baptisms, or a total of 2,857,973 for the year. The foreign secretary conducts the correspondence with foreign countries. The treasurer attends to the disbursement of money under the direction of the Executive Committee. The accounts of the treasurer in the United States are made up annually on April 1. The accounts for the foreign field are made up on Oct. 1; and the financial year of this country and of foreign countries differ, therefore, by six months. The Executive Committee meets after the adjournment of the general meeting, and considers and prepares a list of appropriations for the coming year, beginning with the Ist of the next October. Into that budget is put every expenditure which can be foreseen or estimated, and the whole is appropriated at one time; and to this amount additions are made as emergencies arise, from time to time. Hence, when the treasurer reports a debt on April 1, it does not necessarily mean that he has a moneystone, but simply that he has not in hand sufficient money to meet all his payments to the 1st of the next October—six months in advance. A mission treasurer is connected with one—Burma, the mission. The budget has been made out, the foreign secretary notifies each missionary of the amount which he has at his disposal for all purposes for the coming year; and, beginning with the 1st of each month, the treasurer notifies each of the mission treasurers what amount he is authorized to pay to each missionary. The Missionary Union becomes thus, in effect, a foreign banking-house. It keeps its own account in London, draws its own bills of exchange, and does its own financing. The credit of the union is unquestioned. The invested funds of the union consist of $800,000, which were given on the condition that they should be invested and the income only expended; and $380,000 subject to annuities. The union owns real estate in nearly every country in which it works, having a total value of $800,000 to $1,000,000. In educational work the union has confined itself as far as possible to the preparation of ministers, native workers, and evangelists; only in the last year, the union has given $35,000 for the support of theological schools, colleges, and preparatory schools are established where they seem to be absolutely necessary and can be advantageously used. Among the schools there are 7 theological schools and 4 colleges. In many countries the union is obliged to print its own literature; and in some of these the written and printed language, the inhabitants having never had such, was made by its missionaries. Medical work and hospitals are conducted in subordination to the missionary and spiritual work. In all its operations the Executive Committee is simply seeking to bring the religion of Jesus Christ to the knowledge, and if possible to the acceptance, of those people who have not heard it.

Relations of the Woman's Societies.—At the mid-year meeting of the boards of all the Baptist missionary societies (Northern), held in New York in December, 1901, a joint committee was appointed, consisting of representatives of the American Baptist Missionary Union and the four Woman's Baptist Foreign Missionary Societies of the East, the West, of Oregon, and of California, every two weeks, so that a relationship could be established between the parent organization and its auxiliaries. A pre-
Primary meeting of this committee was held in Boston, Jan. 28, 1902, at which the three Western societies were represented by letters; and further correspondence a final meeting was held Feb. 19, at which the three larger societies were represented by delegates, and those of California and Oregon by letter. A report was unanimously adopted at this meeting, and afterward approved by the board of the societies concerned, in which the absolute need of "woman's work for women" was asserted. The belief was expressed that the educational work in missions which the woman's societies are doing in our own country through the instruction of children in Sunday-schools, the preparation and distribution of literature, and the stimulation of a more thorough study of missions by ministers of women and girls, with their training in habits of benevolence, is a sufficient reason for the existence of these societies, and we would deprecate any effort which might interfere with their sense of individual responsibility." A continued separate organization of the woman's societies of the East and the West was regarded as desirable, with the states of Oregon and California with that of the West was advised. Respecting the unity of the work of all the societies, the report continues: "We consider that the unity of the work must be maintained. The foreign work, which funds are duly sent to the treasury of the Missionary Union, and are finally administered by the Executive Committee of the union. The title to all property in foreign countries, acquired by the money collected by the woman's societies, is held by the Missionary Union; all women candidates are appointed, and their fields are designated by the Executive Committee, and their salaries are paid by order of the Executive Committee through the treasury of the Missionary Union; every appropriation for the foreign work of the woman's societies is submitted to the Executive Committee, and can become operative only with their approval. The woman's societies also appropriate large sums for educational, medical, and evangelistic work, at the request of the Executive Committee, to support work where the woman's societies have no representative." The woman's societies method of raising funds "quietly among the women themselves, by means of envelopes or mite-boxes" was commended as preferable to that of making promiscuous appeals to the whole congregation.

Joint Conference of Societies.—A joint conference of the American Baptist Missionary Union, the Publican Society, and the Home Mission Society was held at St. Paul, Minn., May 12, to hear reports and consider questions concerning the relations of the three societies. The report of the Commission on Systematic Benevolence, which was referred to this meeting from the several societies, related the history of the work of the commission, and closed with a recommendation that it be discontinued; whereupon the presidents of the several societies were requested to appoint a committee of 7 members for each on Christian stewardship for three years, whose duty shall be to foster the work already done by the Commission on Systematic Benevolence, to conduct house-to-house visitation work, and also to supervise a campaign of education in the fundamental principles of Christian stewardship among the churches. Contingent upon its securing a sufficient guarantee fund for three years by special subscription this committee was authorized to appoint a superintendent to give his whole time to the work, but who should in no respect be regarded as a special representative for any one of the societies. It was decided that in connection with the anniversaries each year, a session should be devoted to hearing the annual report of this committee, and to the consideration and discussion of the whole question of Christian stewardship. The committee of 3 members from each of the 3 societies on collecting agencies reported concerning the investigations they had made, recommending the continuance of the policy of the employment of district secretaries, but adversely to the combination of the offices, so that one man shall represent the 3 organizations in a given territory, while suggesting that an experimental trial of the plan might be made in a selected district. The plan called the "wheel plan," under which causes are each exclusively presented in rotation, in a given territory, at proper intervals, was unanimously approved by the committee and recommended by the conference. One recommendation of the committee related to conferences between the several secretaries and the committees of arrangement of State conventions and local associations, looking to the avoidance of congestion and friction, and to the plan of appointing association secretaries as the local advisers and helpers of the district secretaries. The 3 societies and the 4 women's missionary societies were advised to appoint a committee to formulate a plan for combining all their publications in a single monthly and a bulletin, each representing all the denominational missionary interests —this committee to report in 1903. By agreement of the 3 societies a committee of 15 was provided for, to consist of 7 ministers, 5 laymen, and 3 women, to whom all matters respecting the relations between the societies shall be referred, whose duty it shall be to ascertain such facts as whether there be any lack of proper adjustment and proper cooperation as to fields of labor, collecting and other agencies, and methods of work; whether there may be improvement in their mutual relations for more harmonious, effective, and fruitful service; whether changes are needful or desirable in their forms of organization, in their constitutions, by-laws, agencies, and methods of work; and if changes are needed, recommending what they shall be.

Following the recommendations of a conference held in 1901 in connection with the anniversaries at Springfield, Mass., the constitutions of the 3 principal societies were so changed as to make the qualifications for membership in them alike.

Woman's Societies.—The twenty-fifth annual meeting of the Woman's Baptist Home Mission Society was held in St. Paul, Minn., May 19 and 20. The occasion was celebrated as the "silver anniversary" of the society, and the proceedings were marked by the reading of historical papers and addresses, relative to the general organization, the State and local branches, and the several fields of work. The labors in the day were in practice distinctly directed to the women and children, with the purpose of Christianizing and consequently elevating the homes of the people. The agencies it used were house-to-house visits, a weekly child's meetings, Bible bands, women's (or mothers') meetings, parents' conferences, and training classes for workers. The work had been carried
on during the quarter of a century now completed at a total cost of $1,122,664; in addition to which goods and supplies valued at $225,178 had been distributed. The receipts for the year had been $347,733 for the general work and $4,798 for the Alaskan work; but deficiencies were left in the accounts of both branches amounting together to $3,094. The larger portion of this sum was obtained during the meetings, whereby the debt was reduced to $965. The labors of the society were prosecuted among the negroes of the South, among the Indians, among foreign populations, and in Porto Rico and Alaska.

The forty-fourth annual meeting of the Woman's American Baptist Home Mission Society was held in Boston, Mass., May 7 and 8. The receipts for the year had been $347,733 for the general work and $4,798 for the Alaskan work; but deficiencies were left in the accounts of both branches amounting together to $3,094. The larger portion of this sum was obtained during the meetings, whereby the debt was reduced to $965. The labors of the society were prosecuted among the negroes of the South, among the Indians, among foreign populations, and in Porto Rico and Alaska.

The forty-fourth annual meeting of the Woman's Baptist Foreign Missionary Society of the West was held in St. Louis, Mo., May 6 and 7. The receipts for the year had been $42,900 for the general work of the society and $1,700 for the home for missionaries' children. The society had under its care 220 schools, 231 teachers, 6,711 pupils, and 100 Bible women, 2 hospitals, and 2 dispensaries, in which 9,818 patients had been treated, with 387 outside patients. The report of the joint Committee on the Relation of the Missionary Union and its Auxiliary Woman's Societies, recommending the continuance of women's work as now carried on, was approved, and the Woman's Baptist Missionary Societies of California and Oregon were invited to unite organically with this one.

Young People's Union.—The Baptist Young People's Union of America held its eleventh annual meeting in Providence, R. I., July 10 to 13. Mr. H. Clay, of Cincinnati, was chosen president for the year. The report of the Board of Managers showed that all outstanding obligations, including a debt of $20,000, had been paid. There were had had a return in the past year of 10,927 examination papers, and in ten years of 108,180. The net receipts for the year had been $17,682, besides $40,196 in the business department of the Baptist Union. The assets amounted to $33,271.

Southern Baptist Convention.—The Southern Baptist Convention met in its forty-seventh annual session at Asheville, N. C., May 8. The Hon. James P. Eagle, ex-Governor of Arkansas, was chosen president. The report (eleventh) of the Sunday-School Board showed that the total receipts for the year had been $89,345, or $10,904 more than in the preceding year. The reserve fund had increased by $6,000, and stood at $60,000, safely invested. Twelve thousand dollars additional had been set aside to start a building fund, and the house and lot in which the board transacted its business were included in the table of assets. The appropriations for the year amounted $19,893, not including the missionary boxes. By the "Book Endowment Plan" gifts of $500 constitute a fund, bearing the donor's name, to be applied to publishing. The Board of Education had had the issue of new books as fast as it is restored by sales. The list of Sunday-school periodicals had been enlarged. An annual lecture course on Sunday-school work was provided for at the Sunday-School Board in Baltimore, Md. The Home Mission Board had received $49,950 during the year, an increase of $12,045 over the receipts of the previous year, besides special gifts, subject to annuities, of $1,500. The church building and loan department, established about two years previously, had received less than $100 additional to the $4,110 received during the first year of its operation. It had made a number of loans, of from $150 to $400 each, for periods of from three to five years. Work in the mountain regions was done in cooperation with the State mission boards, mainly in the establishment and maintenance of schools, which were mostly in the charge of preachers serving in the county adjacent, and of other teachers. Thirteen schools were maintained, and others would be established as circumstances might allow. In cooperative work among the negroes the board had expended $1,971 in the States of Georgia, Kentucky, Missouri, North Carolina and Virginia, the American Baptist Home Mission Society and the State boards paying the balance. Sixteen missionaries had been employed, who had held 116 institutes and reported 496 baptisms. The board had also cooperated with the National Baptist Convention (colored) in the support of two general missionaries, expending $1,356. Five stations besides Havana, were established in Cuba, with 5 missionaries and 8 teachers. The year's receipts of the Foreign Mission Board had been $173,846, and the board entered the new year with a balance in bank of $13,378. The missions in China, Japan, Africa, Mexico, Italy, and Brazil returned 139 churches, with 171 outstations, 115 missionaries, 38 ordained native preachers, 135 native helpers, 7,521 members, with 1,439 baptisms during the year, and native contributions amounting to $18,386. Two training-schools for young preachers were maintained in China; 1 in Italy, 1 in Mexico, and 2 in Brazil. Publication societies were established at Rio, Brazil, and Canton, China. Twenty of the 25 missionaries ordered during the last year were sent out by the board, 11 were under appointment, and 6 more were under appointment. The Southern Baptist Theological Seminary reported a prosperous year. While other seminaries were complaining of a falling off in the number of students, this institution had gained 12, and now had 243. The report of the Committee on Cooperation, which was unanimously adopted, recommended that associational members to the convention be regarded as messengers to their associations and requested to represent the work of the convention; that a statistical secretary be appointed; and that the secretaries of the State boards and the State boards constitute a committee on cooperation to make suggestions for uplifting the people of the South.

The contributions of the Woman's Missionary Union Auxiliary to the Southern Baptist Convention had been $54,776 in cash and $33,153 in boxes.

Education Society.—The American Baptist Education Society, holding its session for 1902 in connection with the meetings of the Southern Baptist Convention, met at Asheville, N. C., May 8. The report continued in the issue of new books as fast as it is restored by sales. The list of Sunday-school periodicals had been enlarged. An annual lecture course on Sunday-school work was provided for at the Sunday-School Board in Baltimore, Md. The Home Mission Board had received $49,950 during the year, an increase of $12,045 over the receipts of the previous year, besides special gifts, subject to annuities, of $1,500. The church building and loan department, established about two years previously, had received less than $100 additional to the $4,110 received during the first year of its operation. It had made a number of loans, of from $150 to $400 each, for periods of from three to five years. Work in the mountain regions was done in cooperation with the State mission boards, mainly in the establishment and maintenance of schools, which were mostly in the charge of preachers serving in the county adjacent, and of other teachers. Thirteen schools were maintained, and others would be established as circumstances might allow. In cooperative work among the negroes the board had expended $1,971 in the States of Georgia, Kentucky, Missouri, North Carolina and Virginia, the American Baptist Home Mission Society and the State boards paying the balance. Sixteen missionaries had been employed, who had held 116 institutes and reported 496 baptisms. The board had also cooperated with the National Baptist Convention (colored) in the support of two general missionaries, expending $1,356. Five stations besides Havana, were established in Cuba, with 5 missionaries and 8 teachers. The year's receipts of the Foreign Mission Board had been $173,846, and the board entered the new year with a balance in bank of $13,378. The missions in China, Japan, Africa, Mexico, Italy, and Brazil returned 139 churches, with 171 outstations, 115 missionaries, 38 ordained native preachers, 135 native helpers, 7,521 members, with 1,439 baptisms during the year, and native contributions amounting to $18,386. Two training-schools for young preachers were maintained in China; 1 in Italy, 1 in Mexico, and 2 in Brazil. Publication societies were established at Rio, Brazil, and Canton, China. Twenty of the 25 missionaries ordered during the last year were sent out by the board, 11 were under appointment, and 6 more were under appointment. The Southern Baptist Theological Seminary reported a prosperous year. While other seminaries were complaining of a falling off in the number of students, this institution had gained 12, and now had 243. The report of the Committee on Cooperation, which was unanimously adopted, recommended that associational members to the convention be regarded as messengers to their associations and requested to represent the work of the convention; that a statistical secretary be appointed; and that the secretaries of the State boards and the State boards constitute a committee on cooperation to make suggestions for uplifting the people of the South.

The contributions of the Woman's Missionary Union Auxiliary to the Southern Baptist Convention had been $54,776 in cash and $33,153 in boxes.
BAPTISTS.

600 in all, condition upon $346,000 more being secured; 11 institutions had successfully competed for $775,000, which represented the sum was supplemented by $213,942 collected by the institutions. Within the past twelve years the society had paid in grants to institutions almost $867,956—a sum which was represented by $2,081,625, making the aggregate increase $3,151,148. A favorable report was made of the work of the Southern Baptist Theological Seminary on the admission of women missionaries as students of the seminary. Two hundred and fifty students had matriculated in the institution, 50 of them being from outside the bounds of the Southern Baptist Convention.

Negro Baptists.—The negro Baptists numbered 500,000 in 1890, and 1,000,000 in 1891; but at the end of 1901 they had increased to 1,500,000, and 1,000,000 was regarded as a safe estimate, after exaggerations were allowed for. They had 15,000 churches and 10,500 ordained ministers, many of the ministers serving several churches. Their numbers in the States where they are most numerous are: In Alabama, 29,000; in Georgia, 25,000; in Texas, 17,893; in North Carolina, 140,205; in South Carolina, 140,107; in Mississippi, 200,118; in Georgia, 221,442; in Virginia, 271,297. During 1901, 75,000 baptisms were reported and estimated among them. Marked intellectual progress had taken place among them during the past forty years. While in 1860 the minister who could read the Bible was an exception, in 1900 the exception was the man who could not read it. In the cities and large towns generally there were able, cultivated ministers, who preached to intelligent congregations meeting in excellent and well-furnished houses of worship, while the Sunday-schools were studying the International lessons; but in the rural regions progress was slow and the conditions were not such as were desirable for the education of their children was seen in the fact that nearly all the schools were aided by the American Baptist Education Society and had an average attendance of 24,998, with 4,472 officers and teachers, and contributions of $4,287 to various missions and $12,567 for school purposes. Of the 247 schools, 10 were mission schools and 2 union schools. The advisability of appointing a superintendent of Sunday-school work was recommended by the convention to the consideration of the boards interested in this subject, and to the committee. The Church Edifice Board, with a permanent fund of $9,500, had received $2,715, and had made loans amounting to $2,385. During its history it had helped 91 churches with loans aggregating $43,000. Four churches had repaid their loans in full during the year. The total disbursements of the Committee on Western Missions (Manitoba, the Northwest, etc.) had been $6,337. Seventy-three men were engaged in work in the missions, which returned 98 churches and 300 preaching stations. Fourteen German colonies were mentioned. The Board of Home Missions had assisted 124 pastors and 50 students, who had been serving 296 churches and preaching stations. The churches and given $10,000 for missions, returning, according to the representations of the report, 44 per cent. on an annual invest-
BAPTISTS.

ment in them of $23,044. Eight new churches had been or were being erected, 5 had declared for self-support, 22 had reduced their applications for aid, 12 new churches had been organized during the year, and 750 baptisms were returned. The total gross receipts had been $27,900, and the expenditures $30,382. The report on the state of religion showed that in all the churches 18 ministers had been ordained during the year, 2,201 persons had been added to the membership, and that the present number of members was 43,940, showing a net gain of 689 members. Throughout the denomination there had been 1 baptism to every 17 members. The churches had expended $505,805, of which $313,845 were on work at home and $177,020 on work abroad; showing an average of $7.22 per member on work at home and $1.76 on work abroad, or a total average of $9.98 per member; besides which special contributions had been made to extraordinary objects.

The main strength of the convention is in Ontario and the Western provinces. In Lower Canada the Baptists have 31 English-speaking churches, with 2,100 members. Of the 19 churches comprising the Eastern Association, 11 are associated with the Home Missions Board. There are 10 French-speaking churches, with about 500 members, making the whole number of members in the province of Quebec about 2,000.

Constitution of the Maritime Provinces.—The annual Baptist Convention of the Maritime Provinces met in Yarmouth, Nova Scotia, Aug. 23-25, the meeting being preceded by a breakfast on the preceding day. The Rev. Dr. E. M. Saunders was chosen president of the convention. A communication was received from the Free Baptist General Conference declining to consider favorably the proposals of the Baptist convention to cooperate in the work of education and of foreign missions. The Foreign Mission Board reported that its total receipts had been $18,370, of which $4,862 had come from the churches, $8,575 from the Ladies’ Aid Societies, and the rest from invested funds and other sources. The accounts showed a deficit of $1,379 for the year, making an accumulated deficit of $5,027. Additional contributions of $1,800 were made to the foreign mission fund during the session of the convention, making it possible to show a reduction of the deficit. The report of home missions showed but little if any advance. Favorable reports were made by the university and its associated institutions, particularly by the Ladies’ Seminary, the faculty of which was to be enlarged. A decline was noticed in the number of students preparing for the ministry in attendance at the university. Additional contributions were reported to the fund of $600, upon the completion of which a gift of $15,000 was promised to Acadia College by Mr. John D. Rockefeller. The general receipts for all purposes showed an increase for the year of $2,000 in Nova Scotia, but a decrease of more than $1,000 in New Brunswick and Prince Edward Island. More than half of the contemplated Centenary fund of $60,000 had been completed. A commission of 6 brethren, 2 in each province, was appointed to have charge of the raising of funds for all the denominational objects. Estimating for non-reporting churches, the number of members was returned as more than 51,000, and 1,598 baptisms were reported.

Baptists in Great Britain.—From the British Baptist Handbook for 1905 it appears that the gain in membership of the British Baptist churches for 1901 was 7,390, compared with about 12,000 the year before, making the present total membership 372,000. The gain in Sunday-school attendance was 4,000, giving a total of 532,219 pupils. The triennial statistics of Baptists in the world showed 4,045,089 Baptists in church-members in all, making a gain in three years of more than 300,000, and of 748,000 in the last six years. Of this total gain in the latter period, 524,000 were in the United States, 41,000 in Great Britain and Ireland, and 183,000 in the rest of the world. There were about 260,000 Baptist church-members in the British colonies. Of these, 113,826 were in India, or about one-seventh more than in Canada.

The Baptist Union of Great Britain and Ireland met in its annual spring session April 27. The president for the year, the Rev. J. R. Wood, opened the meetings with an address in which he spoke of the place and influence of the minister and the danger to be apprehended from the presence of the commercial spirit in the Church. The report of the council referred to an increase of 7,230 members and 38 pastors in charge as having taken place during the year. The receipts as figured in the cash summary had amounted to £29,012, or £4,294 below the account of the Twentieth Century fund. The expenditure had been £12,300. An increase of £3,425 appeared in the Home Mission fund, by which 109 churches in 21 associations, and 27 mission stations, with 79 mission pastors in all, had been aided. The aided churches had 5,550 communicants, with an average attendance of 9,095 persons, and 8,943 children being in the Sunday schools. The responses to appeals in behalf of the Annuity fund had been generous, and all annuities would be paid in full. The sum total of cash contributed and promises made to the Twentieth Century fund (intended to be £250,000) to the day of the meeting of the assembly had been £228,154, while £6,000 more had been promised contingent upon the whole amount being raised.

The capital of the Baptist Building fund stood at £54,521. During the year 41 churches had received grants, varying from £40 to £500 in each case, to the extent of £250,040. The Long-term fund had amounted to £12,390. Forty-four churches were waiting for loans to an aggregate amount of £15,220, or more than the probable income for the next fifteen months.

A resolution expressing the education bill protested against the measure as one which would lower the standard of national efficiency and perpetuate and extend the injustice of payment by private managers of the teachers of public schools, whose stipends it was proposed to pay entirely out of the public funds. The bill, in its main provision, was characterized as a further endorsement of the Established Church, and the union would offer it a determined and unceasing opposition. Another resolution called on all friends of Sunday closing of public houses to press the demand for a comprehensive measure which would extend the blessing to the whole of England. A proposition for the establishment of a Baptist Union Sustentation fund, drawn up by the late Mr. William Chivers, was submitted to the assembly, and was referred to the finance committee for consideration. The plan contemplates the inclusion in the fund of the existing augmentation and home mission funds of the union; and the object of the fund is declared to be "to secure a minimum salary to all duly accredited ministers whose churches are supported with the fund, and to make provision for home evangelization in new or needy districts." The last business of the meeting was the announce-
BAPTISTS.

The completion of the Twentieth Century Fund of £250,000, the final subscriptions having come in since the opening of the assembly. The annual meetings of the Baptist Missionary Society were held in London, April 29 and May 1. The report represented that the purpose determined upon at the centenary meeting of the society several years before, to raise the annual income to £100,000, had never been carried out, but they had been forced to face each year a deficit of £10,000, which had to be met by special subscriptions. The deficit this year was £9,909, toward the removal of which subscriptions were taken during the meeting, whereby it was reduced to £3,700.

The general receipts of the Zenana Mission had amounted to £11,855, and the expenditures to £10,705. The mission staff numbered 63 missionaries in India and 6 in China. In India, visits were paid regularly to about 3,000 zenanas, 1,500 zenana girls were under instruction, and 97 schools were taught, with nearly 4,000 pupils. The missionaries returning to China had been warmly welcomed back by the Chinese Christian women.

The Bible Translation Society returned a total income of £1,564, and a balance in hand of £101 after meeting all expenses. Progress was reported in the translation of the four versions of the Scriptures in Bengali, Oriya, Cingalese, and Dualla and other languages of the Congo.

The autumnal assembly of the union was held in Birmingham, Oct. 6-9, Tuesday, Oct. 7, being given to the meeting of the Baptist Missionary Society. At this meeting a farewell was given to 10 missionaries returning to their fields and 4 new missionaries going out; and a resolution was adopted pledging cooperation with the visitation of the churches which had been instituted for the purpose of securing sufficient funds to maintain an equilibrium between income and expenditure, and of obtaining further support to meet the new and promising openings that were presenting themselves and the increasing demands for reinforcements from fields already occupied.

The address of the President of the Union, the Rev. J. R. Wood, was on The Church and the Nation. The Twentieth Century Fund of £250,000 (which had all been subscribed) reported that the amount of £204,000 in cash had been received for it—£173,000 of the sum from England. A considerable additional amount was expected from Wales, and some from England. The education bill was the subject of an active discussion, and resolutions were unanimously adopted declaring that the members of the assembly maintained the objections against the bill offered in the spring meeting of the union for the following reasons:

1. That the bill seeks to confirm and to perpetuate the control of elementary schools.

2. That it provides no effective remedy for the grievous wrong which is done to non-conformists and other parents in 7,474 parishes where the only public elementary schools are those whose avowed object is the training of the scholars in the principles of the Established Church among themselves.

3. That in the case of 11,777 Church of England and 1,045 Roman Catholic schools, while the entire cost of teaching staff and furniture and apparatus would be paid by the public purse, denominational managers would appoint and dismiss teachers and prescribe any form of religious instruction which they pleased; and

4. That the bill violates the fundamental principle of the Constitution that taxation shall be accompanied by popular control. They regard the bill as the product of an alliance between the Government and the High Anglican party and the Roman Catholic hierarchy, having for its main purpose the clericalization of education at the cost of the just rights of all Free Church citizens and to the injury of Protestantism and non-conformity; and since this attempt occurs at the end of a series of sectarian aggressions in our national educational legislation, and as a fresh and unprovoked disturbance of the present arrangement, they are resolved to use their political influence to secure a system of national education in harmony with the principles of justice and efficiency, and in which every public elementary school shall be sectarian and placed under the management of a board of which women may be members, and no citizen, teacher, or scholar be placed at any legal disadvantage on account of religious opinion.

They now declare their solemn determination not to submit to this measure if it becomes law and to render it unworkable by every lawful means in their power. They also declare that very many of the opponents of the bill have resolved to suffer distress of goods as a protest against this obnoxious measure, rather than pay the rates for the support of the Mid-Town Church and the growing alienation of the working classes from places of worship, The Problem of Suburban Work, The Missionary Dispensary, The Rural Baptist Church, Lay Preaching Power; and a public evening meeting was devoted to the Exposition of Free Church Principles.

Baptist Jubilee in New Zealand.—Jubilee celebrations of the foundings of the first Baptist churches in the colony were held in New Zealand early in the year. The Baptist Union was not formed till 1882. The demands for reinforcements from fields already occupied. The address of the President of the Union, the Rev. J. R. Wood, was on The Church and the Nation. The Twentieth Century Fund of £250,000 (which had all been subscribed) reported that the amount of £204,000 in cash had been received for it—£173,000 of the sum from England. A considerable additional amount was expected from Wales, and some from England. The education bill was the subject of an active discussion, and resolutions were unanimously adopted declaring that the members of the assembly maintained the objections against the bill offered in the spring meeting of the union for the following reasons:

1. That the bill seeks to confirm and to perpetuate the control of elementary schools.

2. That it provides no effective remedy for the grievous wrong which is done to non-conformists and other parents in 7,474 parishes where the only public elementary schools are those whose avowed object is the training of the scholars in the principles of the Established Church among themselves.

3. That in the case of 11,777 Church of England and 1,045 Roman Catholic schools, while the entire cost of teaching staff and furniture and apparatus would be paid by the public purse, denominational managers would appoint and dismiss teachers and prescribe any form of religious instruction which they pleased; and

4. That the bill violates the fundamental principle of the Constitution that taxation shall be accompanied by popular control. They regard the bill as the product of an alliance between the Government and the High Anglican party and the Roman Catholic hierarchy, having for its main purpose the clericalization of education at the cost of the just rights of all Free Church citizens and to the injury of Protestantism and non-conformity; and since this attempt occurs at the end of a series of sectarian aggressions in our national educational legislation, and as a fresh and unprovoked disturbance of the present arrangement, they are resolved to use their political influence to secure a system of national education in harmony with the principles of justice and efficiency, and in which every public elementary school shall be sectarian and placed under the management of a board of which women may be members, and no citizen, teacher, or scholar be placed at any legal disadvantage on account of religious opinion.

They now declare their solemn determination not to submit to this measure if it becomes law and to render it unworkable by every lawful means in their power. They also declare that very many of the opponents of the bill have resolved to suffer distress of goods as a protest against this obnoxious measure, rather than pay the rates for the support of the Mid-Town Church and the growing alienation of the working classes from places of worship, The Problem of Suburban Work, The Missionary Dispensary, The Rural Baptist Church, Lay Preaching Power; and a public evening meeting was devoted to the Exposition of Free Church Principles.

BELGIUM.

The Belgian constitution, providing for a representative, hereditary monarchy in western Europe. The legislative power is vested in the Senate and the Chamber of Representatives. Senators are elected for eight years, one-third by provincial councils and two-thirds by the direct vote of the people. Half the Senators retire every four years. The Chamber contains 132 members, one to 40,000 inhabitants, elected for four years. Every male citizen twenty-five years of age possessing full civil rights and domiciled for one year in his commune has a vote. If he is thirty-five years of age, married or a widower with children, and pays 5 francs in direct taxes, he is entitled to 2 votes. If he possesses real property of the value of 2,000 francs or investments in the public funds yielding 100 francs a year, he may cast 3 votes. If he is a graduate of an institution of higher education or holds or has held public office or practices a profession implying the possession of higher education he has 2 votes; and if, in addition, he is the head of a household or an owner of property or public stocks, he has 3 votes. There were 1,452,235 individual electors in 1900 who cast 2,532,960 ballots. Representative candidates polled 1,277,720 who cast 1,994,153 for Senators. The number of Representatives is determined after each census, and the Senate consists of half their number.
The reigning sovereign is Leopold II, born April 9, 1835, who, on Dec. 10, 1865, succeeded his father, Leopold I, a prince of Saxe-Coburg, who was elected King of the Belgians by a National Congress on June 4, 1831, after the secession on Oct. 4, 1830, of Belgium from the Netherlands. A treaty was signed on Nov. 15, 1831, by Austria, Great Britain, Germany, Russia, guaranteeing the perpetual neutrality and inviolability of Belgium. The heir to the throne is Princess Albert, born March 24, 1837, the king's only brother, who has one son living, Prince Albert, born April 8, 1875.

The Council of Ministers appointed on Aug. 5, 1899, was composed as follows: President of the Council and Minister of Finance and of Public Works, Count de Smet de Naeyer; Minister of Foreign Affairs, Baron P. de Faveureux; Minister of Justice, M. van den Heuvel; Minister of Agriculture, Baron van den Bruggen; Minister of the Interior and of Public Instruction, M. de Trooz; Minister of War, Major-General A. Cousebant d'Al kemade; Minister of Railroads, Posts, and Telegraphs, M. Lieber; Minister of Industry and Labor, Baron Surmont de Volezborg, who resigned on Aug. 20 and was succeeded by Gustave Francotte.

Area and Population.—The area of Belgium is 11,373 square miles. The population in 1902 was 6,893,000. The census of that date makes it 6,895,311, or 590 to the square mile, an increase of 454,960 in ten years. The number of marriages in 1899 was 55,765; of births, 194,268; of deaths, 126,903; excess of births, 67,305. The number of divorces in 1899 was 563. The number of immigrants in 1900 was 29,231, and of emigrants 25,064; nat immigration, 4,107. The population of the principal towns on Dec. 31, 1900, was as follows: Brussels, including suburbs, 561,782; Antwerp, 265,000; Liège, 173,708; Ghent, 160,949; Mechlin, 56,013; Verviers, 52,503.

Finance.—The ordinary revenue of the Government in 1899 amounted to 483,372,000 francs, and the ordinary expenditure to 570,442,000 francs. In 1900 the ordinary revenue was 491,904,000 francs and the ordinary expenditure 580,555,000 francs. The revenue was 480,040,050 francs, of which 26,438,000 francs are derived from property taxes, 21,629,000 francs from personal taxes, 9,000,000 francs from trade duties, 1,500,000 francs from customs, 43,355,806 francs from customs, 68,755,040 francs from excise, 2,902,000 francs from various taxes, 30,200,000 francs from registration and other fees, 19,720,000 francs from succession duties, 8,000,000 francs from stamp duties, 913,000 francs from fines, 2,105,000 francs from rivers and canals, 204,370,000 francs from railroads, 10,000,000 francs from telegraphs, 15,910,530 francs from posts, 1,510,000 francs from steamboats, 2,955,000 francs from domains and forests, 14,999,500 francs from profits of the Bank of Belgium, and other chartered enterprises, 6,168,039 francs from railways, 2,955,000 francs from domains and forests, 14,999,500 francs from profits of the Bank of Belgium, and other chartered enterprises, 4,477,074 francs from repayments. The total expenditure for 1902 was estimated at 488,344,403 francs, of which 133,781,107 francs were for internal administration, and the cost of the public debt, 6,115,276 francs for the civil list and dotations, 20,791,400 francs for the Ministry of Justice, 3,283,988 francs for the Ministry of Foreign Affairs, 30,160,151 francs for the interior, and 12,412,756 francs for the Ministry of Public Instruction, 14,488,800 francs for the Ministry of Agriculture, 16,484,800 francs for the Ministry of Industry and Labor, 160,377,494 francs for the treasury, 1,091,963 francs for telegraphs, and 55,205,371 francs for the Ministry of War, 34,498,820 francs for the Ministry of Finance and of Public Works, 7,334,210 francs for the gendarmerie, and 2,076,000 francs for revenue stamps.

The national debt on June 30, 1901, amounted to 2,650,988,150 francs, of which 2,428,111,982 francs are loans raised at 3 per cent. interest, 2,895,536 francs represent the capitalized value of annuities, and 216,039,632 francs are the share of Belgium in the old debt of the United Netherlands, a perpetual debt on which 2½ per cent. interest is paid. The loans were raised almost entirely for the building of railroads and other useful and remunerative public works. They are redeemable by means of a sinking fund. The revenue of the provincial administrations in 1899 was 18,819,013 francs, and expenditures 15,938,019 francs; provincial debts, 32,207,082 francs. The ordinary revenue of communes amounted to 118,742,538 francs, and expenditure to 117,144,576 francs; the extraordinary revenue to 59,278,223 francs, and expenditure to 62,172,216 francs.

The Army.—The standing army is raised partly by conscription, to which every Belgian is liable at the age of twenty, and partly by voluntary enlistment. The strength of the army on the peace footing in 1902 was 287 staff and superior officers, 1,921 officers, and 27,708 men in the infantry, 370 officers and 5,770 men in the cavalry, 653 officers and 8,682 men in the artillery, 152 officers and 1,703 men in the engineers, 75 officers and 999 men in the administrative departments, 210 surgeons, 41 veterinarians, and 71 officers and 2,903 men in the gendarmerie; total, 3,743 officers and 47,809 men, with 10,879 horses. The infantry uses the rifle of the model of 1899, with 7.65 millimeters caliber, holding 5 cartridges. The field-artillery have 204 Krupp breech-loading steel guns of 47 centimeters bore in the mounted and 7.5 in the horse batteries. Conscripts are allowed to furnish substitutes, which the Ministry of War provides on the payment of a maximum price of 1,600 francs. The nominal term of service is eight years in the active army and five years in the reserve. Unlimited leave is given after service with the colors for twenty-eight to thirty-six months. The budget estimate of 1901 was for the defense of 45,000 men, with 28,600 horses. It is proposed to increase the strength to 180,000 men by shortening the term of service.

Commerce and Production.—Of the total area of Belgium 65.06 per cent. is cultivated, 17.70 per cent. is forest, and 17.24 per cent. is wasteland, marsh, river, road, and building and mineral land. Less than 18 per cent. of the people are dependent on agriculture. The production of wheat from 180,377 hectares in 1899 was 3,816,777 hectoliters; of barley from 40,242 hectares, 1,402,571 hectoliters; of oats from 248,933 hectares, 10,101,950 hectoliters; of rye from 283,375 hectares, 6,543,152 hectoliters; of potatoes from 184,890 hectares, 33,246,046 hectoliters; of sugar-beets from 54,090 hectares, 18,065,538 quintals; of other beets from 40,561 hectares, 17,383,656 quintals; of tobacco from 2,148 hectares, 34,067 quintals. The quantity of hops gathered was 63,991 quintals. The annual value of forest products is estimated at 22,000,000 francs. The value of quarry products in 1899 was 55,448,745 francs. The quantity of iron ore mined in 1899 was 201,445 tons, valued at 1,196,000 francs; the quantity imported from Luxembourg and other countries was 2,621,336 tons. There were 125,235 persons employed in the coal-mines, which produced 22,072,000 tons. The value of coal was 5,091,615 francs. The production of pig iron was 1,024,574 tons, valued at 74,404,000 francs; of manufactur-
BELGIUM.

sailing vessels, of 741 tons, and 69 steamers, of 112,518 tons. Of the vessels entered and cleared in 1900 Belgium cleared, of 1,380,390 tons, and 1,908 cleared, of 1,384,776 tons; Great Britain, 4,042 entered, of 3,804,974 tons, and 4,019 cleared, of 3,758,418 tons; Germany, 1,037 entered, of 1,679,067 tons, and 1,032 cleared, of 1,676,044 tons; Norway, 530 entered, of 310,102 tons, and 538 cleared, of 330,404 tons; Sweden, 237 entered, of 193,301 tons, and 243 cleared, of 203,141 tons; Denmark, 237 entered, of 235,310 tons, and 242 cleared, of 236,968 tons; Holland, 203 entered, of 203,777 tons, and 199 cleared, of 196,121 tons; Japan, 48 entered, of 197,058 tons, and 49 cleared, of 201,034 tons; France, 148 entered, of 148,730 tons, and 149 cleared, of 149,232 tons; Russia, 66 entered, of 67,113 tons, and 67 cleared, of 66,540 tons.

Railroads, Posts, and Telegraphs.—The total length of railroads in operation on Jan. 1, 1901, was 2,833 miles, of which 2,503 miles were operated by the Government and 330 miles by companies. The number of passengers carried during 1900 was 123,700,046 on the state and 15,428,041 on the companies' railroads; gross earnings, 209,184,311 francs on the state and 15,428,041 francs on the companies' railroads; gross expenses, 140,428,155 francs for the state and 11,828,518 francs for the companies' railroads. The state railroads cost 1,963,823,697 francs to build. Since the first railroad was constructed in 1834 the Government has received in net profits above all expenses for operation, maintenance, and interest on borrowed capital amounting for the whole period to 115,528,477 francs.

The post-office in 1900 carried 137,617,928 private letters, 25,355,406 official letters, 65,384,343 postal cards, 125,648,551 circulars, etc., and 134,724,720 newspapers; receipts were 25,248,483 francs, and expenses 13,498,196 francs.

The telegraphs of Belgium had on Jan. 1, 1901, a total length of 3,975 miles, with 24,940 miles of wire. The total number of dispatches in 1900 was 14,411,487; receipts were 9,309,440 francs; expenses, 5,896,524 francs. There were 37,285 miles of telephone wires and 14,920 stations. The number of conversations was 39,284,657.

Legislation.—The Chambers in the early part of the session of 1902 agreed to the Government's military reform bill, which reduces the term of service and increases the effective strength of the army 20 per cent. by an extension of the volunteer system. The antigambling bill, which suppresses the public gaming-houses in Ostend and Spa and all gambling clubs in Belgium, was finally passed by the Chamber of Representatives, March 22. A workmen's accident bill divides the risk between employer and employee. In case of temporary or permanent incapacity the workman receives half the amount of his average earnings, and this is paid to his family for a certain number of years if he is killed. Contributory negligence on the part of the injured workman does not absolve the employer from his liability for compensation. Employers are bound to insure themselves in a company approved by the Government or to deposit a sufficient insurance fund in the state savings-bank. A commission is appointed for the settlement of claims, which includes representatives of both employers and working men.

At meetings held at the People's Palace in Brussels and in all the industrial centers of the provinces the Socialists of Belgium decided to start a new movement for the extension of female suffrage. A manifestation in front of the Parliament buildings announced for Mardi gras was
frustrated by a strong cordon of troops and police who kept the demonstrating bands out of the near-by parks and squares. The number of qualified voters was increased from 135,000 to 1,400,000 with over 2,000,000 votes. This extension of the franchise admitted Socialists to the Chamber, but was unsatisfactory to the Liberals, who replaced it through a system of proportional representation in 1899. Until this was adopted the scrutin de liste frequently left the Liberals without representation in districts where they almost had a majority. The Belgian system of proportional representation is worked out by dividing the total vote for each list by the number of members to be elected. The quotient is the electoral divisor which regulates the division of seats among the candidates of the different parties by the number of times it is contained in the total number of votes cast for each party ticket. The result for the whole country in 1900 was to give still to the Clericals an unduly large proportionate representation. In a total ballot of 2,073,003 the Clericals 1,040,000 votes, the Liberals and Progressists 535,000, the Socialists over 500,000. In the allotment of seats the Clericals obtained 85, the Liberals and Radicals 35, the Socialists 33, the Independents 1, giving the Catholics a majority of 18 over the united Opposition parties, who polled a popular vote about equal to theirs in the true proportionate representation. Hence the old Liberals as well as the Radicals entered into coalition with the Socialists, willing to sacrifice, if necessary, to political expediency Jansen’s old saying that in 1830 the age of thirty-five or forty married men to vote twice, and to accept the Socialist program of one man one vote, while the Socialists on their side agreed to adopt the favorite Liberal principle of proportional representation. The Socialists and Liberals proposed to lower the voting age to twenty-one and to alter the composition of the Senate. The Catholics proposed to couple woman suffrage with the Socialist plan of an equal franchise for all voters. This innovation was resisted by the Liberals, who anticipated that the influence the clergy can exert over the female mind, especially in the Catholic and middle classes, would secure to the Clericals a permanent majority. The Government bill increasing the number of Deputies from 102 to 186 and the number of Senators from 76 to 83 was passed by the Chamber on April 12 without opposition. The arrest of M. Vandervelde, the Socialist leader, on April 10 led to a serious riot in Brussels. The troops charged with fixed bayonets and fixed volleys, while the rioters used revolvers and glass bombs filled with corrosive fluids. Disturbances occurred in other towns. This outbreak caused a breach between the Socialists and the Liberals, who wished to withdraw from the alliance and urged the Government to dissolve Parliament when the Socialists decreed a general strike. The strike began in the cities and spread to all the trades. In three days more than 200,000 men quit work. On April 17 Count de Smet de Nayer gave his decision not to bring forward equal suffrage because the majority of the people did not want it, because there was no chance of a two-thirds majority in the Constituent Assembly in its favor, and above all because the Government would not yield to mob rule and allow the proceedings of Parliament to be dictated from the street or the action of the rioters to be encouraged by strikes, intimidation, and violence. By 84 votes to 64 the Chamber on April 18 decided not to admit the question of revision to consideration. The un-
Belgium.

The more compromising negative of the Prime Minister made the business men of the country, whose affairs were at a standstill, as indignant at the Clericals as against the Socialists. The latter appealed to the King and announced that they would bring the question of revision before the Chamber until it should be considered. On April 19 at Louvain a mob drove the militia back into their quarters, where they loaded their rifles, and when again pressed hard they fired and killed and wounded a number of people. The people fired revolvers at another company, which replied with a volley, killing 7 and wounding 18. The strike was declared at an end by the council of the Labor party, and on April 21 the working men generally resumed their occupations. The Chamber voted the budget on April 25. The sum of 46,000,000 francs was voted for the armament. The Chamber imposed a tax of 1 franc on newspapers, and 5 francs on lotteries, and 2 francs, 50 centimes on the sale of opium and rum. The Chamber voted the budget on May 27. There were 50 retiring members to be replaced, and 14 additional members were elected to bring up the number of Deputies to 249. A new Chamber was created by the act enlarging the Chamber to meet the increase in the electorate. In conformity with the same act 7 new Senators were elected. The new Chamber consisted of 137 Liberals, 32 Liberals, and 2 Christian Democrats, increasing the Clerical majority over the united Opposition from 20 to 24. Of the newly created seats 8 went to Christian Socialists, 2 to Liberals, and 1 to a Christian Democrat. The new seats in the Senate were divided between 4 Clericals, 2 Liberals, and 2 Socialists.

The Sugar Convention. — Several international conferences have been held with the object of bringing about a mutual agreement for the regulation or abolition of the bounties given by Continental governments to protect the production and encourage the export of beet-sugar. These bounties are accomplished by high revenue-producing excise duties and a surcharge on imports sufficient to shut out foreign sugar from the producing countries. The popular view is that these duties serve two purposes: first, to make sugar a luxury in countries where the sugar is grown, twice as dear or more in France, Germany, or Austria as it is in England, which spurs the dimes d'importation or consumption. England used to import and refine cane-sugar grown mostly in the West Indies. When Germany, France, Austria, and Belgium began to give bounties England could get sugar from the Continent for less than the actual cost of production. The importation of cane-sugar ceased altogether, and the British refineries went out of business. On the other hand, the manufacture of British jams, confectionery, and biscuits, cheated by the low price of sugar, grew to enormous proportions and the demand for articles was expended to all parts of the earth. Meanwhile Jamaica and other British West India islands, British Guiana, Mauritius, and other colonies which formerly supplied Great Britain with raw sugar languished and declined and the capital invested in sugar plantations was to a great extent lost or withdrawn. The poverty and distress in the island colonies and the falling off of the colonial revenue by a stage at last that the British Government granted large sums in aid. On the recommendation of a commission experimental stations were established in England, Belgium, Spain, Italy, the Netherlands, and Russia signed the convention. France adhered to it in principle and reserved the right of signing later. Avoiding repercussions by selection of a higher saccharine content, as has been done with the sugar-beet, and public aid was given to encourage more scientific, economic, and thorough methods of extracting the sugar from the cane, the protection of modern machinery. The colonies called upon the Imperial Government to impose countervailing duties upon bounty-fed sugar, as the United States Government has done for the protection of American sugar-growers. In the sugar-producing countries of Europe the bounties were a heavy fiscal burden which tended constantly to increase, because France or Germany or Austria at the first appearance of foreign competition in sugar immediately increased the bounty or raised the duty, which further reduced domestic consumption, and any change made by one country was undone by the others. All these countries were competing for the English market, which was more valuable to them than all the other foreign markets together. Germany, the greatest sugar-producing country in the world, sold more sugar to England than the German people themselves consumed. Of the third of the sugar crop went to Great Britain, and a like proportion of the Austrian sugar, which found another good market in British India. Just as in the Continental nations, as in the United States, as in all others, the sugar brought powerful pressure on their governments to bring about an increase in the bounties and protective duties and by all means to prevent the destruction of the sugar interests of England and Scotland who used sugar became a strong and united interest fighting against the imposition of countervailing duties, supported by the general public, to prevent any reduction of cheap sugar. To raise the price of this necessity of life by taxation was represented as a violation of the principle of free trade, though the friends of the colonists argued that duties equivalent to the bounties were necessary to secure free trade to the cane-growers. The manufacturing industries using beet-sugar, which were in Great Britain and were influential in Parliament and in the press, had grown into a bigger business than the production of cane-sugar in British colonies. The popular view was that, if the Continental governments chose to make a present of their production free to the British public by granting bonuses to their sugar-producers to enable the latter to sell sugar so much cheaper in the English market, the British public would not think it foolish to accept this benefit granted by the cost of foreign taxpayers. The impoverishment of the colonists, unable longer to pay the expenses of the colonial administration, the death of sugar and reducing consumption in the beet-growing countries, the overproduction of sugar and glutting of the foreign markets, and the embarrassing charge of the bounties were, however, growing evils that had at some time to be faced and could not at any time be ignored by publicists and statesmen. The first diplomatic conference convoked to deal with these conditions was held in London in 1888. The powers invited by Great Britain to meet to consider the abolition of the bounties signed a convention on Aug. 30, 1888, in which they agreed in principle to the total suppression of open or disguised bounties on the exportation of sugar. They agreed to exclude from their respective territories any sugar coming from countries which continued to pay bounties on the manufacture of sugar. England, Belgium, Spain, Italy, the Netherlands, and Russia signed the convention. France adhered to it in principle and reserved the right of signing later. Avoiding repercussions by selection of a higher saccharine content, as has been done with the sugar-beet, and public
definite adhesion of Austria and France was never secured, and the system of bounties and prohibitive duties flourished more rankly than before. Ten years later the Belgian Government, at the instance of Germany and Austria and with the encouragement of Great Britain, invited the same powers to a new conference. The German and Austrian governments were willing to suppress bounties at once, which was desired by Great Britain. The Belgian and Dutch representatives proposed gradual abolition. France reserved the right to continue a system of indirect bounties, and Russia declined to discuss its system of drawbacks for exports, denying that it was of the nature of a bounty, while the Austro-Hungarian delegate pronounced it equivalent to a bounty on exportation. The conference came to an end without agreement, with the understanding that the Belgian Government should carry on a diplomatic correspondence with the other governments, and if the basis of an understanding could be reached through diplomatic channels the conference could be reconvened later. Sugar production had doubled since the earlier convention. In December, 1901, the representatives of the English manufacturers met in conference once more at Brussels. The situation had changed, chiefly that England no longer viewed the bounty question with platonic wishes for the abolition of bounties, but indifference as to the time when they should be abolished, since the British people reaped the material profit so long as they were continued. The necessities of the sugar colonies had reached the stage when the British Parliament had to come to their aid with substantial grants to offset the bounties. Reciprocity agreements had been made with the United States which afforded some relief, but this was likely to be temporary. The needs of the British treasury made a revenue from sugar imperative, and the tax could not be framed in utter disregard to these colonies. India was already permitted to impose a countervailing duty on bounty-fed sugar. The effect on the sugar trade of Austria would be disastrous. Overproduction caused a crisis in Germany and other countries. While the beet-growers were losing money the refining trust, or cartel, in Germany continued to make large profits. Germany is the greatest sugar country in the world. The production in 1901 was 2,500,000,000 kilograms, of which 700,000,000 kilograms were consumed in Germany, 750,000,000 were exported to Great Britain, and 850,000,000 went to other countries. Great Britain also has taken about a third of the Austrian output, and only a third is consumed at home. Germany has given away 29,000,000 marks yearly in bounties, which did not save the growers and manufacturers of raw sugar from a serious crisis, although the cartel made a profit of 90,000,000 marks in the first year after its organization in June, 1900. By agreement between the refiners and the manufacturers of raw sugar, the latter received 53,000,000 marks, but this did not counterbalance the loss resulting from the reduction of the price of raw sugar from 205 to 155 marks a ton. On the other hand, the 33 refiners were able to divide their share as an extraordinary profit. A direct bounty on the exportation of sugar was given in Germany and Austria-Hungary, and since 1897 in France. In Belgium and in Russia indirect bribes to suppress the export of sugar. The excise tax duty, which limits home consumption in all European countries which produce sugar, was 20 marks per 100 kilograms in Germany and equally excessive in other countries. To bounty consumers, owing to the bounty system, had to pay 66 francs per 100 kilograms for an article normally worth 30 francs. In addition to the excise duty an import duty of 20 marks per 100 kilograms was charged in Germany and one of 22 crowns in Austria-Hungary. In France the surtax had been reduced to 10 francs and in Belgium to 5 francs. The cartel system was developed first in Austria and copied in Germany. It had the effect of increasing production, and at the same time further limiting home consumption. While fixing prices at a higher figure at home, manufacturers were obliged to lower them abroad beyond all precedent, and still could not find a market for the surplus stocks, which were never so large in Germany and in Austria. In December, 1901, the representatives of the powers met once in a conference at Brussels. The British as well as the German government had endeavored to find a basis for negotiations in the preliminary correspondence, and the bounty-paying governments had to face the alternative of countervailing duties that would eventually restore the import duties on bounties unless they voluntarily gave up the payment of bounties and reduced the prohibitory surtax on imports. In any case they had to look for a substitute for the bounty. The manufacturing establishments, is 27 kilograms per head of population. In the United States it is 29 kilograms. In Germany the consumption per capita is 13.5 kilograms, in Austria only 8.4 kilograms. The Agrarians in Germany made a mien as if they would defeat the ratification of the convention and talked of a tariff war with England. In the end the treaty was ratified and it was arranged to fix the excise duty at 14 marks, instead of 20 marks, which with the reduction of the import duty of 40 to 18.50 marks reduces the total tariff from 40 to 18.50 marks. In France it was lowered from 64 to 30 francs. The sugar convention was signed at Brussels on March 5, 1903. The producing countries agreed to suppress from Sept. 1, 1903, all direct and indirect bounties for the benefit of the production or exportation of sugar or of sweetmeats, chocolates, biscuits, and condensed milk, or other articles containing a notable proportion of sugar; also to limit the surtax on imports to a maximum of 6 francs per 100 kilograms; and to impose a special duty on imports from countries which continue to grant bounties either for production or export, this duty to be at least equal to the amount of bounty given. Bounty-led sugars may even be prohibited by any of the contracting parties, but the sugars imported from any of the contracting countries or from colonies belonging to them which do not give bounties and submit to the obligations of the convention must be admitted at the lowest import rates, and no discrimination shall be made between cane and beet sugar. Spain, Italy, and Sweden are freed from the obligation to give no bounties on production so long as they do not export sugar, and from the limitation of the surtax and the obligation to levy a countervailing duty. Bounties include those on production, total or partial exemptions from taxation granted for a part of the manufactured product, profits derived from surplusage
of output or from the exaggeration of the drawback, and advantages derived from any surtax in any sugar is limited to the same extent, and is therefore fixed by the surtax treaty, which are 6 francs for refined and 3 francs for other sugars. Revenue officers must supervise factories and refineries in each country. A permanent international commission of surveillance will be established in Brussels, which will exercise a general control, settle any litigious questions that may arise, and decide as to the admission of sugars that have not taken part in the conference. The convention was concluded for five years, to be continued thereafter by tacit agreement from year to year, any power having the right to withdraw by giving notice before Oct. 31. In case such notice is given by any of the contracting parties the Belgian Government will convocate within three months a new conference to decide on the measures to be taken.

Great Britain made a special declaration that during the continuance of the convention no direct or indirect advantage would be given to the importation of colonial sugars into the United Kingdom. The Netherlands made the same engagement in respect to the Dutch colonies. Both Great Britain and the Netherlands agreed to submit to the conference any questions of a political nature and invite their adhesion. The ratifications were to be exchanged before Feb. 1, 1903.

France objected to the total abolition of bounties, wishing to retain an annual bounty of 4.50 francs in order to balance the reduction in the duty. Germany, supported by Austria-Hungary, resisted the reduction of the surtax to 5 francs, which had been proposed by Belgium and France. Germany also strove hard to have the date of the going into force of the convention postponed for one year longer. A proposal emanated from Great Britain to have the cartels suppressed by law, but it was withdrawn. The persons associated in the cartels in Germany and Austria and all others interested in growing beets or manufacturing sugar opposed vigorously all the features of the convention and met in conference at Berlin to discuss ways of defeating it. Opposition was also everywhere in Britain, and the parts of the cartels were suppressed by law. Rumoullia, which has hitherto imposed an import duty of 51 francs, desired to be placed in the category of the exempt non-erecting countries but the conference will adopt the duty of 6 francs. The United States was not represented at the conference, nor were any of the countries producing raw sugar, neither Cuba nor the British or Dutch colonies except indirectly by their home governments, which represent them diplomatically and have undertaken to influence them to sign the convention. Russia declined to take part in the conference. The Russian Government asserts that it does not promote the export of sugar, either by direct or by indirect bounties. It regulates the amount sold in the home market in order to prevent overproduction and to lessen the cost of production, and thereby increase consumption in Russia. The Ministry of Finance fixes each year the amount of sugar to be placed on the home market after payment of the ordinary excise duty of 1.75 ruble per pound, and this amount is apportioned among the various producers. Each producing country is bound not to go below the quantity fixed. Any producer wishing to sell more must pay an extra excise duty of 3.30 rubles per pound. He may, however, export sugar above the limit, provided he pays an extra duty of 4.50 rubles per pound. The Russian Government contended that it gives no sugar bounty, and therefore under the most-favored-nation clause other countries are precluded from imposing countervailing duties on Russian sugar; that it would be a breach of existing commercial treaties even if the Russian system of regulating the home market could legitimately be regarded as an indirect bounty. In a note to the governments which took part in the Brussels conference the Russian Minister of Finance said that if it could be proved that a system like the Russian interferes with the natural development of international competition the Russian Government would gladly take part with the other powers in considering by what means it would be possible to obviate such effects; but it would only consent to do this if the question were examined at full length and in its full extent, and all the consequences of indirect measures, such as the giving of premiums, the regulation of production, and the action of syndicates of various kinds, were considered, or protected by governments were made the subject of discussion, and it were admitted that the agreement arrived at should apply, not only to sugar, but to other products also and may well partake in international commerce. This offer, it was hoped, would show the readiness of the Russian Government to cooperate in protecting from artificial reduction the prices of sugar and other products on the international market. It was in effect a proposal to suppress or to regulate by international agreement the cartels, syndicates, trusts which have been developed in Germany to a fuller extent than in other countries, not the sugar cartel alone, but the steel cartel and other combinations which regulate production and prices and the other products which are sold in all the main branches of industry which adopt various methods of selling cheap abroad in order to sell dear at home. The Russian import duty on sugar is 1.50 of the per pound, and 4.50 rubles on raw sugar. The Russian producers are therefore protected by a surtax of 4.25 rubles per pound, equivalent to 32.50 francs per 100 kilograms. The Russian Government upheld its argument that the application of countervailing duties against Russian sugar would be an infringement of treaties. It did not intend to carry on a general tariff war against all the powers at once, but would consider itself free to disregard treaty stipulations when it saw fit and to adopt such measures as would be advantageous to Russia in the case of any of them. Goods imported into Russia by industrial trusts would be the first to be subjected to discriminating treatment. India imposed countervailing duties on bounty-fed sugar after the failure of the Brussels conference of 1898, but they were not sufficient to keep out European beet-sugar, which constituted more than half of the Indian imports in 1902. As well as the imports from Mauritius, and this was supposed to be due to the operation of the sugar cartels as revealed in the discussions at Brussels. After the conclusion of the conference the countervailing duty was fixed by the Indian Government at a higher figure, against which
BOLIVIA.

action the Austro-Hungarian and also the Russian Government raised a protest.

The position of the Republic is on the South American continent, north of Argentina. This country was the scene of a war made in 1892, military service in these various bodies of the National Guard is compulsory on all Bolivians between the ages of twenty-one and fifty years. The total number of national guardsmen is about 3,000, of whom 4,000 are infantry, each of 4 companies of 220 men, armed with Mauser rifles of the Argentine model of 1893 and the Bolivian of 1896, having a caliber of 7 millimeters; 2 cavalry regiments; and 2 regiments of artillery. There is a garrison battalion in each department.

Commerce and Production.—Coffee is exported to Chile and the Argentine Republic. Sugar is grown to be distilled into rum, but the supply of this beverage is supplemented by imports from Peru. The production of coca, mostly in La Paz, is valued at 2,000,000 bolivianos a year. Cinchona is another important export. Large quantities of rubber are obtained in the Acre region and shipped down the Amazon. The production of silver, including the contents of concentrated ores, in 1899 was 11,155,190 ounces. The export of barillas, or tin ore, in 1900 was 10,080 tons, and of bar tin, 1,651 tons. The annual production of molybdenum and copper in 1900 was 3,046,645 bolivianos. Gold is washed by Indians, and companies have been formed to work some promising locations. Lead, zinc, antimony, bismuth, wolfram, salt, and petroleum are found. The total value of imports in 1900 was 13,344,118 bolivianos, and of exports 35,657,690 bolivianos. Imports of cotton goods were valued at 2,011,494 bolivianos; woolen goods, 1,549,409 bolivianos; provisions, 1,642,406 bolivianos; cattle, 1,004,294 bolivianos; machinery and hardware, 1,060,177 bolivianos; spirits and wines, 971,629 bolivianos; clothing, 751,053 bolivianos. The value of mineral exports was 23,794,268 bolivianos; of vegetable products exported, 11,249,283 bolivianos; of animals and animal products, 614,127 bolivianos. The exports of silver and silver ores were valued at 12,626,286 bolivianos; tin and tin ores, 8,579,539 bolivianos; copper ore, 1,025,030 bolivianos; bismuth, 271,702 bolivianos; lead, antimony, wolfram, gold, and zinc, 106,467 buss mestizos and very few of pure European blood. Many Indian tribes still retain their original organization and customs. La Paz has 57,660 inhabitants; Cochabamba, 21,896; Sucre, 12,207. The financial revenues of the state are about 5,350,000 bolivianos in customs duties, 1,627,000 bolivianos in revenue from salaries, and 1,515,000 bolivianos in public charges and imposts. The foreign debt, originally 6,550,000 bolivianos, has been reduced by applying 40 per cent. of the Arica customs to its extinction, and in 1900 only 818,813 bolivianos were outstanding. The internal debt amounted in 1901 to 4,004,020 bolivianos. The departments received in 1901 from land taxes, excise duties on coca, tobacco and spirits, state subventions from the National Government a revenue estimated at 2,152,359 bolivianos, and spent 2,175,600 bolivianos, mainly for police, justice, public works, education, and public works.

The Army.—There is a standing military force of 2,680 men. The militia held in readiness number about 30,000, and the regular and extra reserves 40,000, besides which there is a territorial guard of 4,000 men.

Area and Population.—The area, including the territories, is estimated at 734,390 square miles. The population, estimated from the incomplete returns of the census of Sept. 1, 1900, is 1,785,674. The department of La Paz, area 171,130 square miles, had 425,800 inhabitants; Oruro, area 21,350 square miles, had 96,601; Chuquisaca, area 381 square miles, had 186,143; Cochabamba, area 21,430 square miles, had 326,163; Tarija, area 34,610 square miles, had 77,887; Potosi, area 52,100 square miles, had an estimated population of 366,200; Beni, area 100,580 square miles, is estimated to have 38,700; Santa Cruz, area 87,700 square miles, has a population estimated at 210,900. The population for the territory of Madre de Dios, area 13,400 square miles, is 18,600, and for the Purus territory, area 192,300 square miles, the estimate is 48,900. The people are mainly of the native Indian race. There are numerous Indians tribes and very few of pure European blood. Many Indian tribes still retain their original organization and customs. La Paz has 57,660 inhabitants; Cochabamba, 21,896; Sucre, 12,207. The financial revenues of the state are about 5,350,000 bolivianos in customs duties, 1,627,000 bolivianos in revenue from salaries, and 1,515,000 bolivianos in public charges and imposts. The foreign debt, originally 6,550,000 bolivianos, has been reduced by applying 40 per cent. of the Arica customs to its extinction, and in 1900 only 818,813 bolivianos were outstanding. The internal debt amounted in 1901 to 4,004,020 bolivianos. The departments received in 1901 from land taxes, excise duties on coca, tobacco and spirits, state subventions from the National Government a revenue estimated at 2,152,359 bolivianos, and spent 2,175,600 bolivianos, mainly for police, justice, public works, education, and public works.

The Army.—There is a standing military force of 2,680 men. The militia held in readiness number about 30,000, and the regular and extra reserves 40,000, besides which there is a terri-
BOLIVIA.

The article has offered to instead pay 6,000,000 bolivianos in compensation. This proposition Bolivia has refused to consider.

Railroads, Posts, and Telegraphs.—A railroad from Antofagasta enters Bolivian territory at Ascotán, and has been extended to Uyuni and Yura, with a branch to Imbabura. The Bolivian sections have a length of nearly 500 miles. A railroad from La Paz to the Peruvian frontier, to connect with the Peruvian line now half built from the port of Mollendo to Lake Titicaca, is soon to be undertaken. A line from Santa Cruz to the river Paraguay is contemplated. Railroads from Oruro to Cochabamba and from Chapallata to Colquechaca have been authorized, and a route has been examined for an international railroad into the Argentine Republic.

The total length of telegraph-lines is 2,454 miles. The number of letters, postal cards, newspapers, and other mail-matter carried in the mails in 1900 was 2,222,176 in the internal and 72,240 in the international service.

Boundary Disputes.—In the extreme north of Bolivia the valleys of the Acre and Yacu and of the Amazon and Beni rivers have been claimed by both Bolivia and Brazil, and the Acre territory, which is one of the richest rubber districts remaining, has been disputed by Peru also. American and Brazilian long interested parties into this region to gather rubber, which is taken in boats down the Amazon, the only outlet. When none of the governors which claim the territory exercised any authority there adventurers from various parts of the world attempted to set up an independent republic there, intending to exploit its natural wealth for their private benefit. They fell to quarreling among themselves, and others came in to contend for the prize. One dictator succeeded another until the interested governments, each of which protested against the recognition of the foreign usurpers, took steps independently of each other to assert sovereign rights and suppress the American and European claimants. Bolivian, Brazilian, and Peruvian forces met with four shot, and the whole proceeded to gather rubber. On one occasion twelve shots were fired. Whenever the Government forces retired the foreigners again set up their authority, and among them desperate conflicts arose. The ships were taken over, and this was in spite of the occasional interference of the white desperadoes and of savage tribes. Men interested in the rubber trade were involved in the scheme to set up an independent jurisdiction. The chief object of the men who proclaimed the republic of Acre was to avoid paying 15 per cent. export duty which Bolivia levies on rubber. Although some of them were Brazilian citizens, the Government of Brazil did not favor the erection on its border of an irresponsible state of buccaneers whose treatment of the Brazilian natives whom they took into Acre to gather rubber was barbarous. The frontier between Brazil and Bolivia was submitted to arbitration. The Brazilian claim to the Acre territory was met by the arbitrator as follows: What the rights of Peru were on these affluents of the Amazon and the Andean plateau remained undetermined. In 1902 an arbitration treaty was arranged between Bolivia by the arbitrator was for Bolivia to have the right of navigation on the rivers, save against those to whom the right has already been conceded, and it receives all the mineral rights within the territory for twenty years to be free from all taxation, and it can import anything free of duty. Of the taxes and duties it collects it retains 40 per cent. and pays...
60 per cent. over to the Government. The company undertakes to furnish a police force at its own expense, but the Government will furnish troops if they are necessary to defend the frontier. At the end of thirty years the Bolivian Government may resume the fiscal administration, but the company may retain its privileges of trading and exploitation perpetually. The company can develop ways of communication of all sorts and charge tolls for their use. It undertakes to assist the Government to raise a loan on the security of the Government's share in the taxes and customs. In Caupolican the company receives an exclusive title to all valuable lands as soon as they are surveyed, is exempt from taxes and customs duties for fifty years, can charge tolls on roads and waterways for that period, must maintain a police force and establish a postal service, and pays to the Government 20 per cent. of the annual profits, while 20 per cent. more are to be expended in improving communications. The great rubber forests on the Beni, Madre de Dios, and Orton rivers, which have their outlet down the Madeira river, are outside these concessions and are already in the hands of independents and companies which lose a good part of the rubber in the falls of the Madeira and pay heavy charges for transport. The Acre rubber goes down the Purus and the Yurua, while that from Caupolican is transported by a mule road, which is being improved, over the cordilleras to Lake Titicaca. A strip along the border of both Acre and Caupolican is the disputed area which Peru disputes with Bolivia. What part of the areas can be claimed by Peru can only be determined by a survey of the frontier. Whenever the Bolivian Government has attempted to establish its authority in these regions Peru has raised a protest, and when the terms of the concession to American capitalists were made known the Peruvian Government strongly protested. On several occasions agreements have been signed between Bolivia and Peru in order to settle their differences, but they have never been finally ratified. The last agreement, concluded after the Brazilian arbitration and before the concession to the Anglo-American chartered company, seemed more likely to lead to a definite treaty. The Brazilian Government protested vigorously against the invasion of an American syndicate of a vast territory on the Amazon river, such syndicate to have powers of internal administration. Bolivia offered to transfer to it all the property held in order to allay this opposition. The Brazilian Government replied on April 14, 1902, that the territory in question is still the subject of contention with Peru, and in no case would Brazil agree to a lease which gives to the lessee the use of military force and really gives up sovereign rights, so that if Brazil were a party to such an arrangement she would have to meet face to face authorities which she never can or will acknowledge. The Brazilian Government thereupon withdrew from the consideration of the Brazilian Congress a treaty of commerce and navigation with Bolivia which had been submitted to its approval, threatened to break off all diplomatic relations with Bolivia if the lease of territory in the Acre region were not rescinded, and announced that obstacles would be placed in the way of any development by the syndicate of this region by means of the alluents of the Amazon running through the Brazilian territory. The United States Government, while making it clear that it could not interfere in behalf of the American syndicate beyond asking fair consideration, tendered its good offices for the settlement of the boundary dispute. Brazil, a federal republic in South America. The National Congress consists of a Senate of 63 members, 3 from each state and 3 from the federal district, elected for nine years by direct suffrage, one-third retiring every three years, and a House of Deputies containing 212 members, 1 to 70,000 of population, elected for three years. Every adult male Brazilian has the right to vote, with the exception of soldiers in active service, members of monastic orders, papists, and persons who have been convicted of crime. The President of the Republic is elected by direct suffrage for four years. Dr. Manoel Ferraz de Campos Sales was elected President for the term beginning Nov. 15, 1898, and Dr. Francisco Rosa e Silva was elected Vice-President. The following ministers were in office at the beginning of 1902: Minister of Foreign Affairs, Dr. Olynto de Magalhães; Minister of Finance, Dr. Joaquim Martinho; Minister of War, Marshal João Nepomuc de Medeiros Mallet; Minister of Industry, Alfredo Maia; Minister of the Interior and Justice, Sabino Barroso; Minister of Marine, Rear-Admiral Aureliano Chaves. Area and Population.—The area of Brazil is officially estimated at 3,218,130 square miles. A census taken in 1900 was rejected by the Government as defective since it showed a decrease in population, whereas a considerable increase was expected. According to the census of Dec. 31, 1890, the population was 14,335,915, consisting of 7,237,832 males and 7,098,083 females. The population in 1900 had reached 17,667,818. The total population in 1890 comprised 6,302,198 white persons, 4,583,495 of mixed race, 2,067,420 negroes, and 1,935,796 Indians. The number of immigrants in 1898 was 53,822, including 33,272 Italians, 11,662 Portuguese, 5,943 Spaniards, 669 Austrians, 477 Germans, 247 French, 137 Russians, and 120 Swiss. The total number of foreigners domiciled in Brazil is estimated at 2,093,500, comprising 1,300,000 Italians, 800,000 Portuguese, 300,000 Germans, 100,000 Spaniards, 80,000 Poles, 10,000 French, 5,000 British, and 100,500 others. Finances.—The estimated revenue in 1900 was 53,975,000 milreis in gold and 312,358,000 milreis in paper, and the expense 27,974,000 milreis in gold and 283,162,000 milreis in paper. For 1901 the revenue was estimated at 56,880,000 milreis in gold and 286,082,000 milreis in paper, and the expense 32,578,000 milreis in gold and 244,514,000 milreis in paper. The budget for 1902 makes the revenue 42,877,000 milreis in gold and 257,361,000 milreis in paper, of which 33,430,000 milreis in gold and 7,425,000 milreis in paper were import duties, 1,000,000 milreis in gold and 72,744,000 milreis in paper were revenue from internal revenue, 34,870,000 milreis in paper were excise duties, 90,000 milreis in gold and 1,645,000 milreis in paper were for the redemption of the currency, 6,600,000 milreis in paper were revenue for the amortization fund, 2,530,000 milreis in paper were for the port fund, and 72,000 milreis in paper were for a salvage fund. The expenditures for 1902 were estimated at 33,553,000 milreis in gold and 224,415,000 milreis in paper, of which 15,916,000 milreis in paper were for the Ministry of the Interior, 10,978,000 milreis in gold and 828,000 milreis in paper for the Ministry of Foreign Affairs, 23,200,000 milreis in paper for the Ministry of Marine, 45,579,000 milreis
The external consolidated debt outstanding on January 1, 1901, was 304,906,448 milreis, and the internal consolidated gold debt amounted to 272,999,000 milreis, making the total debt payable in gold 421,905,449 milreis. The internal consolidated debt payable in paper was 533,298,673 milreis, and there was a floating debt of 165,577,335 milreis. The paper money in circulation amounted to 689,000,000 milreis, making the total paper debt 1,972,000,000 milreis. The states owe about 150,000,000 milreis in gold.

The Army and Navy.—The active army had a nominal strength of 58,160 men in 1901, organized into 10 regiments of cavalry, 6 regiments of field-artillery containing 24 batteries, 6 battalions of fortress artillery, 3 battalions of engineers, and 6 squadrons of train. The budget provided an establishment for the army and navy, but the actual strength was much smaller. Since 1875 military service in the National Guard is by law obligatory. Although the law has not been enforced, the National Guard is being reorganized and improved. The soldiers of the regular army are armed with Mauser rifles of the caliber of 7 centimeters. The gendarmerie numbers about 30,000 men.

The navy in 1901 consisted of 2 second-class battleships, 2 iron-clad coast-guards, 7 armored gunboats, 10 small cruisers, 18 gunboats, 10 first-class torpedo-boats, 10 second-class torpedo-boats, 2 submarine boats, 2 torpedo school-ships, and 2 monitors. The old battleships Rialto and 24 de Mayo have 11-inch armor and carry in their turrets 40 of these big projectiles, besides which they have 6 4.7-inch quick-fires, 2 3-pounders, and 15 machine guns. The French-built Deseo and Floriano, of 3,102 tons, are plated with 13.7-inch Harvey armor and armed with 2 6.4-inch guns, 2 6-inch howitzers, and 2 4.7-inch quick-fires. The Tamoanare, built in Brazil in 1898, and the English-built protected cruiser Barroso have a strong quick-firing armament.

Commerce and Production.—The main product of Brazil is coffee, the supply of which has increased by 25.220 miles of wire. The number of despatches in 1898 was 38,085,000 letters and postal cards and 29,250,000 pieces of printed matter and samples. The telegraphs have a length of 12,830 miles of line, with 25,220 miles of wire. The number of despatches in 1898 was 2,662,711.

Politics and Legislation.—The congressional session which began on May 3, 1902, was the last one of the present legislature. When his term began gold payments were suspended and 788,000 contos of reis in paper money were in circulation. The rate of exchange for the paper money was 7 1/2 milreis for a dollar. The silver bonds were at 50 per cent. discount. There was due on the loan of 1897 the sum of £1,122,000 and £273,000 for war material, and the treasury owed 20,395,000 in bills and notes to the Bank of the Republic, while the President
found only £21,713 with the Rothschilds in London and $5,000 contos in the treasury. There were, moreover, large deficits for the previous years. To cut down expenses and provide more money was the only way to get the country out of its difficulties, and that was the program adopted by the Government at the time. When the elections were held in 1897, the paper money had been reduced to 189,000 contos and the Brazilian bonds had been reduced to 200,000 contos. The rest of the loan of 1897 has been repaid, and the treasury bills are outstanding, the Government having at the end of the financial year £2,000,000 credit in London and 12,000 contos and £500,000 sterling with the Bank of the Republic. The era of deficits has come to an end of substantial surpluses. With the funding loan of $6,750,000 the nominal amount of the debt was about $2,000,000 greater, but adding the amount of paper money redeemed to $4,500,000 of gold bonds and 5,200 contos of internal bonds, a considerable amount of debt has been wiped out. The San Francisco railroads were acquired by the Brazilian Government by bonds paying 5 per cent., instead of the 7 per cent. paid by the Imperial Government; and for the purchase of the other railroads £2,000,000 of 4-per-cent. bonds were issued, only £300,000 more than would have been due had they remained in the possession of the private property of the companies. The Government has leased some of the redeemed lines with advantage, the deficits of some have been turned into surpluses, and the surpluses of others have been increased. The commercial agreement with Italy was continued till Dec. 31, 1902, pending a new arrangement. In return for concessions in favor of Italian products, for which on account of the large Italian population there is a growing demand in Brazil, the Brazilian Government asked for complete exemption from duty on Brazilian coffee; when this was refused, it offered to continue the minimum tariff for three years only in return for a large reduction in the Italian coffee duty. Germans complain that German immigrants and their descendants in Brazil encounter hostility from the Italian settlers and are subjected to injustice; that in many cases the provincial government of Rio Grande do Sul had declared that the land sold to the ancestors of the Brazilian landowners who sold the farms to their ancestors had failed to fulfill the terms on which the land had been granted. The German owners have demanded that they be reimbursed and in others had been compelled to buy the land over again without allowance being made for the improvements they had made themselves. Nevertheless, emigration to Brazil is encouraged by the colonial policy in Germany in the hope that the German communities there will preserve a patriotic attachment to the empire and extend its influence.

Dr. Francisco Rodrigues Alves, who arranged with the European companies for the transfer of the guaranteed railroads to the Government, was on March 1 elected President of the republic for the term beginning Nov. 15, 1902, and Dr. Silvano Brandao was elected Vice-President. On Sept. 2 Dr. Joaquin Murtinho, who carried out the reforms of the restoration and of the country's finances, desiring to enter the Senate, resigned the Ministry of Finance, which was taken over by Sabino Barroso, the Minister of the Interior, for the remainder of his presidential term.

BRITISH COLUMBIA, a province of the Dominion of Canada. Area, 383,300 square miles; population, about 177,000.

Politics and Legislation.—At the beginning of 1902 the Government was composed of James Dunsmuir, Premier and President of the Council; D. M. Eberets, Attorney-General; J. D. Prentice, Minister of Finance, Agriculture, and Education; W. C. Wells, Chief Commissioner of Lands and Works. The Defence Ministry was vacant, and remained so until Feb. 27, when E. G. Prior, who had once been a member of the Conservative Government at Ottawa, was appointed minister. In politics the Government was a coalition, and the personal element remained during this year an important feature in British Columbia politics, although a feeling in favor of introducing direct party politics into the administration of provincial affairs grew steadily in force. A stormy session of the Legislature followed, with a fluctuating Government majority. Mr. Dunsmuir went to England after its adjournment to attend the coronation, and not long after his return he resigned the premiership in favor of Col. Prior, who on Nov. 26 announced the following as his Cabinet: Premier and Minister of Mines, E. G. Prior; Attorney-General, D. M. Eberets; President of the Council, W. B. McInnes; Ministers of: Provincial Secretary and Minister of Education, Dennis Murphy; Commissioner of Lands and Works, W. C. Wells.

Meanwhile the Legislature had been opened on Feb. 20 by Lieut.-Gov. Sir Henry Joly de Lotbiniere, after C. E. Pooley had been elected Speaker and Richard McBride chosen leader of the Opposition at a meeting of the speech from the throne contained these passages:

"In view of the unfavorable conditions which affected the mining industry during 1901, it is especially gratifying to know that the output of the mines considerably exceeded that of any previous twelve months, and that the year closed with several detrimental causes removed, and with prospects of greatly increased activity and development. Negotiations with the authorities at Ottawa, begun last year, have been continued by my Government, and a conference has been agreed to for the further discussion of matters affecting the relations of the province of British Columbia and the Dominion of Canada under the terms of union. A report will be laid before you concerning the commission which inquired into and adjusted, where possible, freight rates on agricultural products. It is satisfactory to state, as a consequence, that substantial reductions have been made and in others very great satisfaction that the agricultural industry in this province is so prosperous. To further the interests of the stockraisers of the interior a measure will be submitted providing for the establishment of a system of cold storage in connection with abattoirs.

"The subject of fishery development is one which has been receiving greatly increased attention, and the efforts of my Government are in the direction of placing the industry on a more satisfactory footing. Steps will be taken with a view to the introduction of a fair measure of redistribution. Measures will be submitted for your consideration having for their object the encouragement of immigration and the settlement of unoccupied lands. A measure will also be submitted for the purpose of consolidating existing loan acts and obtaining authority thereunder for the issuance of a small term.

"Under the authority of legislation of last session, agreements have been entered into with several companies for the manufacture of pulp
and paper, and negotiations are now being carried on for the establishment of these industries. Negotiations are being carried on for the purpose of securing the extension of the railway lines from Revelstoke to Yellowhead pass, to connect with the railway system on Vancouver island, and for the construction of the Coast Kootenay Railway. Legislation will be introduced dealing with taxation and assistance to hospitals. The estimates of revenue and expenditure have been carefully prepared with a view to the strictest economy being exercised, and will be submitted without delay.

An important piece of legislation during the session, which closed on June 21, was a measure increasing the number of members of the Legislature from 38 to 42. Vancouver received 1 more member, or 5 against Victoria's 4. The bill passed its second reading on March 25 by 32 to 3, and was declared by many Opposition members to be extremely fair. It eventually became law.

Railway Legislation.—The most important enactment of the session was the passing of a measure that temporarily settled the problem of aiding transportation through the northern part of the province and of meeting the popular demand for some form of competition with the Canadian Pacific Railway. By this act, which was presented on May 6 and finally passed, the old Victoria, Vancouver, and Eastern Railway project was merged in a new line—the Vancouver and Kootenay Railway—and Messrs. MacKenzie and Mann, with their American supporter, J. J. Hill, received the reward of prolonged agitation. The measure provided for land and money to the Canadian Pacific Railway, from Bute inlet to the eastern boundary of the province, and to the Vancouver and Coast Kootenay Railway Company. To aid the Canadian Northern, the Government was to pay for the first 50 miles of railway, beginning at or near Bute inlet, $4,800 a mile; from the end of the said first 50 miles to the point nearest to Quesnel, $4,000 a mile; from the said point nearest to Quesnel to the eastern boundary of British Columbia, at or near Yellowhead pass, $4,500 a mile; and also 29,000 acres of land for each mile of railway, the option to sell the land to the Railway Company at the current price of Government lands, and to accept the cash subsidy in British Columbia 3 per-cent. inscribed stock.

The Vancouver and Coast Kootenay Railway the Government offered $4,000 a mile for the western 80 miles; for the next 100 miles, $4,800 a mile, and for the other 110 miles, $4,000 a mile. The railway was to connect with the Victoria Terminal Railway and ferry company's line for Victoria. The Canadian Northern was also to run a ferry to Vancouver island and a railway down Vancouver island to Lord]. The Government also introduced a bill to borrow $3,000,000 to aid the railways, to pay the overdraft, and to carry on other public works.

The War.—On June 2 the following resolution was unanimously passed: "That this house, having heard with the greatest satisfaction that the war in South Africa has been brought to a successful termination, desires to extend to His Majesty's Government the most sincere and loyal congratulations upon the happy occasion."

In the course of his speech the Premier made the following: "It is at once a matter of pride and patriotic joy that we can join with the people of Great Britain and Britons everywhere in celebrating the successful outcome of a conflict in which our brave Canadian sons took so valorous and conspicuous a part, having among colonial troops won special distinction everywhere in South Africa and throughout the whole war. It is especially gratifying that the brave Canadians the boys of British Columbia were ever to the front in deeds of bravery and shared the hardest fighting and the longest and most memorable marches. The patriotic charge at Paardeberg will live long in history, and is engraved in the hearts of the British people."

Financial.—The receipts of the province for the fiscal year ending June 30, 1902, were $2,140,751, the expenditure $2,475,334. The estimated receipts for the year ending June 30, 1903, were stated to be $2,222,565; the estimated expenditure, $2,489,127. The following are the details of the receipts for the first and second periods mentioned. The estimate of receipts included: Dominion of Canada—subsidy, grant, and interest, $305,988.50; land sales (including estimated collections on overdue payments, $40,000), $80,000; timber leases, $110,000; free miners' certificates, $100,000; mining receipts, general, $175,000; licenses, $80,000; real property tax (including estimated collections on arrears, $80,000), $210,000; personal property tax (including estimated collections on arrears, $60,000), $140,000; wild-land tax (including estimated collections on arrears, $75,000), $130,000; income tax (including estimated collections on arrears, $13,000), $55,000; revenue tax, $150,000; mineral tax, $130,000; fines and forfeitures and small debt court fees, $16,000; law stamps, $14,000; probate fees, $10,000; registered mail receipts, $15,000; interest on investment of sinking-funds, $35,000; Chinese restriction act, 1884 (Dominion refund), $40,000; fisheries, etc., $35,000; succession duty, $20,000; royalty and tax on coal, $130,000; miscellaneous receipts, $44,100.

The expenditures in 1901—02 included $411,440 upon the public debt, $253,980 upon salaries, $231,132 upon justice, $41,225 upon legislation, $124,380 upon the maintenance of public institutions and $87,300 upon hospitals and charities, $110,200 upon administration of justice, $368,537 upon education, $32,694 for revenue services, $904,641 upon public works, and $119,000 upon miscellaneous matters.

The Opposition denounced the Government very freely for extravagance and for frittering up alleged deficits year after year. R. G. Talbot and Dennis Murphy were the chief speakers on this subject, and the latter estimated the public debt of the province at the close of 1902 as being nearly $10,000,000. Speaking on May 3, he explained this as follows: "The debt as it appears in the balance-sheet is about $6,450,465.06; unrecoverable assets, principally payments of interest on railway bonds, the details of which he had given, were $298,076.05; discount on diking items, $400,000; total, $6,749,141.13. To this must be added the overdraft for the current year. Taking the Finance Minister's own figures—he thought they were below the mark—this overdraft will on June 30, 1902, amount to $1,000,000. The overdraft on June 30, 1901, was $871,771.58, so that the increase during the current year will be in round numbers $759,086. Adding this amount to the debt as already computed of $6,749,141.13, the total net debt of the province on June 30, 1902, would be $7,578,141.13. The Finance Minister intended to raise a new loan of $3,000,000, of which, according to his own figures, $1,000,000 would be eaten up by the overdraft, leaving the sum of $1,000,000 to be added.
to the net debt, which would therefore be, when this new loan was floated, $4,278,141.13.

General Development.—The increase in development of British Columbia is shown by the following tables:

Coal mined (tons) ....... | 61,000 | 628,000 | 1,099,000 | 1,099,000 |

In the ten years 1890–1900 there were spent in hospitals $528,000; education, $2,388,135; roads, streets, bridges, works and buildings, $2,422,290; surveys, $230,473.

Mineral Production.—The total product of the mines of British Columbia was, in 1891, $172,241,988, of which $80,000,000 was in gold and $54,000,000 in coal and coke. The total production in 1898 was $10,900,861; in 1899, $12,203,121, in 1900, $13,449,935. The cost of production in the year ending Dec. 31, 1900, the placer gold produced was valued at $970,100, the lode gold at $4,268,435, the silver at $2,284,438, the copper at $4,446,963, the lead at $2,022,735, the coal and coke at $5,016,398, the miscellaneous minerals at $417,238.

Education.—The report of the Superintendent of Education for the year 1900–01 says the total enrolment during the year was 23,615, an increase of 2,064. Of this number, 12,049 were boys and 11,566 girls. The enrolment of the 5 high-schools was 894, an increase of 31; at the graded schools, 15,400, an increase of 1,047; at the common schools, 7,671, an increase of 406. The average daily attendance of all schools was 15,347.

The expenditure for education proper during the year was: Teachers' salaries, $213,088.23; incidental, $30,428.07; per capita grant to city districts, $395,940; education office, $12,205.81; normal school, $1,044.30; total, $312,507.18—less fees for teachers' examination, $1,320—net expenditure, $312,187.17. The expenditure for the construction of new schoolhouses, furniture, and repairs and improvements to school property was $35,345.14. The average cost for each pupil in enrolment districts for principals and teachers was $59.26, and the average monthly salary for rural teachers and monitors $322.50.

The Chinese Question.—On Feb. 27 the report of the royal commission of 1901 to inquire into the question of Oriental immigration was submitted to Parliament. The decisions of this voluminous document may be briefly summarized.

The belief was expressed that the Chinese kept out immigrants who would become permanent citizens and created conditions insanitary to labor and dangerous to the industrial peace of the community where they resided, spent little of their money, and traded chiefly with their own people. The commissioners believed it was impossible for the province of British Columbia to take its place and part in the Dominion unless its population was free from any taint of a servile class not imbued with a sense of the duties and responsibilities appertaining to citizenship.

The estimated white population of British Columbia was 129,000, and 16,000 Chinese. The commissioners pointed out that British law had recognized that aliens can be kept out of the country, especially if as a class they are undesirable. The commissioners approved the views of the Legislature of British Columbia, alleging the probability of a great disturbance to the economic condition of the province and of grave injury being caused to the working classes by the large influx of laborers from China. They found that the capitation tax at $100 was ineffective and inadequate. They were of the opinion that the further immigration of Chinese laborers into Canada ought to be prohibited, and in the meantime the capitation tax should be raised to $600. Messrs. Clute and Foley recommended that the capitation tax should be raised at once, while Commissioner Munn recommended that $300 should be imposed for two years, and if a prohibitive treaty be not obtained within that period, that it be then raised to $500.

Boards of Trade Convention.—A convention was held at Kelowna during the week ending March 1, composed of representatives of the boards of trade of British Columbia. Resolutions were passed, including one that increasing the duties on white lead and other manufactured lead products in Canada; another from Rossland regarding proposed popular safeguards against corporations incorporating in the Crow's Nest fields; one protesting against the injustice of the existing mineral tax, and asking the Government to reduce it so as to levy on the net value of the ore by deducting, in addition to the present freight and treatment charges, the cost of mining exclusive of capital expenditures. It was declared that further revenue might be obtained by rigidly enforcing the tax of 25 cents an acre now levied on non-working Crown-granted mineral claims, and also by increasing the fees for recording assessments.

Conservative Convention.—On Sept. 12–15 a gathering of representative Conservatives was held at Revelstoke. It was addressed by R. L. Borden, the Dominion party leader, and John Houston, M. P. P., was elected president of the Provincial Conservative Association. Charles Wilson, K. C., was selected as the provincial leader, and after speeches from Col. Prior, the hon. T. Carter-Cotton, and the hon. R. Macneil, opposing leaders in provincial politics, the resolution was passed in favor of the introduction of Dominion party lines into provincial affairs. The following resolutions were also passed:

"That the policy of the party in matters of provincial roads and trails, ownership and control of railways, and the development of agricultural resources as laid down in the platform adopted in October, 1899, is hereby reaffirmed.

"That to encourage the mining industry the taxation of metalliferous mines should be on a basis of percentage on net profits.

"That Government-owned telephone systems should be brought about as the first step in the acquisition of public utilities.

"That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state-owned mines may be easily possible if their operation becomes necessary or advisable.

"That in pulp-land leases provisions should be made for reforestation; and that steps should be taken for a general preservation of forests by guarding against a wasteful destruction of timber."
That the Legislature and the Government of the province should persevere in an effort to secure the exclusion of Asiatic labor.

That the matter of better terms in the way of subsidy and appropriation for the province should be vigorously pressed upon the Dominion Government.

That the silver and lead industries of the province be further encouraged by the imposition of increased customs duties on lead and lead products imported into Canada, and the Conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.”

Meeting of Liberals.—On Feb. 6 a provincial Convention of Liberals opened in Vancouver, with Senator Templeman, chairman of the provincial Executive of the party, in the chair. The object was to discuss the question of introducing party lines into provincial politics and to select a leader or discuss the advisability of doing so. The whole matter soon settled into a struggle on the question whether Mr. Martin should be chosen by the convention or the subject be postponed to another occasion. The chairman found the meeting hard to control from the beginning, and the first important issue raised was the right of the provincial Executive to appoint its members as members of the convention. Disputes as to credentials, therefore, occupied the attention of the delegates present, and the speeches were interspersed with opinions for and against the adoption of party lines. Finally a vote of 69 to 41 declared that the provincial Executive and the editors of Liberal newspapers appointed by that body were not entitled to membership in the convention. Senator Templeman and his friends then left the hall, and those present elected G. R. Maxwell, M. P., as his successor, who chose Mr. Martin the party leader by a substantial majority, and passed resolutions in favor of the adoption of party politics in provincial affairs and of fealty to Sir Wilfrid Laurier as the Dominion leader.

Labor Party and Questions.—On April 11-13 a convention of labor representatives was held at Kamloops, and Christopher Foley, of Rossland, was elected president of a newly organized provincial Progressive party, with the following platform:

1. That we gradually abolish all taxes on the producer and the products of the producer, shifting them on land values.

2. Government ownership of railways and means of communication.

3. That the Government establish and operate smelters and refineries to treat all kinds of minerals.

4. That the franchise be extended to women.

5. The abolition of property qualifications for all public offices.

6. Farms, improvements, implements, and stock not to be taxed, and wild lands to be assessed at the price asked for them by speculative holders.

7. No land or cash subsidies. Lands to be held by the actual settlers.

8. Ten per cent. of all public lands to be immediately set aside for educational purposes, and the education of all children, up to the age of sixteen years, to be free, secular, and compulsory. Text-books, meals, and clothing to be supplied out of the public funds when necessary.

10. Restriction of immigration by a law on the lines of the Natal act; and if said law be disallowed it be repeatedly reenacted until the end sought is obtained.

11. That to protect us from Asiaties already in the province the Government insert a clause in all private acts to this effect: ‘This act shall be null and void if the company fails to enter
BRITISH COLUMBIA.

into an agreement with the Government as to condi-
tions of sale or operation; and the House pass a resolution instructing the Govern-
ment to prohibit the employment of Asians on all franchises granted by the provincial House.

"12. Conservation of our forest riches. Pulp-
land leases to contain a provision for reforesting,
so as to produce a perennial revenue and make pulp manufacture a growing and permanent in-
dustry.

"13. That the act compelling the sealing of
logs by Government scalers be enforced.

"14. Absolute reservation from sale or lease of a coal mine in Sublime Point, coal area.
All leases or grants hereafter made to contain a pro-
vision enabling the Government to fix the price of coal loaded on cars or vessels for shipment to
be sold to consumers.

"15. Municipalization and public control of the
liquor traffic.

"16. That there be a referendum where a valu-
able body of coal is to be carried, and has not
17. That all transportation companies be
compelled to give transportation free to mem-
bers of the Legislative Assembly and Supreme Court
of the province.

"18. That all transportation companies be
compelled to give transportation free to mem-
ers of the Legislative Assembly and Supreme Court
of the province.

"18. Election day to be a public holiday. Pro-
vision made that every employee shall be free
from service at least four consecutive hours dur-
ing polling time.

The British Pacific Cable.—At three o'clock
in the morning of Oct. 31, 1902, at Suva, in the
Fiji Islands, was completed the last link in the Pacific cable, placing British Columbia, in direct communications with Australia and New Zealand. A message of congratulation was despatched immediately to the King, and another to Lady Vogel, expressing regret that her hus-
band, the late Sir Julius Vogel, had not been spared to see the consummation of the plan
which is a monument to his genius and foresight.
The new cable, which was laid under the direc-
tion of C. R. Lucas, engineer-in-chief to the Tele-
graph Construction and Maintenance Company, extends southwest from Vancouver by way of
Fanning island, Fiji, and Norfolk island to Aus-
tralia, its entire length being in the Southern Hem-

prince is Alexander of Battenberg,
but his election was not confirmed by the Porte and
the powers till 1896. The heir to the throne is
Prince Boris, born Jan. 30, 1884. On Feb. 14,
loan of 1889, 121,717,000 lei of the 6-per-cent. bond authorized in 1895, 21,875,000 lei of a much later 6-per-cent. treasury bonds issued Jan. 1, 1900, and secured on the tobacco tax, and 9,700,000 lei of the Russian occupation debt. The Eastern Roumelian tribute payable to Turkey is 2,951,000 lei per annum, besides 600,000 lei to clear up the arrears of 3,243,000 lei. The Government was authorized by a law passed in June, 1896, to convert the entire public debt into a new loan of 290,000,000 lei with interest at 5 per cent. The Bulgarian tribute and the Bulgarian share of the Turkish public debt were to be fixed according to a provision in the Berlin treaty. The claims of Russia for the expenses of the occupation, 26,500,000 lei payable in annual instalments of 2,000,000 lei, ought to have been extinguished at the end of 1902. The Eastern Roumelian tribute, originally fixed at 6,125,000 francs, was reduced in 1883 to 4,823,000 francs. After the union with Bulgaria, in 1886, the Government left it unpaid till 1894, when a further reduction to 3,250,000 francs was obtained on condition that the arrears should be paid up in annual instalments of 500,000 lei. In 1896 the Bulgarian Government withdrew the obligation, and in 1897 the Administration of the Turkish Debt, to which the tribute had been assigned, agreed to take 2,830,000 lei henceforth if promptly paid equal to the old tribute. As it has not been paid. The amount of the foreign consolidated debt on Jan. 1, 1902, was 198,755,404 lei. Of the effective proceeds of the loans of 1889, 1891, and 1892, the 1892 was 228,307 lei. 111,884,808 lei were spent on railroads and harbors, while the remainder was used to meet deficits in the budget and pay interest for the sinking-fund. The floating debt on Jan. 1, 1902, amounted to 78,297,393 lei, exclusive of payments of 13,373,000 lei due on the last two budgets. To clear off the floating debt, the tobacco loan of 1900, and a part of the loan of 1892, the Government in 1901 arranged with a Paris bank to borrow on the guarantee of the tobacco revenue 150,000,000 francs at 8%, to be repaid in fifty years with interest at 5 per cent. The tobacco monopoly was to be created and conceded until the extinction of the loan to the bank, which, through the agency of a company whose officers it would appoint, would have for that period the exclusive privilege of manufacturing and selling tobacco and supervision over its cultivation, importation, and exportation. Of the surplus profit, after paying interest and amortization on the loan and 8 per cent. dividends to the shareholders, the state would receive 65 per cent. and the company 35 per cent. The loan was negotiated by the Cabinet of Petko Karayevoff, leader of the Democratic party, who before he took office deprecated a foreign loan, denounced the creditors of Bulgaria, the Jewish houses of Vienna and Berlin, and protested against monopolies in general and giant combinations of any kind to foreigners. All the economies he could effect when he became Premier and Minister of Finance were of slight value, and by remitting the unproductive title duties he had further crippled the resources of the Government. After obtaining, with difficulty, a loan of 4,000,000 lei from the Russian State Bank to avert insolvency, he had to content the very terms with the foreign money-lenders that he had denounced as ruinous and humiliating. The money for the proposed tobacco loan was to be provided, in fact, by the state by the French bank, but by the financiers who already held Bulgarian securities, and who were therefore interested in averting national bankruptcy. The budget passed by the Sobranje in 1902 was not much better than the others, notwithstanding the promises of the Kankoffit ministry to economize. The improvement in production and trade and in the general prosperity, however, was a favorable augury. The estimate of revenue for 1903 was 95,956,400 lei and that of expenditure was 98,896,337 lei, leaving a deficit of 2,942,937 lei, which was more than doubled by the uncollected arrears of taxes and the expenditure of 1,000,000 lei on the celebration of the battle of Shipka, on which occasion half the Bulgarian army maneuvered for the inspection of the Czar's generals.

The Army.—Service in the army is obligatory. The term is two years in the infantry and three years in the other arms. There are 24 regiments of infantry and skeletons of 24 reserve regiments; 5 regiments of cavalry, each of 5 squadrons; 6 regiments of field-artillery, each divided into 3 sections of 3 batteries of 6 guns each; 3 battalions of fortress-artillery; and 3 battalions of engineers and 1 technical battalion composed of 1 railroad company, 1 company of pontoniers, 1 company of telegraphists, and 1 company of train. The infantry is dressed in uniform, while the cavalry is a posteriori model of the rifle of 1888, having a bore of 8 millimeters. The cavalry carries carbines of the same caliber. The artillery have Creussel field-pieces of 7 centimètres calibre and Krupp mountain guns of the caliber of 7 centimeters. The peace strength of the army in 1901 was 2,500 officers and civil employees and 40,556 men, with 7,400 horses and 3,200 oxen and 312 guns, besides a reserve of 81,996 men, with 15,356 horses and 120 guns.

Commerce and Production.—The land tax in Bulgaria is one-tenth of the produce, paid in money or in kind. Villages have common pastures and woodlands which are not taxed. Of the total area, 9,670,500 hectares, 2,435,900 hectares are covered with farm and garden crops, 113,512 hectares are vineyards, 4,567,838 hectares are pasture, 1,675,250 hectares are forest, 312,000 hectares are meadows, 445,000 hectares are building land, road, water, etc. The farmers, who contribute 70 per cent. of the population, generally own the land they till. The main crop is wheat, most of which is exported; the production of attar of roses in 1900 was 4,300 kilogramas. The mercantile business is done mainly by foreigners—Greeks, Roumanians, Austrians, and Jews of all nationalities. Textiles, hardware, machinery, groceries, building materials, leather, petroleum, paper, and salt are the chief imports. The total value of imports in 1900 was 46,342,100 lei; of exports, 53,963,629 lei. The imports of textile goods were 13,296,869 lei in value; of groceries, 3,904,213 lei; of metals and metal manufactures, 5,197,706 lei; of machinery and implements, 2,786,114 lei; of lumber and wood manufactures, 1,335,271 lei; of leather and leather goods, 2,533,026 lei. The exports of cereals were 27,126,280 lei in value; of textile fibers and cocoons and woolen stuffs, 4,924,484 lei; of live animals, 5,609,462 lei; of animal food products, 4,632,535 lei; of attar of roses, 3,719,280 lei. The trade with the principal countries in 1900 is given in lei in the table on the next page. The total value of imports in 1901 was 70,444,073 lei and that of exports 82,769,759 lei, showing an increase of 51 and 53 per cent, respectively. Imports from England by the French bank, but by the financiers who already held Bulgarian securities, and who were therefore interested in averting
BULGARIA.

TUINERIES. | Imports. | Exports.
---|---|---
Turkey | 4,000,000 | 18,000,907
Austria-Hungary | 12,041,131 | 5,780,189
Great Britain | 7,248,331 | 5,190,360
Germany | 5,591,000 | 6,000,900
France | 1,991,100 | 2,000,000
Belgium | 3,991,000 | 4,000,000
Russia | 2,991,000 | 3,000,000
Italy | 2,191,000 | 2,201,000

TOTAL | 44,456,100 | 58,950,000

Exports to England, 9,800,000 lei more; to Turkey, 6,400,000 lei more; to Belgium, 4,380,000 lei more; to Germany, 5,020,000 lei more.

Navigation.—The number of vessels entered at Bulgarian ports during 1909 was 10,833, of 2,357,827 tons; cleared, 10,827, of 2,360,914 tons.

Railroads, Posts, and Telegraphs.—The length of railroad lines in Bulgaria in 1909 was 970 miles, of which 784 miles were the property of the Government.

The length of Government telegraph lines in 1909 was 2,770 miles, with 4,724 miles of wire.

The number of dispatches sent was 1,366,041.

There were 1,228 miles of Government telegraph lines.

The postal traffic in 1899 was 21,176,000 pieces of mail-matter; receipts, including telegraph receipts, 3,060,637 lei; expenses, 3,105,188 lei.

Political Affairs.—The coupons of the foreign debt were paid in July, 1901, with 4,000,000 francs advanced by the Russian Government, which, in January, 1902, had to give an extension of the time for repayment. Premier Karaveloff laid before the Sobraje in December, 1901, the contract for the loan, which after protracted negotiations had been obtained from the French bank on condition that a monopoly of tobacco be given to the lenders. He was deserted by many of his own followers, who were pledged to vote for the loan. The Stamboloufists, however, for patriotic reasons determined to support the unpopular measure, which seems to offer the only escape from bankruptcy. Although promising excessive profits to the concessionaires, the tobacco monopoly in the hands of foreigners offered financial advantages to the Government, which loses about 2,500,000 lei of the tobacco revenue every year through contraband, and the country would benefit by the introduction of improved methods of cultivating and curing tobacco. But the country was exasperated against the grasping foreigners. This entering wedge of foreign financial control roused the national jealousy of the Bulgarians. When the question of the foreign arrangement was put to the Sobraje in the beginning of January Karaveloff was defeated, and the ministry resigned. M. Danoff, who had much to do with negotiating the loan for which M. Karaveloff as Minister of Finance had to accept the responsibility, formed a new Cabinet on Jan. 5, in which M. Sarafoff, the chief negotiator, was retained. It was a purely Zankofist ministry, which was not what the opponents of the loan wanted. The first vote of supply asked for was therefore refused. The Sobraje was dissolved and new elections were ordered in order to ascertain the temper of the people and give time to seek some other method. If possible, to save the Government from bankruptcy. Gold was obtained from Bulgarian banks to pay the coupon which was due at the end of the month. The new ministry let it be known that it considered the conditions of the loan rejected by the Sobraje as null and void and that it would endeavor to conclude another arrangement. An extensive fraud on the Government was discovered in which some officials and politicians were implicated. Plates for printing revenue stamps had been stolen, and forged stamps to the amount of 2,000,000 lei or more had been sold and used throughout the country for several years. The ministry was composed of Zankofists. Numerous changes were made in the official personnel in preparation for the elections.

Direct interference or coercion was precluded by the new electoral law, which the Government promised to observe loyally. On Feb. 6 the new Minister of Public Instruction, M. Kanchkov, who had been a schoolmaster in Macedonia and was quite popular, was murdered by a discharged teacher, also a Macedonian, and once his pupil, who was crazed by his desperate fortunes.

The Sobraje elected on March 2 contained 63 Progressists or Easterners; 14 Socialists; 13 Christian Democrats; and 13 Agrarians. The peasants in many places made demonstrations against the concession of the tobacco monopoly to foreigners, and the result of the election was a popular condemnation of the proposed loan. Before the Sobraje assembled Dr. Danoff went to Paris and St. Petersburg to obtain, if he could, more favorable loan conditions.

The financial embarrassment of the Government was the effect of the economic distress of the people, caused by a succession of bad harvests and an unfavorable state of foreign exchanges, and still more the result of financial errors and mismanagement on the part of the Government, of excessive military expenditure, extravagant outlay on public works, fiscal changes in 1895 which reduced revenue with a corresponding entailment of expenses, and the return to tithes in kind in 1900 which could not be collected. When the principality was first established there were surpluses for six years, and since 1892 the deficit has been chronic, averaging 9,500,000 lei a year. During the late period of agricultural depression taxes fell, in 1908 to 36,000,000 lei, or an amount of 20,000,000 lei. The unbusiness-like reminiscence of the Bulgarians in meeting financial obligations, a national trait of this peasant nation exhibited not only by individuals but by the Government, which in some instances has met the coupons only by obtaining advances from abroad at the last moment and has shown culpable indifference in regard to the Eastern Roumelian tribute, the hostility shown toward foreign creditors, the frequent political disturbances, and the recrudescence of the Macedonian agitation have combined to impair the public credit, although the debt is light and the productive resources of the soil and the people are abundant.

On March 23 the Cabinet was reconstructed as follows: Premier and Minister of Foreign Affairs, Danoff; Minister of Finance, Sarafoff; Minister of the Interior, Ludskofoff; Minister of Justice, Raiffe; Minister of War, Gen. Papoff; Minister of Public Instruction, Todoroff; Minister of Commerce and Agriculture, Abrasheff; Minister of Public Works, Constantinoff. All the members

pledged to the Zankoffist party. Ministers Da-

nod and Sarafoff, through the influence of the

Koryaks, and intimidated the extract for a

sum of 100,000,000 francs at 5 per cent, to be

taken at 83, on the security of the tobacco-tax

revenue without the concession of a monopoly

duty. For the purpose of ratifying this

agreement and of voting supplies the Sobaranje

was summoned in extraordinary session on May

5th. The election of the aged Dragam Zankoff as

president of the Sobaranje indicated that the re-

constituted ministry could rely on its narrow

majority.

Since the reconciliation with Russia

de old party programs had lost their value.

The government policy was to seek the good-will

of Austria-Hungary as well as of Russia and to

 cultivate friendly relations with Roumania and

Serbia and a loyal understanding with the Porte.

A good harvest and returning prosperity offered

the best chance for a reestablishment of the na-

tional finances and the attraction of foreign capi-

tal for the development of the resources of the

country. This ministry was not easily to be

swayed in the wake of the Macedonian agita-

tors: yet it would not be harsh or hasty in its

treatment of the popular heroes, whom the Prince

himself had deposed and the peace with whom

was a true Bulgarian. The Macedonian trouble

assumed a more serious aspect in 1902. The

organizers of revolution in the Turkish vilayats

were Bulgarians. They were left active service

for the reserve in order that they might teach

Macedonian rebels to fight effectively under mili-

itary leading. The situation in Macedonia for a

year past had been bad and no augmentation of

danger. Large bodies of troops from Asia Minor

were stationed there and were reinforced in 1901, but

this military occupation of the country, where distress

was felt from natural causes as well as from political agita-

tion rendered the situation of the Christian inhabitants

more intolerable. The quiet ones often suffered

for the misdeeds of the rebels and brigands. All

the Turkish troops on the frontier could not

prevent such acts as the kidnapping of Ellen

Stone. The lawless acts of Macedonian bands

provoked only against the Mussulman inhab-

ants, who formed themselves into guerrilla

bands to take reprisals and, when caught by the

Turkish troops, they were more leniently dealt

with than the Christians. A constant stream of

Macedonian emigrants passed over the border

to Eastern Roumelia. The

Macedonian committees smuggled many thou-

sands of rifles into Turkey. Weapons and ammu-

nation were hidden in churches and other places

in towns as well as in secret nooks in the

mountains. The Bulgarian Government appealed to

the powers to force Turkey to carry out the re-

forms promised in the treaty of Berlin and

threatened to strengthen the frontier garrisons if

Turkey continued to mass troops on the bor-

der. The Russian and Austrian embassies in

Constantinople called the attention of the Porte

to the situation in Macedonia, and in conse-

quence of these representations the Sultan

appointed the Grand Vizier, the Minister of For-

eign Affairs, and the Minister of Public Instruc-

tion a commission to consider measures of re-

form. Russia had advised the Porte to proceed

with speed against disturbers, but carefully to

avoid injustice. Russia and Austria jointly

warned the Government of Sofia. The extreme

view of the revolutionary party, led by Boris

Sarafoff, was that the ransom paid for the

release of Ellen Stone to resume active

operations early in the spring. Bands of Bul-

garians entered Macedonia, levied blackmail and

committed outrages, attacked Turkish patrols,

and bribed the Cretans by paying those who condemned the proceedings of the

Macedonian committees. The Bulgarian Govern-

ment proved its loyal intentions by removing

Macedonian refugees into the interior and taking

possession of all firearms found in the frontier

districts. At the same time it reminded Russia

and Austria that the Berlin treaty assured to the

Christians of the vilayets some such degree of

self-government as the Cretans already enjoyed.

On detecting the chief agents of the Central Mac-

edonian committee in the business of forming

bands, the Government threatened to dissolve the

committee. The Macedonian committees and the

Bulgarian clergy tried to prevent the consecra-

tion, which at last took place on June 30, at

Uskub, of a Servian bishop, Monsigur Firmilian,

whose acceptance by the Porte was due to the

intervention of the Russian ambassador. The

Turkish investigating commission recommended

minor modifications of the civil administration,

building of roads, the establishment of schools,

and a reorganization of the gendarmerie so that

the revolutionary bands might better be hunted
down and the peace with the Turk be enforced. The

local authorities in the disturbed vilayets disarmed the Christians, who by law are not al-

lowed to keep weapons; nor are Mohammedans,

but in their case the Christian was allowed to

possess them. The exortion of the Turkish officials often drove impoverished rayas into the revolutionary bands which combined brigandage with patriotism.

For that reason the Austrian and Russian ambas-

dadors advised the Porte to choose a better class of officials and to pay them their salaries

regularly. When a congress of Macedonian com-

mittees was called to meet in Sofia, the Austrian

and Russian representatives advised the Bul-

garian Government to interdict it and the Turk-

ish representative called for the arrest of Boris Sarafoff, the former president of the central com-

mittee, who had been tried for the murder of the

Roumanian professor Mikhailéno, and whose

chief lieutenant, Deutcheff, was supposed to have

planted and directed the abduction of Ellen

Stone. Sarafoff was still the leading spirit in

organizing the Macedonians for revolution, while

Gen. Zontcheff, the president, and the other mem-

bers of the committee who succeeded Sarafoff

and his colleagues devised the funds they collected
to recruiting and fitting out the bands of

Bulgarians who invaded Macedonia. These bands

were much larger than the groups of 6 or 7 men

which Sarafoff founded on the Nihilism plan,

pledged to obey every order from the superior committees and to murder traitors. The Bul-

garian bands were military bodies of 100 or more,

led by professional officers. They traversed the

Turkish provinces as far south as Salonika, aided

by Macedonian peasants who kept them in-

formed of the movements of the Turkish troops.

Wherever they could not engage the troops on equal

terms they did so, in order to give their actions

the appearance of regular warfare. The gen-

darmerie and troops, on the other hand, sought
to evade encounters, and often let the bands escape

when it would have been easy to capture them, or

bribed perhaps to do so by the Bulgarians. The

Zontcheff and Sarafoff factions were bitterly hos-
tile to each other. Sarafoff and his new

committee had no object but the aggrandizement of

Bulgaria, and he put forth a program of

Macedonian autonomy instead of annexation for

Bulgaria. When the congress opened on May 10

he appeared with delegations from 45 societies,
mostly Macedonian. The Zontcheff wing, comprising societies in Bulgaria and Macedonia, excluded the Sarafoff delegates, over the vote of 15 of the delegates admitted, who declared themselves also partisans of Sarafoff, who therefore in the rupture that followed commanded the allegiance of the larger and more vigorous section of the party. The police seized documents of the central committee which proved that Gen. Zontcheff was actively fitting out bands to operate in Macedonia. He was therefore arrested on Sept. 2 and interned in his native place. Other members of the committee and ex-officers were arrested or took to flight. The fighting in Macedonia, which in other years comes to an end early in June, continued through summer and autumn till the mountains were covered with snow. There were 80,000 troops in Macedonia, most of them quartered on the people, a serious burden in addition to the taxes, which took a fifth of their income. Neither the Bulgarian bands nor the Macedonian secret societies gave much trouble to the authorities who in Monastir restored a tolerable degree of order and made a show of governing in a civilized manner under Gen. William, as an enlightened administrator, but unable to restrain the corrupt practices of his subordinates. In Uskub and wherever the Albanians predominated the semblance of an insurrection kept up by the Bulgarian bands inflamed the arrogance of the Albanians, which the Turks have never in the course of ages attempted to subdue, and provoked the Serbs to action by the tactlessness that made the condition of the Christians unbearable.

A consular convention between Bulgaria and Austria-Hungary was concluded and ratified by the Sobranje. The narrow and uncertain majority supporting the Government in the Sobranje was unsatisfactory to the ministers, who seized an opportunity to dissolve the Chamber again. The elections, which took place in September, were more easily influenced by the Government than the last ones. The heterogeneous Sobranje gave 15 votes to one in which the Government party had an overwhelming majority.

BUREAU OF AMERICAN REPUBLICS, INTERNATIONAL. This is the representative organization in Washington, D. C., of an agreement entered into by the independent republics of North and South America for the purpose of bringing about closer trade relations between them, to disseminate the information by the publication of their tariff laws and all other laws and provisions that may be enacted by them relating to trade and navigation, and for the collection and publication of useful statistics and general information of interest to all.

The organization was the one practical outcome of the first International Conference, commonly known as the Pan-American Congress, held in Washington in 1889-'90. Article II of the recommendations adopted by that conference on this subject says:

"The International union shall be represented by a bureau to be established in the city of Washington under the supervision of the Secretary of the United States, and to be charged with the care of all the transactions and publications, and with all the correspondence pertaining to the international union."

It was also stipulated that this bureau should be the Commercial Bureau of the American Republics, and that its organ should be a publication to be entitled the Bulletin of the Commercial Bureau of the American Republics. The scope and field of this publication was explained, and it was made of the probable expense of maintaining the bureau, which was not to exceed $30,000 a year. Each republic was required to pay its share of this expense in proportion to its population, and a schedule of the first year's proportionate payment of each country was embodied in the report of the committee presenting the project to the conference. This proposed assessment of each country forms the following table:

<table>
<thead>

In order that no delay should occur in organizing the bureau, the Government of the United States was asked to advance the expenses for 1893. The State Department at once took up the project, and the bureau was organized in Washington, practically under the direction of the Secretary of State and White as director. Regardless of the amount of work accomplished and the information disseminated through its publications, the bureau led a precarious existence, difficulty of obtaining information and the cooperation of the many countries that had entered into the agreement. The first year's report shows that 28 publications were issued besides the regular bulletin, these including handbooks of the republics, patent and trade-mark laws, import duties, and commercial directories. The commercial directories were intended for the use of manufacturers and merchants in forwarding catalogues and circulars and opening correspondence, and the demand for them, especially in the United States, demonstrated the eagerness of the part of those for whom they were intended to introduce their wares into markets hitherto practically unknown or unsought. A perplexing question was at once pressed upon the attention of the executive officer of the bureau owing to the demand for its publications, the demand increasing so rapidly as to make compliance impossible because of the limited edition. This led to the issuance of a circular in October, 1893, giving a list of the publications that had not been exhausted, with a price affixed, for which the copies could be secured by application to the Government Printing-Office. This list contained 39 publications obtainable, out of 69 that had been published by the bureau since its organization.

A resolution adopted by the International Conference recommended the adoption of a common nomenclature which should designate in alphabetical order, with equivalent terms in English, Spanish, and Portuguese, the commodities on which import duties are levied by all the American nations for the purpose of levying customs imports, and also to be used in shipping manifests, consular invoices, entries, clearance petitions, and other customs papers. This work was turned over to the bureau and conducted under its direction by authority of the acts of Congress of July 14, 1890, and July 16, 1892. The work was advanced as rapidly as possible, but it entailed a great amount of labor, and though the two appropriations of $10,000 each were exhausted and seven years elapsed before the work was completed, when the schedule was published it was found to contain many errors and inaccuracies, owing chiefly to
the use of local names in some of the countries that are entirely unknown in other countries in which the same language is spoken; and, as a consequence, it was unnecessary for the nations that entered into the agreement to form the union, the Argentine Republic notified the State Department in a communication through its minister of its withdrawal under the terms of Article 8 of the treaty, which provided that the Argentine Republic had neither ratified the recommendation containing the union nor declared its intention of entering it, but in March, 1892, the Dominican government was in favor of entering the union and authorized its representatives to pay the amount of its annual assessment. The annual report of the director of the bureau for 1893 shows that the following republics, Bolivia, Nicaragua, Paraguay, and Peru had not paid their quotas, though nearly all of them promised to do so. The existence of the bureau gradually became so uncertain that it was finally decided by the State Department to make a determined attempt at reorganization, and an invitation was extended to the accredited representatives of the Latin-American republics to this country, by the Secretary of State, representing the union, and the representatives of all the nations were represented with the exception of the Argentine Republic, Bolivia, Paraguay, the Dominican Republic, and Haiti. The result of this meeting was that the bureau was reorganized on the basis of the original agreement, and its scope was widened. An office was opened in New York for soliciting business, as it was decided to publish advertisements of reputable firms in the Monthly Bulletin, and an agent was employed for that purpose. This action, however, soon brought forth a vigorous protest from the publishers of export papers, who declared that the soliciting and publishing of advertising was not within the province of an official organ of the Government, and that this interfered with their legitimate business. The bureau was represented by the director of the bureau favoring the advertising project, but it was subsequently shown that with the increased business the expenses of the bureau had increased to such an extent that it was necessary to call for an appropriation of $41,972 to meet the deficiency for six months ending June 30, 1897, which appropriation was made by the United States. At a meeting of the Executive Board it was shown that of the $36,000 in advertising contracts made, 40 per cent. was required to be paid to the solicitor, who demurred to his percentage before the bills against the advertisers could be collected, which required an additional outlay of capital by the bureau, and as a consequence it was decided to terminate all existing contracts for advertising, subscriptions to publications of the bureau upon commissions, and to discontinue the New York office. This action was taken at a meeting of the bureau at New York on Feb. 28, 1898, the previous year had seen the completion of the code of commercial nomenclature in the three languages proposed, and also that of a commercial directory that cost $5,000. Through the good offices of the representatives of the Latin-American countries in the United States and ministers accredited by the United States, the bureau obtained the privilege of sending its mail matter free of postage from all the governments of Costa Rica, Ecuador, Guatemala, Haiti, Honduras, Nicaragua, and Venezuela through their respective territories. Bolivia was the only country that had hitherto granted these privileges. Soon afterward the Argentine Republic, which had withdrawn from the union, announced its intention to take the formal steps necessary to enter it, and this announcement was followed by that of Chile. Colombia and Paraguay, although they had not formally withdrawn from the union, had failed to pay their annual assessments, but now they paid the indebtedness, thus showing their disposition to become active members of the union. This was followed by Bolivia and Peru granting postal franchise privileges, which now made it possible for the republics granting this privilege, including our islands and Canada.

The second International Conference, held in Mexico in 1901-03, fully recognized the importance of the bureau to all the republics; and the Mexican Government assigned two rooms adjoining the conference hall for its use and the installation of a reference library. With the view of rendering the bureau still more useful to all the countries represented in its administration and making it still more valuable in establishing and maintaining closer relations between them, the conference adopted a plan of reorganization that is intended to increase the efficiency of the bureau and enable it to discharge its duties to better advantage. One of the aims in the adoption of the plan was that the management of the bureau more truly international. The new regulations provide that the bureau shall be under the management of a governing board comprising the Secretary of State of the United States, who is to be its chairman, and the diplomatic representatives in Washington of all the other governments represented in the bureau. This governing board is required to meet once a month, excepting in June, July, and August of each year, and may hold special meetings any time on the call of the chairman, or on the request of any two members. The merit system of filling places is adopted, and it is provided that all applicants shall be examined to determine their fitness for the places for which they apply. It is required that an itemized budget be prepared annually, estimating the expenses of the bureau for the succeeding year, and this budget is to be transmitted to each government, together with a statement of the amount to be paid by such government on the basis of the existing apportionment of the expenses, and each government is required to transmit the amount of its contribution to the Secretary of State of the United States six months in advance. The bureau is given authority to correspond, through the diplomatic representatives of the several governments in
WASHINGTON, with the executive departments of those governments, and is required to furnish such information as it may possess, or can obtain, to any of the republics requesting it. Each of the republics agrees to facilitate the gathering of information by the bureau; to send to it promptly two copies of each of its official publications for preservation in its library and to supply such information as may be requested by the director. Provision is made for the continuation of the publication of the Monthly Bulletin in English, Spanish, Portuguese, and French; and for the publication of such maps, topographical and geographical charts, and other publications as the governing board may direct. All the publications of the bureau are to be kept free from advertising as soon as the existing contracts expire, and said publications are to be considered public documents and are to be carried in the mails of all the republics. The bureau is made custodian of the archives of the International American Conferences, and is especially charged with the performance of the duties imposed upon it by the conference. The specific duties thus imposed upon the bureau at the last conference were:

The carrying out of the provisions of the resolution looking to the collection, compilation, and dissemination of more complete statistical data and information regarding the resources of the several republics; the fixing of the date for, and the performance of the general executive work of the sanitary convention to be called in accordance with the resolution adopted on the subject of quarantine and sanitation; the performance of the general executive work of the Customs Congress to meet in the city of New York, and also the Coffee Congress, which met in New York Oct. 1, 1902, and adjourned Oct. 23rd (see COFFEE), and the keeping of the accounts of the American International Archeological Commission. In addition to these duties specifically prescribed by the conference, it was recommended that the bureau should collect, compile, and keep on file, and should publish to such extent as may be practicable, information regarding commercial laws; the banks of the American republics, their capital and surplus; the internal laws of the several countries, changes in said laws, patents granted, and decisions of the courts of the several countries in patent litigation; complete monthly statistics of imports and exports of the several countries; the arrival and departure of vessels from the ports of the American republics, with their tonnage; the length, stated in miles and kilometers, of railways, streets, canals, telegraph and telephone lines in the several countries, and complete data as to the new lines projected or being built; information regarding new public works of all kinds; the most complete vital statistics of each of the republics and of its important cities that can be obtained; and such other information as the director, with the approval of the governing board, may determine. It is stipulated that the library established by the bureau be known as the Columbus Memorial Library. This last provision was made at the suggestion of Mr. Calvo, delegate to the conference from Costa Rica, who said that at the previous conference a recommendation to that effect had been unanimously approved, but no practical steps had been taken to carry out the idea. He further said that the chief aim in establishing the library, which was to be practically only an amplification of the existing one in the bureau, was to create a valuable collection of Latin-American books of commercial and statistical information. In the director's report for the fiscal year 1901 it was stated that the existing library comprised of 8,948 volumes. In the year 1,456 books and pamphlets were received, of which 901 were gifts. About 2,000 periodicals were received, including daily and weekly newspapers.

The reorganization of the bureau was immediately set up after the adjournment of the International Conference at Mexico in the early part of the year, in conformity with the resolutions adopted. Mr. W. W. Rockhill continues in office as the director, and Mr. Nicolas Veloz Goto was elected by the governing board to fill the place of Mr. Guzman; Dr. José Ignacio Rodriguez, long connected with the bureau as chief translator, was confirmed in his office, and received the additional honor of the office of Chief of the Columbus Memorial Library; and Mr. W. C. Fox, who represented the bureau as acting director at the conference in the city of Mexico, was confirmed in his office of chief stenographer, and was made editor of the Monthly Bulletin.

CANADA. DOMINION OF, a federal union of British provinces in North America; area, not including the far Northern Franklin Territory, 3,653,946 square miles; population, 5,389,262.

Government and Politics.—At the beginning of 1902 the Dominion Government was composed of Sir Wilfrid Laurier, Premier and President of the King's Privy Council for Canada; Sir R. J. Cartwright, Minister of Trade and Commerce; R. W. Scott, Secretary of State; David Mills, Minister of Justice; Frederick William Borden, Minister of Militia and Defence; William Mulock, Postmaster-General; Sydney Arthur Fisher, Minister of Agriculture; Joseph Israel Tarte, Minister of Public Works; William Stevens Fielding, Minister of Finance; Andrew George Blair, Minister of Railways and Canals; Clifford Sifton, Minister of the Interior and Superintendent-General of Indian Affairs; William Paterson, Minister of Customs; Michel Esdras Bernier, Minister of Inland Revenue; Richard Reid Dobell, without portfolio; and James Sutherland, without portfolio.

Early in the year several changes occurred in the Government. On Feb. 8 it was announced that the Hon. Mr. Mills had been appointed to the Supreme Court of Canada; that the Hon.
Charles Fitzpatrick was to succeed him as Minister of Marine and Fisheries. After the retirement of Mr. Carroll, K. C. M. P., was to replace the last-mentioned as Solicitor-General, without a seat in the Cabinet; and that the Hon. William Templeman, of British Columbia, was to become a member of the Government without portfolio. Mr. Fitzpatrick was born in on Feb. 22. The Hon. James Sutherland, M. P., who had been a member of the Government since 1894, without portfolio, had already been sworn in as Minister of Marine and Fisheries on Jan. 16, in place of Sir Louis Davies, who had gone to the Supreme Court in the preceding December.

The most important political event of the year, however, was the retirement of the Hon. J. Israel Tarte from the Government. As he represented a constituency by reason of his position and had been a member of the Government for some time, he was very popular with his constituents and had become more so as the time of Sir Wilfrid Laurier's return from England drew near. On Oct. 20—two days after the Premier's return—Mr. Tarte made a speech in the House of Commons, in which he had been connected since 1892. My views on the tariff and the Union are well known to you. I have on several occasions stated them publicly in your presence, and discussed them often privately with you. Entertaining the opinion that the interests of the Canadian people make it our duty to revise the tariff of 1897, with the view of giving a more adequate protection to our industries, to our farming community, and our working men, I can not possibly remain silent. I prefer my freedom of action and speech under the circumstances, even to the one that has been offered to me, and I am determined to make the tariff a subject for transit and my opinions, and others papers will be laid before you.

Sir Wilfrid Laurier, in his reply, accepted the resignation upon constitutional grounds and for the following expressed reasons: the country demanded without delay an increase of the customs duties, the first thing for you to do as a member of the Government, before addressing your views to the country, would have been to place them before your colleagues, with the object of obtaining that unanimous action of the cabinet which is the very foundation of responsible Government. If you had not been able to obtain from your colleagues their consent to the course you recommended, you would have been obliged then either to accept their views or find your colleagues inimical with them, and then for the first time you would have been free to place your views before the public. Such was the very simple course which was binding upon you; but to remain a member of the Government, at the same time to advocate a policy which had not yet been adopted by the Government, was an impediment to the proper working of our constitution and implied a disregard for that loyalty which all those who are members of the same administration owe to each other, and have a right to expect from each other.

Mr. Laurier, in his last editorial charge of La Patrie, a French-Canadian Liberal paper in Montreal, and announced that he would entertain an independent attitude toward the Government. After the retirement of Mr. Borden, M. P., formerly mayor of Montreal, was appointed Minister of Marine and Fisheries, and the Hon. Mr. Sutherland was transferred to Mr. Tarte's late department Nov. 12. Meanwhile R. L. Borden, M. P., the Conservative leader, had been making a tour of Manitoba, the Northwest Territories, and British Columbia, accompanied by Messrs. E. F. Clarke, J. Clancy, R. Blain, D. Henderson, and other Conservative members of Parliament. A great many speeches were made, and the ground was taken that Mr. Tarte was coming over to Conservative policy and fiscal principles. Mr. Borden left Winnipeg for his home in Nova Scotia on Oct. 21, and before doing so issued a final appeal to the people of the west to support the Government, in its attack on the monopolies and other grievances which he believed to be the cause of the present depression.

"Application having been made by the Canadian Pacific Railway to the Department of Railways and Canals for an increase of its capital, to meet the demand for additional rolling-stock and other improved facilities for handling the growing traffic, my ministers availed themselves of the opportunity to stipulate that the long-pending question of the power of the Governor in Council to regulate the tolls of the company should be submitted to the courts for a judicial decision. The corresponding vote will be laid before you.

"The inventor, Mr. Marconi, having met unexpected obstacles to the carrying on of his experiments in wireless telegraphy in a sister colony, my ministers deemed it expedient to invite him to continue his operations on the coast of Nova Scotia, and they availed themselves of his presence in Canada to enter into negotiations resulting in an arrangement through which, should the project prove as successful as is hoped for, the Government and people of Canada will enjoy the benefits of the invention on very favorable terms, including receipts for transit of messages very much below those now existing.

"I am pleased to inform you that the display made by Canada of her products at the international exhibitions held in the United States last year has attracted much attention, and has already resulted in many inquiries and orders for our goods. I may also congratulate you on the satisfactory condition of the revenue, and on the steady and continuous expansion of the general business of the country as evidenced by the increased volume of exports and imports. With the view of still further facilitating and developing our trade with other countries, it will probably be found expedient to increase the number of our commercial agencies, and Parliament will be asked to consider the desirability of making additional provision for that purpose.

"I have also pleasure in informing you that the governments of Australia and New Zealand have accepted an invitation from my Government to attend a conference in London next June for the consideration of trade, transportation, cable, and other matters of mutual concern and interest. It is hoped that the meeting may lead to an extension of Canadian trade with those important portions of His Majesty's dominions. I have further to advise you that my Government has decided that the inquiry to be made, has reached the conclusion that the establishment of direct steam-
ship service with South Africa would enable Canada to secure in that country a profitable market for her varied products, and, to that end, will endeavor to arrange for such a service." 

The session was comparatively quiet. The principal events were the act authorizing the Canadian Pacific Railway to increase its capital stock considerably, the legislation enabling Manitoba farmers to erect free grain warehouses at railway-stations, and the granting of representation to the Yukon Territory. The following were the chief acts passed and duly assented to by the Governor-General at the prorogation of the houses on May 15:

To incorporate the Indian River Railway Company.
To incorporate the Sovereign Life Assurance Company of Canada.
To incorporate the Nipissing and Ottawa Railway Company.
To incorporate the St. Lawrence and Northern Railway Company.
To incorporate the Strait of Canso Bridge Company.
To incorporate the Crown Bank of Canada.
To incorporate the Knapp Tubular Steamship Company.
To incorporate the Canadian Manufacturers' Association.
To incorporate the Pacific Northern and Omenica Railway Company.
To amend the bills of exchange act.
Further to amend the Canada evidence act, 1893.
Further to amend the acts respecting the Northwest Territories.
Further to amend the Yukon Territory act and the acts in amendment thereof.
To incorporate the Toronto and Niagara Power Company.
To amend chapter xli of the Statutes of 1901 respecting the administration of justice in Yukon Territory.
To amend the land titles act, 1894.
To amend the Chinese immigration act, 1900.
To incorporate the Intercolonial Railway Company.
To incorporate the Yukon Pacific Railway Company.
To incorporate the Manitoba and Keewatin Railway Company.
To incorporate the Canada Eastern Railway Company.
To incorporate the Nepigon Railway Company.
To incorporate the Canadian Central Railway Company.
To incorporate the North Shore Power, Railway, and Navigation Company.
To provide for the establishment of a Medical Council in Canada.
To amend the immigration act.
To amend the fruit marks act, 1901.
To incorporate the Securities Bank of Canada.
To incorporate the Metropolitan Bank.
To incorporate the Union Life Assurance Company.
To amend the Manitoba grain act, 1900.
Respecting the coasting-trade of Canada.
To amend the customs tariff, 1897.
To incorporate the Canadian Northern Telegraph Company.
Respecting the incorporation of joint-stock companies by letters patent.

The budget of 1902.—On March 17 the Minister of Finance presented his sixth annual statement to the House of Commons. He had no changes in the tariff to announce, and he said that machinery and structural iron for beet-sugar factories would remain free of duty for another year from April 1. He estimated the revenue for the fiscal year ending June 30, at $56,800,000, the expenditure at $51,000,000, and the addition to the debt of the Dominion at about $6,000,000. He was able to say that his expression of belief in his last budget speech that the country had about reached the crest of the wave of business prosperity had been proved incorrect by the activities and progress of the past year. The revenue had been greater than his estimate, and larger than that of the years 1899–1901, as the following table showed:

Mr. Fielding drew special attention to the post-office returns. There was an increased revenue of $235,969, and the total receipts of the department were $3,441,504. But the expenditure was $3,930,446. He said, however, that the deficits had once been as high as $500,000, and that in the meantime Mr. Mulock had not only reduced the amount, but had cut the British postage in two and reduced the Canadian postage one-third. In railways he described the condition as not worthy. From total receipts of $3,140,678 in 1896, when the Laurier Government took office, the amount had risen in 1901 to $5,213,381. The total expenditure in consolidated fund account, or permanent expense account, was $46,806,367, against $42,975,279 in the preceding year. In legislation there had been an increase of $342,424; in arts, agriculture, and statistics—which included the census—the increase was $235,645; in militia there was an increase of $215,495; in railways and canals—chiefly the working expenses of the line of the Intercolonial Railway—of $3,138,060; in public works the increase was $1,096,742; in the Government of the Northwest Territories, $150,177; and in the post-office, $173,431. Adding to this consolidated fund account the money of the Canada government, the total was $57,962,860, against $52,217,466 in 1900. For railways on capital account there was an expenditure in 1901 of $3,014,010; for canals, of $2,390,669; for public works, of $1,006,983; for Dominion lands, of $260,060; for militia, of $1,35,884; for the Canadian Pacific Railway, of $8,978. The total was $7,295,488, an increase altogether of $229,645. The net public debt was described by the minister as having been $269,480,000 on June 30, 1901, against $505,493,806 in the previous years. In the five preceding years, he added, the increase had been $9,985,750, an average of $1,997,514, compared with an average of $6,363,075 in the preceding eighteen years. The exact increase for 1900–01 was $2,986,196. The statements of the minister were variously criticized, and on May 13 Mr. Borden, the Opposition leader, introduced the following motion:

"That the total expenditure during each fiscal year from 1893 to 1901, both inclusive, was as follows: In 1893, $42,272,190; in 1894, $43,068,834; in 1895, $42,872,338; in 1896, $41,762,383; in 1897, $42,972,756; in 1898, $43,343,281; in 1899, $51,542,683; in 1900, $62,717,467;"
in 1901, $37,962,968. That the Finance Minister estimates that the total expenditure for the fiscal year ending June 30, 1902, will be $65,250,000; that the annual expenditure on both consolidated revenue and capital account has increased between 1897 and 1901 by no less a sum than $13,010,110; that during the period above mentioned the revenues of the country have been unusually large, and the Government claims a total net surplus of $19,743,267.09, but no portion thereof has been applied in reduction of the public debt, which, with the addition estimated by the Finance Minister for the current fiscal year, will have increased from $528,478,432.77 in 1890 to $774,480,000 in 1902, an increase of more than $186,000,000; that the Minister of Finance estimates that the total revenue for the year ending June 30, 1902, will be $56,900,000; that notwithstanding this very large revenue the Minister of Finance estimates that the public debt will be increased during the current year about $8,600,000; that the House desires to place on record the opinion that the expenditure for the year ending June 30, 1902, and the proposed expenditure for the year ending June 30, 1903, are excessive. The debate of Lords on the Government, with the exceptionally large revenues at its command, has not only failed to reduce, but has largely increased the public debt and has incurred capital expenditure for which the country does not receive and can not expect an adequate return.

The motion was lost on a party division of 84 to 41.

The supplementary estimates for the fiscal year ending June 30 were presented to Parliament on May 6. The total was $5,739,301. Of this amount, $3,396,201 was chargeable to consolidated fund and $2,353,100 to capital account. This made the main estimates $50,100,939 for the year beginning in July, 1902. There were $10,000 for experimental farms; $175,000 for the St. Louis Exhibition; $20,000 for the Cork and Wolverhampton Exhibition; $50,000 for salaries at Esquimalt; $300,000 for arms and ammunition; $150,000 for purchase and construction of the coronation military contingent; $315,000 for the Halifax garrison; $1,315,000 for the intercolonial and $36,000 for Yukon public buildings; for the Northwest Territories $340,000; and for the Yukon Government $384,500.

Canada at the Coronation.—During the greater part of the year the subject most universally in the public mind was the coronation of the Emperor of India. Bound up with it also were the visits of Canadian premiers and leaders to the motherland; the conferences held there upon many important subjects; and the hospitality extended to Canadians. The royal invitation extended to the Premier of Canada made him the guest of the British nation during a special period, with headquarters at the Hotel Cecil, in company with the Premiers of Australia, New Zealand, Cape Colony, Natal, and Newfoundland, and certain appointed representatives of the Crown colonies and the Indian Empire. The premiers of all the provinces of Canada were also invited to be present at the coronation, though not as guests at the expense of the nation. In accordance with the King’s desire to make the coronation an imperial event, each part of the empire was asked to send a contingent of troops. Canada sent 656 soldiers, chiefly veterans of the war, under the command of Lieut.-Col. R. E. W. Turner, V.C., D. S. O., of Quebec, and the infantry under Lieut.-Col. H. M. Pelatt, of Toronto.

The Coronation Conference.—In a communication addressed to the Governor-General of Canada, on Dec. 27, 1901, Mr. Chamberlain conveyed a formal intimation of the coronation having been fixed for June 29 following, and an expression of the King’s desire that the Premier of Canada should be present and be a guest of the Government, together with his wife, for a fortnight from the time of arrival. On Jan. 23, 1902, the Colonial Secretary cabled Lord Minto as follows: “It is proposed by his Majesty’s Government to take advantage of the presence of the premiers at the coronation to discuss with them the questions of political relations between the mother country and the colonies, imperial defense, commercial relations of the empire, and other matters of general interest. Should your ministers desire to submit definite proposals or resolutions on any of the above questions, or should they wish to suggest any further subject for discussion, I should be glad to be informed of the purport by cable, in order that the other Governments may be communicated with.” The period of three weeks after the coronation was suggested as that during which the premiers should remain as his Majesty’s guests, and Lord Minto replied, accepting the invitation for Sir Wilfrid and Lady Laurier, and dealing with matters of policy as follows: “Referring to the several questions mentioned in your dispatch of Jan. 23, the only one which, in the opinion of my ministers, gives promise of useful discussion, is that of the commercial relations now existing between the mother country and the great self-governing colonies, and particularly Canada, which are regarded by my ministers as entirely satisfactory, with the exception of a few minor details; and they do not anticipate that in the varying conditions of the colonies there can be any scheme of defense applicable to all.”

This correspondence was laid before the Canadian House of Commons on March 11, and Mr. Borden, leader of the Conservative Opposition, brought up the subject in the House on May 12. He read the correspondence between Mr. Chamberlain and Lord Minto as showing no reason for any apprehensions or uneasiness about the action of the Government in declining to discuss imperial defense; declared that of the three possible features before the country—indemnity, annexation, or present policy—he preferred the last, and believed that it would be the permanent one; and pointed to advantages which Canada had long received from its protection by the British fleets that of the empire. He then, at considerable length, discussed the existing preferential tariff and the various proposals for preferential trade in its wider sense; quoted the Premier’s statement in the session of 1901 that preferential trade throughout the empire could not be discussed without premising the abolition of the protective conference, and could have no useful result under present condition of government in the Dominion. He concluded by asking for an authoritative statement as to the policy of the Government in connection with the coming conference. "We want to know whether the Government, while retaining for Canada full control of all her public money and her system of defense, is prepared to discuss with the imperial authorities a system of imperial defense. We want to know whether the Prime Minister proposes, as he did in 1897, and as the Minister of Agriculture did in 1901, to tell the Government and the great self-governing Empire that Canada desires no preference in the British markets. We want to know whether the Government are yet fully seized of the fact that
the British Government have adopted a policy which, in the view of the right honorable gentleman and his colleagues, has repeatedly declared during the last five or six years was absolutely impossible of adoption by the Government in the near future."

In his reply Sir Wilfrid Laurier deprecated the idea of any discourtesy, and pointed out that the subjects referred to would all be discussed apart from his Government's expression of opinion as to the value of such discussion. As to imperial defense especially, both he and his colleagues felt that no useful purpose could be served by dilating on what part Canada is prepared to take in her own defense, what share of the burden must fall upon us as being responsible for the safety of the land in an Imperial war and to which we are pledged as a dominion. Our allegiance, in which all our hopes and aspirations are centered, certainly we are always prepared to discuss that subject. Nor do I believe that we need any particular point that subject, or that our attention should be specially called to it." But this was not imperial defense as now much much more. "There is a school abroad, there is a school in England and in Canada, a school which has wandered to the floor of this Parliament, which wants to bring Canada into the vortex of militarism, which is the curse and the bane of Europe. I am not prepared to indulge this policy.

The conference, as finally constituted, was composed of the Premiers of Canada, Australia, New Zealand, Capet Colony, and Natal, with Mr. Chamberlain and certain appointed representatives of colonies still under Colonial Office control. The arrangements made for submission to the various colonial parliaments included plans for correspondence between the several countries and the German Empire, as well as the repayment of Indian debts, and the establishment of a common market for the United Kingdom. The Canadian ministers were also unable to agree to proposals of the Canadian Government, and while highly appreciating the good feeling manifested by Canada in the granting of preferential treatment, did not think that any material advantages to the trade of the United Kingdom were as great as the Canadian ministers claimed. He further said that the change desired by Canada would be an important departure from the established fiscal policy of the United Kingdom, and that if the proposal could be entertained at all, as to which he was not prepared to commit himself, it would be in the interests of Canada, to offer some material tariff concessions beyond those which she has already voluntarily given. The Canadian ministers pointed out that the Canadian tariff was prohibitive, that large quantities of goods were imported, and that a great proportion of these came from foreign countries. In any lines in which there was a reasonable probability of goods being manufactured in Great Britain, it might be possible to readjust duties as to give an additional advantage to the British manufacturer, and thus turn over a larger proportion of trade to the profits of which now go to foreign countries. This readjustment might be brought about in any or all of the following ways: 1. In some cases by the reduction of duties now imposed on British goods, where such reduction might be made without injustice to any Canadian industry. 2. By the transfer of some articles from the free list to the list subject to such rates as would give substantial preference to the British manufacturer, instead of leaving him, as at present, on even terms with the foreign competitor as respects such goods. 3. By abolishing the duty as respects foreign goods on some articles now on the free list, while allowing them to continue free as respects British imports. 4. In some cases by the reduction of duties now imposed on the foreign articles, thus increasing the amount of the preference on British goods. Such increase on foreign articles could, however, only be justified where the market could be supplied by the British manufacturer at the prevalent rates of duty. The Canadian ministers said that if they could be assured that the Imperial Government would accept the principle of preferential trade generally, and particularly grant to the food products of Canada in the United Kingdom exemption from duties now levied, they, the Canadian ministers, would be prepared to carry on the discussion on the lines above mentioned and endeavor to give to the British manufacturer an increased advantage over his foreign competitor in the markets of Canada."

The Alaska Boundary.—This question was fitly discussed in the press and by publicists in 1902, although no serious developments arose. Speaking in the House of Commons on Feb. 11, 1901, Sir Wilfrid Laurier has declared that the Americans have "taken such an attitude that it seems almost impossible to reconcile the two opposing views." He hoped, however, that if an honorable settlement could not be reached an honorable compromise might still be effected. In the meantime, and in view of the further complications that might arise at any moment from fresh discoveries of mineral and other products on the provisional boundary which will serve as a boundary so long as the question remains unsettled, and that provisional boundary has been settled by the discovery of the country and the discoveries of the Ameri-

answer to an inquiry from Mr. R. L. Borden, the Premier said that the agreement was "in the nature of a compromise between the respective positions taken by the two parties." On April 16, in the course of a discussion upon Yukon matters in committee, Mr. Sifton, Minister of the Interior, made the following statement regarding international arrangements and the situation at the moment: "As to the portion of the territory which lies contiguous to Alaska, there is a provisional boundary-line agreed to between the two governments, and that line, wherever necessary, has been laid down upon the ground by commissioners appointed by the parties. Our commissioner and the commissioner of the United States went for Canada. The boundary-line at the only place practically necessary—that is, across the Dalton trail to Pyramid Harbor. Under the terms of the provisional arrangement, this boundary line, which was also used by travelers before the railway was opened, is considered to be the provi-
sional boundary-line. So we have at all the
passes where travel is possible, a fixed provi-
sional boundary-line, and there can be no diffi-
culty about administrating it. The Prime
Minister, on May 6, in connection with a question asked by Mr. E. G. Prior, said that
the point of difference between the Ameri-
can and the Canadian governments was, as to
where the Portland channel referred to in the
Anglo-Russian treaty really is. "They want to
make it run up Observatory inlet, and then to
the west, making out that Observatory inlet is
only a small inlet running into the interior. We,
the other hand, contend that Portland chan-
nel is as it is described on the map of Vancouver,
on which the treaty of 1855 seems to have been
based, namely, all that channel of water which
runs west of Pearse island."

The Fourth Census.—Details of the Dome-
inion census taken in 1901, under the auspices of
Archibald Blue and Thomas Cote, were pub-
lished in 1902. The population of Canada, which
numbered 3,935,024 in 1871, 4,294,810 in 1881, and
4,533,961 in 1891, was announced as being 5,309,
362 in 1901. The only province that showed a
decrease was Prince Edward Island—from 109,
078 to 109,259. The largest numerical increase
was in Ontario, where it increased from 2,182,335 to
1,484,906; the largest proportional increase was
in the Northwest Territories and Yukon, which
had grown from 98,967 to 211,649. Ontario in-
creased 5,150,716, or 230,665 more than Quebec;
Nova Scotia, from 450,396 to 459,574; New
Brunswick, from 321,263 to 331,129. Manitoba
grew from 152,056 to 234,947, and British Colum-
bia from 44,035 to 177,087. The increase in city
and town population was marked all over the
country. In 1891 the rural districts had 3,290,
861 inhabitants, and in 1901 3,349,065, while
the urban growth was from 1,537,066 to 2,504,601.
It was distributed as follows:

According to religions or sects there were 142
divisions recorded and classified. Only 5 had
more than 100,000. The population showed a
total of 2,493,417 males in 1891 and 2,372,078
females, while in 1901 there were 2,751,473 males
and 2,619,578 females.

Immigration.—The immigration arrivals in
Canada for the fiscal year ending June 30, 1902,
were 26,338 from the United States; 17,259 from
the British Isles; 6,570 from Austria, including
Galicia; 3,759 from Russia and Finland; 2,451
from Germany; 1,046 from Hungary; 654 from
France and Belgium; from miscellaneous nations
7,902; and constituted a total of 67,379. The figures
showed an increase of 18,230 over the previous year, made up as fol-

Military and Defense.—According to figures
furnished by the Minister of Militia and Defense
for his annual report dated March 12, 1902, and
supplied by Col. Lord Aylmer, adjutant-general,
the regimental establishment of the active milit-
ary Dec. 31, 1901, was 98,000 officers, non-com-
missioned officers, and men; the number ordered
to drill during the year was 35,437; and the
number employed or partly trained was
30,392. The number of officers and men par-
ticipating in the royal review by the Duke of
Cornwall and York at Quebec was 3,546; at
Toronto, 10,981; at Halifax, 3,766. The total
appropriation for militia services in the year end-
ing June 30, 1901, was $3,097,752, with pensions
for the Northwest rebellion, the Fenian raids, and
the troubles of 1877 amounting to $21,125 addi-
tional. The total revenue was $85,470, which in-
cluded $22,035 from the Royal Military College
at Kingston.

Conference of Boards of Trade.—This was
held in the Parliament buildings at Toronto on
June 4-6. It met under the auspices and initia-
tive of the Toronto Board of Trade and its offi-
cers—Mr. A. E. Ames, President; Messrs. J. F.
Ellis and J. D. Allen, Vice-Presidents; and Mr.
Paul Jarvis, Secretary. President Ames was se-
lected as chairman, and Mr. Jarvis was appointed
secretary of the conference. In his opening ad-
dress Mr. Ames referred briefly to the elements
of supremacy and success that existed within the
British Empire. "It remains, in order that the
position of the empire shall be maintained and
advanced, that the elements of prosperity, which are
all available in large measure, shall be recognized,
shall be studied, and shall be safeguarded, and
that there shall be intelligent cooperation among
the countries interested. I believe no one expects
that the delegates have come to this conference
with the idea of trying to turn things upside
down and trying to have employed any but
methods of natural evolution. I take it, however,
that the coming together of such an influ-
ential body means that you consider that the best
method of dealing with problems is not to shirk
their discussion, and that nowadays it does not
do to drift. I think there is also, underlying
this assemblage, the feeling that the brightest
day which the British Empire can have will be
when Great Britain and the other self-governing
countries of the empire all combine in realizing
that united, in every sense, they stand; and di-
vided, in any sense, they fail."

After prolonged and important discussion, res-
solutions were passed in favor of cheaper news-
paper rates between Canada and Great Britain;
of the removal of the British embargo upon
Canadian live cattle; of the extension of the Pa-
sific cable scheme so as to create a complete line of British state-owned cables around the globe; of establishing a Canadian commercial depot in London, and other centers in other countries; of a fast Atlantic steamship line, and of Government aid to a steam service to South Africa; of a heavier duty on lead products; of increased copyright powers; of the appointment of a railway commissioner and Government encouragement of ship-building industries; of the enactment of an insolvency law; the encouragement of Canadian trade via Canadian ports; and increased aid to transportation facilities. The following resolution was also passed: "That in the opinion of the conference it is the duty of the Dominion, as an important division of the empire, to participate in the cost of the general defense of said empire, and therefore that an annual appropriation should be provided in the Dominion budget for this purpose, to be expended as the Dominion Government may direct."

Another resolution was passed in favor of preferential trade as follows: "That this conference is of opinion that Great Britain can best serve the interests of the empire by giving the products of her colonies a preference in her market as against the products of foreign countries: it being believed that such preference would stimulate trade and at the same time benefit Great Britain by largely freeing her from dependence upon foreign industries for her food supplies; and with that view the Prime Minister of Canada is hereby requested to urge at the imperial conference the securing of a royal commission, composed of representatives from Great Britain and the colonies, to investigate conditions and to suggest such preferential treatment of imports from the various parts of the empire as shall be best calculated to insure the fullest benefits."

**Railways.**—The twenty-first annual report of the Canadian Pacific Railway Company for the year ending June 30, 1902, was preceded by a statement of the result of the company's operations during the fiscal year ending June 30. The gross earnings were $37,503,053; working expenses, $23,417,141. The surplus for the year was $8,085,913. The net earnings for the year amounted to 62.44 per cent. of the gross earnings, and the net earnings to 37.56 per cent., compared with 60.75 and 39.25 per cent., respectively, in 1901. The average working expenses per mile were 1.75 cents, and per ton of freight per mile 6.75 cents, against 1.93 and 6.70 cents respectively in 1901. Four-per-cent. consolidated debenture stock to the amount of $850,000 was created and sold on account of the construction of branch lines authorized, and for the purpose of acquiring first-mortgage bonds, on which the interest is guaranteed by the company, of the Mineral Range Railroad Company, the Columbia and Western Railway Company, and the British Columbia Southern Railway Company.

The sales of the company's lands in the year amounted to 1,362,852 acres for $4,442,136, an average price of $3.26 an acre, and the cash receipts enabled the directors to redeem and cancel 5-per-cent. land bonds to the face value of $1,401,400, leaving in the hands of the public at the end of the fiscal year $1,430,000 of these bonds, all of which have since been called for redemption and cancellation.

The statement of the Grand Trunk Railway Company for the half year ending June 30, 1902, showed gross receipts of $2,377,201 and working expenses of $2,063,885, and net profit of $313,316. The cash receipts for the year amounted to $635,624, which was increased from $275,175,196, the total of $285,635,155 for the year ending June 30, 1902, being increased from $190,314, the total of $185,969,956 for the year ending June 30, 1901. The receipts from passengers were $201,498; from mails and express, $1,905,314; from freight and live stock, $1,597,384; from miscellaneous sources, $271,466—a total of $2,377,201 or $11,886,065. The number of passengers carried was 3,525,885, and the tons of freight and live stock were 5,675,338. On maintenance of way and structures $242,400 were spent; on maintenance of equipment, $24,565; on conducting transportation, $260,583; on general expenses and taxes, $271,450. Four-per-cent. debenture stock to the amount of $211,063 was issued during the half year as part provision for the repayment of $222,290 Northern Railway 5-per-cent. bonds, and $85,600 of Montreal and Champlain bonds were repaid. Sir Charles Rivers-Wilson, the president, concluded his statement on Oct. 1 by saying that "the cost of operation has been reduced, increased dividends are available for distribution, and additions to capital have been maintained within the most reasonable limits."

By the completion of the line between Port Arthur and Winnipeg the Canadian Northern Railway took hold of the fourth system in Canada in point of mileage.

The company completed this year an extension of the Carmang branch 19.8 miles west of Carmang. The company also owns the Winnipeg, Great Northern Railway's line of 40 miles from a point near Winnipeg to St. Laurent, Manitoba, which was built some years ago, but has not been operated.

Mackenzie, Mann & Co.'s system also includes the Inverness and Richmond Railway in Nova Scotia, of which 61 miles are in operation—giving them a total of 1,304.7 miles in operation.

The report of the Railway Commission is an elaborate document submitted to the Government on Feb. 10, 1899, by Mr. S. J. McLean after careful investigation, but not made public until 1902. The commissioner gave his conclusions regarding the possible establishment of an independent railway commission in Canada; and the Minister of Railways announced in Parliament that a bill substantially embodying the commissioner's plan would be introduced next year.

**Trade and Commerce.**—The foreign trade of Canada for 1902 was as follows: The imports of home produce were as follows: Mines, $34,947,574; fisheries, $14,058,070; forests, $32,119,429; animals and their produce, $58,245,433; agriculture, $37,132,888; manufactures, $18,462,970; miscellaneous, $32,599; total, $196,019,763.

There was a gain over 1901 in everything but the products of the mine. The increase in agricultural exports was very marked, and was partly attributable to the shipment of war supplies. The Canadian exports to and imports from the countries with which the Dominion had the largest dealings in 1902 were as follows:

The exports to Great Britain in 1902 were $16,490,720 more than in 1901, and the imports from Great Britain increased $6,395,698. Exports to the United States decreased $1,416,836, and imports from that country increased $13,850,031.
The noteworthy increase in Canadian exports to Great Britain and the United States since 1897 is shown in the increase of the former from $92,735,352 in 1897 to $101,000,000 in 1900, and of the latter, from $39,717,057 to $66,560,835. Similarly, imports increased $20,000,000 in amount from Great Britain and $63,000,000 from the United States.

Shipping.—Canada stands eighth in the point of ownership of vessel tonnage among the nations of the earth, leading Spain, Sweden, Holland, Denmark, Greece, Japan, Turkey, and other countries. Great Britain leads the list, the United States being second, then Germany, Norway, France, Italy, Russia, and Canada. The marine departmental report for 1901 showed that the total number of vessels remaining on the register books of the Dominion Dec. 30, 1901, including old and new vessels, sailing vessels, steamers, and barges, was 6,792, measuring 664,483 tons register tonnage, an increase of 5,287 tons register compared with 1900. The number of steamers on the registry books on the same date was 2,177, with a gross tonnage of 297,421; the number of new vessels built and registered in the Dominion of Canada in 1901 was 335, measuring 34,481 tons register tonnage.

Fisheries.—The export of fish from the Dominion in 1900 amounted to $107,200,352. The total value produced, as shown by the annual report of the Fisheries Department for 1901, was $124,762,193, thus increasing from the previous year. Divided among the provinces, the production was as follows: Nova Scotia, $7,800,135; British Columbia, $4,875,820; New Brunswick, $1,917,403; Newfoundland, $1,329,294; Prince Edward Island, $1,059,193; Manitoba and the territories, $718,150. Salmon led in the list of value of fish taken, the figures being 3,939,217, cod being set down for $3,614,775, lobsters for $3,065,350, herring for $1,883,237, and mackerel for $1,549,448. None of the other fish reached the million-dollar mark. In the halibut fishery on the Pacific coast a growth in value of $130,000 was noted in a total of $405,983. The capital invested in the industry was $10,900,125. The lobster plant was valued at $1,419,106, while the British Columbia salmon fishing industry was credited with establishments valued at $1,420,000. Altogether, about 90,000 men were employed, at least a part of their time, in the work of the fisheries, and more than 2,000 vessels of not less than 2,000 fathoms of net. The total expenditure by the Marine and Fisheries Department for the fiscal year ending June 30, 1901, amounted to $1,597,890.53. The expenditure for maintenance of lighthouse and coast service amounted to $505,438.08; construction, $73,378.00; total, $578,812.72; while for the previous year the expenditure for the building and construction, was $516,494.40, showing an increase of expenditure of $62,518.

Minerals.—According to the Geological Survey report for 1901, the production of metallic minerals included: Copper, to the extent of $6,600,104; gold from the Yukon, $72,195,000; silver, $6,495,222; iron ore, $701,284; pig iron from Canada, $1,215,116; lead, $1,199,734; nickel, $4,594,223; silver, $1,993,608; a total of $42,928,299.

In non-metallic minerals the production included: Gypsum, $340,148; limestone, $183,162; manganese ore (exports), $4,820; mica, $160,000; baryta, $3,842; others, $16,375; mineral water, $3,115,615; granite, $115,000; pottery, $200,000; sand and gravel (exports), $117,465; sewer pipe, $250,116; slate, $9,980; terra-cotta, pressed brick, etc., $278,671; building material, $4,820,000. The total structural materials and clay products was $9,461,261, and the total of all other non-metallic minerals was $19,621,072.

Agriculture.—The value of some Canadian farm products exported in 1901 showed a phenomenal increase in volume when compared with 1896, such as peas, which had risen from $1,299,491 in the latter year to $2,674,712 in 1901; flour, which had risen from $769,854 in 1896 to $854,088 in 1896; while from the port of Montreal alone the number of packages carried in cold storage increased from 227,965 in 1900 to 410,983 in 1901. Canadian butter won a better relative position in the markets of the United Kingdom than it had occupied at any previous period. The bacon trade also manifested phenomenal progress. In 1896 the value of the bacon, hams, etc., was only $4,446,884, whereas at the close of the last fiscal year it had risen to $11,829,820. In cheese, while in 1896 the exports were valued at $13,953,571, in 1901 they exceeded $19,800,000, and in 1901 reached 29,690,951.

Criminal Statistics.—The increase of lunacy was 22.76 per cent. in 1901 over the number of cases in 1891, while the population increased but 11.76 per cent. Generally speaking, the country underwent a moral improvement. There was a decrease in crime in Prince Edward Island, New Brunswick, Ontario, the Yukon, and British Columbia; the territories showed an increased ratio, while Nova Scotia and Quebec showed a small increase. The report of urban crime showed a proportion of 29.30 in every 10,000 inhabitants; the rural, 2.26 in every 10,000. The returns by occupation showed that convictions in the agricultural, commercial, domestic, professional, and laboring classes had decreased. The industrial classes received no injury. England supplied 6.35 per cent. of the persons convicted: Ireland, 2.9 per cent.; Scotland, 1.07 per cent.; Canada, 72.91 per cent.; the United States, 4.04 per cent; other foreign countries, 16 per cent.; other British possessions, 13 per cent.

Liquor Statistics.—The Dominion revenue from excise in the year ending June 30, 1902, was $1,125,485, against $1,045,790 in 1901, and $7,165,483 in 1898. Of the total in 1902, spirits amounted to $5,620,613, malt to $1,077,806, tobacco to $3,563,578, and cigars to $907,360. The quantity of spirits produced during the year was 3,234,147 proof gallons, against 2,652,708 in 1901. The consumption of spirits per head was 0.796 gallon, compared with 0.755 in 1901, 0.701 in 1900, and 0.740 in 1902. The provincial revenue from excise taxes on liquor was $1,729,498, against $87,471 in 1898.

CARNEGIE INSTITUTION. On Jan. 28, 1902, Andrew Carnegie gave an endowment fund of $10,000,000. The Carnegie Institution was incorporated on Jan. 4, 1902, "to conduct, endow, and assist investigation in any department of science, literature, or art, and to this end to cooperate with governments, universi-
ties, colleges, technical schools, learned societies, and individuals.

In Mr. Carnegie's deed of gift he further explained the objects of the institution. "It is proposed," so runs the document, "to found in the city of Washington an institution which with the cooperation of institutions now or hereafter established, there or elsewhere, shall in the broadest and most liberal manner encourage investigation, research, and discovery—show the application of knowledge to the improvement of mankind, provide such buildings, laboratories, books, and apparatus, as may be needed; and afford instruction of an advanced character to students properly qualified to profit thereby. Among its aims are these:

"1. To promote original research, paying great attention thereto as one of the most important of all departments.

"2. To discover the exceptional man in every department of study, whenever and wherever found, inside or outside of schools, and enable him to make the work for which he seems specially designed his life work.

"3. To increase facilities for higher education.

"4. To increase the efficiency of the universities and other institutions of learning throughout the country, by so increasing their existing facilities and aiding teachers in the various institutions for experimental and other work in these institutions as far as advisable."

The trustees are: President of the United States, President of the Senate, speaker of the House of Representatives, Secretary of the Smithsonian Institution, and President of the National Academy of Sciences (all ex officio) and Daniel C. Gilman, president; Abram S. Hewitt, chairman; John S. Billings, vice-chairman; Charles D. Walcott, secretary; William N. Frew, Lyman J. Gage, John Hay, Henry L. Higginson, Henry Hitchcock (since deceased), Charles L. Hutchinson, William Lindsay, Seth Low, Wayne MacVeagh, D. O. Mills, S. Weir Mitchell, William W. Morrow, Elihu Root, John C. Spooner, Andrew D. White, Edward D. White, and Carroll D. Wright. E. A. Hitchcock, Secretary of the Interior, was elected a trustee to fill the vacancy made by the death of his brother, Henry Hitchcock, of St. Louis.

The trustees at their annual meeting in November, 1902, adopted the following propositions as guides for the Executive Committee in selecting projects to which the funds and energies of the institution are to be devoted:

First, to promote original research by systematically sustaining—

"(a) Projects of broad scope that may lead to the discovery and utilization of new forces for the benefit of man, pursuing each with the greatest possible thoroughness.

"(b) Projects of minor scope that may fill in gaps in knowledge, of particular things or restricted fields of research.

"(c) Administration of a definite or stated research under a single direction by competent individuals.

"(d) Appointment of research assistants.

Second, to increase facilities for higher education by promoting (a) original research in universities and institutions of learning by such means as may be practicable and advisable. (b) The advancement and expansion of the opportunities offered for special study and research by the Government bureaus in Washington.

The Carnegie Institution will not undertake: (a) To do anything that is being well done by other agencies.

"(b) To do that which can be better done by other agencies.

"(c) To enter the field of existing organizations that are properly equipped or are likely to be so equipped.

"(d) To give aid to individuals or organizations in order to relieve them of financial responsibilities which they are able to carry or in order that they may divert funds to other purposes.

"(e) To enter the field of applied science, except in unusual cases.

"(f) To purchase land or erect buildings for any organization.

"(g) To aid institutions when it is practicable to accomplish the same result by aiding individuals who may or may not be connected with institutions.

"(h) To provide for a general or liberal course of education." At the same meeting the following appropriations were authorized: For scientific research, $200,000; for the reserve fund, $100,000; for administrative expenses, $50,000; for the publication of scientific memoirs and papers, $6,000. It was decided to issue a year-book in December, 1902, to contain the advisory reports and such other information regarding the work of the institution as might seem proper.

CHEMISTRY. Chemical Theory.—A considerable part of the address of Prof. James Dewar as president of the British Association, at Belfast, Sept. 10, was devoted to the discussion of researches concerning extreme cold, the absolute zero, and the liquefaction and congelation of gases, with which the speaker had been closely connected. The first formal expression of a zero of temperature is accredited to Amonson, who in 1794 constructed a thermometer scale in which the zero was placed at a point corresponding with 240 of the centigrade scale—"a remarkable approximation to our modern value for this point of minus 273 degrees." Amonson's experiments were verified by Lambert in 1779, who estimated the value of the zero as —270°. Other estimates followed, with widely varying results, till in 1848, when "the whole question took an entirely new form," and Lord Kelvin, applying the principles underlying Carnot's work on the Motive Power of Heat, calculated the zero at —273° C. "It was a great advance to demonstrate by the application of the laws of thermodynamics not only that an absolute zero of temperature is a reality, but that it must be located at 273° below the freezing-point of water. As no one has attempted to impugn the solid foundation of theory and experiment on which Lord Kelvin based his thermodynamic scale, the existence of a definite zero of temperature must be acknowledged as a fundamental scientific fact." Systematic experiments in the production of extreme cold are traced from the production of liquid carbonic acid by Thilorier in large quantities and his discovery, in 1835, that the liquid could be frozen into a snow by its own evaporation. A very important step in the investigation was the Bakerton lecture of Andrews, in 1869, on The Continuity of the Gaseous and Liquid States of Matter in which the critical temperature and the relations of pressure were defined and experimental proof was given that "the gaseous and liquid states are only distinct stages of the same condition of matter, and are capable of passing into one another by a process of continuous change." Van der Waals, in his essay On the Continuity of the Gaseous and Liquid States, gave "the equation of continuity," involving the relations of pressure, temperature, and volume; molecular
CHEMISTRY. 90

4. To do that which other sciences cannot do.
5. To enter into the field of operations that are properly to be so equipped and to continue in the broad and most liberal manner, encourage investigation, research, and discoveries, show the application of knowledge to the improvement of mankind, provide some findings, laboratories, books, and apparatus, as is necessary, and afford instruction of an advanced character to students properly qualified to profit thereby. Among its aims are these.

1. To promote science by paying great attention thereto and to the most important of all departments.

2. To discover the present men in every department of science and wherever found, induce or schools, and enable him to complete them, which he seems specially disposed to seek.

3. To maintain the truths in higher education.

4. To cooperate with the universities and the schools of learning throughout the country, awakening and adding to their existing objects to get teachers in the various institutions and to do other work in these institutions is advisable.

The Trustees of the United States, President, Speaker of the House of Representatives, at the South-ward Institution, at the National Academy, and President, with the advice of his friends, Mr. John Dewar as president of the British Association, at Belfast, Sept. 16, devoted to the discussion of chemistry, concerning extreme cold, the absolute zero, and the liquefaction and condensation of gases, with which the speaker had been closely associated. The first conception of a zero temperature is accredited to Ammonson, who in 1794 constructed a thermometer scale in which the zero was placed at a point corresponding was 270 of the centigrade scale—a remarkable approximation to our modern value for this point of minus 273 degrees. Ammonson's experiments were verified by Lambert in 1779, who estimated the value of the zero as 270. Other estimates followed, with widely varying results; in 1848, with the whole question took an entirely new form, and Lord Kelvin, applying the principles of Carnot's work on the Motive Power of Heat, calculated the zero at 273.° C. It was a great advance to demonstrate by mathematical laws of thermodynamics that the zero temperature is real, but that it must be located at 273 below the freezing point of water. As no one has seemed to impugn the solid foundation of their experiment on which Lord Kelvin based his theoretical scale, the existence of a definite point of temperature must be acknowledged as a fundamental scientific fact. Systematic experiments in the production of extreme cold and from the production of liquid carbonic acid by Thilorier in large quantities, discovered, in 1845, that the liquid could be frozen into a snow by its own evaporation. A very important step in the investigation was the discovery of the Gascony and Liquid States of Water, in which the critical temperature and the transitions of pressure were defined and experimentally determined. The proof was given that "the highest states are only distinct stages of the same condition of matter, and are capable of passing into one another by a process of continuous change." Van der Waals, in his essay On the Critical State of the Gascony and Liquid States, gave the equation of continuity, involving the relations of pressure, temperature, and volume, mole:
CHEMISTRY. [CHEMICAL THEORY.]

pressure, and molecular volume. A second contribution by Van der Waals to the theoretical side of the question, in The Theory of Corresponder States, was even more important than his original essay. This theory with the propositions that have already been developed has been of the greatest importance in directing experimental investigation and in attacking the difficult problems of the liquefaction of the most permanent gases. In Van der Waals theory has far outrun experiment. In the meantime experiment had come on, and most of the gases had been liquefied; and the problem had become not so much how to produce intense cold as how to save it when produced from being immediately leveled up by the relatively superheated surroundings. For this purpose the author contrived a system of double-walled vessels, with the space between the walls very highly exhausted. "Vessels of this kind are now in general use, and in them liquid air has crossed the American Continent." Liquid hydrogen—that being the last of the gases yet refrigerated—is the lightest liquid known to exist, and by far the coldest. It boils at —252.5° C., or 20.5° absolute. Reduction of the pressure in air below the temperature to —238°, when the liquid becomes a solid resembling frozen foam, and this by further exhaustion is cooled to —290°, or 13° absolute, the lowest stable temperature that has yet been reached. "This gap of 18° might seem at first sight insignificant in comparison with the hundreds that have already been conquered. But to win one single degree in the scale of heat is a different matter from doing so at higher temperatures; in fact, to annihilate those few remaining degrees would be a far greater achievement than any so far accomplished in low-temperature research." With the liquefaction and evaporation of a gas as much more volatile than hydrogen as that is than nitrogen it might be possible to reach a lower temperature—say 5° absolute—but even a second hypothetical substance of like relative volatility—as perhaps helium—would not bring the experimenter quite to this limit. He thought that the limit of the series would very be reached by man is extremely improbable. But supposing all difficulties to be overcome and the experimenter to be able to produce a gas of 4° absolute, it is by no means certain that he would find the near approach of the death of matter sometimes pictured. Any forecast of the phenomenon that would be seen must be based on the assumption that there is continuity between the processes studied at attainable temperatures and those which take place at still lower ones. The speaker doubted whether such an assumption was justified.

In a communication to the National Academy of Sciences, April 1902, Prof. T. W. Richards treated of the hypotheses that may reasonably be tried to account for changes in atomic volume. It seems very extraordinary, he held, that notwithstanding the stupendous mass of chemical facts that have been collected and the important researches that have been made in physical chemistry, we are still without knowledge of the nature of a chemical compound and of the manner in which its constituents are held together. We are not even certain that they are held together by mutual attractions; for though the evolution of heat usual when bodies combine indicates that there is some attraction of the molecules simultaneously with the act of combination, there are still cases in which heat is absorbed during combinations. This fact suggests an inquiry whether there may not be other agencies than mutual forces the action of which results indirectly in the formation of chemical bodies; and whether, if so, such agencies may not be a factor even of those combinations in which they are aided by direct forces. When hydrogen and chlorine come together no condensation of which account is taken occurs, although an enormous evolution of heat takes places. The extreme chemical activity of the resulting gas, however, seems to prove that it is not a complete chemical compound. Notwithstanding the great energy with which the ions have approached one another, they are still so active that the case must be regarded as very different from that when a mixture of hydrogen, and oxygen loses one-third of its volume in combining. A body may undergo contraction without combining with a different body, as in the case when the vapor of water is cooled. In all such cases heat is plenteously evolved, and molecule unites with molecule. It may be questioned how far the heat of chemical reaction is anything more than heat of contraction. Condensation does not necessarily consist solely in the approach of atoms toward one another. If a molecule is in itself incapable of condensation and capable of deformation; and it may be so even if it is not a vortex. If atoms are compressible the mutual attraction between two atoms would naturally tend to deform them. Hence we have, further, to determine the relation between such deformations and their valency. Apparently, highly compressible elements, like coals or like carbon, are little compressible. Such considerations as these noted should be borne in mind in the construction of new hypotheses upon which experimental investigations are to be based.

In his presidential address before the section of chemistry of the British Association Prof. Edward Divers, of the Imperial University of Tokio, Japan, presented what he designated as The Atomic Theory without Hypothesis, or divested of the conception of atoms as discrete particles. He thought that the conception of bodies as not continuous in texture, but as composed of discrete minute particles, had been a bar to the full and universal acceptance of Dalton's atomic theory. He thought that a code of all reference to the physical constitution of matter, in which only the conditions of chemical equality between substances should be regarded. In their study of the theory of radio-activity, E. Rutherford and Frederick Solly observe that all the most prominent workers in the investigation, including M. and Mme. Curie and M. Becque- rel, agree that the phenomenon is the function of the atom and not of the molecule. In the experiments of the authors with the emanation produced by thorium compounds and the property it possesses of exciting radio-activity on surrounding objects the radio-activity appeared in each case as the manifestation of a special kind of matter in minute amount. The emanation behaved in all respects like a gas, and the excited radio-activity it produced as an invisible deposit of intensely active material, independent of the nature of the substance on which it was deposited, and capable of being removed by rubbing or the action of acids. The position is thus arrived at, that radio-activity is at once an atomic phenomenon independent of any chemical change in which new kinds of matter are produced. Before such a view was entertained attempts made to explain it on existing
hypotheses proved unsatisfactory. It is appar-
ent that in radio-activity we are dealing with
physical changes that operate at known
atomic forces, for the whole process goes on in
dependently of temperature and chemical affinity.
The idea of the chemical atom in certain cases
spontaneously breaking up, is interesting, but the evolu-
tion of energy is not of itself contrary to anything that
is known of the properties of atoms. The changes brought to knowledge by radio-activity,
although unmeaningly material and chemical in
nature, are of a different order of magnitude from
any that have been before dealt with in
chemistry—being of an extreme order of minute-
tness. It is a significant fact that the radio-ac-
tive elements are all at the end of the periodic
table. If we suppose that radium is the missing
second higher homologue of beryllium, then the
known examples—uranium, thorium, radium,
polonium (bismuth), and lead—are the five
elements of heaviest atomic weight. Nothing can yet be said of the mechanism of the changes un-
volved; but whatever view is ultimately adopted,
it seems not unreasonable to hope that radio-
activity affords the means of obtaining informa-
tion of processes going on within the chemical
atom itself.

The radio-active elements are considered by
Mr. Geoffrey Martin, of the University of Ber-
linc, as examples of elements undergoing decom-
position at a greatly elevated temperature. In all prob-
ability the behavior is not peculiar to heavy
radio-active elements, but occurs with other ele-
ments in the periodic system at suitable tempera-
ture ranges where other elements exist.

Through his experiments with liquid and solid
hydrogen, Prof. James Dewar has been able to
learn much concerning the true relations of that
element. Faraday, Dumas, Daniell, Graham, and
Andrews thought that if hydrogen could ever
be brought into the state of a liquid or solid it
would reveal metallic characters; but Prof. Odling,
in 1861, pointed out in his Manual of
Chemistry that the chlorous relations of hydro-
gen were as decided, important, and frequent as
its other ones, and expressed the opinion that it
must be a part of every body, and should not be expected to present, in its
liquid or solid form, the appearance of a metal. Dumas found analogies between hydrogen and moli-
ars, and theory that both elements probably had the same atomic volume; and he deduced a density for hydrogen near the value
that has been obtained in subsequent experi-
ments. Newlands, in 1872, regarded it as the
lowest member of the chlorin family; Mendeleef
placed it with the alkalai metals; and Dr. John-
stone Stoney classed it with the alkaline earth
metals and magnesium. The conclusion of Prof.
Odling has been confirmed by Prof. Dewar's re-
sources. In the account of his investiga-
tions given in his presidential address before the Brit-
ish Association, 1902, Belfast, he cites the case
of liquid hydrogen as an excellent illustration of
the truth that no theoretical forecast, however
apparently justified by analogy, can be finally ac-
cepted as true until confirmed by actual experi-
ment. As described in this address, liquid hydro-
gen is a colorless transparent body. It has a
clearly defined surface, is easily seen, drops well,
in spite of the fact that there is only the twenty-fifth part of that of water or
one-fifth of that of liquid air, and can be poured
easily from vessel to vessel. The liquid does not cool so that it changes into a solid,
250 degrees absolute, it is very critical point of
the liquid is about 29 degrees absolute, and the critical
pressure is not more than 15 atmospheres. The
vapor of the hydrogen arising from the liquid has
nearly the density of air—that is, fourteen
times that of the gas at the ordinary tempera-
ture. It boils at 258 degrees absolute, and may
be kept in the form of a clear, transparent ice,
melting at about 55 degrees absolute, under a pressure of 55 millimeters, and hav-
ing one-eleventh the density of water.

In a lecture on Catalysis, Prof. William Ost-
wald defined a catalyst as any substance which
will alter the velocity of a chemical reaction
without appearing in the final product, and
catalysis as the process induced by a cata-
lyst. Catalytic action is extremely
common, and as a matter of fact appears wherever the velocity of a chemical reac-
tion can be measured. Catalytic reactions were
at one time divided into four groups: 1. Re-
lease in supersaturated solutions, as when such
solutions of Glauber's salts are crystallized by a
small trace of the solid substance with which the
solution is saturated. It also occurs in solu-
tions of gases, vapors, etc. 2. Catalysis in
homogeneous solutions—the largest and theore-
tically the most important class of contact reac-
tions. 3. Heterogeneous catalysis, which is illus-
strated in the action of platinum on combustible
mixtures of gases, as of oxygen and hydrogen, or
in the combustion of sulfur dioxide to tri-
oxide. 4. Enzymes, which are to be looked upon
as catalysts that are in the organs during the
life of the cell, and by the action of which it
recharges the greatest part of its duties. There
seems to be an internal activity which
hydrogen cannot be catalytically influenced, no chemical
substance, whether element or compound, which
ca 

Experiments on the antiseptic properties of
dilute solutions of acids were made by M. Bial
on yeast-cells. The retarding action of different
acids on the cell growth appears to have been
measured by observing the amount of carbon diox-

It
was found that the concentrations of the solution. Different ones are present. The development of the cells completely are much smaller in the case of the strong acids like hydrochloric and sulfuric acids than in the case of weak acids, such as acetic and butyric acids. The results led the author to conclude that the antiseptic power is essentially determined by the hydrogen ion which is contained in the solution, and that the electrolytic dissociation theory is competent to account for the observed phenomena in a satisfactory manner. As is required by this theory, it is found that the addition of neutral salts to a solution diminishes the antiseptic power of the acid; the concentration of the active component of the solution, the hydrogen ion, being under these circumstances the only factor determining the power.

In a lecture at the Royal Institution, Prof. Otto N. Witt, of Berlin, explained that in order to become a dyestuff a substance must not only be so intensely colored that it could communicate its own shade to colorless substances holding it in solution, it must not only be soluble in water or other liquid suitable for preparing a dyestuff, but moreover it must be capable of giving rise to a suspension of the dyestuff in the substance of the fiber, unless there are other chemical influences, such as that of the mordants, at work to change the solution into a suspension by precipitating the dyestuff and the mordant into the fiber. This peculiar combination of solubilities is rare in colored substances of an inorganic nature; and in the vast domain of organic substances of the aliphatic series few dyestuffs are met with, but in the aromatic series, where the power of selective absorption of light is very frequent, it would be curious if they were not of common occurrence. Since the physical properties of every compound are direct functions of its molecular constitution, it is easy to believe that this peculiar combination of solubilities would be the result of certain general conditions fulfilled by members of the aromatic group; and the theory the author had proposed twenty-five years before was simply an attempt to discover those conditions by investigating the constitution of all those dyestuffs whose constitution was known in those days. In the molecule of every coloring-matter whose constitution was known certain atomic constellations had been observed which seemed to be essential, and of which two must always be present—chromophores and auxochrome groups. Of the former, about two dozen were known, all agreeing in the fact that they could not exert their influence except in the presence of the auxochrome groups, of which very few were known. There must exist a law governing the formation of these auxochrome groups, but so far it has not been definitely established, though some progress has been made toward doing so. Our knowledge of the chemical causes of the physical properties of coloring-matters is continuously developing, and lately some definite views have been formed about the connection of the chemical constitution of the aromatic bodies with that form of selective absorption of light known as fluorescence. Much work has been done on the constitution of the azo-colors, the introduction of which was the direct result of the physical properties of the auxochrome groups on definite scientific principles. The number of dyestuffs of this class is extraordinary; and it has been computed that 3,100,000 of the different ones are produced each year. Of these, at least 25,000 are patented, while more than 500 are manufactured on the larger scale. Azo-dyestuffs can be produced at will to dye wool or silk or cotton, to make paper or quickly, to stand soap, or acid, or alkali; and this possibility of adjusting their properties with almost mechanical precision has been the cause of the greatest successes of the color industry. While this field has borne it rich harvest, other fields have not been neglected. Perhaps the greatest and most brilliant success of the chemistry of dyestuffs has been the industrial synthesis of indigo.

An experimental basis has been laid for the chemical theory of the formation of petroleum by the researches of M. Paul, of small dimensions, and J. B. Senderens on the action of reduced nickel, iron, and other metals upon hydrocarbons. By the direct hydrogenation of acetylene in the presence of nickel, we obtain liquid mixtures of hydrocarbons which can be made to correspond with the American or Cauca- sian petroleum by varying the conditions of the experiment. To be sure, even the richer form of petroleum, it is thus sufficient to admit that there are in the depths of the ocean free alkali metals and metallic carbides which in contact with water give rise to the mixtures of hydrocarbons and hydrocarbons. These cases encounter nickel, cobalt, or iron in a finely divided state, and thus give rise to the mixtures of hydrocarbons, so as to form natural petroleum. Berthelot and Mendeleef had supposed that the natural hydrocarbons were mainly formed by the action of steam upon metallic carbides; but difficulty had been found in applying this theory to the formation of the naphtas of the Russian oil-fields.

Chemical Physics.—It was found in the ex- periments of E. Rutherford and F. Solly, of McGill University, that thorium from which the radio-active constituent (Th) has been separated regained its activity with time, while the activity of Thx decreased with time. Thx was observed to possess a distinct chemical behavior which differentiated it in many respects from Th, and was the only reagent of those tried capable of separating it from the latter. Experiments are cited which indicated that Thx was continuously produced by thoritistone, the rate of the reaction increasing in direct ratio. The rate of production of Thx and rate of decay of its activity were apparently unaffected by known agencies. Both changes proceeded independently of the chemical and physical conditions of the molecule. The source of the energy required to maintain the radio-activity of thorium over indefinite periods was therefore supposed to be found in a chemical change producing new types of matter. Emanating power appeared to be a property of Thx, and of thorium, and was proportional to the activity of the Thx present. The group of emanating power of Thx and thorium were completely analogous to the decay and recovery of radio-activity. These results find their simplest explanation in the view that one of the products is gaseous and in the radio-active state is the emanation. The result arrived at, that radio-activity is the consequence of changes in which new types of matter are formed, contrary to the conclusion that it is the result of subatomic changes. In experiments made after the writing of this account, solution in water was found to increase the emanation for new color ofing-matters on definite scientific principles. The number of dyestuffs of this class is extraordinary; and it has been computed that 3,100,000 of the different ones are produced each year. Of these, at least 25,000 are patented, while more than 500 are manufactured on the larger scale. Azo-dyestuffs can be produced at will to dye wool or silk or cotton, to make paper or quickly, to stand soap, or acid, or alkali; and this possibility of adjusting their properties with almost mechanical precision has been the cause of the greatest successes of the color industry. While this field has borne it rich harvest, other fields have not been neglected. Perhaps the greatest and most brilliant success of the chemistry of dyestuffs has been the industrial synthesis of indigo.
Simultaneously with the observation of the latent heat of the primary mode of atomic transformation, it was noticed that preparations of thorium carbonate varied enormously in radiating power according to the method in which they were prepared. In the course of the experiments to which these observations led, it was found that active filters produced under various conditions described by the authors contained no thorium, or at most only a minute trace, but another substance in very appreciable quantities which when precipitated with sodium phosphate appeared as a white substance possessing both emanating power and radio-activity many hundredfold greater than those of thorium. This substance has not yet been obtained in sufficiently large quantities for an exhaustive chemical investigation, and it is impossible at present to say what it may prove to be. The authors do not believe, however, that it is the radio-active or the emanating constituent of thorium. The evidence of a series of observations leads them to the conclusion that the major part of the radio-activity of thorium—ordinarily about 54 per cent.—is due to a non-thorium type of matter (Thx) possessing distinct chemical properties which is temporarily radio-active, its activity falling to one-half its volume in about four days. The constant radio-activity of thorium is maintained by the production of this material at its constant rate. Both the rate of production of the new material and the rate of decay of its activity appear to be independent of the physical and chemical condition of the thorium matter. Further, it possesses the property of exciting radio-activity in surrounding inactive matter, and about 21 per cent. of the total activity under ordinary circumstances is derived from this source. Its rate of decay and other considerations make it probable that it is the same as the excited radio-activity caused by the thorium emanation, which has been shown to be produced by Thx. There is evidence that if by any means the emanation is prevented from escaping in the radio-active state, the energy of the radiation goes to augment the excited radio-activity in the compound. Thorium can be freed by suitable means from both Thx and the excited radio-activity which the latter produces, and then possesses an activity about 25 per cent. of that of normal thorium, below which it has not been reduced. The residual radiation consists entirely of rays non-decivable by the magnetic field, where as the other components comprise both decidable and undecidable rays. Most probably, the authors suggest, this residual activity is caused by a second non-thorium type of matter, produced in the same changes as Thx, and it should therefore prove possible to separate it by chemical methods.

T. W. Richards predicates two conceivable causes of compression in a substance. The pressure may be applied from the outside or it may be due to the attraction or affinity of the smallest particles of the substance for one another. That is, the substance may be compressed either by an outside pressure or by the intensity of its own cohesion. The former cause may be typified by highly compressed gases, the second by liquids. In solids we must consider also the direct action which manifests itself in crystalline form and crystal structure. The presence of the crystal-making force complicates the phenomenon, and is a considerable stumbling-block to the study of the theoretical tension of solids, a view of the case. It is believed by the author possible that the study of compression as manifested by atomic volume under different circumstances, as well as of atomic compressibility, might afford a sort of light at work. The outcome of the author's first studies, of which an account was communicated to the American Academy of Arts and Sciences, is that atomic volume is not constant, but is a function of pressure and temperature, and, probably, of electric stress.

Enumerating some of the results that have been attained in low-temperature studies (with liquid air and liquid hydrogen), Prof. James Dewar said at the British Association meeting that the great majority of chemical actions are entirely suspended; but fluorin is still active at the temperature of liquid air. Whether solid fluorin and liquid hydrogen would interact, no one can at present say. Bodies naturally become denser, but even a highly expansive substance like ice does not appear to reach the density of water at the lowest temperature, a fact confirmatory of the view that the particles of matter under such conditions are not, and at the lowest possible way. The force of cohesion is greatly increased at the extremely low temperature, as is shown by the additional stress required to rupture metal which is temporarily being kept as being of much interest in connection with two conflicting theories of matter: that of Lord Kelvin, that the forces which hold the particles of matter are the forces of cohesion, and assuming any other agency than gravitation, or any other law than the Newtonian; and the opposite view, that the phenomena of the aggregation of molten metal, and the vibration of a crystalline as a physical cause. Hence, according to this theory, at the zero of absolute temperature, the vibratory energy being in complete abeyance, the phenomena of cohesion should cease to exist, and matter generally be reduced to a heap of cosmic dust. The second view receives no support from experiment.

The photographic action of light is diminished at the temperature of liquid air to about 20 per cent. of its ordinary efficiency, and at the still lower temperature of liquid hydrogen only about 10 per cent. of the ordinary sensitivity remains. At the temperature of liquid air and liquid hydrogen a large range of organic bodies, and many inorganic ones, acquire under exposure to long continued violet light the power of phosphorescence. Such bodies glow faintly so long as they are illuminated, but become exceedingly brilliant during the period when the temperature is rising. Even solid air is a phosphorescent body. All the alkaline earths besides which phosphoresce brilliantly at the ordinary temperatures lose this property when cooled, and have it renewed on heating; but such bodies may be stimulated through the absorption of light at the lowest temperatures. Radio-active bodies, on the other hand, like radium, which are naturally self-luminous, maintain their luminosity unimpaired at the very lowest temperatures, owing to the electric stimulation causing discharges between the crystal molecules. This phenomenon is very pronounced with nitrate of uranium and some platino-cyanides.

A long series of experiments were made by Prof. Dewar and Prof. Fleming on the electric and magnetic properties of bodies at low temperatures—such as the thermoelectric powers of pure metals, the magnetic properties of iron, steel, dielectric constants, the magnetic and electric constants of liquid oxygen, and magnetic
CHEMISTRY. (New Substances.) 101

susceptibility. The results showed that electric resistance by pure metals is largely dependent upon the molecular or atomic motion which gives rise to temperature, and that the process by which the energy constituting what is called an electric current is dissipated essentially depends upon non-homogeneity of structure and upon the absolute temperature of the material. It is not shown, but left doubtful, that resistance would vanish altogether at zero of absolute temperature and all pure metals become perfect conductors of electricity; but other observations are mentioned, made at very low temperatures, which appear to point to an ultimate finite resistance. In magnetic work the result of greatest value was the proof that magnetic susceptibility varies inversely as the absolute temperature.

The properties of 19 elements were examined by Mr. Hugh Ramage in a comparative study of the structure, densities, and melting-points of some groups of elements and the relation of the properties of elements to their atomic mass. The elements and groups were: 1. Lithium, sodium, potassium, rubidium, and cesium. 2. Calcium, strontium, and barium. 5. Aluminum, gallium, indium, and platinum. The flame spectra of the metals were much studied with the object of obtaining spectra, and might be regarded as the fundamental spectra. They furnish purely experimental data with which to begin an investigation of the laws which govern the distribution of the spectra and by which to analyze the relation of the physical and chemical properties of the metals to their spectra. Diagrams have been drawn to show the important points revealed. Among the facts observed in the study of these diagrams were: 1. That the metals considered may be classified into groups according to their spectra, the elements in each group appearing to have a similar atomic structure. 2. The connecting lines between the members of the chemical groups are not continuous; there are certain breaks in them. These occur between the metals sodium, magnesium, and chromium and the metals of the respective groups higher up in atomic masses. The break between the sharp series in the spectra of the aluminum group is very marked; that between the diffuse series is very marked and corresponds to marked changes in the densities and cooling-points of these elements. 3. The course of the discontinuity of corresponding lines is strongly homogenous is intimately connected with the atomic masses. The shift of the subordinate series of potassium, rubidium, and cesium is proportional to the atomic mass, while the shift of the principal series is very nearly proportional to the square of the atomic mass. 4. The lines which connect the corresponding members of the homogeneous doublets and quartets approach one another as the atomic mass decreases, and intersect on the line of zero atomic mass. The spectra of potassium, rubidium, and cesium change regularly with atomic mass. The whole study is regarded as indicating that the properties of the elements are fundamentally due to the structure of the atoms as revealed by their spectra rather than to the quantity of matter in them.

New Substances.—Having in a previous paper published an account of the preparation and properties of the liquid silicon hydride, M.M. H. Morris and S. Smiles have continued their research, and have given further proof of the formula SiH4, which they found for it. This silicid corresponds among silicon compounds to ethane in the carbon series; it is spontaneously inflammable in presence of air, and possesses very energetic reducing properties. It decomposes carbon tetrachlorid and sulfur hexafluorid with violence.

Describing, in the American Chemical Journal, some reactions between acid and basic amids and liquid ammonia, Messrs. Franklin and Stafford observe that solutions of these amids in liquid ammonia are conductors of electricity, a fact possibly due to electrolytic dissociation of the dissolved substances. These amids seem to bear a relation to liquid ammonia which in many respects is very similar to that borne by ordinary acids and bases to water. Complete or partial neutralization of the dissolved amids takes place with the formation of one or more molecules of the solvent in which the reaction takes place. By bringing together liquid ammonia solutions of different acid and basic amids, the authors have prepared a large number of metallic substituted amids—such, for example, as monopotassium acetamid, monopotassium and dipotassium benzanid, monopotassium and dipotassium sulfamid, monopotassium and dipotassium urea.

Herr Th. Gross reports in the Elektrochemische Zeitung as one of the results of the investigation of the behavior of silicon when exposed to long-continued electrolysis is the evidence of the probable presence of some second element in the fused mixture produced. The silicon recovered after passing the electric current through silica when dissolved in a weight of pure caustic potash showed a deficiency on the original weight. The part lacking was found in a small quantity of a substance possessing different physical and chemical properties. This substance was easily soluble in hydrochloric acid. When heated in a porcelain crucible it melted and yielded a brown mass, which on treatment with hydrogen gas left a gray residue possessing metallic characteristics resembling those of selenium. The experiments are regarded as requiring further confirmation.

In a paper on persulfuric acid read in the Royal Society, Prof. H. E. Armstrong and T. Morton Lowry said that on electrolyzing strong solutions of sulfuric acid, Faraday in 1834 noted "a remarkable disappearance of oxygen." This was shown by Berthelot in 1878 to be due mainly to peroxidation of the sulfuric acid. An anhydrid, S₅O₇, was isolated, and Berthelot therefore combining lines is some strictly homogenous is intimately connected with the atomic masses. The shift of the subordinate series of potassium, rubidium, and cesium is proportional to the atomic mass, while the shift of the principal series is very nearly proportional to the square of the atomic mass. 4. The lines which connect the corresponding members of the homogeneous doublets and quartets approach one another as the atomic mass decreases, and intersect on the line of zero atomic mass. The spectra of potassium, rubidium, and cesium change regularly with atomic mass. The whole study is regarded as indicating that the properties of the elements are fundamentally due to the structure of the atoms as revealed by their spectra rather than to the quantity of matter in them.

Some experiments in the destruction of rats in ships as a prophylactic against the communication of plague are referred to in the Journal of July 19 as demonstrating the superiority of a gas called Clayton gas to sulfurous acid or carbonic acid gas for that purpose. This gas is essentially a sulfur dioxide, but there occurs in it by
CHEMISTRY. (New Substances.)

virtue of the peculiar method by which it is obtained a technical "impurity," which gives it its special value. This "impurity" is sulfur trioxide, the presence of which is manifested by the burning properties of the gas. Clayton gas is produced by the combustion of sulfur in a current of air during which the temperature rises sufficiently high to lead to the formation of some amount of sulfur trioxide. The gas is used mixed with air in the proportion of 10 to 15 per cent. It is said that less than 5 per cent. of the Clayton gas will destroy rats and other vermin, while at least 15 per cent. of pure sulfur dioxide is required for the destruction of vermin life. Yet Clayton gas has no appreciable action on colored materials, foodstuffs, paints, or dry metals except in a moist atmosphere. Its fire-extinguishing qualities are also remarkable; a mixture containing 8 per cent. of it rapidly extinguishes burning materials.

Pentafluorid of iodin was obtained by M. Moissan without difficulty in a perfectly pure state by the action of fluorin upon solid iodin. It formed a colorless liquid—boiling at 96° C., and boiling without change at 97° C. Analysis shows that the fluorid has undoubtedly the composition IF₅, and it is noteworthy that it can be produced in a certain extent being the only hydrogen without any reaction taking place. This fluorid possesses very great chemical activity. Most elementary bodies decompose it, and it produces with compositions a large number of double decompositions. Pentafluorid of iodin is decomposed about 500° C., iodin being formed, and possibly a new fluorid of iodin.

A method of the analogue in the cacodyl group of methylamin—has been prepared by A. W. Palmer and W. H. Dehn. Indications of the existence of such a compound had been obtained three years before by the reduction of methylidichlorarsin; but as this is costly and difficult to prepare, a more suitable starting-point was found in cacodyl acid. This, on reduction with amalgamated zinc dust and hydrochloric acid, gives the CH₃AsH₂, which is separated from the hydrocyan acid that accompanies it by passing through a U-tube surrounded by a mixture of solid carbon dioxide and ether. Monomethylarsin is a colorless, mobile liquid which boils, under ordinary atmospheric pressure, at 2° C., and possesses the penetrating, objectionable smell of cacodyl. It is not attacked by rubber, and combines immediately with oxygen, without, however, catching fire spontaneously; in this respect differing from dimethylamin. The production of monophenylarsinic acid is discussed in the same paper.

In the manufacture of a pigment which in composition is a hydrated basic ferric oxide, Fe₃O₄·Fe₂(Oh)₁, one of the first commercial applications is presented of those physico-chemical theories which have been developed largely by the study of dilute electrolysis. The waste ferrous liquor derived from iron pickling—generally ferric acid with some free acid—is neutralized and then oxidized by the joint action of air and steam. As the oxidation proceeds an alkali, as sodium carbonate in solution, sufficient to maintain substantial neutrality, is produced, and simultaneously therewith a large volume of water, which is the true precipitating agent. The effect is that known as hydrolysis, or the solubilization of a salt composed of a base and acid between which there is a great disparity of strength—in the present instance a compound of a weak base with a strong acid. By the oxidation of ferrous sulf ate, basic ferric sulfate is formed, and this salt in the presence of a large volume of water is hydrolized, yielding sulfuric acid and basic ferric hydroxide—the pigment of which is manifested by the burning properties of the gas. Clayton gas is produced by the combustion of sulfur in a current of air during which the temperature rises sufficiently high to lead to the formation of some amount of sulfur trioxide. The gas is used mixed with air in the proportion of 10 to 15 per cent. It is said that less than 5 per cent. of the Clayton gas will destroy rats and other vermin, while at least 15 per cent. of pure sulfur dioxide is required for the destruction of vermin life. Yet Clayton gas has no appreciable action on colored materials, foodstuffs, paints, or dry metals except in a moist atmosphere. Its fire-extinguishing qualities are also remarkable; a mixture containing 8 per cent. of it rapidly extinguishes burning materials.

Exposing powdered niobite and sugar charcoal to the temperature of the electric furnace, Prof. Moissan obtained a substance rich in niobium and tantalum. From this tantalum was separated by a solution of iron at 98° C., and boiling without change at 99° C. Analysis shows that the fluorid has undoubtedly the composition IF₅, and it is noteworthy that it can be produced in a certain extent being the only hydrogen without any reaction taking place. This fluorid possesses very great chemical activity. Most elementary bodies decompose it, and it produces with compositions a large number of double decompositions. Pentafluorid of iodin is decomposed about 500° C., iodin being formed, and possibly a new fluorid of iodin.

The action of radiferous barium chloride, contained either in sealed tubes or gutta-percha sheaths and held in the hand or carried in the pocket for from six to ten hours, has been found by Mr. M. W. Travers to be capable of producing a slight redness of the skin, but not sufficient to be at all dangerous. 

New Processes.—It has been found by Camille Martignon that tellurium, gold, and platinum in all their different forms are attacked by a mixture of hydrochloric acid and oxygen at temperatures much below those used in the oxidation of hydrochloric acid gas in oxygen. The mixture constitutes a chlorating agent for a great number of materials. In the three cases mentioned its action can be compared to that of free chlorine.

With an apparatus essentially modified from that of Hampson for the liquescent air, Mr. M. W. Travers has obtained liquid hydrogen in quantity. Hydrogen at a pressure of 200 atmospheres is subjected to a preliminary cooling at 150° C. in solid carbonic acid and alcohol. It is then successively cooled by liquid air boiling under atmospheric pressure and under a pressure of 100 millimetres, after which it escapes from the Hampson valve, and being sufficiently imperfect, is cooled further by the lower temperature (—290° C.) obtained by the liquid air boiling under low pressure. Regenerative cooling is produced, as in the liquescent air of the Hampson machine. Liquid hydrogen is thus obtained, and is collected in a vacuum vessel which is specially isolated from external heat.

The production of oxygen and hydrogen gases by the electrolysis of solutions of caustic alkali is carried on as a regular industry at works in Rome, Milan, Zurich, Lucerne, Hanau, Brussels, and Paris. In the Schuchert electrolyzer a 15 per cent solution of sodium hydroxide is the electrolyte, and the decomposition by the electric current goes on so rapidly and regularly that a continuous supply of distilled water is required to remove the gas. The most efficient work is given at a temperature of 70° C. with an electro-motive force of 2.8 volts. With a Schuchert electrolyzer 660 millilitres in length, 450 millimetres in breadth, and 260 millimetres high, a primary current of 50 liters of sodium-hydrate solution, and a current of 600 amperes, 220 liters of hydrogen, and 110 liters of oxygen at 15° C. temperature and 700 millimeters pressure are produced per hour.

The remarkable influence which is exerted by traces of iron in determining and regulating the oxidation of various organic substances was first observed by H. J. H. Fenton about twenty years ago, and the observation has opened to him since a very wide and fruitful field of investigation. The work in it is still being extended in several directions. In a communication by Mr. Fenton to the Cambridge Philosophical Society a brief summary was given of the researches on the subject that have been made in the last ten years which had recently been obtained. The condition of the oxidation method showed very close analogies with certain natural processes, and many experiments were in progress with a view to throwing further light upon the function of the iron.

In the decomposition of the natural phosphates by sulfuric acid in the manufacture of superphosphatic fertilizers, fluorine is released in the form of hydrofluoric acid or of fluorid of silicon, to the annoyance of manufacturers, and in some degree of contaminating the atmosphere. For a time the gases were led through water, and with the solution thus formed sodium, magnesium, or aluminum fluosilicates were prepared, which were of little use, except that the last two might be applied to the hardening of stone. Fluosilicic acid has more recently been found to have strong antiseptic properties, and to be very useful as a preservative of manure, checking the denitrifying action of bacteria, for which purpose it surpasses plaster, kainite, and superphosphate of lime. In a recently patented preparation, the fluosilicic acid is incorporated with clay in a powder, which is accompanied by another powder consisting of a porous substance saturated with sulfuric acid. When the powders are scattered over the manure pile, the antiseptic fluosilicic acid is generated by the action of the sulfuric acid on the fluosilicates.

Since the discovery of the compound of hydrogen and nitrogen known as hydrazoic acid numerous modes of obtaining hydrogen in quantity have been discovered. Most of these depend upon the use of organic compounds. Purely inorganic syntheses have been made by Wieliczens from sodium amid and nitrous oxid, and by Tanater by a mixture of hydrazin and hydrazyn chlorid. In a third synthesis recently described by Tanater, a mixture of hydrazin sulfate and hydroxyamin hydrochlorid is treated in acid solution with an oxidizing agent and distilled, when hydrazoic acid passes off with the distillate.

Artificial silk is now manufactured in France from wood-pulp dissolved in electrically made bisulfide of carbon. The solution of wood-pulp, prepared in the usual way, as for paper-making, is squirted through glass nozzles of exceedingly small dimensions, whence it issues in fine hair-like threads. These fibers are to all intents and purposes silk as soon as the volatile solvent has evaporated. They are then prepared in the usual way and spun into thread.

A new process lead dioxid is now produced electrochemically from a solution of an alkaline chlorid in which lithium is suspended. Atomic Weights.—A number of atomic weights published by the International Committee, the values on the basis of O = 16 are given unaccompanied by the didactic table based on H = 1. The withdrawal of the didactic table is explained to be in accord with a widely expressed wish. It is generally felt that if O is to be taken as = 16 for any purpose, it should be taken so for all purposes. In a paper read to the American Society of Science and Arts, Prof. T. W. Richards appealed to chemists to conform to the decision of the International Committee. He pointed out that O = 16 has served as the experimental standard of reference in the great majority of cases, that the great bulk of valuable work has already been published on that basis, and that the use of this standard involves no great didactic difficulties; and he contends that the decision of the International Committee is in itself an important reason for admitting this standard, and that this standard is more important than any of the special advantages claimed by either side in the discussion. The only alternations of atomic weights in the
current year's table were those of calcium from 4 to 40.1, iron from 50 to 55.9, and tellurium from 127 to 127.8.

The results of a redetermination of the atomic weight of uranium have been published by Prof. T. W. Richards and Mr. Merigold. Of previous determinations, that of Zimmermann, who in 1898 found the value 238.68, was regarded by the authors as most worthy of consideration. Zimmermann's method, which was based upon the preparation of pure UO₃ and its conversion into U₂O₇, seemed likely to give too high numbers, because of the difficulty of obtaining the lower oxide free from occluded gases, and of oxidizing it completely. The authors chose for the basis of their research the analysis of uranous bromide. The analysis was effected by oxidizing uranous bromide to uranic bromide by means of hydrogen peroxide and then precipitating the bromine by means of a sodium nitrate. The results showed satisfactory concordance, and led to a conclusion expressed by the authors as follows: If O be taken as 16 and bromine as 79.935, the atomic weight of uranium appears to be not far from 238.53." It is remar ked that although this number differs by more than a unit from that given by Zimmermann, the percentage atomic difference, 0.0023, seems to be no greater than many which have often been passed unheeded in the case of elements of smaller atomic weight. It is, however, a noteworthy difference, and the probability seems to the authors to be that Zimmermann’s number was too high.

Through concentrating by fractional crystallization the greater part of the radiferous barium at her disposal, Mme. Curie succeeded in obtaining amount 1 decigram of perfectly pure radium chloride. This enabled her to determine the atomic weight of radium. She found it to be—taking chlorin = 35.4 and silver = 107.8—radium = 225, with a probable uncertainty of not more than 1 unit silver being considered a bivalent element. Pure anhydrous radium chloride is described by Mme. Curie as being spontaneously luminous. From its chemical properties, radium appears to be an element of the alkali earthy series, and is the proper homologue of thoria. According to its atomic weight, it should be placed in Mendeleieff’s table below barium in the alkaline earthy series, and on the line with thorium and uranium.

It has been observed that when calculated to the standard O = 16, many of the atomic weights approach whole numbers in a much larger proportion than they theoretically should according to the theory of probabilities. This subject is referred to by Arthur Marshall, in the Chemiker Zeitung (July 19), in a paper in which attention is called to some very remarkable relationships which appear to exist in many cases between the atomic weights of allied elements. Taking from the tables accepted by the German Chemical Society the 18 values calculated to two places of decimals, the chances against their approaching whole numbers are as 4,120 to 1. If the atomic weights are referred to H = 1, little or no tendency appears to approach whole numbers. The most striking relationships appear when certain of the atomic weights are referred to entirely different standards. Thus, the atomic weights of the halogen elements and silver are exactly in the ratio Cl : Ag = 35.4 : 107.8 = 322. In the case of the alkali metals the proportions are even simpler: L: NH₂: Na: K: Rb = 7: 18: 23: 39: 85. Then in the horizontal series, V: Cr: Mn: Fe: Co: Ni: Cu = 58: 52: 59: 62: 67: 69. Other analogies are shown in Mr. Marshall’s paper. It is not yet time, the authors observes, to work out relationships for all the elements; for there is still too great uncertainty about many of the atomic weights referred to above to appear to be thoroughly well established.

In experiments for determining the atomic weight of arsenic, W. Clarence Brough proceeded by four methods, namely, conversion of silver arseniate with silver chlorid and reduction of this to metallic silver; conversion of silver arseniate into silver bromid; conversion of lead arseniate into lead chlorid; and conversion of lead arseniate into lead bromid. The mean of results obtained in 20 experiments was 75.008, with a probable error of ± 0.006. While this result is not regarded as conclusive, it is considered in many respects “certainly confirmatory.”

Prof. T. W. Richards has determined the atomic weight of cesium at about 132.878, with a range of from 132.873 to 132.882.

The subject of the most suitable standard for the calculation of atomic weights is discussed by Mr. Cecil Hollins, who shows that when oxygen was taken instead of hydrogen, and the value of its atomic weight was raised from 15.88 to 16, the unit was later than many which have often been passed unheeded. In this scale the atomic weights of the elements exhibit a considerable tendency to agree with Prout’s whole-number hypothesis—16 of them being integral against 6 when H = 1 is used as the standard, and the sum of the deviations from unity being only 10.286 as against 15.861. So, by further lowering the unit, he might expect that the atomic weights of the elements would still more closely approach to integers. By dividing each of the atomic weights into the nearest whole numbers, the authors obtained factors ranging between 1.0101 for helium and 0.9859 for silicon, the mean of which was 0.99877. If this be taken as the unit, the atomic weights of the elements show a further tendency to become integral; and by treating these in the same way the whole weight is again reduced, the mean factor now being 0.99867.

The results upon 17 elements on whose atomic weights authorities differ are as follows: hydrogen, helium, lithium, sodium, potassium, oxygen, sulfur, selenium, nitrogen, fluorin, chlorin, carbon, chromium, beryllium, calcium, aluminum, and boron, were encouraging. The values of the 17 atomic weights are integral when the standard is H = 1, and 6 when it is O = 16. 10 are so when the factor is 0.99877 is taken, and 15 when the factor is 0.99867. The total deviations under these different units, taking them in the same order, are 2.87, 1.448, 1.064, 0.729. The author’s paper is only preliminary, and his research is to be continued.

Chemical Analysis.—The thirty-seven volume of the proceedings of the American Academy of Arts and Sciences contains the results of an investigation of the decomposition of mercurous chloride by dissolved chlorid, the work of Messrs. T. W. Richards and E. H. Archibald. This decomposition is shown to be considerable if the chlorid solutions are fairly concentrated—a point of considerable importance in the analytical determination of mercury as mercurous chloride. The action is not of a catalytic nature, but a simple oxidation of mercurous chloride; but when a stirrer is set up, the dissolved mercury being supposed to exist in the form of a complex ion represented by the formula HgCl₄, in the solution.

A method for Fe: Ni: Cu: Ag: Au: Pd: Pt; but the method proposed by Anson G. Betts is based on a reaction
CHEMISTRY.

between bromin and phenol in aqueous solution, by which tribromphenol and hydrobromic acid are formed. The reaction takes place instantly and quantitatively. The precipitate of tribromphenol appears if the brine contains as much as 0.002 per cent. of bromin. It was found impossible to precipitate all the bromin and form hydrobromic acid. Electrolysis is suggested as an advantageous method of setting bromin free. If the phenol is pure, the precipitate is crystal-like and filters easily. If cresol is present, the precipitate is tarry. By drying and heating the precipitate, most of the bromin is recovered as hydrobromic acid. The rest is caught by passing the vapors through an alkali solution or a solution of ferrous bromid. Reduction of the precipitate by iron and mineral acid will regenerate the phenol. The process is best carried on by saturating one part of the brine with chlorin and the other part with phenol, and then mixing the two portions. Other organic bodies, such as acetylen, are suggested as suitable for recovering bromin from brine.

A new and simple test for albumin described by Flora C. Fuhs is based on the facts that albumin is coagulated by carbolic acid; equal volumes of non-albuminous urine and a mixture containing a precipitating power of equal equal parts of acid and gopherin form an emulsion which clears up entirely on agitation, leaving a perfectly transparent and highly refractive liquid; and equal volumes of albuminous urines and the solution when mixed produce a white turbidity, which remains in spite of agitation, and does not precipitate on standing or redissolve.

S. Kollit and Edgar F. Smith give an account in the Journal of the American Chemical Society of quantitative determinations of uranium in solutions of the acetate, sulfate, and nitrate. A special table is given of results in the separation of uranium from barium, calcium, magnesium, and zinc. No satisfactory method could be obtained in the attempt to separate it from nickel and cobalt.

The deposits of salts called alkali in Wyoming occupy undrained depressions in geological deposits extending from the Triassic to the present, and range from a few inches to sometimes reaching 15 feet. The larger beds are often covered with water in the spring, whence they have been called lakes. The deposits are also used as a source of gyps. Thealkali smells of hydrogen sulfid and contains the same salts that form the deposit resting upon it. As described by W. C. Knight and E. E. Sisson, these deposits are rarely very pure, but are mixtures of several salts, with alternating layers of sand, salt, and mud. The classes of deposits that carry carbonates in quantity contain as principal salts, sodium carbonate, sulfate, and chlorid. Gypsum occurs, but is not prominent. Traces of potassium, lithium, iron, aluminum, manganese, borates, nitrates, sulfates, and phosphates are often found. Chrisobalite constitutes the greater mass of most of the deposits, and epsomite is abundant. Different deposits vary greatly in composition, and different parts of the same bed show very different proportions of the contained salts.

Difficulty is met in the classification of mineral waters on account of the way they shade into another. Another solution suggested by Prof. E. H. S. Bailey, of the University of Kansas, of designating them according to their predominant ions. Thus he would have: 1. The chloric group, in which chlorids are predominant. 2. The sulfatic group, marked by the predominance of the sulfates. 3. The chlor-sulfate group, in which the chlorid and sulfate ions are about equal. 4. The carbonate group, in which carbonate ions are about equal to the carbonate groups, containing a considerable quantity of the ions of each class. 6. The sulf-hydride group, in which hydrogen sulfide is given off,—the water is commonly called sulfur water. 7. The chalybeate or iron group, which includes also waters containing manganese ions. 8. The special group, or waters which owe their value to some special substance, like lithia or borax. 9. The soft-water group, or waters which contain only a small quantity of mineral substance. More than 90 mineral waters of the State of Kansas are classified under this system.

New Apparatus.—A simple electric thermometer is described by William Duane and Charles A. Long, of the University of Colorado, with which the temperature of a bath can be kept constant to within one one-thousandth of a degree C. for a considerable time. The heat is supplied by an electric current, which in the case of a conducting liquid flows through the liquid itself; and in the case of a non-conducting fluid, flows through wires suspended in the bath. A system of tubes containing a liquid with a large temperature coefficient of expansion is placed in the bath, and by means of a suitable mechanism the expansion of this liquid interrupts or reduces the strength of the heating current when the required temperature has been reached. The making and breaking of the current follow in rapid succession that no perceptible variations occur in consequence of the interruptions.

A new form of electric resistance laboratory furnaces designed by Prof. Holbone, of the Reichsanstalt, Berlin, permits the easy attainment of temperatures up to 1,500° C. by the use of the ordinary 110-volt electric supply. The furnaces are made in two forms, one being adapted for heating crucibles, and the second for heating tubes 44 centimeters in length; but both are alike in principle, the electric current being carried through a resistance coil of platinum or nickel wire, wound around a thin porcelain tube or cylinder. The crucible or substance to be heated is placed within a thickness sometimes reaching 15 feet. The outer side of the coil and the containing vessel is packed with asbestos or powdered quartz. Using nickel, the temperature of the furnace can be regulated with an accuracy of 1,000° C. without damage to the coil, but with platinum it is possible to attain a temperature of 1,500° C. with a current of 14 amperes and 110 volts. It is necessary in the use of these furnaces to include a resistance in the circuit, and to use only half of the maximum current when the heating is first begun. The use of the exterior resistance enables the temperature of the furnace to be registered with ease within somewhat narrow limits. Further advantages claimed for the furnaces are that the separate portions are replaceable when worn out, that the heating spirals can be easily removed and changed to suit special temperatures when required, and that with the tubular form of furnace, the heating of the substance can be carried on in the absence of air and in the presence of any desired gas or gaseous mixture.

An electrical furnace described by S. A. Tucker and H. R. Moody is composed of carbon bricks 12 inches by 4 by 2, luted together with Dixon's stove-polish. The sides are of 6-inch bricks, and a working span of 6 by 4 by 2 inches, and the bricks can be increased or diminished according to the charge
used. The whole is then clamped and held firmly together by iron cross-bars provided with adjustable screws on each end, the bars being insulating from the body of the furnace by strips of asbestos. The end bricks are perforated with 1.5-inch holes containing a collar of asbestos or a small cylinder of clay, through which the electrodes of carbon (1 by 12 inches) pass into the furnace-chamber. Connection is made with these electrodes by copper sleeves lined with copper gauge and tightened with set screws, which at the same time carry copper lugs that hold the flexible cables.

Miscellaneous.—The Electrochemical Society (of America) held its first meeting in Philadelphia, Pa., April 3 to 5, Prof. T. W. Richards presiding. Twenty papers were read and discussed during the sessions, and arrangements were made for the publication of the proceedings.

In his presidential address before the meeting of the Chemical Society in Philadelphia, F. W. Clarke presented as the chief need of chemistry at present a better organization of research. While appreciating the great work done by individuals laboring independently, the speaker thought that collaboration and systematization were urgently required. Laboratories of research, he said, should be established in all civilized countries. Work should be so regulated by conference as to avoid repetition, each worker reenforcing the others. The program of research on the scheme should be to perform the drudgery of science, to carry on the tedious, laborious, elaborate investigations from which the solitary work shrinks, but which are nevertheless essential to the development of chemistry. Brilliant discoveries might be made in the course of these investigations, but incidentally and not as their main purpose.

A large increase has taken place in recent years in the manufacture of artificial graphite in the United States, the product of the year 1901 having amounted, according to the reports of the Geological Survey, to 2,500,000 pounds, as compared with 860,750 pounds in 1900, and 162,385 pounds in 1897, when the commercial production of amorphous charcoal was begun. More than half of the output for 1901 was in the form of graphitized electrodes for use in the manufacture of alkaline and bleaching by electrolytic processes. The rest was employed in the manufacture of points, bullion, crucibles, motor-brushes, crucibles, and dry batteries.

Sodium amalgam was allowed by M. Moissan to act upon ammonium iodid in solution in liquid anhydrous ammonia at a temperature of about —20° C. Under these conditions the sodium amalgam reacted upon the ammonium iodid and became more fluid without the formation of any gas. The sodium iodid formed, together with the excess of sodium, were next removed by liquid ammonia at a temperature of —40°, and then with ether at —85° C. The solid ingot, thus produced, was then placed in a tube kept at —35° C. and connected with a mercury-pump. It was found that a perfect vacuum could be maintained in the apparatus without any gas being given off by the ingot. The temperature was then allowed to rise, when a mixture of ammonia and hydrogen gases in the proportion of two of the former to one of the latter was given off. All these phenomena are in accordance with the theory that the radical NH₂ is actually present in the metallic mass prepared at —35° C.; but M. Moissan believes that this is really not the case, there being a possibility of partial decomposition of the amphoteric hydride formed. He has found that when sodium amalgam reacts with a solution of ammonia in water there is a slow evolution of gas without foaming. If, however, sodium hydrude in solution in sodium furnace by strip of asbestos, there is at once a foaming mass produced, which may last for two or three days.

Quicklime, if pure and free from silicates, is melted only in small quantity and with great difficulty at the highest temperature attainable with the oxyhydrogen blowpipe. It has, however, been found by M. Henri Moissan to be melted with great ease in the electric furnace, when it may be made to boil. On cooling, crystals were found, which belonged to the cubical system; but after keeping for a few months they broke up into other crystals, which acted upon polarized light. The density of the lime was raised from 3.3 to 3.4 by fusion. Since lime forms the basis of the electric furnace, it is of importance to study the effect of heating to high temperature with various substances. The results of reactions with carbon, silicon, boron, titanium, chromium, manganese, iron, nickel, cobalt, and platinum were presented in M. Moissan's paper.

In experiments on the decomposition of hydrogen peroxide on exposure to sunshine, R. T. D. Argy found (a) that the ketone and hydrocarbons of the substance are rapidly affected by exposure to sunshine. When an aqueous solution containing 4 per cent of H₂O₂ was exposed to a flask to a bright sunshine of five days in June, about three-fourths of the hydrogen peroxide decomposed. In open dishes the compound was more rapidly decomposed, and the effect was not dependent— at any rate, to any extent— upon the gamma of the decomposition taking place simultaneously, and it was not an effect of temperature. (b) That the surface of a solution of hydrogen peroxide undergoing this decomposition is capable of discharging negative electrification. (c) That the days in which sunlight decomposes H₂O₂ most rapidly are the days in which the charging action is most pronounced. The conclusion is drawn by the author that the decomposition of hydrogen peroxide by light is a possible source of production of positive and negative ions in the atmosphere.

Experiments are described by J. Matuschek which indicate that the proportion of water present in petroleum contaminated with bituminous products of distillation of lubricants, pencil, hares, etc., is the combustion-point of the petroleum. This increase depends on the quantity of water present. Further, it was found that the regular rise of the flash-point and combustion-point is maintained only up to a certain degree. The regularity ceases as soon as small drops of water begin to form in the mixture during the experiment.

CHILE, a republic in South America. The Congress consists of a Senate of 32 members elected for six years by the provinces, in the proportion of 1 Senator to 3 Deputies. The Chamber of Deputies is composed of 94 members, elected in the proportion of 1 member to every 30,000 people in each department. Every male citizen twenty-one years of age and able to read and write has the right to vote for both Deputies and Senators. The President of the republic is elected indirectly through a college of electors for the term of five years. German Riesco was elected President of the Republic, entered upon office on Sept. 18, 1901, and appointed the following Cabinet: Prime Minister and Minister of the Interior, Ramon Barros Luco; Minister of Foreign Affairs, Armendariz, and Colonela Pino; Minister of Justice and Public In-
The value of imports in 1900 was 128,538,-
142 pesos; of exports, 167,674,635 pesos. The im-

pean money markets. In 1894 a loan of £1,835,000 was contracted at 7 per cent.; in 1895, one of £2,000,000 at 6 per cent.; in 1895 one of £1,000,000 at 6 per cent. and one of £19,850,000 at 4 per cent.; £16,000,000 were borrowed at 5 per cent. in 1896 and £16,000,000 more at 4 per cent. in 1898 to pay the last instalment of the Japanese war indemnity. The whole war loan was guaranteed on the salt duties. In 1898 a railroad loan of £2,300,000 was contracted, to pay which the earnings of the railroad were pledged. The Boxer uprising and consequent invasion of Pekin by the powers resulted in more than doubling China's liabilities. An indemnity to be divided among the powers for the expenses of the occupation and damage done to foreign property and injury to foreigners from acts of the Boxers was agreed upon on May 29, 1901.

China promised to pay the sum of 450,000,000 taels, which amounts to $204,000,000. It is a gold debt payable in 39 annual instalments on Jan. 1 of each year, with interest reckoned on 5 per cent. The interest and sinking-fund average 37,009,000 taels, or £5,120,000 per annum. The proportion of the payment of the duties not appropriated for other debts are pledged as security, and the powers agreed that these should be increased to 5 per cent. ad valorem, ultimately to be converted into specific duties, the native customs that are administered by the Maritime Customs, namely, the liikan or transit duty within 16 miles of any of the open ports, are included in the guarantee, and also the salt gabel not otherwise appropriated. A commission at Shanghai receives the assigned revenues each month. The annual amount to be handed over for the payment of duties out of the proceeds of the maritime customs is £5,770,000. The indemnity debt is payable in gold at the exchange rate of 3s. to the tael. It is divided into 5 series: A, 75,000,000 taels, paying from 1902 interest and sinking-fund amounting to 3,829,500 taels; B, 60,000,000 taels, paying 2,400,000 taels interest and from 1911 till 1940 a sinking-fund which increases the annual payment to 3,429,800 taels; C, 150,000,000 taels, paying 6,000,000 taels interest, increased by a sinking-fund from 1915 to 9,384,000 taels; D, 50,000,000 taels, paying 2,000,000 taels interest, increased from 1915 to 11,500,000 taels; E, 115,000,000 taels, paying 4,600,000 taels interest and a sinking-fund from 1932 which increases the annual payment to 15,466,350 taels. For the first nine years of the payment the sinking-fund on all the series amount to 18,829,500 taels per annum; for the next four years, 19,599,300 taels; for the next year, 23,263,300 taels; for the next sixteen years, 24,483,500 taels; for the last nine years, 33,350,150 taels. The payments were so adjusted that the gold debt payments of China would be evenly distributed over the whole period of thirty-nine years, varying little from year to year. The debts incurred before the indemnity debt and secured on the imperial customs and liikan required for 1902 the remittance of 23,000,000 taels, making with the indemnity debt a total payment of 49,299,500 taels. The payment of interest and sinking-fund on the existing debt decreases to 22,800,000 taels in 1811, to 19,400,000 taels in 1815, to 18,500,000 taels in 1916, to 7,500,000 taels in 1932, and will be 5,000,000 taels in 1940, when the last instalment of the indemnity is paid. The total annual charge for foreign debt in that year will be £4,150,150. In no year does it reach 43,000,000 taels. This scheme was presented by the Chinese at the peace conference as the easiest for China to bear, and was accepted by the ministers of the allied powers. The ways and means of finding gold for the payment of nearly 19,000,000 taels in addition to between 23,000,000 and 24,000,000 taels required each year for the existing debt the ministers did not suggest, except that in the commercial treaties it to be concluded a revision of the tariff was promised. They insisted that the indemnity should be reckoned in gold at the current rate of 3s. to the tael. The immediate increase in the maritime customs duties under the treaty to an effective 5 per cent. ad valorem was calculated by experts to give an increase of 2,500,000 taels in the yield. The salt gabel and the native customs, duties to be collected from the junk trade, were considered uncertain resources, capable of producing 11,000,000 taels a year if it could be collected. The provincial treasuries, however, would be deprived of a large proportion of their accustomed revenues, and the result would be either increased levies by the mandarins or reduced remittances to Pekin. The Chinese Government notified the viceroyals that till 1911 they would have to send additional annual remittances, distributed in fixed sums among the provinces, proportioned according to the valuation of the additional sums to be obtained was not suggested. The Yangtse viceroyals memorialized the throne, stating that their existing revenues were insufficient to meet the increased demands of the new debt, inasmuch as part is provided for by increased import duties and the transfer of native customs to the imperial Maritime Customs. The Government resorted to sales of official rank throughout the empire as the readiest means of obtaining an immediate addition to the revenue, and efforts were made to collect arrears of the grain tax. Various schemes of taxation were discussed, but an increase of the foreign customs to 10 or 15 per cent. offered the only hope of ultimate relief. Meanwhile the viceroyals and governors endeavored to scrimp additional revenues out of the provinces to satisfy the fresh demands, producing misery and discontent, encountering resistance and evasion, and provoking revolt. The immediate pressure of the increased foreign debt was to cause a fall of 10 per cent. in the price of silver, increasing in that proportion the amount of the entire foreign debt and diminishing the income from it by checking foreign trade. There has been a steady balance of trade against China for a series of years, ranging from 10,000,000 to 35,000,000 taels, notwithstanding which the influx of silver bullion has been constantly going on at the rate of about 2,500,000 taels a year. Before the Japanese war a much larger amount of silver specie was absorbed every year. The annual export of gold from China, according to official reports, is 7,000,000 or 8,000,000 taels. The export trade was depressed, rather than stimulated by the drop in silver. The cotton industry at the treaty ports collapsed. The disturbance of trade and exchange created alarm among international bankers and financiers. If the first pressure of the indemnity debt stopped imports, China would have to ship silver to pay the instalments. The silver market was unaccountably disturbed before such a movement had taken place, and when it did the effect would be disastrous.

Production and Industry.—The value of the imports for consumption in 1898 was reported by the Maritime Customs at 284,748,456 haikwan
CHINA.

The values of imports from and exports to different countries and ports in 1900 were as follows:

In northern China wheat, millet, corn, barley, peas, and beans are grown, and in the south rice, sugar, cotton, and indigo. Tea is raised in the southern and western parts, opium in the west, and silk in all the provinces, but especially in Shantung, Kuangtung, Chekiang, and Kiangsu. Coal is found in every province and has been mined for several years at Kaiping. At Poshan, in Shantung, are also productive mines. A company has been formed to work the anthracite fields of Shansi, which cover 13,500 square miles, while in the western part of that province bituminous coal is equally abundant. Coal is mined already in Hunan, where there are 21,700 square miles of anthracite and bituminous deposits, and in Szechuan, where there are enormous beds. Iron is mined in Shansi and Manchuria, copper and some tin, silver, and lead in Yunnan. The quantity of teak imported in 1890 was 3,54,324 piculs of 1,334 pounds, of which 665,256 piculs went to Russia, 255,156 piculs to the United States, 119,328 piculs to Hong-Kong, 135,139 piculs to Great Britain, and 45,582 piculs to Australia.

Navigation.—The number of vessels entered and cleared at Chinese ports during 1900 was 89,230, of 40,807,242 tons, of which 67,576, of 39,553,788 tons, were steamers. Of the total number 22,818, of 23,052,450 tons, were British; 34,129, of 7,864,217 tons, were Chinese; 3,627, of 4,032,147 tons, were German; 4,917, of 3,871,559 tons, were Japanese; 978, of 664,987 tons, were French; and 1,311, of 474,479 tons, were American.

Railroads and Telegraphs.—A railroad connecting Pekin with Tientsin and running along the coast to Shanhaikwan and thence to Chenchau, on the Liaotung Gulf, with branches to Tienciao and to the Nan-Pao coal-mines, has a total length of 404 miles. This line is connected with the Russian line which terminates at Niuchuang and with the line to Port Arthur. The Russo-Chinese Manchurian railroad from Harbin to Port Arthur has a length of 650 miles. The line across Manchuria to Vladivostok, 950 miles, the eastern terminal section of the Russian Trans-Siberian Railroad, has been completed. A line runs southwest from Pekin to Patoting-Fu, 88 miles, and is being continued to the Yangtze river at Hankow. The Germans have built a railroad from Tsintau, near Kiaochoah, to Tsinau, whence it will be continued to Yenchau to meet a line built from Kiaochoah direct to the latter place. American engineers have undertaken to construct a railroad from Hankau to Canton, with a branch from Yochau to the Pingshiang coal-mines in Honan. A railroad 12 miles in length connects Shanghai with Wusung. The French have received a concession for railroads from Tongquin in Kwangsi, Kwangai, and Kwangtung, running from Laoksi to Yunnan-Fu, from Langson to Longchau, and from Nanning-Fu to Pakhooi. British concessionaires have undertaken to build lines from Yuen-Shih to Suchau, Chinkiang, and Nankin, and to Hangchau and Nipko and from Chingtu to Wuchau and Canton.

Telegraph-lines connect all the chief cities of China and join the Siberian overland line to Europe and the Indian system as well as the cable. Their total length is a little less than 14,000 miles.

Return of the Court to Pekin.—The imperial court entered the Forbidden City, restored and renovated so that outwardly there were no marks of the ruin and destruction wrought by the allies, on Jan. 7, 1902. Contrary to all precedents, foreigners were allowed to witness the royal entry, which was attended with gorgeous pageantry and elaborate ceremonial, and natives too, who have been forbidden by immemorial usage to view the passage of royal personages through the streets, were permitted to witness the spectacle and gaze on their rulers. Yuan-Shih-Kai, Viceroy of Pechili, with 12,000 trained troops restored and maintained order where under foreign control strife and confusion reigned. He added 8,000 to the force, and recruits of the best
physical and moral qualities offered themselves freely. The Chinese arsenals were kept busy turning out war material. The people as well as the Government were bent on repairing the military shambles and making the Empire whole. The foreign ministers were formally received in audience by the Emperor on Jan. 22, in the innermost of the great halls of the Forbidden City. Afterward the Empress Dowager gave a reception to the ladies of the legations.

In the provinces where Tung-Fuh-Si and Prince Tuan were still at large Belgian missionaries and nuns, Christians were murdered. A royal edict was at once issued ordering that Tung-Fuh-Si and should be beheaded according to the terms of the protocol. The chief minister had been arrested as soon as Li Tung-Fen, when the foreign diplomats, except the Russian representative, had tried to include in the list of proscribed officials, but who, although no friend of foreigners, had kept the Chinese foreign movement under control and saved the foreigners in Pekin from massacre and, when orders were issued for the extermination of foreigners throughout China, had by secret instructions sustained the Yangtse viceroy, in his attempt to disregard these edicts. The foreign military authorities still held Tientsin and administered the railroad between that city and Pekin. This action determined the Russians to prolong their occupation of Niuchwang and the railroad leading to that port. An American and a British war- vessel went to Niuchwang, and disturbances occurred between American seamen and Russian soldiers, of which the Russian minister complained.

The indemnity claims of the powers amounted to 462,000,000 taels, 12,000,000 taels over the aggregate. The American and Russian ministers proposed a pro rata reduction, to which the others agreed excepting the British and Japanese ministers, who stated that their claims had been reduced to minimum after an official investigation of each item. An instalment of the indemnity was due, and was tendered by the Chinese officials to the bankers' commission in Shanghai as provided in the protocol; but the commission would not accept it because the foreign governments were unable to agree upon the terms of division. At a meeting of military commissions at Tientsin on Jan. 22 it was agreed that the garrisons could be reduced in the spring. The Russian general declined to express an opinion, the Russian forces having already withdrawn from Pechili in 1901, but refused to attend, regarding the question as a political one to be decided by the governments. The Japanese commander informed the others that Japan had already begun to withdraw her troops without regard to the action of other nations. The combined force at Tientsin had an effective strength of 4,000 men.

On Feb. 1 an imperial edict was issued legalizing marriages between Manchus and Chinese and forbidding the practise of binding the feet of girls. The imperial clan and the generals of the Eight Banners were ordered to select young Manchus to go abroad to study foreign branches of knowledge. Hundreds of students, coming from every province, were sent to Japan to obtain the military, administrative, and scientific knowledge which that nation had borrowed from the West, thereby winning an independent position among the powers that preyed upon China.

The Peace Agreement between Great Britain and Japan was signed at London on Jan. 30, 1902, in the following terms:

The governments of Great Britain and Japan, actuated solely by a desire to maintain the status quo and general peace in the extreme East, being moreover specially interested in maintaining the independence and territorial integrity of the Empire of China and the Empire of Korea, and in securing equal opportunities in those countries for the commerce and industry of all nations, hereby agree as follow:

I. The high contracting parties, having mutually recognized the independence of China and of Korea, declare themselves to be entirely uninfluenced by any aggressive tendencies in either country. Having in view, however, their special interests, of which those of Great Britain relate principally to China, while Japan, in addition to the interests which she possesses in China, is interested in a peculiar degree politically, as well as commercially and industrially, in Korea, the high contracting parties recognize that it will be admissible for either of them to take such measures as may be indispensable in order to safeguard those interests if threatened either by the aggressive action of any other power or by disturbances arising in China or Korea, and necessitating the intervention of either of the high contracting parties for the protection of the lives and property of its subjects.

II. If either Great Britain or Japan, in the defense of their respective interests as described, should become involved in war with another power, the other high contracting party will maintain a strict neutrality, and use its efforts to prevent other powers from joining in hostilities against its ally.

III. If in the above event any other power or powers should join in hostilities against that ally, the other high contracting party will come to its assistance and will in such case have war in common, and make peace in mutual agreement with it.

IV. The high contracting parties agree that neither of them will, without consulting the other, enter into separate arrangements with another power to the prejudice of the interests above described.

V. Whenever in the opinion of either Great Britain or Japan, the above-mentioned interests are in jeopardy, the two governments will communicate with one another fully and frankly.

VI. The peace will come into effect immediately after the date of its signature, and remain in force for five years from that date. In case neither of the high contracting parties should have need of the assistance which the other may be entitled to give, then the expiration of the said five years the intention of terminating it, it shall remain binding until the expiration of one year from the day on which either of the high contracting parties shall have denounced it. But if, when the date fixed for its expiration arrives, either ally is actually engaged in war, the alliance shall ipso facto continue until peace is concluded.

In a covering letter the Marquis of Lansdowne stated that the two powers had been in close and uninterrupted communication throughout the troubles and complications consequent upon the Boxer outbreak and the attack upon the legations, and each desired that the integrity and independence of the Chinese Empire should be preserved and that there should be no disturbance of the territorial status quo either in China or in the adjoining regions; that all nations should, within those regions as well as within the limit. An agreement between Great Britain and Japan was signed at
CHINA.

the future. Having discovered that their far Eastern policy was identical, each side expressed the desire that their common policy should find expression in an international contract of binding validity. The British Secretary of State for Foreign Affairs explained that his Government had been largely influenced in their decision to enter into this important contract by the conviction that it contains no provisions which can be regarded as an indication of aggressive or self-seeking tendencies in the regions to which it applies. It has been concluded purely as a measure of precaution, to be invoked, should occasion arise, in the defense of important British interests. It in no way threatens the present position or the legitimate interests of other powers.

The allied governments of France and Russia on March 18 sent an identical note to the powers which signed the Pekin protocol of Sept. 7, 1901, wherein they expressed themselves fully satisfied with the Anglo-Japanese convention concluded with the object of insuring the status quo and general peace in the far East and of maintaining the independence of China and Korea, which are guaranteed by the treaty of all nations, finding therein an affirmation of the essential principles which they themselves on more than one occasion have declared to constitute the basis of their policy. The two governments considered that respect for these principles is at the same time a guarantee for their special interests in the far East. As long as they did, on their part, to consider the case in which either aggressive action of third powers or fresh troubles in China, raising once more the question of the independence and free development of that power, might become a menace to their own interests, the two allied governments reserve the right to consider eventually the means of insuring the defense of their interests.

The British Government suddenly changed its plans with regard to Wei-Hai-Wei. The work of fortification was stopped. Military and naval authorities pronounced the place valueless as a strategical base. The Government was transferred to the Colonial Office, with the intention of making it a sanatorium for officers of the army and navy.

The Manchurian Agreement.—Russia had 40,000 troops in Manchuria in the spring of 1902, and the Trans-Siberian Railroad was still kept busy transporting soldiers and military stores and munitions of war to the East. When the Tungus bandits, hunted out of Manchuria by the Russians, crossed into Mongolia and committed depredations in the vicinity of Jehol, the Russian troops pursued and dispersed them. The negotiations regarding the evacuation of Manchuria by Russia, discontinued when Li-Hung-Chang died, were resumed with Yung-Lu when the court returned to Peking. It was understood which is the agent of the Russian Government in railroad and financial matters appertaining to Manchuria and China, negotiated for exclusive railroad and mining rights in Manchuria. Secretary Hay on Feb. 1 sent a note to the Russian and Chinese governments protesting against such an arrangement as constituting a monopoly which violates treaties made by China with the foreign powers, affecting the rights of American citizens, restricting their rightful trade and exposing it to being discriminated against; moreover, impairing China's ability to meet her international obligations, which would be further diminished when other nations demand and obtain equal advantages in other parts of the empire, wrecking the policy of equal treatment of all nations respecting commerce and navigation; and on the other hand, conflicting with the repeated assurances of the Russian Government that it intended to follow the policy of the open door, as advocated by the Government of the United States and accepted by all the treaty powers having commercial interests in China. The English and the Japanese made representations to the Chinese Government of similar purport. The Russian minister satisfied the United States Government with verbal assurances that the concessions were sought without the knowledge of his Government, and in so far as they conflicted with its avowed policy of an open door in Manchuria they would be vetoed.

The Chinese Government was said to have given a promise to Russia while Li-Hung-Chang was conducting negotiations that if any foreign military officers were to be employed to instruct and drill Chinese troops in northern China they should be Russian officers. The Germans urged that if any foreign instructors were needed they should be German. Chinese officers for men were even more eager to build up an efficient Chinese army than they were before the Boxer uprising, but they were also more averse than ever before to have foreign influence of any Chinese troops. Japanese military experts were therefore employed as translators and interpreters of Japanese treaties on modern military science, who were also so far as needful instructors and advisers of the Chinese officers. Japanese traders swarmed in Manchuria, who probably served their Government at times as secret agents and informers.

Russia was willing to give up the invidious privilege which the secret promise of Li-Hung-Chang conferred. Accordingly M. Lessar obtained from Prince Ching, as president of the Foreign Office, a written undertaking that in future no foreigners of any nationality should be employed in the Peiyang, or northern Chinese, naval or military forces. Yuan-Shih-Kai, who as Viceroy of Pechil is commander-in-chief of the Peiyang squadron and army, refused to be bound by this undertaking, given without his knowledge and consent. The foreign mining companies and the Russo-Chinese Bank were broken off after the presentation of the American note. The Manchurian convention was finally concluded and signed by M. Lessar and Prince Ching and Wang-Wen-Shao on April 8. The objectionable features of the draft convention withdrawn by the Russian Government a year before were removed. The text of the new one was submitted to the American and the British and Japanese governments for approval. It was admitted that the sovereignty of China and the treaty rights of other nations were not infringed. The first article states that the Emperor of Russia, desirous of giving a new proof of his love of peace and sentiments of friendship for the Emperor of China, notes that from different points of Manchuria along the frontier first attacks were made against the peaceful Russian population, consents to the reestablishment of Chinese authority in Manchuria, which remains an integral portion of the Chinese Empire, and restores to China the right to exercise sovereign and administrative powers as before the occupation by Russian troops. The Chinese Government in the second article agrees to abide by the contract made with the Russo-Chinese Bank on Aug. 27, 1896, and in conformity therewith, on resuming possession of sover-
eign and administrative powers in Manchuria, to protect in every way the railroad and staff and safeguard all Russian subjects living in Manchuria, together with the enterprises established by them. Russia, in view of these obligations assumed by China, consents on its part, in the event of there being no trouble whatsoever and if the conduct of other powers should not oppose obstacles thereto, to withdraw gradually all Russian troops from Manchuria within six months from the signing of the convention from the southwestern part of Mukden province as far as the Liao river, at the same time restoring the Shanhaikwan, Niunchuan and Siminling Railroad subject to certain conditions; during the six months following from the rest of Mukden province and from the province of Kirin; and during the next six months from the province of Heilung-Kiang. Until the evacuation is completed the number of Chinese troops to be kept in Manchuria and the military stations must be arranged with the Russian commander, and in the fourth article China engages not to increase the garrisons beyond the agreed limits. China ought not to exterminate brigands and pacify the country. After complete evacuation China will have the right to determine whether the number shall be increased or decreased, but not increased. Unlawful assembly of the Peiho river, Russia, since the maintenance of an excessive number of Chinese troops would necessitate the augmentation of the Russian troops in the adjacent districts, causing an increased military expenditure of the advantage of both countries. For the maintenance of order in the interior outside of the territory ceded to the Chinese Eastern Railroad Company the provincial military governors may raise a Chinese gendarmerie, mounted and foot, to consist exclusively of Chinese subjects. The conditions on which Russia consented to restore the Shanhaikwan Railroad, which had been occupied by Russian troops since the end of September, 1900, were that China should undertake the sole responsibility of guarding the railroad and not invite any other power to undertake or take part in the defense, construction, or working of the railroad, nor permit any power to occupy the territory restored by Russia; that the railroad shall be managed according to the Anglo-Chinese agreement of April 16, 1899, and the contract of Sept. 28, 1898, with the company, China strictly observing the obligations of the company not to take possession of the railroad and undertaking not to part with it in any way whatsoever; that if China should seek to extend the railroads into southern Manchuria, or construct branch lines, or to build a bridge across the Liao river, or to transfer the Shanhaikwan station, a previous understanding must be reached with Russia. China agreed to reimburse Russia for the expenses of repairing and operating the railroad. The convention went into force on the day of signing. It was understood that Niuchwang would be restored to the Chinese authorities as soon as the powers withdrew from Tientsin, and the railroad as soon as the Shanhaikwan, Tientsin and Pekin Railroad was handed over by the other powers.

The English delayed the restitution of the branch of the northern railroad held by them because Russia would not immediately surrender control of the railroad. The Chinese refused to ratify the Manchurian agreement or surrender the railroad beyond the Great Wall. Subsequently it was announced that the evacuation of Manchuria would begin on Oct. 8. Yuan-Shih-Kai drew up a plan for the government of Manchuria by a viceroy and two governors, with Chinese officials associated with the Manchus. He proposed to create a new province of the Ordos country and parts of Kansu and Shensi with the object of strengthening the border. Russian influence and trade increased in Mongolia as rapidly as in Manchuria, and relations have been established between the Russian Government and the native authorities of Tibet.

Evacuation of Tientsin.—The great commercial city of northern China and official residence of the Viceroy of the capital province was still in the military occupation of the allied forces and governed by an international provisional Government. Lawlessness and brigandage were rife in the district. The 4000 men who although were no better able to preserve order than the army of Count Waldersche had been in the city and district of Pekin, which became quiet at once when the Chinese soldiery resumed the task. The provisional Government paid a part of the native customs over to the Maritime Customs, and these payments, 700,000 taels per annum, the fiscal from which the Chinese authorities ought to exterminate brigands and pacify the country. After complete evacuation China will have the right to determine whether the number shall be increased or decreased, but not increased. Unlawful assembly of the Peiho river, Russia, since the maintenance of an excessive number of Chinese troops would necessitate the augmentation of the Russian troops in the adjacent districts, causing an increased military expenditure of the advantage of both countries. For the maintenance of order in the interior outside of the territory ceded to the Chinese Eastern Railroad Company the provincial military governors may raise a Chinese gendarmerie, mounted and foot, to consist exclusively of Chinese subjects. The conditions on which Russia consented to restore the Shanhaikwan Railroad, which had been occupied by Russian troops since the end of September, 1900, were that China should undertake the sole responsibility of guarding the railroad and not invite any other power to undertake or take part in the defense, construction, or working of the railroad, nor permit any power to occupy the territory restored by Russia; that the railroad shall be managed according to the Anglo-Chinese agreement of April 16, 1899, and the contract of Sept. 28, 1898, with the company, China strictly observing the obligations of the company not to take possession of the railroad and undertaking not to part with it in any way whatsoever; that if China should seek to extend the railroads into southern Manchuria, or construct branch lines, or to build a bridge across the Liao river, or to transfer the Shanhaikwan station, a previous understanding must be reached with Russia. China agreed to reimburse Russia for the expenses of repairing and operating the railroad. The convention went into force on the day of signing. It was understood that Niuchwang would be restored to the Chinese authorities as soon as the powers withdrew from Tientsin, and the railroad as soon as the Shanhaikwan, Tientsin and Pekin Railroad was handed over by the other powers.

The English delayed the restitution of the branch of the northern railroad held by them because Russia would not immediately surrender control of the railroad. The Chinese refused to ratify the Manchurian agreement or surrender the railroad beyond the Great Wall. Subsequently it was announced that the evacuation of Manchuria would begin on Oct. 8. Yuan-Shih-Kai drew up a plan for the government of Manchuria by a viceroy and two governors, with Chinese officials associated with the Manchus. He proposed to create a new province of the Ordos country and parts of Kansu and Shensi with the object of strengthening the border. Russian influence and trade increased in Mongolia as rapidly as in Manchuria, and relations have been established between the Russian Government and the native authorities of Tibet.
CHINA.

By obtaining a similar concession from the provincial authorities, which, however, the Imperial Government had refused to grant, the French commanders at Tientsin decided that the continuance of the provisional Government was necessary to maintain communication with Pekin. The negotiations at Peking then had another conference and agreed in principle to the restoration of the city to the Chinese. On April 12 the allied commanders agreed upon conditions for abolishing the provisional Government as soon as the forts were destroyed or by July 1 at the latest. The Chinese Government must undertake not to resist the taking over by any of the forces between Pekin and Taku and Shanhaikwan, not to fortify the native city of Tientsin or rebuild the wall, and not to keep a garrison there or a police force exceeding 2,500 men, or to monopolize the carriage and in the hills west of Pekin. Only one Chinese war-vessel shall be at Taku at a time, and no masts or torpedoes shall be placed in the Peiho river. For the restoration of the railroad the time was set. It was worked under British military control, having when the foreign forces entered Pehelil been operated by the Russians, who at first, then taken over by the Germans, and finally transferred to the British, who claimed the right to guard and manage the line because British capital had built it and a British staff was on hand. Conditions for the transfer to the Chinese were negotiated with the British minister. The British and Chinese corporation applied to be made agents for the purchase of all railroad material for the northern railways, but the Chinese Government insisted on having liberty to buy by open tender. Yuan-Shih-Kai and Hu-Yu-Fen signed an agreement with Sir Edward Grey, in which the minister stated that any extension of the line or extensions within 80 miles of the existing line shall be built only by the Imperial Chinese Railroad Administration. Railroads from Tungchau to Tientsin, from Pekin to the Great Wall, and from Tientsin to Paoting-Fu were specially mentioned. The agreement required the ratification of the powers, nearly all of which objected strenuously. If the Chinese Government needed funds to build the branches and extensions it was stipulated that it could only apply to the British and Chinese corporation. The agreement was signed without the knowledge of the Foreign Office. The Belgians were the first to lodge a complaint, Li-Hung-Chang on April 9, 1901, having given an undertaking that the Tientsin and Paoting-Fu line, if built, should be constructed by the Pekin and Hankow Railroad Syndicate. Americans and Frenchmen were interested in this project. Russia raised an objection to the construction of the Tientsin and Paoting-Fu line, which would be built under British auspices as a violation of engagements of the Chinese Government, as it was also of the Anglo-Russian railroad agreement, but the Chinese Government would not be evacuated if the British persisted in this plan to control the northern railways. The United States and the other powers cowed in the face of the threat. The Foreign Office memorialized the Throne, blaming Yuan-Shih-Kai and Hu-Yu-Fen, and the Board of Censors punished those officials by reducing their rank. The agreement, which the Chinese Government had duly signed, was presented to the foreign ministers for their assent. It was modified afterward by a concession made by Great Britain to Russia that, if the line from Pekin to the Great Wall is built, it shall be done with Chinese capital only and shall not be mortgaged to foreigners. That there should be no military directors on the Tientsin Railroad Board was also demanded, and when England would not give way on this point the Russian minister notified the Chinese Government that if any military directors are appointed in the administration of any part of the northern railroads they shall in every case include a Russian. Confronted with this alternative, England gave way, and Germany and Japan consented that there should be no military directors. The Pekin, Tientsin and Shanhaikwan Railroad, as well as the other northern railroad from Shanhaikwan to Noda, is now the property of the Chinese Government, but have been managed by English officials in the interest of the English bondholders. The dispute between England and Russia, which nearly led to a clash at arms in the spring of 1901, regarding a concession of land in Tientsin to the Russian trading community that was claimed by the British for a railroad line that went to Harbin, Detring, the Commissioner of Customs, for arbitration. The Chinese Government found it impossible to accept the conditions for the restoration of Tientsin. There were no Chinese garrisons nor soldiers in the area where the garrisons were forbidden to increase. The commanders yielded to the demands of the Vicerey to the extent of allowing him a body-guard of 300 men; but with this force and the 2,500 police he could not undertake to preserve order in one of the wealthiest and most populous parts of China. Foreign soldiers were at liberty to go to and fro at will and on a river crowded with boats and infested with pirates. Fresh armed intervention must necessarily ensue, and it was also right of the Chinese authorities to arrest foreign lawbreakers within their jurisdiction and would allow more than one Chinese war-vessel at Pehel, and they agreed to restore the private property seized for the accommodation of the foreign soldiery. The rest of the conditions they persisted in maintaining, although it was a clear breach of the treaty of peace to impose any new conditions, as it was for the international troops to retain possession after Sept. 22, 1901, the date fixed for the evacuation. The Americans had already withdrawn from the military provisional Government. The Japanese wished to withdraw, but felt constrained to support the British commander, who as senior officer was chiefly responsible for the difficulty, although the German commander was even more insistent upon upholding the hard terms. On June 18 Russia announced her withdrawal from the Tientsin foreign Government, as she would not be a party to imposing new conditions. France this time did not follow the lead of Russia, and was left with England, Germany, Italy, and Japan to bear the brunt. China in June proposed a scheme for a line from Shantung to Tientsin thwarted. Russia announced that BANCHURIA would not be
and a restitution of the city and district. No salt was made, no banks were opened, little trade was done. The military commanders granted commercial concessions to members of their official staffs which will be binding on the Chinese Government for sixty years, and confiscated for the benefit of foreigners valuable lands and buildings, giving small remuneration to owners. The Japanese minister sought to remove the inhibition of Chinese troops in the Tientsin district, of which the British as well as the Russian minister had expressed disapproval, though all three originally voted with the three other ministers for the sake of unanimity. The United States used its good offices effectively, and, with the support of England, Japan, and Russia, obtained the elimination of the obnoxious conditions. The area of over 1,000 square miles in which the Chinese could have no military force was reduced to about 50 square miles, a circle with a radius of 6 miles, and there is no restriction to the number of police that can be employed in this smaller district. All the numerous concessions dealt out by the provisional Government were declared null and void. The provisional Government during its existence destroyed Taku and the forts on the coast as far as Shanhaikwan, replaced the wall of Tientsin with a boulevard, did much for the sanitation of the city, suppressed piracy on the Peho to a great extent, and began and provided for the completion of the regulation of that river which will render it navigable for seagoing vessels. The English restored the Peking and Shanhaiwan Railroad privileges to the Chinese in the beginning of October, after the Russians had surrendered the railroad to Niu-chwang and begun the evacuation of Manchuria south of the Liao river.

The Chinese Government and the Yangtze viceroy pressed for the withdrawal of the foreign garrisons at Shanghai. The British posted a garrison there during the Boxer troubles, and because they did so the French sent one, and then the Japanese, and lastly the Germans. Each garrison was about 200 strong. The Nankin Viceroy Voeid of garrisons, though their presence scarcely helped him in his efforts to hem in the foreign movement and prevent a rising in the Yangtse valley. After the peace, and still more after the expiration of the Tientsin occupation, the center of the Boxer movement, the continuance of the foreign garrisons was a humiliating slight to the Yangtze viceroy. The French and the British and the Japanese were willing to retire their troops at once, but the Germans were not inclined to move so quickly. The German military authorities planned to keep a brigade in China of 3,300 men, only 1,500 less than in 1901, and ordered 800 to be stationed at Shanghai, 400 at Tsingtau, 300 at Pekin, and 1,300 were kept at Tientsin until the evacuation. England, France, and Japan pressed willingness to leave Shanghai, and proposed a simultaneous withdrawal of the foreign forces. The Germans complained, when the board to manage the regulation of the Whangpu, or Shanghai, river was elected, that owing to an Anglo-Japanese coalition only one German was appointed, reducing them, notwithstanding the importance of their shipping and commerce in the Yangtse, to the same position as the Danes and Belgians, while the Americans, French, and Japanese had 2 members respectively and the English 5. The Nanking Viceroy, Liu-Kun-yi, had the great advantage to call in all the exports from the Taotai of Shanghai and the commissioner of customs, but at first he declined, resenting the omission to consult him in the matter and because he considered that the consanguine schermshe under international control was a violation of China's sovereign rights.

**New Commercial Treaty.**—The financial question resulting from the heavy indemnity exacted by the powers was the most difficult and expressing one that confronted Chinese statesmen. Among various expedients, mostly trivial or futile, the most important was a house tax, which could not be generally applied at once without provoking rebellion. In Shanghai, Wuchang, Canton, and other large cities the authorities attempted to introduce it gradually, levying it in the beginning on property paying high rents. Increased salt and land taxes were imposed sporadically and without sufficient sanction. All attempts to raise revenue failed. The United States Government repaid to China $516,000, the value of silver bullion seized by United States troops in the salt yamen at Tientsin. The Russians returned the salt heaps they had seized, having at no time been able to sell any of the salt because the Chinese were forbidden by their Government to buy it from the Russians.

The negotiation of a new commercial treaty was undertaken by the Government with the existing treaty and nearly all commercial arrangements with China were originally made. Sir James L. Mackay was appointed British commissioner, and Sheng-Ta-jen and Lu-Hai-huan were the Chinese commissioners. The subjects of negotiation included the registration and protection of trade-marks, a uniform national currency, extension of the treaty, the importation of foreign salt, free movement of native grain within the limits of the empire, the right of permanent residence in the interior for commercial purposes, the improvement of navigable waterways, increased transit facilities for exports, the definition of the area free of likin at treaty ports, reform of the Mixed Court at Shanghai, provision for a higher tribunal for civil suits, amendment of the inland navigation rules, definition of the liability of Chinese shareholders in foreign companies, amendment of the Chinese Postage Tariff, the payment of postal and telegraph services, substitution of taxes for the likin duties on native opium, opening of new treaty ports, and general facilities for trade. Articles were signed with British, French, German, and Japanese commissioners studied the question of the new provisonal customs tariff, while Sir J. L. Mackay was urged on the Chinese Government the advisability of abolishing likin barriers. Unexpected objections came from Manchester merchants and others in the China trade who have ceaselessly pressed for this reform, but now reckoned the difficulties and delays in carrying it out and the probable diminution of profits, as it was contingent on an increase of the import duties to 15 per cent. They also feared the competition of native yarns and piece goods and of other native manufactures if these were freed from likin. To abolish the whole system of likin barriers was a stupendous task, as an army of officials is employed in the collection and most of the public revenues are drawn from likin, collected from native as well as from foreign goods. It was likin in addition to the trade of China. American and Russian merchants objected to trebling import duties for the sake of suppressing likin, which in north China, where
most of the American trade is, does not weigh heavily on commerce. The total collections of duties and kindred taxes on imports and exports were estimated by the Chinese commissioners at 44,000,000 taels, of which less than 17,000,000 taels reaches the Government. Lixin is collected at innumerable barriers scattered without system along the chief trade routes of the interior, which may be set up at will by the local authorities. The abuses inseparable from the collection of lixin are more onerous than the payment itself. At each barrier goods are delayed and examined, giving the officials an opportunity to squeeze bribes and fees in addition to the lixin, or when no lixin is due, as on imports that have paid 21 per cent. in addition to customs duty at the port of entry, and are thereby free of lixin under the treaty. Owing to the uncertainty and irregularity in the cost and time of transit the trade in foreign goods can not be developed in the interior, while the high duties paid on exports that pass many barriers are fatal to the export trade. There is no limit to the amount of tax payable at one barrier, but there is none to the number of barriers that may be set up. The revision of the existing provisional tariff so as to produce an equitable revenue was not done before the protocol of Sept. 7, 1901, was interrupted by the Chinese commissioners in consequence of the further fall in silver, which made the specific duties already arranged less than 43 per cent. ad valorem. The old duties, calculated on a basis of 5 per cent. ad valorem according to the prices current in 1858 yielded but little over 3 per cent. tax. The result was that the Chinese Government was compelled to make to raise gold for the indemnity caused a further break in the silver market. The gold value of the taels fell to 26.76, increasing the burden of the indemnity by 20 per cent. The enhancement of the prices of foreign commodities in China was disastrous to the import trade. The Chinese Government of its own accord decided to reduce the duty on tea for export, which has been about 40 per cent. of the present value of tea, to a 5-per cent. basis. The International Commission to fix duties under the protocol concluded its labors and the provisional tariff was signed on Aug. 16, to go into force on Nov. 1, 1902. The specific duties agreed to represent an average rate of 43 per cent. of the values current. Russia, Italy, Spain, and Portugal were not represented on the commission. Portugal, not being a signatory of the protocol of 1901, claimed a right to import goods under the old tariff, which she offered to relinquish if China would concede two small islands near Macao in fullfilment of an article in the treaty of 1888, together with the right to build a railroad from Macao to Canton.

On July 27 the Imperial Government gave its assent to the entire abolition of lixin on all merchandise, native as well as foreign, throughout the empire. The Yangtse viceroy, who first registered the suggestion of the sumptuous chamber of Peking, to the effect that the whole system of inland native customs. The lixin taxes are not ancient. They were introduced to furnish means to cope with the Taiping rebellion and afterward extended to appear as the customs of the Chinese government, or the cargoes for the Chinese government, or the taxes from foreign commerce sacrificed in the sumptuous temple in 1858. The article in the draft treaty abolishing lixin was submitted by the imperial Maritime Customs, was to be levied by the customs officers of the same description, whether carried by junk or steamers. Within foreign settlements or concessions the consumption tax cannot be levied. Yarn and cloth manufactured by machinery in China by foreigners or Chinese pay an excise duty, collected by the imperial Maritime Customs, equal to double the import duty. On raw cotton imported from the countries of the surtax, which is a rebate of the import duty and two-thirds of the surtax, and is exempt from the consumption tax and all other duties leviable on Chinese raw cotton used in the manufacture of cotton goods. The Chinese machine-made yarn or cloth is

James L. Mackay could not agree to it, as he did to the other articles, until he obtained the approval of his Government. Instead of a 15 per cent. duty on imports, as originally proposed by the Chinese Government, the British merchants were asked to consent to a total duty of 124 per cent. The first seven articles of the treaty provided for registration of trade-marks, bonded warehouses, the navigation of the Yangtse and Canton rivers, equalization of dues on junks and steamers, facilities for drawbacks, the establishment of a national currency, and the liability of Chinese stockholders in foreign companies. The eighth article abolished lixin and other dues at the place of production, in transit, or at destination in return for a surtax on foreign goods imported and Chinese produce destined for export abroad or coastwise, the surtax on imports not to exceed 74 per cent. ad valorem. Export duties may be charged at a scale of 5 per cent. ad valorem, with a surtax of half that amount in lieu of internal taxation and lixin. Silk and cocoons pay no surtax. Lixin on salt is abolished, after which the campaign of the lixin and other taxes is added to the salt duty collected at the place of production or in the province where the salt is to be consumed. Native produce trade is charged a 15 per cent. surtax. An annual license fee and are not liable to any other charges or tolls excepting port dues from junk duties. The commutation of lixin on foreign opium remains as before, a total of 74 per cent., instead of the 124 per cent. charged on other imports. For the taxation of native opium China may retain offices on the borders of each province, where all taxation that is leviable in the province is paid in a lump sum and the cakes are stamped in evidence of payment, but no goods except opium can be stopped or taxed at these offices. The loss of revenue from the abolition of lixin and all other kinds of internal taxes on foreign goods imported and on native goods exported abroad and coastwise is only partly made good by the surtax, and therefore it is agreed that China is at liberty to impose a consumption tax on articles of Chinese origin not intended for export. This tax shall be levied only at places of consumption, and not on goods while in transit, and the Chinese Government undertakes not to interfere with foreign goods or native goods for export, and when foreign goods are similar to native goods the owner can demand on payment of the import duty and surtax a certificate of their foreign origin. This consumption duty may vary according to the articles are necessary of life or luxuries, but it shall be levied at a uniform rate of three-fourths of the same description, whether carried by junks or steamers. Within foreign settlements or concessions the consumption tax cannot be levied. Yarn and cloth manufactured by machinery in China by foreigners or Chinese pay an excise duty, collected by the imperial Maritime Customs, equal to double the import duty. On raw cotton imported from the countries of the surtax, which is a rebate of the import duty and two-thirds of the surtax, and is exempt from the consumption tax and all other duties leviable on Chinese raw cotton used in the manufacture of cotton goods. The Chinese machine-made yarn or cloth is
free of export or coast-trade duty and surtax and consumption duty. The same conditions apply to all goods of foreign make by machinery in China, except that the products of Government ironworks, arsenals, dockyards, etc., are exempt from all taxation. Members of the foreign staff of the Imperial Maritime Customs, to be appointed by the viceroyos or governors in consultation with the Inspector-General of Customs, will have a general supervision over native customs, the consumption tax, and salt and native opium taxes. Illegibilities complained of will be investigated by a Chinese official in conjunction with an officer of the foreign Government concerned and an officer of the Maritime Customs; and if the complaint is found to be well founded compensation will be paid through the imperial Maritime Customs from the surtax funds and the high provincial officials will be held responsible for the punishment and dismissal of the officer guilty of the illegal action. The Chinese Government promised to open to foreign trade the following new treaty ports: Changsha in Hunan, Wanhien in Szechuen, Nganking in Anhui, and Waichau and Kungmum in Kiangtung. After the edict is issued abolishing the salt likep, the declaration of internal taxation on goods, any official disregard of the letter or the spirit of the injunction shall be severely punished and removed from his post, and the high provincial authorities will be held responsible that this is done. The surtax on imports and exports and the salt tax substituted for the salt likep will be divided between the province in which the transaction occurs and the Maritime Customs in such proportion for each viceroy or governor as may be arranged between him and the Board of Revenue. The surtaxes shall not be pledged as security for new foreign loans or for existing liabilities of China, but the interest and sinking-fund of the loan of 1898 for which the likep and salt likep were pledged are to be set aside out of the proceeds of the surtaxes on imports and exports and the new salt tax. In the ninth article of the treaty China agrees to resuscitate regulations in such manner as to offer no impediment to the attraction of foreign capital. The tenth article contains regulations for the navigation of inland waters, which is made for the first time a treaty matter, and the provisions are to enable them to build or lease wharves and warehouses. The eleventh article restricts the importation of morphia. In the twelfth article Great Britain engages herself to relinquish extraterritorial rights as soon as the reform of the Chinese judicial system and the establishment of an effective administrative machinery shall warrant her in so doing. In the thirteenth and last article Great Britain agrees to take part in a joint commission representing China and the treaty powers interested with the object of investigating the missionary question and devising means of securing peaceful relations between the Christian converts and the rest of the population of China. The treaty was signed by the British and Chinese plenipotentiaries on Sept. 7. It was subject to the acceptance of its conditions by all the powers entitled to most-favored-nation treatment and to their ratification in Paris, and it was to be removed on Jan. 1, 1904, and all officials employed in the collection of taxes and duties prohibited by the treaty shall be removed from their posts.

Should the powers not agree before that date the treaty will go into force as soon as they have accepted its conditions. All the duties on imports, although nominally 12½ per cent, actually amount to between 10 and 11 per cent. on the system of valuation in force. Great Britain, however, was spared from their determination not to join the other powers in a pro rata reduction of the indemnity claims to bring the total sum down to the stipulated 450,000,000 taels when the United States offered to abate its claim independently. When silver fell 20 per cent. below the exchange rate at which the indemnity was reckoned the Chinese Government claimed that the payments should be made in silver. The fall in silver already added 90,000,000 taels to the indemnity debt and 3,000,000 taels to the annual interest, and if China continued to sell silver for gold to meet the payments the rate would continue to fall, as there was little demand for silver outside of China. The Chinese Government proposed to collect the customs duties in gold at the exchange fixed by the treaty. The representatives of the powers peremptorily refused to allow this course. The Chinese then declared that they would pay in silver, and the treaty likep and salt tax likep in terms of the current rate of exchange. The commissioners refused to accept this amount. The Government then acknowledged that it was a gold debt and appealed to the powers to relax it from conditions that would soon render it impossible to pay the interest or principal of the indemnity. The United States Government took the ground that the indemnity and the likep in silver were only money available in China, was in equity a silver debt, intended to be equivalent to a gold debt at the rate stated in the protocol without regard to the fluctuations of silver. The American minister notified China that his Government was willing to accept payment of its part of the indemnity at the current rate of exchange. England then proposed that China should be permitted to pay the indemnity in silver until 1910. After an acknowledgment by the Chinese Government that it had agreed in the treaty to pay in gold the other powers agreed to the English proposal.

The native customs were handed over to the Maritime Customs department according to the protocol, but not for shipowners to build or lease wharves and warehouses. Canton remains the principal port of trade with the United States; Fergana is the chief of the British and German and Japanese likep. The Chinese were allowed a choice of three months to select a new place, but they preferred the old place. Registered letters are sent for 5 cents Mexican by the imperial post-office, and postal and money-order offices are established in all the large towns and provincial capitals. Chang-Chih-Tung, which the present viceroy interposed obstacles at first to the extension of the post-offices into their provinces,
but their opposition was only formal and temporary. Chang-Chih-Tung, while remaining Vice-
or of Wu Chiang, became Imperial Commissioner of Commerce, an office bestowed upon Li-
hung-Chang shortly before his death. When the United States Congress passed the new Chi-
ese exclusion act the Chinese Government began against the reenactment of the law, particularly against its extension to Hawaii and the Philip-
ines, where the Chinese have acquired large in-
terests and are connected by family ties with the population of the islands, for which reasons the repression of free intercourse would result in peculiar hardships.

The Imperial Government, in response to a memorial of Yuen-Shih-Kai, issued on Sept. 13 an edict intended to eradicate official squeezing and malversation. Considerable progress was made in this reform in Pehchi. The edict an-
ounced that salaries would be fixed, and ordered that all fines and other revenues be accounted for and turned into the public treasury, with the exception of a certain percentage, until a scale of salaries is adopted by the Imperial Gov-
ernment which will render squeezing unnecessary.

The Chinese National Railroad and the Chinese Corporation in 1896 secured a concession for a railroad from Shanghai to Nanking and mining and railroad concessions in Shansi and Honan and applied for a concession for a trunk line between Pekin and Hankau. A Belgian syndi-
cate with Russian and French backing secured the latter, whereupon the British minister de-
manded and obtained the right to build lines to serve the industri
al interests of others, who spread a rumor that Germany was pressing the Chinese Government to grant exclusive privileges in Shantung. The German Government denied, in answer to inquiries, that
the industrial concessions granted established a German monopoly or were intended to shut the door to foreign competition in Shantung. A German firm proposed to form the concession and sale of opium throughout the empire, offering 50,000,000 taela a year for the monopoly, but the scheme was not favorably received by the Chinese Government. The terms of the last
German mining rights in Shantung it is intended to apply to all mining concessions. The con-
ditions are that the Government shall receive 25 per cent. of the profits and also a proportion of
the product, which is 25 per cent. for precious stones, 15 per cent. for precious metals and quick-
silver, 10 per cent. for copper, lead, and zinc, and 5 per cent. for iron and coal, beside a 5 per-cent.
duty on exports and 2½ per cent. on products consumed in China.

A Japanese company placed a fleet of steamers on the Yangtse and other rivers, which have ascended the river as far as Siangtung. Steamers belonging to European and Chinese companies are increasing in all Chi-
inese waters. A French project for a railroad from Canton to Fung-kow was submitted, be-
cause it conflicted with the rights acquired by the American syndicate in 1898.

The Manchurian Railroad was near enough to completion to carry freight and passengers from the beginning of 1902. The East Chinese and Siberian Railroads afford continuous rail communication from Port Arthur, or, by the line that runs through Tientsin, Taku, and Nanchou, and connects with the East Chinese line at Tash-
chu, from Pekin to St. Petersburg and other Eu-
ropean cities. The Russian Railroad guards in Manchuria number about 40,000, distributed in fortified posts, 10 or 15 miles apart, along the line and along the branch that runs from Harbin to Vladivostok.

Insurrectionary Disturbances.—The popu-
laus and productive provinces of the center and
south, which had no part in the Boxer uprising and were unaffected by the foreign occupation, were stirred to the heathen in the begin-
ing of 1902 proposed new conditions for that
and its other railroad contracts which the Chi-
inese Government would not even discuss. The
same syndicate, the British and Chinese Corpora-
tion, formed by the great mercantile and banking
concerns in Shanghai, contracted to build the line from Canton to Hong-Kong and the one from Suchau to Hangchau, and with a German syndi-
cate in the projected trunk line from Tientsin to Chinkiang; originally also with an American syndicate in the Hankau and Canton Railroad. which last has been begun, but with the aid of Belgian, not British capital. The Germans are determined to build the Tientsin-Chinkiang line. An Anglo-French syndicate in 1902 obtained mining concessions covering a third of the province of Yunnan and comprising mines producing coal, copper, nickel, quicksilver, petroleum, tin, and precious metals. An English and a French syndicate in rivalry sought mining concessions in Szechuen. The Germans have pushed forward the Shantung railroads and have already done much to develop the mineral resources of that province. They have a right to mine coal, etc., within 10 miles on each side of the railways.

A German syndicate has obtained rights to mine diamonds and other precious stones, coal, gold, and other minerals in several districts. The ac-
tivity of German mining companies excited the jealousy of others, who spread a rumor that Germany was pressuring the Chinese Government to grant exclusive privileges in Shantung. The German Government denied, in answer to inquiries, that
the industrial concessions granted established a German monopoly or were intended to shut the door to foreign competition in Shantung. promised to yield their quota, but it was all extra taxation; they were in many cases unable to wring it from the people, and had to borrow money from bankers on their personal security to complete their contributions. In the more prosperous districts some of the mandarins squeezed much more out of the people than their quota, and thus dissatisfaction and indignation against the regent and the imperial Government spread throughout the purely Chinese provinces that have never been contended under the Manchu rule.

The taxes that had to be raised for the indemnity increased in the same proportion as the fall in the gold price of silver. This was felt to be a fresh extortion of the foreigners. In this way and by the negligence of the continued occupation of Tientsin and retention of the railroads in violation of the treaty of peace kept alive or revived the anti-European movement.

In February disturbances broke out in Kuang-tung and Kuangsi along the French border. Two French officers were murdered. A German mission was destroyed. The Imperial Government, too, joined the local officials to use all the means to suppress disorder and punish the offenders. Although foreigners were the first victims, the movement developed into an antidynastic rebellion. Su-Yuan-Chun, a general who had maintained order along the French frontier for many years, was sent back to the post with an army. He encountered and defeated a body of rebels at Langchau.

Gen. Ma led another army out from Canton, but had to retreat from Fangcheng, where the rebels put the mandarins to death. The movement spread rapidly and extended into Yunnan. The most active and troublesome of the rebels were discharged soldiers. The objects of the rebellion were the downfall of the Tartar dynasty, the establishment on the throne of a Chinese line of monarchs, and the relief of the suffering Chinese people. These objects are always cherished in the Kuangsi provinces and kept alive by the Triad and secret societies. frequent and countrymen joined the rebellion for food and plunder because drought prevented rice-plowing. The imperial troops were checked at Sung-shih-k'ou and Liang-yung-kou, and Kuang-tung and Fukien, and Puchuen in Yunnan. Many of Su’s troops deserted and joined the rebels.

The Viceroy of Canton asked for reinforcements. The rebel army was defeated at Kung-chuen, where the opportunity of Gen. Wong with quick-firing rifles was defeated by the Chinese. The rebel forces, however, were unable to make headway, and sat down at Lienciu and Kuchau until reinforcements arrived, a regiment of the foreign-drilled troops of Yuan-Shih-Kai with artillery and one of Black Flags for Nanning-Fu, which was protected by torpedo-boats, while gunboats were sent to protect Wuchau. The rebels obtained arms from outside and their ranks were strengthened daily. The antispanish agitation at Ningpo led to the dispatch of German, British, and French troops in their protectorates enjoined the people to spare and protect the foreigners and their commerce, but to drive out the mandarins who ground them down with oppressive extortions. They charged Manchu nobles and corrupt mandarins in control of the Imperial Government with having sold parts of China to Occidental nations and with having declared war without the concurrence or knowledge of the true Chinese of the south, upon whom they now imposed increased taxes to pay the war debt. The revolutionary program set forth as the order of the movement is the overthrow of the Manchu dynasty, the founding of a new dynasty under a Chinese Emperor, relief for the oppressed; the introduction of reforms, protection of commerce, the establishment of 3 governments in Kwangsi, Kweichau, and Kuan-tung with an emperor at Canton and viceroy’s in Kwangsi and Kweichau, and protection of Europeans and their property. The movement was the cradle of the Taiping Rebellion, and the revolutionists took the name of Hung from Hung-Sau-Chuen, the leader of that rebellion. The reformers Kung-Fu-Wei and Sung-Fu-Ten had no connection with the insurgents; who number about 10,000 armed men supplied with muskets and revolvers by pretended opium merchants coming from Annam. The prefect of Nanning-Fu alienated the district by destroying whole villages in his hunt for the rebel chief. All the country surrounding and beyond that city was dominated by the rebels. They held over 30 towns and villages, making prisoners of the mandarins. In most places the people received the rebels with open arms. A force of 2,000 imperial troops sent by Marshal Su to dislodge the rebels from a village was ambushed and cut to pieces in a narrow defile. A sufficient force of imperial troops was sent into Kwangsi to hold the insurgents in check. A large body of rebels was dispersed near Wuchang, and Hung-Yung-Seng, their leader, was captured. Nanning-Fu was attacked by the rebels on April 27. A few days later a large insurgent force sustained a severe defeat. The political movement subsided, but well-armed predatory bands, largely composed of braves of Su’s frontier force, who, receiving no pay, had deserted with their arms, continued to roam about the country, pillaging and murdering, and preying on the rich. They were the effect of the war, the consequence of the government, and the result of the system of taxation. The French, with the aid of the British, took up the work of the Chinese. Outrages on Christians in northern Kansu committed by Gen. Tung-Fuh-Siang’s troops, who numbered 3,000 or 4,000, armed with modern rifles, compelled missionaries to flee. The troops of General Su’s army were not trained for field service and were not fit for duty. The troops of northern China betrayed an anti-foreign feeling caused by the continued occupation of Tientsin, the imposition of the indemnity.

CHINA.
CHRISTIAN CONNECTION.

The missionary claims, and intrigues of reactionary officials. In the central and southern provinces the proclamations of the officials levying indemnity taxes were often couched in bitter and provocative phrases, commanding the people to pay in order to increase the wealth of the foreigners.

In parts of Chili the villages and market-towns formed leagues to resist the collection of foreign indemnities and armed the members with Mauser rifles for a conflict with Yuan-Shih-Kai's soldiers. The attempts of local officials at Taining-Fu to collect indemnities for losses of the missions and native Christians on which they had agreed with the Roman Catholic priests led to riots which resulted in great loss of life. Hundreds of villagers were killed, as they were armed only with spears and bows, and 60 of the troops, in consequence of which a brigade was sent to destroy them. A Chinese soldier, killed a missionary and threatened to drive them all out of the district. At Shunte-Fu a league of villagers led by a military mandarin and armed with rifles and cannon in at least one place the first body of troops sent to suppress the rising. A large force of Yuan-Shih-Kai's trained men dispersed the rebels, who numbered some thousands, and the leader of the movement was captured and beheaded. He had killed the members of his family before embarking in the enterprise to prevent them from being punished in the sincerity of their faith. A Boxer outbreak occurred during the summer in which converts were massacred and mission property destroyed. A conflict with the troops took place in Chengtu, which resulted in the defeat of the insurgents, whose leaders were captured and beheaded. The American and French ministers made representations to the Government, which removed the viceroy and the other officials. In every place where disturbances occurred throughout the empire the local officials were punished.

At Chenchau, in Hunan, missionaries were accused of introducing cholera. H. E. Lewis and J. R. Bruce of the Chinese Mission, were beaten to death by a mob on Aug. 15.

CHRISTIAN CONNECTION. Under this head we have traced the American Christian Convention of the United States and Canada, the Christian Church, South, and a number of affiliated colored churches. The quadrennial meeting of the American Christian Convention at Norfolk, Va., was attended by representatives of all these societies. The conference lists given in the Christian Annual for 1902 give the numbers of members as follow: American Christian Convention, 60 conferences, 71,395 members; Southern Christian Convention, 6 conferences, 13,595 members; 6 other conferences in the South, 12,217 members; in all, 72 conferences, with 97,567 members. The total number of churches in 1901 was 1,517, and that of ministers, 1,151. The mission secretary reported, for 1901, in home missions, 6 churches and 7 Sunday schools, with 397 members received, and 298 conversions returned by the missionaries during the year. The report of the foreign missions (Japan and Porto Rico, with one to be established in China) for the year closing July 1, 1901, mentioned 7 organized churches with 145 members, 26 baptisms, and a net gain of 30 members during the year. 16 Sunday-schools with 728 native members and to native ministers and other helpers. The mission reports had been in excess of those of any previous year in the history of the Church. Nine educational institutions of high grade are maintained, one of which is a Biblical Institute, and another a college for colored people. Besides the publishing department of the General Convention, the Christian Publishing Co. continue in the same membership as the General Convention, and issues the denominational weekly newspaper and Sunday-school literature at Dayton, Ohio, and a missionary journal and local newspapers are published in New England and Canada.

The American Christian Convention met in quadrennial session at Norfolk, Va., Oct. 8, the Rev. O. W. Powers, D.D., presiding. The report of the president and secretary represented the Church as in a condition of encouraging progress, with increase in every department of its work. The people had contributed nearly $11,000 for education. The receipts of the missionary treasury during the past four years had been $61,057, or $18,965 more than in the previous four years, showing an increase of 42 per cent. The expenditure had been $49,465. The Woman's Board of Foreign Missions had received (during the four years) $6,976, and the Woman's Board of Home Missions $1,711. The Home for Aged Ministers, at Castle, N. Y., had an endowment yielding an income of $900 a year, while the expenditures were more than $900 a year, and had received additional gifts. A new institution was adopted, during the discussion of which the word "denomination" was stricken out wherever it occurred, and the words "religious body" were added. A provision was passed ratifying the acts of the old convention, as those of the new are under the new articles of incorporation, and provision was made for drawing up new laws, rules, and regulations for the convention, including order of business and parliamentary rules, which are to be printed and distributed among the people of the Church. A plan was approved for the establishment of a university, to be called Palmer University, for which property valued at $200,000 was offered at Muncie, Ind., and $100,000 were promised for endowment, contingent upon another $100,000 being secured. Papers were presented requesting help for different interests of the colored people and asking that literature of the connection be furnished to colored colleges and by recommendation of the conventions the Afro-American delegates were admitted. Four convention collections were authorized to be taken in the churches: for the convention, for foreign missions, for home meetings, and for educational and building and equipping a printing establishment. The Board of Trustees was advised to be cautious in making investments in fixed property, but to exercise greater vigor in publishing new matter. The educational report advised raising the standard of ministerial education, the fostering of industrial training in at least one of the white schools, and the federation of the colleges, in order to bring about uniformity in work and degrees. A report on moral reform took cognizance of such subjects as Sabbath observance, the settlement of labor difficulties by "Christians in harmony," legislation on marriage and divorce in harmony with biblical teachings, abstinence from tobacco and intoxicating drinks, and the restriction of the liquor traffic. Cooperation with the Anti-Saloon League was continued.

The Southern Christian Convention maintains Elloe College, North Carolina (Eloise, Col. College office), and has a book depot and publishing interest at the same place, whence the periodical organ is issued. Its home mission work is in successful operation with one general missionary, and interest in foreign missions is represented as
increasing. Plans for the liquidation of the debt of Elenon College, the establishment of an orphanage, and the raising of a twentieth-century offering of $20,000 have been pushed with vigor.

COFFEE. Coffee forms the largest single item of our imports. For some time the United States have been the largest coffee-importing country in the world, and our purchases have steadily increased. For the last crop year, ending June 30, 1902, the imports into the United States were 7,903,815 bags of 132 pounds each, or 1,043,567,580 pounds. It is now estimated that we consume a little more than 12 pounds of coffee per capita annually. While Great Britain consumes less than $ of a pound per capita annually, some of the other northern countries of Europe consume considerably more. Denmark is given by M. Lecompt, in his Geography for 1901, as the largest coffee-consuming country in proportion to its population, the average consumption being 5.07 kilograms, or 15.72 pounds, to raise a phaldrant. Norway and Sweden are next on his list; their average consumption is 4.63 and 4 kilograms respectively; but, for some unknown reason, Holland, which consumes more coffee than either, is not mentioned. A parliamentary paper recently issued contains an official document entitled Tea and Coffee in 1900, which gives the consumption of coffee in that country per capita as 13.57 pounds annually, which makes Holland the largest coffee-consuming country in proportion to its population.

The steady increase of our coffee consumption may be judged by our imports; those for the fiscal year 1896—836,598,382 pounds—were nearly 20 per cent. greater than our imports of the previous year, 50 per cent. greater than in 1893, about double those of 1890, and more than three times those of 1874. Our imports fell off in 1899 and 1900. The imports for 1899 fell off more than 38,500,000 pounds, and for 1900 they fell off 43,500,000 pounds from those of the previous year. The statistics of the Treasury Department for the fiscal year 1901 give the sum total of coffee imported into the United States as 967,909,356 pounds, valued at $63,773,073. But in 1892 we paid a great deal more money for coffee; our imports for that year, though 98,400,211,000 pounds, were worth $129,042,000.

The years from 1888 to 1902 were prosperous for the coffee-growers; the average price, which was 7 and 10 cents a pound in 1886 and 1887, jumped to 20 cents in 1892. The highest price ever paid for coffee in our history. The price fluctuated between 7 and 9 cents in the fifties, rose to 12 cents in the sixties, took a sudden drop in 1895 to 6 cents, jumped again in 1898 to 11 cents, and then went down to 9 cents. But fluctuating between these figures till the seventies, when it began to rise steadily, reaching 15 cents a pound in 1874. This stimulated the coffee-growers all over the world, and with the increased production the price gradually fell till 1896, when it was down to about 7½ cents. As it costs much more to this to grow and market coffee in many of the coffee-producing countries, the planters were obliged either to go out of business or to use their estates for some other crop. Consequently, with the ever-increasing demand, the price went up again till it reached 20 cents in 1892. The following year it fell to 14 cents, and then it rose to 16 cents, since which time it has been steadily going down till the present year, when coffee was sold on the exchange in New York as low as 15 cents.

In a paper before the Chamber of Commerce at Rio de Janeiro last year, on the consumption of coffee in the United States, by the Brazilian minister to this country, he says that this fluctuation in the wholesale market affected the retail price of coffee but little. The price of a cup of coffee in the United States, he says, is the same as when a pound of the product cost in the wholesale market three times what it is sold for at the present time. He further said that the price of roasted coffee has remained about the same; that five cents a pound, or 22 cents a pound, was paid for coffee in the United States is imported from Brazil; and he intimated that it was sold to the consumer as Java and Mocha and brought the average price of 20 cents a pound. Thus the people of the United States, he says, pay $165,000,000 yearly for Brazilian coffee, less than a quarter of which is paid for in the wholesale market. He further declared that Mocha coffee is scarcely more than a myth, as Brazil supplies nearly the whole of Arabia with coffee; and as for Java, the entire production of the Dutch East Indies for 1896 was but 430,501 bags.

This statement of the Brazilian minister regarding the substitution of Brazilian coffees for Mocha and Java has been denied by some of the coffee dealers in this country; but the official figures show that in 1900 we imported 133,182 bags of coffee direct from the Dutch East Indies, and from Holland 23,104 bags, making a total of 156,286 bags, while for the year 1901 we imported only 72,338 bags direct, and 12,198 bags via Holland, which was only a little more than half of the previous year's importations. From Aden we receive our Mocha coffee, and in 1901 we imported 12,276 bags. These figures show the relatively small quantity of Mocha and Java coffees received in this market, and form the basis of the Brazilian minister's statement to the effect that these coffees are hardly more than a myth. According to the official publication of our Commercial Relations with foreign countries (1902, Vol. 1), of the coffee imports of 1901 nearly 80 per cent. (by weight) came from Brazil, about 8.5 per cent. from other South American countries, a little more than 6 per cent. from Central America, and more than 2 per cent. from Mexico. There remains, therefore, 1.3 per cent. representing the coffee bought by the United States in the rest of the world. The Coffee Exchange gives our imports of coffee from Brazil for the crop year 1902 as 6,738,565 bags, against 1,167,199 bags from all other countries. On July 1, 1902, the world's visible supply in this country and Europe and the chief primary markets had increased to 11,261,331 bags, a quantity sufficient for the world's consumption for one year.

The country that supplies us with coffee next to Brazil is Venezuela, to the extent from that country equaling about one-tenth the amount imported from Brazil. In 1899 we imported a little more than 28,000,000 pounds.
from Colombia, which was less than half our imports for the corresponding year from Venezuela. Mexico came next on the list with nearly 27,250,000 pounds, and then Costa Rica with a little more than 15,500,000, and Guatemala with nearly 15,000,000 pounds. The average price of these coffees a pound was: Brazil, 5.6 cents; Venezuela, 7.7 cents; Colombia, 8.6 cents; Mexico, 9.8 cents; Costa Rica, 14.5 cents; Guatemala, 12.1 cents. These figures, taken from the Commerce and Navigation volumes of the United States, indicate that there is a good deal of truth in the statement made by the Brazilian minister.

Until the acquisition of the Hawaiian Islands, Porto Rico, and the Philippines, no coffee was produced in any territory under the control of the United States. The fact that a superior quality of coffee has long been produced in these islands, and that their conditions are eminently favorable for its production, coupled with the fact that it has always been the policy of the United States to protect her own industries, whether agricultural or industrial, makes the question of production very interesting. Porto Rico has produced coffee in large quantities, that being her principal export for many years, the bulk of it going to Spain, where it has long been considered the finest coffee in the world. Her exports of coffee have amounted to 30,000,000 pounds per annum for many years. The Statesman's Year-Book for 1902 gives 200,000 acres under coffee cultivation in the island, which now produce 60,000,000 pounds of coffee annually. The Division of Insular Affairs gives the exportation of coffee from the island from the date of our occupation in October, 1898, to the end of April, 1900, as a little more than 62,000,000 pounds, of which 23,500,000 went to France, 9,000,000 to Cuba, nearly as much to Spain, 7,500,000 to Italy, a little more than 5,000,000 to Austria-Hungary, and a little less than 5,000,000 to Germany, this country receiving only a little more than 2,250,000 pounds of the product.

The Philippine Islands are said to be peculiarly adapted for the production of coffee, but the Division of Insular Affairs gives for the years 1898, 1900, and 1901 but small acreage exported, the amount for 1899 being 73,500 pounds; in 1900 only 24,500 pounds left that port; but in 1901 the shipments rose to 65,000 pounds.

Coffee appears as a natural product in the Hawaiian group, growing in many of the islands in a wild state; but as yet it is not produced on an extensive scale. It is said that there are more than 200 small plantations in the islands, and the exports given for 1897 were 337,158 pounds, worth $99,896. It is said that the area in these islands in which coffee can be successfully grown is small, but the quality of the product is excellent.

The Coffee Conference.—Owing to the low price obtainable for coffee in the producing countries, it was proposed by Mr. Lazo Arriaga, delegate for Guatemala at the Pan-American Congress held in the city of Mexico last winter, that a commission be convened within one year in the city of New York, to be composed of one or more delegates from each of the American republics, to study the causes of the low price, which was producing a crisis in the producing countries, and to consider means of remediating it. He called attention to the fact that 15 of the nations represented at the congress were producers of the precious bean, while the 4 remaining nations were consumers of it. He further said that the low price had affected the treasury receipts of some of the producing countries to such a degree that perhaps for this reason some of them were in a state of revolution, owing to the misery and poverty caused by the low price of their chief product. All the countries entered into the project through their delegates, who signed the resolution, with the exception of Chile, which declared itself as being exclusively a coffee-consuming country, with no interest in a congress the avowed object of which was to study a means of raising the price of a product which she purchased in considerable quantities at a price already sufficiently high.

Owing to the foresight of Mr. Lazo Arriaga, in placing the details of convening the proposed Coffee Conference in the hands of the Pan-American Republics, it was one of the first, if not the first, of the many resolutions adopted by the Pan-American Congress to be acted upon. The conference met at the New York Coffee Exchange on Oct. 1, and was composed of delegates from all the producing countries with the exception of Colombia, Hayti, and Bolivia. Two of the non-producing countries—Ecuador and Uruguay—were represented at the conference, so that only 6 of the American republics were unrepresented at the conference. The sessions of the conference were presided over by Percy B. O'Sullivan, a delegate of the United States and president of the Coffee Exchange, and were held throughout October.

Papers were presented upon the production, distribution, consumption, and causes of the low price of coffee by representatives of the coffee-producing countries. It was generally agreed that the cause of the low price was overproduction, and to remedy the evil it was proposed by the committee charged with the study of the subject, of which Senhor J. F. de Assis, Brazilian minister at Washington, was chairman, that the coffee-producing countries enter into a combine to hold back a sufficient percentage of their entire crops to reduce the supply to the limit of consumption, and that in case no demand should be created for the surplus so held back by increased consumption, the surplus should be ultimately destroyed by fire. This proposition met with a vigorous protest from the delegate from Porto Rico, who demonstrated that his country was in no wise to blame for the overproduction, the cyclone of 1899 having destroyed more than half of the plantations on the island, and that the present Porto-Rican crop was hardly equal to 4 per cent. of the crop of former years. He pointed to Brazil as the country responsible for the overproduction, and said there was where the remedy should be applied. Of course the United States could not enter into any such radical project to raise the price of any product in which it was interested either directly or indirectly, and consequently its delegation abstained from
COLOMBIA.

voting on this measure. Peru and the Dominican republic voted against it, while the other countries voted in its favor.

A measure adopted by the conference was a recommendation to the coffee-producing countries that the exportation of refuse as coffee and to the consuming countries the importation of such refuse and be used as substitutes or for coffee be prohibited by the most efficacious means possible. It was also proposed to recommend to the consuming countries the abolition, or at least a reasonable reduction, of the import duties in those countries where the consumption of coffee is materially affected by them.

A third measure was a proposition to organize a permanent international union to watch the interests of the coffee industry, and especially to maintain a propaganda for the purpose of increasing the consumption of coffee throughout the world.

The surprise and consternation of some of the other delegates to the conference were evident at the attitude of the Porto Rican delegate when he came out openly for protection for his island product by the United States. When it was proposed as one of the most practical measures for increasing the consumption of coffee, the producing countries should endeavor to secure suppression of the duties imposed upon coffee by European countries, he said that to accept this proposition in an absolute manner would be against the wishes of the Porto Rican people, who, if not citizens of the United States at present, expected to be in the near future, and consequently expected protection in the United States for their coffee. But he favored a reduction of the exorbitant duties in some of the European countries. The conference adjourned on Oct. 31, with the adoption of a final resolution that the Government of Brazil be invited to convene a second conference as soon as possible, to meet in Sao Paulo, the center of the coffee-producing district of Brazil, to delegate to have full power to carry into effect by treaty such recommendations as may be made by that conference.

COLOMBIA, a republic in South America. The area is 374,043 square miles, and the population is 4,000,000. Bogota, the capital, has about 120,000 inhabitants; Medellin, 40,000; Barranquilla, 40,000; Panama, 30,000; Cartagena, 20,000; Bucaramanga, 20,000.

Area and Population.—The estimated area of Colombia is 513,058 square miles, and the population is estimated at 4,000,000. Bogotá, the capital, has about 120,000 inhabitants; Medellín, 40,000; Barranquilla, 40,000; Panama, 30,000; Cartagena, 20,000; Bucaramanga, 20,000.

Finance.—For the two years 1897 and 1898 the revenue was 3,445,640 pesos, and the expenditure 4,129,180 pesos. The expenditure was 3,481,000 pesos, and of expense 33,771,013 pesos. The official annual report for 1902 shows that the international trade of Colombia for 1901 was 29,018,640 pesos, and expenditure was estimated at the same figure. For 1901 and 1902 a revenue of 29,083,640 pesos was expected, while the expenditure of 40,427,515 pesos. Of the revenue 21,453,640 pesos are from customs. The revenue is largely due to tobacco, which is imposed on exports of coffee, hides, rubber, gold, silver, and cattle as well as on imports. The expenditure for war in 1901-02 was estimated at 13,317,088 pesos; for justice, 4,571,801 pesos; for finance, 4,330,238 pesos; for debt, 5,773,560 pesos. The departments obtain revenues mainly from monopolies of tobacco, salt, opium, and ice, and the privilege of keeping gambling-houses, which are farmed out to the highest bidders. The net revenues of the departments for 1889 and 1900 were estimated at 10,986,736 pesos and the expenditures at 17,346,040 pesos. The external debt, mostly held in England, amounted, with arrears of interest, to 23,514,442, when an arrangement was made with the bondholders, in the beginning of 1897, for its reduction and exchange for £2,700,000 of new bonds on which the interest should be 1½ per cent. for three years, 2 per cent. for the next three years, 2½ per cent. for a third period of three years, and after that 3 per cent. The insurrection interrupted the payments in 1899, and in July, 1901, the arrears of interest amounted to £101,250. On the 1st November, 1901, a convention concluded, of which there were 320,000,000 pesos in circulation in 1901, worth only 4 per cent. of its face value. At Panama the paper does not circulate and the Peruvian sol is legal tender.

The Army.—Congress, at each session, fixes the strength of the standing army, which was 1,000 men for the biennial period 1899-90. In the event of war the President has authority to raise the strength as he deems necessary and can impress every able-bodied citizen into the service.

Commerce and Production.—The average production of gold and silver is $4,000,000 a year. Gold is washed in every department, and quartz-mines are worked in Antioquia, Cauca, Bolivar, Panama, and other departments. Copper, platinum, mercury, cinabars, manganese, and lead are also mined. The Government emerald-mines at Muzo and the emerald mines at San Agustin are operated by a French corporation. The total number of mines of all kinds on which license fees were paid in 1891 was 4,981, mostly gold-mines. Iron is smelted near Iquitos. The Government smelter at Zipaquira, and has reopened the coal-mines at San Jorge. The pearl fisheries have been worked with success by natives, but the Government proposes to lease them out. Coffee of fine quality is produced, and the cultivation is extending. The country is generally very fertile, but with primitive means of transportation agriculture can only be carried on for local wants. Cacao and tobacco are grown for export and rubber is gathered in the forests, as also is coca. Tolu balsam is a cultivated product. The number of cattle is estimated at 3,465,000, and many are exported. Vegetable ivory and dyewoods are minor exports. The chief imports are cotton goods, woolens, flour, rice, petroleum, wine, brandy, and salt. The value of the coffee exported in 1900 was £270,876; of gold in bars and dust, £99,286; of silver ore and bars, £40,149; of hides, £34,660; of tobacco, £58,204; of rubber, £14,043; of precious stones, £7,833; of tolu, £4,030; of divi-divi, £2,271. The share of the United States in the export trade in 1900 was 29,918,640 British dollars. Britain takes 25 per cent, France 17 per cent,
and Germany 16 per cent., leaving 15 per cent. for other countries. The Panama Railroad in 1900 carried westward across the isthmus 153,738 tons of goods, of which 60,318 tons were from New York and 54,963 tons from European ports, and eastward 293,619 tons, of which 118,670 tons were for New York and 77,219 tons for Europe.

Navigation.—The number of vessels entered at Barranquilla and Sabanilla in 1898 was 206, of 441,673 tons; cleared, 203, of 442,777 tons. The number entered in 1897 at Panama, Colon, Santa Maria, and Cartagena was 923, of 1,213,110 tons; cleared, 919, of 1,210,829 tons. The merchant Navy in 1898 consisted of 7 sailing vessels, of 1,770 tons, and 1 steamer, of 457 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1901 was 400 miles, while 76 miles were unfinished and 339 miles were projected. The post-office during the two years ending in 1898 carried 2,794,008 letters and postal cards, 1,283,153 newspapers and circulars, and 161,217 packets.

The telegraph-lines had a length of 8,000 miles in 1898. The number of messages in two years was 34,285,000, exchanged between Colón Concha, 35,500 miles.

The Panama Canal.—The company formed by Ferdinand de Lesseps in 1881 to construct a tide-level ship-canal across the Isthmus of Panama from Panama to Colon, 46 miles, raised 772,545,412 francs before the middle of 1886, but was forced to go into liquidation and suspend the work on March 15, 1888. An extension was obtained in 1889, to enable a new company to be formed, and in 1894 the company was organized and agreed to complete the canal in ten years. The term was, in 1900, extended for six years longer, till March 21, 1910. It was estimated that the canal might be completed with locks, the tide-water level having been abandoned, at a further cost of 512,000,000 francs. The directors, who at first demanded $109,000,000, when the Isthmian Canal Commission recommended the Nicaraguan route to Congress, estimating that the work done on the Panama excavations could be utilized for the Nicaragua route, were forced to modify their plans. They announced that the canal could be completed in ten years and that it would cost $45,000,000 less to complete it than to construct the projected Nicaraguan Canal. The French company excavated for 10 miles on the Atlantic side and 15 miles on the Pacific side, the sections at tide-level. Considerable work was done also in the Culebra cut, the highest point above tide-water, which will be cut down to something over 100 feet above the sea. There were 2,500 men at work there in 1899. The advantages of the Panama over the Nicaragua route are, that although the latter is shorter to ports on the Atlantic and Gulf coasts and those of the Pacific coasts of the United States, the Panama route is the shorter to South American ports and more direct between Europe and all Pacific ports; that the more tortuous Nicaragua route would probably not be navigable at night and vessels would take thirty hours, whereas they could go through the Panama Canal in twelve hours; that the cost of maintenance of the Panama Canal would be only $2,500,000, a saving of $1,000,000 a year over the Nicaragua route, with a saving too of interest $5,800,000, and a saving in the cost of construction. The damming of the San Juan river is a difficult engineering problem on the Panama route, and on the other side offers difficulties and the question of possible volcanic disturbances. Both routes are unhealthy and demand much attention to sanitation. Besides the property and franchise of the Panama Canal Company, the title of which is clear, having been transferred to the new company by the receiver of the original company, it was considered necessary to acquire a strip of land 6 miles wide, in order that the canal may be policed and protected from unsanitary conditions. To obtain this it was necessary to have a new concession from the Colombian Government. After having concluded a contract with the existing Panama Canal Company to pay $40,000,000 in cash for the surrender of its perpetual lease and all right and title to the canal, all contracts and machinery, and the railroad running from ocean to ocean, subject to the title being valid and to ratification by the United States Congress, Secretary Hay entered into negotiations with the Colombian minister. He agreed in behalf of the United States Government to pay $7,000,000 in cash and an annuity of $600,000 to the Government of Colombia for the absolute surrender to the United States of 3 miles of land on either side of the canal for its entire length and authority over 5 leagues of the sea at either entrance. The United States Government undertook to expend immediately at least $15,000,000 to install proper machinery and appliances to complete the canal and to employ an increased force of American laborers to do the work. A great part of the work already done will have to be reconstructed. The plans of the French engineers have been much enlarged to provide for a canal accommodating three times as great a tonnage as the Suez Canal carries now. The waterway is to be 47 miles long and to have a depth of 36 feet and a width at bottom of 150 feet, instead of 30 feet of depth and 50 feet of width as originally designed. It will be possible for 4 steamships of 30 feet beam to pass one another at any spot without danger. A traffic of 7,000 vessels a year can be taken care of. Between European ports and those of the Orient the saving of distance by the Panama route is 4,000 miles. Between American ports on the Pacific the voyage can be made, in most cases, in one-fifth of the time now consumed. Experts calculate that the canal will return a net profit on the capital expended of 6 per cent. The Panama Railroad, acquired with the canal, is valued at $7,000,000. During the work of construction it will be useful in carrying men and materials, and when the canal is completed in transporting passengers from one port to the other. The total cost of the canal, including the purchase money, is estimated at $130,000,000. The Panama Canal Company could not transfer its rights to the United States Government without first obtaining the consent of the Colombian Government. In the negotiations with Nicaragua and Costa Rica respecting the Nicaragua Canal, Nicaragua stipulated for a payment of $6,000,000 and Costa Rica for $1,000,000, with a nominal rent of $25,000 a year to Nicaragua and $3,000 to Costa Rica, serving as evidence of their sovereignty over the land traversed by the canal transferred by a perpetual lease to the United States. Colombia, for $7,000,000 and an annual rental of $600,000,
offered the same thing as a perpetual lease of the 6-mile strip and the interests in the canal re- served in the contract with the company. A lease in perpetuity was illegal under the Colombi- an Constitution, but a lease for the term of one hundred years, renewable after each term at the option of the United States, answers the same purpose. Attorney-General Knox examined the title of the Panama Canal Company and its power under the French law to transfer its prop- erty and rights to the United States Government. The new company when constituted assumed an obligation to pay 60 per cent. of the profits of the canal to the stockholders of the old com- pany. Since the entire assets of the old company were turned over to the new company the latter can dispose of this claim of 60 per cent. of the profits. The new company was found to be solvent, with full power to sell with the consent of the French court, which was given. The United States Government can take title to the shares of the canal company in the Panama Rail- road. It can take and hold any kind of prop- erty it may need of in the same manner that an individual can. The Colombian Govern- ment would have difficulty policing the canal strip and the terminal ports. A joint jurisdic- tion was proposed, the administration of justice to be by mixed tribunals, with American and Colombian police both employed, having the right to pursue persons charged with crimes committed within the limits of the belt into any part of Colombia. A treaty was concluded between Secretary Hay and the Señor Concha on May 18, but further arrangements were neces- sary to provide for these questions of sovereign- ty and jurisdiction. When the United States naval authorities stopped the transport of Colombi- an troops by the Panama Railroad the Colombi- an minister delayed negotiations. The canal is to be completed in six years.

The Civil War.—The armed conflict, begun on Oct. 17, 1899, between the Liberals and the Conservatives, who have been entrenched in power for seventeen years, was mostly confined, in the beginning, to the city of Panama. The people of the isthmus, who originally joined the Republic of New Granada of their own free will, have always felt more or less de-ートed by political change, and in an increasing degree economically detached from the natives of the interior parts of the republic, who pro- vide them with large amounts of money. They paid taxes and monoplyes that they consider un- equal. They sympathized generally with the Liberal cause, and in other parts of the republic the common people, on whom the stress of the war taxation and the conscription mainly fell, sympathized more and more with the Liberals, who began the war, and blamed the Govern- ment for not making peace. Duties on all im- ported merchandise were raised, in some cases doubled. The effect in Panama was more marked than elsewhere. The once lively commerce was paralyzed; prosperous industries went out of ex- istence. The necessaries of life were hard to get. Hundreds of suspected Liberals filled the prisons. At the opening of the year an insurgent force of 2,000 men camped within 6 miles of the city of Panama. Risions occurred from time to time in various parts of the republic. The struggle grew fiercer and subsided intermittently, but was the most restive and worst in the history of the country. Sometimes the revolutionists had 35,000 men under arms. The Government raised now and then a total force of 75,000 men, im-
attacking the insurgents by land and sea, their lives in other parts of the republic having been rendered precarious. At all and Aquidulce the Liberals suffered much from disease. The town of Aquidulce, which had been occupied by the Conservatives, was invested by the rebels, and Government troops were sent to the relief of the garrison. The Government troops landed there were soon in worse case than the rebels, without shelter and short of provisions and unused to the climate. Severe fighting began on July 29, continuing two days, and beginning again after a short armistice to allow both sides to care for the wounded and bury the dead. The insurgent gunboat Pachita cut off the communications of the Government troops, which had to depend on a sea base, and were therefore practically surrounded. The Government steamers Boyaca and Chicuito on July 30 attempted to enter the river with supplies and reinforcements, but retired after some firing, the Chicuito returning to Panama, while the Boyaca was chased and captured with 300 soldiers, besides the crew, stores of provisions and ammunition, and two fine new guns. Gen. Salazar made ready to seize a British merchant steamer, then being no British flag on the ocean, under instructions from Washington. Capt. Potter of the Ranger interfered by the courtesy of nations when requested by the British consul. Most of the liberal troops were later forced to retire to the siege of Aquidulce, where Gen. Morales Bertti with 2,500 men was held by 2,500. Gen. Herrera at the same time made a demonstration against Colon, which by the mortars proved their entrenchments. They held both terminal ports in strength, while the rebels occupied the line. The mortality among the Government troops from bad food, exposure, and lack of sanitary regulations was excessive, not less than 25 per cent. of the reinforcements. American marines were landed to guard the railroad and the stations at Panama and Colon. While the siege of Aquidulce was going on peace negotiations were begun in Washington between the Colombian minister and Gen. Soto y Vargas-Sandia, the negotiators of the revolutionists. Peace commissioners went to Aquidulce to arrange a truce, but were unable to communicate with Gen. Herrera. Dr. Concha was sent from Washington by way of Curita, where he arrived in instruction. After a siege lasting over a month Gen. Berti surrendered with honor. This victory not only released the besiegers for operations against Colon, held by 1,000 Government troops, and Panama, held by 2,500, but it stimulated the rebels to fresh exactions in other parts of the republic. At Santa Marta the Government troops were suddenly attacked and routed with a loss of 100 by revolutionists who committed barbarities in revenge for the execution of rebel officers at Panama. Gen. Uribe Uribe and Gen. Castillo appeared on the Magdalena river with fresh forces. Gen. Herrera sent arms and ammunition to the rebels in Cauca. Gen. Perdomo was sent with 4,000 men to reinforce the Government troops on the isthmus, but he waited at Barquilla until he could complete arrangements for commissariat and sanitation. At the prospect of active operations at the isthmus ports United States ships were ordered to the isthmus, the Wisconsin to Panama and the Cincinnati to Colon, to enforce the treaty stipulations by preventing any interference of traffic, even by the vessels of the rebels. The U.S. steamer Panther carried a battalion of marines to Colon. Capt. McLean of the Cincinnati on arrival notified both parties that neither army would be allowed to obstruct traffic, and landed a force of bluejackets. The Government troops between Colon and Panama, their arms being taken in a separate train and guarded by a naval force. Before the end of September 2,000 United States marines and sailors were landed in spite of the protest of Gen. Salazar, who had forbidden the continued employment of Liberals on the railroad, but was overruled by his Government. When the Pacific Steam Navigation Company declined to transport troops to the isthmus an order exempting foreign vessels from tonnage dues was revoked. The main revolutionary force operating on the great plains east of Bogota, under Gen. Carreazo, surrendered in the middle of September. An attempt of rebels to take a Government gunboat on the Magdalena river failed. After the arrival of Gen. Perdomo's reenforcements the military situation became more critical. Capt. McLean had notified the opposing commanders that the United States navy had taken the direction of the railroad from sea to sea and would not permit any fighting along the line. By the treaty of 1846 between the United States and Colombia the United States was given the right of way for transit across the isthmus to the Government and citizens of the United States and their property, and the United States guarantees the neutrality of the land and unimpeded right of transit from sea to sea so that it shall not be interrupted or embarrassed. The instructions of the United States Navy Department were not to allow any transportation of arms which might contravene these provisions of the treaty, nor to sanction any use of the road which might convert the line of transit into a theater of hostility. Capt. McLean had permitted Government troops to go by special train. When Rear-Admiral Casey arrived on the Wisconsin he ordered that no more Colombian officers, troops, arms, or ammunition be permitted unless by special permission. The Colombian Government, through its minister at Washington, protested against being prevented from transporting troops at will any time for transit within its territory. The withdrawal of Government troops from the Magdalena river was followed by such renewed activity of the insurgents that some were sent to Panama. Gen. Uribe held Tenerife, near Santa Marta, and with quick-firing guns cut communications on the river. The Government was reduced to such financial straits that its ability to continue the war was in question. All classes endured severe hardship and the poor were reduced to pitiable destitution. The troops sent out from the interior, now including boys eight years of age, were half starved. Already over 20,000 men had fallen in the 400 engagements that had been fought, or died in the camps. The misery and privation attending the war had decimated the population. Much valuable property belonging to foreign nations had been destroyed, and several times the United States had interfered to protect the property of its own citizens and those of European countries, although, as a rule, both sides spared and protected foreigners. The blockade of the Magdalena river ceased when the Government sent a sufficient force to cause Gen. Uribe to retire. Later Gen. Uribe surrendered at Rio Frio. Gen. Castillo's force was beaten at La Cienaga by troops under Gen. Marjarres. The steamer Panther carried a battalion of marines to Colon. Capt. McLean of the Cincinnati on arrival notified.
to pacify the interior and encouraged the people to resume their peaceful occupations. The President called upon each department to raise 2,000 men to clear the rebels from the isthmus. The Government had bought a steamer in the United States and expected to get an armed cruiser from Chile. The peace negotiations were to be resumed on board the battle-ship Wisconsin by representatives of the Government and of the revolutionary party. The Government, however, after the latest successes declined to discuss anything but the acceptance of the decree of amnesty. Gen. Vargas-Santos THEREupon refused to attend the conference, which he had arranged with Gen. Santo Domingo with the object of bringing about an effective and lasting peace by harmonizing the interests of the several political parties concerned in the revolutionary contest. Gen. Uribe Uribe's condemnation to death after he had capitulated further decided him to withdraw from the conference and issue orders to the revolutionary army to continue the warfare until the Government should recognize the civil and political rights for which the Liberals had taken up arms.

COLOMBO. (See under UNITED STATES.)

CONGO, INDEPENDENT STATE OF THE, a sovereign, monarchial, neutral, and independent state in central Africa, created out of the Congo International Association, which was founded in 1883 by King Leopold of Belgium, and exercised sovereign power recognized by the powers. The general act of Berlin, signed on Feb. 9, 1885, entered into force with Leopold II, King of the Belgians, as its sovereign. A convention was signed on July 3, 1890, between Belgium and the Congo State, which provided for the annexation of the territories of the Independent State to Belgium after the expiration of ten years, King Leopold having by a will dated Aug. 2, 1889, bequeathed his sovereign rights in the Congo territories to the Belgian state after his death. In the convention the Belgian Government agreed to advance to the Congo Independent State the sum of 26,000,000 francs, 3,000 francs for roads and ports, and 2,000,000 francs a year for ten years. The loans were to bear no interest during the period of ten years, at the end of which the Belgian Government would have the option of annexing the territories of the Independent State, with all the rights, appurtenances, and advantages attaching to the sovereignty of that State, in which case the Belgian Government would be reimbursed the interest therefor and be remunerated after a further period of ten years, the sums accruing from concessions of State lands or mines being set aside for the payments. The Belgian Chambers on Aug. 10, 1901, passed a law reserving the option of annexation for a further period of ten years in consideration of the remission of all claims for interest and the repayment of the loan during this period. An additional loan was made for the purpose of repaying one obtained from an Antwerp bank to cover a deficit caused by an expedition into the Nile valley and a revolt of the Arabs. This increased to 32,000,000 francs the indebtedness of the Congo State to the Belgian Government.

The seat of the Central Government is at Brussels, where the Secretary of State, Baron Edmond van Estvelle, directs the administration with the assistance of secretaries in the various departments. The headquarters of the local Government is at Boma, where E. Wangelmée, Vice-Governor-General, directs the administration with the assistance of Secretary-General van Damme and a consultative committee composed of the chief officials and non-official members, not exceeding 5, appointed annually. The territories are divided into 14 districts: Banana, Boma, Matadi, the Cataracts, Stanley Pool, the district of the Equator, the Eastern Province, Lualaba-Kasa, Eastern Kwango, Lake Leopold II, Bangala, Ubangi, Welle, Aruwimi. The public force consists of 12,500 trained native soldiers under 116 European commissioned officers and 348 sergeants.

Area and Population.—The area of the Congo State is estimated at 900,000 square miles, and the population at 30,000,000. There were 2,204 Europeans on Jan. 1, 1901, comprising 1,187 Belgians, 170 Italians, 115 British, 114 Dutch, 107 Swedes, 91 Portuguese, 62 Germans, 58 French, 42 Danes, 30 Americans, 19 Swiss, 19 Norwegians, 14 Russians, 11 Spaniards, 9 Austrians, and 141 others. These include the white officers in the Congo service, the traders of various nationalities, and 180 Catholic and 120 Protestant missionaries. The missionaries teach mostly in the Swaheli language of the Arabs rather than in the numerous Bantu dialects. The Government aids their schools and has established schools of its own in 3 agricultural colonies.

Finances.—The revenue for 1900 was estimated at 26,256,500 francs and the expenditure at 27,731,254 francs. The revenue for 1901 was 30,751,054 francs and the expenditure at 31,236,054 francs. For 1902 the estimate of revenue was 28,709,000 francs, of which 6,052,000 francs were derived from customs, 4,150,000 francs from transport, 15,452,000 francs from domains, 1,703,000 francs from loans, 580,000 francs from direct taxation, and 759,000 francs from various sources. The expenditures for 1902 were estimated at 32,405,492 francs, of which 647,460 francs were for administration in Europe, 3,630,245 francs for administration in Africa, 7,965,125 francs for education, 8,218,030 francs for public works, 2,300,000 francs for transport, 1,137,755 francs for public works, 1,906,462 francs for agriculture, 5,752,905 francs for domains, 3,830,705 francs for various expenses, and 5,586,494 francs for extraordinary purposes.

The debts of the Congo State consist of 452-220 francs of 24-per-cent. bonds given in 1867 to the original subscribers to the capital of the Congo region; 70,000,000 francs of bonds issued under a decree of Feb. 7, 1888, authorizing the issue of 150,000,000 francs; 14,000,000 francs of 4-per-cent. bonds issued under the decree of Oct. 17, 1896, and June 14, 1898; 25,000,000 francs advanced by Belgium under the convention ratified by the Belgian Chambers on July 25, 1899; 584,415 francs advanced by the Belgian Government under a convention of June 10, 1895; and 50,000,000 francs of 4-per-cent. bonds issued in October, 1901, for railroads and other public works.

Commerce and Production.—The chief product of the Congo basin is rubber. Ivory is a diminishing article of export. Palm-nuts and palm-oil are less important than they are on the Guinea coast. Coffee and cacao are grown with success. The natives cultivate tobacco for their own use, and an export trade has begun. The Government has planted the Havana and Sumatra varieties for experimentation to the Government except the districts expressly reserved for native occupancy and the registered private estates.
The general commerce for 1900, including products brought down from beyond the confines of the State for export and the importation of merchandise sent beyond the borders, amounted to 31,803,214 francs for imports and 51,775,578 francs for exports. The special imports were 24,754,109 francs in value, and the special exports were 47,577,401 francs. The special imports of textile fabrics and clothing were 8,673,563 francs; of articles of food, 4,310,138 francs; of machinery, 1,939,653 francs; of beverages, 1,903,125 francs; of steamer and parts of steamers, 1,783,302 francs; of hardware and metal, 1,355,148 francs; of arms and ammunition, 761,804 francs. The special exports of rubber were 39,874,005 francs in value; of ivory, 1,533,300 francs; of palm-nuts, 1,318,810 francs; of palm-oil, 813,300 francs; of woods, 39,886 francs; of coffee, 27,825 francs; of skins, 2,811 francs. The total value of the special imports of Belgium furnished 17,570,483 francs; Great Britain, 2,923,590 francs; Netherlands, 1,507,490 francs; Germany, 1,302,536 francs. Of the special exports Belgium furnished 16,064,127 francs; Netherlands, 2,904,617 francs; Portuguese Africa, 1,565,362 francs; Great Britain, 270,000 francs. The general commerce was distributed as follows:

<table>

The special imports in 1901 amounted to 23,100,000 francs; special exports, 50,500,000 francs, including 43,900,000 francs for rubber, 5,700,000 francs for palm-kernels, 3,900,000 francs for ivory, 300,000 francs for copal. Coffee, earthnuts, cacao, and tobacco are represented by petty sums.

Navigation.—The number of ocean vessels that were entered at the port of Leopoldville and Boma during 1900 were 220, of 465,674 tons; cleared, 227, of 488,562 tons. Of the tonnage entered 273,059 tons and of that cleared 270,111 tons were Belgian, while 81,942 tons entered and 80,330 cleared. British and French vessels entered and cleared were German. There were entered coastalwise 408 vessels, of 18,232 tons, and cleared 428, of 18,746 tons.

Communications.—The Congo and its tributaries have 3,000 miles of navigable water. The Congo itself is navigable for 1,000 miles above Stanley Pool. On the lower Congo the State had 12 steamers plying from Banana to Matadi. The Congo railroad transports goods and passengers from this point to Leopoldville. 200 miles above. The railroad has a length of 250 miles. On the upper river the Government transport service comprises 28 steamers. A railroad is under construction in Mayumbe, of which 20 miles were completed at the beginning of 1902. A Belgian syndicate has obtained a concession for nineteen years for railroads from Stanleyville, on the upper Congo, to Lake Albert, and from Nyangwe to Lake Tanganyika. The head of Lake Albert and the island of Bangor, Chicago, Hartford, Oberlin, Oakland, Cal. (Pacific), and New Haven, Conn. (Yale), return 61 professors, 27 instructors or lecturers, 13 resident librarians or library directors, 46 in the advanced or graduate class, and 320 undergraduates.

Total: 17,065 1,178,788 1,489,549

Church Building Society.—The forty-ninth annual report of the Congregational Church Building Society, presented at the annual meeting in January, gave the total receipts of the year as having been $251,686. Loans and grants amounting to $253,195 had been paid to 93 churches to aid in building houses of worship, and parsonage loans amounting to $22,510 had been paid. In 1947, the aid of these sums of church property valued at $979,297 had been secured. Grants amounting to $42,392 had been voted to 80 churches; church building loans of $79,300 to 39 churches; and loans on parsonages of $30,005 to 61 churches. A considerable number of contributions on the annuity plan had been received.

Home Missionary Society.—The seventy-sixth annual meeting of the Congregational Home Missionary Society was held at Syracuse, N. Y., June 3 to 6. In the absence of the president, the Rev. Newell Dwight Hills, D. D., Mr. William H. Wanamaker presided. Eighteen hundred and forty-five missionaries had been employed during the year in the Territories, of whom 1,262 had been pastors or stated supplies of single congregations and 586 had ministered to two or three or more congregations each. Under their labor the Gospel had been preached regularly or at stated intervals to 2,484 congregations or missions. Two hundred and eighteen missionaries had preached in foreign languages to German, Scandinavian, Bohemian, Polish, French, Mexican, Italian, Spanish, Finnish, Armenian, Greek, and Welsh congregations. The missionaries returned 2,018 Sunday-schools under their special care with about 133,378 pupils. 166 new schools organized, 4,321 additions on confession of faith, 65 churches organized, 42 churches assumed support, and many new church buildings, parsonages, and improvements. The total receipts of the National Society for the year had been $346,840, and its expenditures $293,064. The debt at the beginning of the year had been $303,695, and at the close $39,912, having been reduced $233,783. The auxiliary societies had raised and expended on their own fields during the year $255,612. Adding this sum to the receipts and expenditures of the National Society, the total of receipts for home missions during the year was $602,462, and of expenditures $348,676. The woman's department had conducted twenty years of successful activity. It had been conducted during the past year as a part of the general executive office. Besides the continued publication of its

periodical, the Home Missionary, now monthly, the society had added much to its department of junior literature. The invested funds were controlled under seven heads and including funds temporarily in the hands of trustees and "temporary investments," amounted to $207,590. At the business meeting of the society, the Committee of Fifteen, appointed in the previous year to consider some plan for perfecting the relations between the auxiliaries and the National Society, reported, proposing changes in the constitution intended to substitute for the present voting membership a corporate body elected for a term of years by the churches, to read as follows:

"ARTICLE III. MEMBERSHIP.

"The members of this society shall consist of honorary life members, life members, members elected by the churches, and the officials of the society during their respective terms of office. 1. Any person chosen as president, vice-president, recording secretary, treasurer, corresponding secretary, auditor, or member of the Executive Committee, shall be a voting member during his term of service. 2. Life members appearing on the roll at the date of the passage of this article shall retain their voting right unless it be voluntarily surrendered. 3. The churches shall be represented in the voting membership of this society by members elected in number and manner as follows: Each State association or conference of churches may elect three members, and in addition, one member for every 5,000 church-members; at the first election, three of the State associations or conferences, one-third of the members shall be elected for one year, one-third for two years, and one-third for three years; and thereafter one-third shall be elected each for a term of three years. In any year the State bodies may elect members to fill vacancies. It is recommended that the number of members be in all cases divided between ministers and laymen as nearly equally as is practicable. 4. Honorary life members. Any person on whose behalf $50 shall be paid into the treasury of this society at any one time, or into the treasury of any of its auxiliaries at any one time, accompanied by a request for honorary life membership, shall be an honorary life member, with all the privileges of membership except voting.

"ARTICLE VI. VOTERS.

"All members elected by the churches through their State associations or conferences as herein provided, bringing proper credentials, and life members and officers of the society, who shall be present and cause their names to be registered upon a roll to be made at each annual or other meeting of this society by the recording secretary, and no other persons, shall have the right to vote at the annual election and in annual or other meetings of the society, upon questions there arising."

The committee further recommended that an annual conference be held at the place of the annual meeting of the society, and at an hour preceding its opening session, in which the representatives of the auxiliaries and societies and the officers and Executive Committee of the Congregational Home Missionary Society shall confer with regard to the condition and problems of home missionary work in all parts of the land. The report was adopted and the committee was also resolved that hereafter the president of the society should not hold office for two successive years.

Education Board.—The annual meeting of the Congregational Education Board was held in Boston, Mass., June 11. The receipts of the
society for the year had been $135,288, or $35,612 more than those of the previous year, and it was free from debt, with a small balance in its treasury. It had aided 22 academies and 3 colleges. Five of its 6 schools in Utah were in centers entirely Mormon.

**American Missionary Association.**—The eighth annual meeting of the American Missionary Association was held at New London, Conn., Oct. 21 to 23, the Rev. Washington Gladden, D. D., presiding. The total receipts for the year, including those on account of the Daniel Hand fund, had been $404,291, and the expenditures $368,347. The Daniel Hand Educational fund for colored people was credited with $56,636 as income and $14,440 on endowment account; and other endowment funds of $10,000 had been received. A balance of $73,907 was shown in the report.

The religious and educational work of the association was carried on in 22 States and Territories of the United States, and among people of 6 different races: Christianity, among the Indian, the negro, and the Irish-American, the Chinese, and the Japanese. There were 267 mission schools, with 5,465 pupils; having in all 490 instructors, and showing a total of 14,048 pupils. Of these pupils 93 were in theological, 271 in collegiate, 365 in collegiate preparatory, 1,159 in normal departments. Much attention was given in most of the schools to manual and industrial training. Eleven of the schools were “mountain schools,” among the white people of the mountainous, and rural, and between 96 instructors and 2,198 pupils. Two schools, with 10 instructors and 343 pupils, were in Porto Rico. The Church work in the South included 250 churches, with 139 ministers and missionaries, and 12,155 church-members, who had contributed $2,813 for benevolences and raised $30,298 for church purposes, 17,311 pupils in Sunday-schools, and 1,168 members added on profession during the year. A larger number of churches had been enrolled during the past year than in any year since 1885. In the Indian missions, 20 churches and 10 out-stations were reported, with 47 white and 41 Indian teachers and missionaries, 1,453 church-members, 2,661 pupils in Sunday-schools, and contributions for benevolence and church support of $2,681. Six Indian schools, in Dakota, Montana, and Alaska, returned 342 pupils. While the number of churches in these missions remained the same as in the previous year and the number of subscribers and workers and the benevolent contributions had decreased, substantial gains had been made in church-membership and in the attendance at the 6 schools. An unexpected development was mentioned in Alaska, in that Eskimos from the islands of Bering’s Straits, and even from Siberia, were finding their way to the American islands and coming in touch with the spirit and power of Christianity. At the business meeting of the association, the question of the election of salaried officers by the Executive Committee rather than at the annual meeting was referred; the president of the association was made ex officio a member of the Executive Committee. It was reported that no plan had been matured for holding one annual meeting of all the societies, nor for publishing one magazine in cooperation with the other societies, and that the proposition to have one treasurer for the three societies whose headquarters were in New York had not been found feasible. A plan was substituted providing for a limited corporate and responsible membership of the association. Being, in effect, a notice of a proposed amendment to the constitution, its consideration was deferred to the next year.

**The American Board.—The ninety-third annual meeting of the American Board of Commissioners for Foreign Missions was held at Oberlin, Ohio, Oct. 14 to 17, Mr. Samuel Carrier, Presiding. The Prudential Committee reported that the receipts for the year, not including moneys for the debt, had been $741,454, an increase from the previous year of $44,068. After paying the debt of $102,341, largely through a collection taken at the previous meeting (see Annual Cyclopaedia for 1901, p. 139) an overplus remained of $1,510. Counting in these sums, the grand total of receipts from all sources was $845,105. While the receipts from regular unconditioned donations, individuals, churches, and societies ($465,035) had fallen off $4,285, those contributed through the Woman’s Board ($214,710) had increased $16,055, and those from legacies $49,510. The special gifts amounted to $42,717. The expenditures had been $741,503. The Twentieth Century fund, contemplated to be of $250,000, now amounted to $115,796. It had not been pressed during the past year. Fifty thousand dollars were contributed in behalf of the National Armenian Relief Committee and the Orphans’ Homes in India. Relations were maintained with the Congregational Foreign Mission Board of Canada, whose contributions went largely to the support of the work in the West Central African Mission. The Yale Foreign Missionary Society, connected with Yale University, had been organized to be independent of denominational control, but would cooperate with the board, and was to establish a mission in China.

From the 20 mission fields, with 101 stations, 1,301 out-stations, and 1,679 places for stated preaching, were returned 168 ordained missionaries (15 being physicians), 15 other men physicians, and 360 woman missionaries (12 of them physicians), making, with 6 other assistants, the whole number of 549 laborers sent from the United States; 286 native pastors and, including also native priests, were reported; 732 native catechists, Bible women, and others, totals of 3,581 native laborers and of 4,130 Americans and natives; 324 churches, with 55,645 members, 5,500 having been added during the year, 261 members of Sunday-schools. The whole number of church-members from the first, as nearly as could be learned, was 163,267. The educational department included 14 theological seminaries and station classes, with 167 students for the ministry and 916 students in collegiate training, 118 boarding and high schools, with 10,805 pupils, and 1,134 common schools, with 46,149 pupils; making the whole number under instruction, 60,964. The native contributions, so far as reported, amounted to $107,512. An additional college at Smyrna had been formally recognized, making 3 colleges in the Western Turkey mission. Central Turkey College, having completed twenty-six years of work, was beginning to pass gradually into the hands of the native converts. In the Marshall Islands the church-membership had almost trebled in ten years, and the German Government was friendly. The devastated missions in northern China had been largely restored. A headquarters building had been completed for the mission at Hong-Kong, without expense to the board. Advances were mentioned in the African missions. As the tragic incident in the Egyptian Turkey mission was the capture of Miss Ellen M. Stone and a native assistant by brigands and
their retention for six months, when their release was secured on payment of a ransom of $68,200. Nevertheless, the diggings were successful, good progress was made, and there had been a marked growth in the churches. A union evangelistic movement, in which all the evangelical denominations except one were cooperating, was the most notable event in Japan. The Doshisha was now firmly established on a Christian basis, and its diplomas were recognized by the Government.

"The Forward Movement," as a plan was called under which individuals and local churches contributed to the support of special missions or missionaries, was approved, and the Prudential Committee was directed to provide for its maintenance. A proposition made by the Committee of the National Congregational Council that the appointment of paid secretaries be vested in the Executive or Prudential Committee was referred to. In view of certain legal questions arising in connection with a proposition to make some changes in the membership of the board of trustees, the Prudential Committee was given permission to seek to obtain modifications in its charter to meet the case. In view of the extension of German sovereignty and the German language over that region, the Prudential Committee was empowered to transfer the missions in Micronesia, except in Guam, when that can be done advantageously, to societies of other nationalities. A corner-stone was dedicated for a memorial arch of the missionaries of the board in China who lost their lives in the "Boxer" troubles. The arch will stand in the grounds of the university at Oberlin.

Deputation to India and Ceylon.—A deputation which had been appointed by the American Board to visit the missions in India and Ceylon presented the report of its visitation to the Prudential Committee Feb. 4. Besides investigating the specific work of the board, the deputation was called upon to look into the general religious conditions in the country, the progress of Christianity, and the work of Christian missions. Its report related principally to the Ceylon, Madura, and Trichinopoly missions. The deputation found that the Christian movement in India was gaining in momentum with every decade. In the forty years from 1851 to 1891 the number of Protestant Christians had increased 146 per cent, while the population had increased only 20 per cent. But the entire Christian force now in the country, though larger than it had ever been before, was far too small to reach all parts of the empire. The attention of the deputation was frequently called by educated Hindus and by English Government officials to the need of industrial education. A false sentiment prevailed against sending students who had advanced as far as entrance to college engaging in manual labor, and it had created a class of educated illicits. The large proportion of Christian converts were from the lower castes, although there were many devout Christians from among the Brahmins. Every year new castes were reached, and the work was broadening among the other castes. In one school children of 18 different castes lived and studied together. The Government of India was in sympathy with mission work, and the rulers of the nation were interested in it. The Congregational Church in America had 48,922 members, 7,000 of whom were native. Every large Protestant missionary society in the world had its representatives in the field. The mission in Ceylon would probably not call for a mission force larger than it now possessed. In it a more efficient and effective system was needed to meet the cost than in any other mission of the board. The Madura mission, lying in a field in which the American Board worked exclusively, was compact, and marked by the number and prosperity of its educational enterprises and hospitals, and the efficiency of the Young People's Society of Christian Endeavor. In the Marathi mission the stations covered more territory and were farther separated. A proposition had been made to the other evangelical mission boards which use the Marathi language to unite in the conduct of the theological seminary at Ahmednagar upon a union basis, and some of them had responded favorably. The deputation made a number of recommendations, among which was one that the missionaries so modify their courses of instruction that all male pupils aided through the mission should have some practical instruction in productive manual labor adapted to the conditions and needs of the country, and the female pupils also, with necessary modifications; and that such a course be entered upon systematically, so that it should be operative alike in the larger and the smaller missions; and that the mission should provide as much English education as is practicable for carefully selected candidates for the position of pastors and preachers. In the effort to carry the Gospel to the remote corners of the country, a Christian community drawn from various existing castes will necessarily be stronger than if confined to any single class, trade, or caste. The time has passed when missions should provide free education to all who are willing to attend mission schools. As the course of study rises so as to include English, which already has a recognized commercial value, the fees demanded should be increased so as to cover, in a large measure, the increased expense of the higher courses.

Woman's Societies.—The thirty-fourth annual meeting of the Woman's Board of Missions of the Interior was held in Chicago, Oct. 28. The receipts for the year had been $81,220, a larger sum than had been received in any former year, but which still fell short more than $5,000 of the sum actually expended. Contributions were made during the meeting of $2,955 toward paying the debt of $3,500. Accounts were given of enterprises in which the society is interested in Turkey, India, China, Japan, West Africa, Spain, and Micronesia.

Reports made at the annual meeting of the Woman's Home Missionary Association, in Boston, Mass., Oct. 29, showed that it had stations in 20 different States and Alaska, and in Cuba, and was laboring among Americans and foreigners.

The thirty-fifth annual meeting of the Woman's Board of Missions was held in Washington, D. C., Nov. 4 to 9.

Congregational Union of Ontario and Quebec.—The meeting of the Congregational Union of Ontario and Quebec was held at Ota- tawa in June. The Rev. J. F. Gerrie was elected chairman. The annual report showed that there were 82 churches connected with the union, with 7,705 members and 21,000 persons under pastoral care. The total value of church property was $860,000. Forty-three churches were free from debt. The sum of $100,000 had been raised during the year. The figures show an in-
crease of 518 members and $9,500 in contributions. Sixty-two of the churches, with 5,639 members, are in Ontario.

The Congregational churches were visited in September by a deputation of representatives of the Congregational Union of England and Wales, who were despatched in the interests of the Colonial Missionary Society to inquire into the condition and prospects of the Congregationalists of the Dominion, with a view to ascertaining what responsibilities rested upon English Congregationalists for the evangelization of the new territories in the far West.

English Congregationalists.—The English Congregational Year-Book for 1902 gives the number of Congregational churches, chapels, and mission stations in England and Wales as 4,873, with 1,743,583 sittings; of ministers as 3,121, of whom 572 were out of service and 118 were in professional, secretarial, or other work; of lay preachers as 5,128, besides 227 evangelists; of church members as 436,279, showing an increase of 4,762 over the previous year; of members of Sunday-schools, 684,747, showing a decrease of 8,600. The theological seminaries returned 395 students, 209 new students, 62 new churches and 66 new churches and halls had been built during the year. Fifty ministers had been ordained. In 1900, 1,184 churches and mission stations were returned as being on the Continent of Europe and in the British colonies. Of the latter, 143 were in Canada, 283 in Australasia, and 258 in South Africa. The ministers abroad comprised 472 in the colonies and on the Continent of Europe, and 273 English missionaries in the service of the London Missionary Society. The colleges were attended by 401 students, and the 10 institutions of the London Missionary Society in heathen lands by 300 students.

Congregational Union of England and Wales.—The Congregational Union of England and Wales met in its annual assembly in London, May 12. In the absence of the chairman, Principal Caleb Scott, who was seriously ill, the Rev. Dr. G. S. Barrett, of Norwich, presided. In his opening address to the assembly, he gave it general notice of the question of the "United Congregational Church," which was to come before the meeting, said that whatever might be the result of the discussions on the question of the amalgamation of the minds of the two churches, the Church was clear upon the point that the time had come for their churches when, without sacrificing any of their independence, they might be drawn into a federation that should reveal their common brotherhood.

The report of the committee opened with a brief survey of the work achieved by the union since its formation seventy years before. During this period it had established the Colonial, Evangelical Continental, English Chapel-Building, Church Aid, Pastors' Insurance Aid, and Total Abstinence Societies; had created the Memorial Hall Trust, the Pastors' Retiring Fund, the Pastors' Widows' Fund, the Young People's Union, and other societies; had published the Congregational Lectures, the Year-Book, and hymnals; had given substantial aid to Congregational societies through its earnings in the publication department; and had given stimulus to churches from its platform and engendered friendly feeling among them. An important step in the evolution of Congregational affairs had been taken in the creation of an incorporated society, the Congregational Union of England and Wales, in 1886, to provide opportunity for such changes as may commend themselves to a majority of the most earnest men among them."
The proposals of Dr. Parker, as they had been summarized in the circular sent out by the CONGREGATIONALISTS.

The name. The United Congregational Church.

I. Constitution. To be the Confederation of the Congregational Churches of England and Wales.

III. Administration. The churches thus confederated shall appoint a general council, in which shall be vested full powers of administration. This council might consist of representatives nominated by the churches and elected either annually or triennially by the county unions in such proportions as may hereafter be determined. The general council may consist of not less than 600 members.

IV. This general council shall meet at least once in each year, and the business entrusted to it by the United Congregational Church shall be transacted.

While it was conceded that there are certain prerogatives, responsibilities, and privileges which belong to the individual churches, it was maintained that there are other great questions, such as the introduction of standardized national instruction in the ministry, the administration and management of the Congregational societies and institutions, the conduct of missions at home and abroad, etc., which concern all the churches, and that the Congregational faith and order. It was with the latter questions that the general council would have to do.

The churches were asked to answer certain questions: 1, if they approved the federation; 2, if they did not like it, what plan they had to suggest; 3, if they approved the name.

Upon hearing the report of the answers to the circular of the committee, the assembly resolved that the General Committee of the union, having already carefully considered various branches of Congregational reform, and having consulted the churches on Dr. Parker's proposal, is hereby requested to prepare a scheme which may serve to unite Congregational churches more closely for common purposes. And to this end, the General Committee is asked to appoint a special committee of 24, not more than 16 of whom shall be members of its own body, to draft proposals for its consideration. The General Committee is also requested to propose to the assembly as early as practicable. Resolutions were adopted unrestrainedly condemning the education bill and recording the sense of the assembly "not only of the public damage to religion in the bill proposed, but far more of the wound to Christ's body and the grief to the Holy Spirit. We see in it one section of his true flock using an accidental political advantage to compel from the other's conscience the support of teaching which we think (rightly or wrongly) that he has led us to regard as unscriptural and not merely as inadequate. And not only so, but we are forced to support teaching which unchurches us; and yet worse, which invades our hearts by instructing our children to deny their fathers' faith and despise the religion of their homes. The safeguards proposed are, have been, and must be, illusory in practice." Copies of these resolutions were ordered sent to the Archbishops of Canterbury and York, and the Bishops of London, Durham, and Hereford. The final statement of the Twentieth Century fund showed that the total amount contributed had been £710,123; of which £30,132 was for the purchase of land, £407,811 for supplemental funds, and £219,791 (incomplete) for affiliated funds. The sum of £82,492 had been disbursed on account of the central fund, while the supplemental and affiliated funds were shown as having been disbursed to supporting churches and unions. Some churches having made promises, which at present they were unable to fulfill, arrangements had been made to keep the fund open so as to receive their contributions. Of whatever came in half would be forwarded to the London Missionary Society, and the remainder would be divided equally between the Church Aid Society and the Colonial Missionary Society. The Special Committee on a Uniform Code of Rules regarding Ministerial Removals reported concerning the answers of the unions to the propositions sent them, showing a variety of views and action on the subject. The General Committee was instructed to summon a conference of representatives of the county unions to promote the adoption by all of them of the same code of rules. A Sunday-school conference and the annual meeting of the Young People's Union were held in connection with the assembly. The Rev. Dr. H. J. Horton was elected chairman of the union for the ensuing year.

The autumnal meetings of the Union were held at Glasgow jointly with the Congregational Unions of Scotland, on the 21st and 22nd and 23rd. The most prominent subject of the discussions was the education bill, against which the assembly protested most strongly, because, as its resolution reads: "It sacrifices educational efficiency to sectarian and priestly ends. 2. By the summary abolition of the school boards of England and Wales, which have powerfully promoted the education of the people while they have enlarged religious liberty for parents, teachers, and scholars, it has seriously impaired the direct control of the people over schools supported by public funds, while it also tends to withdraw the schools out of the range of their immediate interests.

It has not only been introduced without mandate from the constituents, but it is also being forced through Parliament in the face of direct indications that the opinion of the country is opposed to its main provisions. 4. It violates the principle of civil and religious liberty (a) by placing the entire support of education in the hands of the Government, and (b) by confining the appointment of teachers in denominational schools to the Government. This assembly therefore calls upon his Majesty's Government to withdraw the bill or forthwith to appeal to the country upon it. And if the act is enforced upon the nation, the assembly is prepared to advise its members to refuse to pay the rates." Only six votes were cast against the resolution as a whole, but about 20 dissentients were recorded against the final clause advising refusal to pay the rates in the event of the enactment of the bill. The officers of the London Missionary Society represented that £14,000 were still required to clear off the deficiency of the past three years, amounting to £253,000; and that an increase of from 20 to 25 per cent. on the present income was needed to meet the annual expenditure of £151,000, which the board was pledged not to exceed for the next five years. Eighty new missionaries had been sent into the field, but the income had not been proportionately increased. At the meeting of the Congregational Historical Society mention was made of the mass of unedited manuscripts in certain libraries which might afford valuable information upon the subject of the union. By the end of the year, a report was agreed on Historical Points of Contact of English and Scottish Con-
Congregationalism. Papers were read on Difficulties in the Way of Belief which beset the Young, Free Church Life in Rural England, and The Relation of the Evangelical Church of Christ to Social Questions. Meetings were held representative of the Young People, the Women, Congregational Settlements, and the Total Abstinence Association.

The report of the subcommittee appointed to draft a superannuation scheme for ministers embodied a plan resting on a basis of equal contributions by ministers and churches, the amount to be determined by the age when each contribution is paid, the amount of the contributions, and the age at which superannuation begins. A minister's contributions are to cease on his attaining the age of sixty-five, after which, on his retirement, the full amount will be payable. Each separate annual contribution will provide a corresponding annuity beginning at the retiring age, the total annuity being the aggregate secured by the several annual payments. Any minister, or any church on his behalf, may at any time pay a lump sum in order to secure for him an annuity or an increased annuity. A minister may be assured under either of two tables, viz., (1) with no return of contribution, or (2) with a lower rate of interest, the total amount of his own paid contributions in the event of his death or of his retirement through failure of health or other approved cause before the age of sixty-five years.

The English Chapel-Building Society had considered 30 cases during the year, and had made grants to 40 of them, amounting to £2,566. Contributions had fallen off, having been received from only 187 churches. The receipts, apart from interest and dividends on investments and a loan from bank, had amounted to £3,568, of which £2,000 were from the return of advances.

The report of the Congregational Total Abstinence Association showed that while twenty-five years before out of 2,000 Congregational ministers there were 700 abstainers, at the present time out of 2,887 pastors in England and Wales the number of total abstainers was 2,551.

The income of the Colonial Missionary Society, including a grant of £1,000 from the Twentieth Century fund, had been £5,500. The society had worked during the year in 12 colonies, and had sent out 5 young men to the colonial field.

The Pastors' Retirement fund had £9,500 had been paid in annuities to 185 annuitants. On account of the Pastors' Widows' fund £1,221 had been paid to 101 annuitants.

In the third volume of the Transactions of the Congregational Historical Society, published in 1902, is a paper by Dr. F. J. Powicke giving lists of the early separatists compiled from the records of arrests and executions. The striking facts are remarked that the great majority of the number were very young, that they were mostly of the tradesman or artisan class, and that very few of them drew back or wavered.

London Missionary Society.—The one hundred and seventh annual meeting of the London Missionary Society was held in London, May 12. The report showed that the total income from all sources had been £121,000, while the expenditure had risen to £153,700. This left a deficit of £23,000 on the year's working, to be added to the deficit of £30,000 and £15,000 for the previous years. Toward removing this debt £17,945 had been received from the Twentieth Century fund, and more than £20,000 had been already promised by friends and others. The report repeated the amount of £20,000 spent of abandoning some field of labor or increasing the income. The statistics as to the staff of the society and facts in its mission work showed that it employed 206 men and 70 women missionaries, 3,474 native preachers, 1,208 Christian men and 310 Christian women as teachers, and 271 Bible women, and had 64,710 church-members and 194,777 native adherents. The mission Sunday-schools numbered 1,283 and returned 54,246 pupils, while there were 1,642 boys' day-schools, with 59,966 pupils, and 190 girls' day-schools, with 30,467 pupils. The local contributions amounted to £22,116, the school fees to £5,964, and the receipts of the medical missions to £3,343; making a total of £31,414 raised and locally appropriated at mission stations. The report reviewed the condition of the missions in China, where restoration was going on, the Theological College at Hankow had been opened, and education seemed to have received a great impetus from the change in the political situation; in India, where progress was slow but steady; and represented that the reports from Madagascar showed that the troubles of past days were apparently over, and that the missionaries of the society were no longer victims of suspicion and mistrust. The resumption of responsibility for the elementary schools of the and last year for the financial difficulty. The conditions of work in Africa and New Guinea, where the mission was understaffed in consequence of the murder of Messrs. James Chalmers and Oliver Tomkins and the prevalent of exceptional sickness among missionaries and natives, were noticed. The work in Tahiti and the Loyalty Islands and part of that in Madagascar, those regions being now French possessions, had been transferred to the Paris Missionary Society. The secretary of this society was present at the meeting with a fraternal message from the director. He said that in ten years, although there were only 600,000 Protestants in France, the number of missionaries of the Paris society had increased from 37 to 97 and its income from £13,000 to £45,000.

The Gainsborough Tercentenary.—The tercentenary of the Congregational church at Gainsborough, of which John Robinson was pastor, and where the separatists worshipped previously to their flight to Holland, was celebrated June 8 with commemorative services at the John Robinson Memorial Church, which had been built with the aid of funds from the contributions of English and American Congregationalists. Officials and other delegates of the Congregational churches in the United States were present, and brought with them the contributions which had been made in the United States for the liquidation of the debt of the new church. A sermon was preached on Sunday by Prof. Duff, of the United College, Bradford, who made allusion to the events which gave the memorial services their importance. A Free Church meeting was held on Sunday afternoon, when the American delegates spoke in behalf of the Congregationalists of the United States. The tercentenary sermon was preached on Tuesday evening, May 10, by the Rev. Dr. Fairbairn, of Oxford, who spoke of the share of John Robinson and the Pilgrims in spreading the Gospel of Christ. At a public meeting held in the Gainsborough "Old Hall" a paper was read by Mr. Edward McKnight, of the Spalding Public Library, on the historic associations of the Old Hall and its connection with the New England Pilgrims. A bronze tablet to the memory of the Pilgrims, placed in the vestry of the church, is reememorating the cooperation of English and
American Congregationalists in the erection of the John Robinson Memorial, was unveiled by Mr. George Spicer, of Enfield.

The Welsh Congregational Union.—The Welsh Congregational Union, at its annual meeting, held in Carnarvon in June, returned 1,068 incorporated churches, 197 mission rooms, 148,618 full members, 133,611 pupils and 15,197 teachers in Sunday-schools, 651 ministers with and 98 without pastoral charges, 22 ministers ordained during the year, 222 ministerial students, and 274 lay-preachers. During the year £56,574 of chapel debts had been paid, leaving outstanding debts to the amount of £239,038, of which £45,735 represented the cost of new buildings. The voluntary contributions had amounted to £294,835, showing an increase of £40,735. A resolution recommending closer relations with the Congregational Union of England and Wales was passed. Other resolutions welcomed the licensing bill and recommended the use of unfermented wine in the sacrament of the Lord’s Supper. The treasurer of the Twentieth Century Fund represented that the total receipts had been £292,443, nearly half of which had been collected by the secretaries since the last meeting. A connectional publication department had been established, and a Welsh Independent Year-Book was to be issued.

Irish Congregational Union.—The seventy-third annual meeting of the Irish Congregational Union was held at New Row, Coleraine, May 25. The report of the Irish Evangelical Society and Congregational Home Mission showed that there were 12 self-supporting Congregational churches in Ireland, while the remaining 16 churches, with 60 out-stations, were dependent on contributions raised by the society. Contributions from England had decreased in past years, but nearly £2,500 had been paid during the last twelve months in grants to the mission stations. The executive of the union has addressed a memorial to the Royal Commission on Education in Ireland, calling their attention to the fact that there were 123,000 of the population of the country who did not belong to the Roman Catholic, Episcopal, or Presbyterian Church, and asking equal rights for them with these bodies in any legislation that may be proposed, to representation on governing bodies, professorial staff, and students’ roll.

"Speaking as Congregationalists only," the memorial says, "we desire a university system which shall make no inquiry as regards religious opinion."

CONGRESS. The Fifty-seventh Congress, beginning March 4, 1901, and to close March 4, 1903, was composed as follows:

THE SENATE.

William P. Frye, of Maine, President pro temore; Charles G. Bennett, of New York, secretary.

Senators by States, with the expiration of term and party affiliation indicated:

Republicans, 198; Democrats, 153; Popularists, 4.

Henry H. Aplin, Michigan, was elected in place of Rousseau O. Crump, deceased. The seat of J. J. Butler, Missouri, was declared vacant, June 28, 1902; H. Burd Cassel, Pennsylvania, was elected in place of William Brosius, deceased; Amos J. Cummings died May 2, 1902; Charles L. Knapp, New York, was elected in place of Albert D. Shaw, deceased; Montag F. Wooten, New York, was elected in place of Nicholas Muller, deserted; Asbury F. Liver, South Carolina, was elected in place of J. M. Stokes, deceased; William H. Moody, Massachusetts, resigned to become Secretary of the Navy, May 1, 1902; T. McKenzie Moss, Kentucky, took the place of John S. Rainey, resigned, March 25, 1902; Peter J. Otey, Virginia, died May 4, 1902; Rufus K. Polk, Pennsylvania, died March 5, 1902; Llewellyn Powers, Maine, was elected in place of George A. Boulenger, resigned; Joshua S. Salmon, New Jersey, died May 6, 1902; Dudley G. Wooten, Texas, was elected in place of Robert E. Burke, deceased.

The Congress met for its first session, Monday Dec. 2, 1902. The House of Representatives organized by electing David B. Henderson, of Iowa, speaker by a vote of 192 out of 355; there were 152 votes cast for John D. Richardson, of Tennessee. Alexander McDowell, of Pennsylvania, was chosen clerk; Henry Casson, of Wisconsin, Sergeant-at-Arms; William J. Glenn, of New York, doorkeeper; Joseph C. McIvor, of Ohio, postmaster; and Henry N. Condon, of Michigan, chaplain.

On assuming the chair Mr. Henderson said:

"Gentlemen of the House of Representatives, this high honor which you have conferred upon me I profoundly appreciate. All the more do I appreciate it coming, as it does, with the generous expression from both sides of the Chamber. There is yet left another method for a presiding officer to express his appreciation of such an honor; that is, by a kindly, firm, and faithful administration of the law and the rules that govern this body. It will be my aim to discharge impartially the duties of this office.

"As I said at the opening of the last Congress, no presiding officer can successfully administer the duties of his office unless he has the support of the body over which he presides. I asked for it then; you gave it to me throughout the entire Congress. Permit me once more to invoke that patience, kind consideration, and splendid support which was accorded to me in the last Congress.

"The maker of laws should not be a breaker of laws. We proceed under law and rules; and the duties devolving upon each and all of the membership of this House will be far better conserved if this principle is kept in mind and acted upon."

The rules of the Fifty-sixth Congress were then adopted for the conduct of business in the House, with the following modifications:

1. That the special orders adopted March 8 and March 14, 1900, providing for a method for the consideration of all bills, claim bills, and other private bills, shall be continued during the Fifty-seventh Congress.

2. That the place of the Select Committee on the Fifteenth Census in the rules of the Fifty-sixth Congress shall be filled in the rules of the Fifty-seventh Congress by a standing Committee on the Census, to consist of 13 members, and have jurisdiction of all proposed legislation concerning the census and the apportionment of Representatives.

Resolved further, That there shall be appointed to serve during the Fifty-seventh Congress a Select Committee on Industrial Arts and Expositions, to consist of 9 members, which shall have jurisdiction of all matters (excepting those relating to the transportation and appropriations referable to the Centennial of the Louisiana Purchase and to proposed expositions.

Resolved further, That the Select Committee on the Expositions and Expositions shall be continued during the Fifty-sixth Congress as a select committee.
THE PRESIDENT'S MESSAGE.

Dec. 3, after due notification from the Senate and the House, that they were organized and ready to receive any communication from the President, the annual message was sent in as follows:

To the Senate and House of Representatives:

The Congress assembles this year under the shadow of a great calamity. On the 6th of September President McKinley was shot by an anarchist while attending the Pan-American Exposition at Buffalo, and died in that city on the 14th of that month.

Of the last seven elected Presidents, he is the third who has been murdered, and the bare recital of this fact is sufficient to justify grave alarm among all loyal American citizens. Moreover, the circumstances of this, the third assassination of an American President, have a peculiarly sinister significance. Both President Lincoln and President Garfield were killed by assassins of types unfortunately not uncommon in history; President Lincoln falling a victim to the terrible passions aroused by four years of civil war; President Garfield, the beneficent vanquisher of a disappointed office-seeker. President McKinley was killed by an utterly depraved criminal belonging to that body of criminals who object to all governments, good and bad alike, who are against any form of popular liberty if it is guaranteed by even the most just and liberal laws, and who are as hostile to the upright exponents of social and political reform as to the tyrannical and irresponsible despot.

It is not too much to say that at the time of President McKinley's death he was the most widely loved man in all the United States; while we have never had any public man of his position who has been so wholly free from the bitter animosities incident to public life. His political opponents were the first to bear the heartfelt and most generous tribute to the broad kindliness of nature, the sweetness and gentleness of character which so endeared him to his close associates. To the standard of lofty integrity in public life he united the tender affections and home virtues which are all-important in the make-up of national character. A gallant soldier in the great war of Union and Nation he answered a call to service to all our people because of his conduct in the most sacred and intimate of home relations. There could be no personal hatred of him, for he never gave an example to any one of us; he was as pure and holy and free from selfishness and self-seeking as the sun is in heaven and the moon in the sky. He was one of the bravest soldiers, one of the wisest statesmen, one of the greatest benefactors of his country, and one of the best friends of all the citizens of the nation.

President McKinley was a man of moderate means, a man whose stock sprang from the sturdy tillers of the soil, who had himself belonged among the wage-workers, who had entered the army as a private soldier. Wealth was not struck at when the President was assassinated, but the honest toil which is content with moderate gains after a lifetime of unremitting labor, largely in the service of the public. Still less was power struck at in the sense that power is irresponsible or rendered in the hands of any one individual. The blow was not aimed at tyranny or wealth. It was aimed at one of the strongest champions the wage-worker has ever had; at one of the most faithful representatives of the system of public rights and representative government who has ever risen to the highest office. President McKinley filled that political office for which the entire people voted, and no President—not even Lincoln himself—was ever more earnestly anxious to represent the well-thought-out wishes of the people; his one anxiety in every crisis was to keep in closest touch with the people—to find out what they thought and to endeavor to give expression to their thought, after having endeavored to guide that thought aright. He had just been reelected to the presidency because the majority of our citizens, the majority of our farmers and wage-workers, believed that he had faithfully upheld their interests for four years. They felt themselves in close and intimate touch with him. They felt that he represented so well and so honorably all their ideals and aspirations that they wished him to continue for another four years to represent them. And this was the man at whom the assassin struck! That there might be nothing lacking to complete the Judas-like infamy of his act, he took advantage of an occasion when the President was meeting the people generally; and, availing himself of the occasion, he turned him in kindly and brotherly fellowship, he turned the noble and generous confidence of the victim into an opportunity to strike the fatal blow. There is no baser deed in all annals of crime.

The shock, the grief of the country, are bitter in the minds of all who saw the dark days, while the President yet hovered between life and death. At last the light was still in the kindly eyes and the breath went from the lips that even in mortal agony uttered no words save of forgiveness to his murderer, of love for his friends, and of unaltering trust in the will of the Most High. Such a death, crowning the glory of such a life, leaves us with infinite sorrow, but with such pride in what he had accomplished and in his own personal character, that we feel the blow not as struck at him, but as struck at the nation. We mourn a good and great President who is dead; but while life is here to us, we live today by the splendid achievements of his life and the grand heroism with which he met his death.

When we turn from the man to the nation, the harm done is an example to all our people because of his conduct in the most sacred and intimate of home relations. There could be no personal hatred of him, for he never gave an example to any one of us; he was as pure and holy and free from selfishness and self-seeking as the sun is in heaven and the moon in the sky. He was one of the bravest soldiers, one of the wisest statesmen, one of the greatest benefactors of his country, and one of the best friends of all the citizens of the nation.

The blow was aimed not at this President, but at all Presidents; at every symbol of government. President McKinley was as emphatically the embodiment of the popular will of the nation expressed through the forms of law as a New England town-meeting is in similar fashion the embodiment of the law-abiding purpose and practice of the people of the town. On no conceivable theory could the President be accepted as due to protest against "inequalities in the social order," save as the murder of all the freemen engaged in a town-meeting could be ac-
cepted as a protest against that social inequality which makes a jail a place of safety, more an expression of "social discontent" than picking pockets or wife-beating.

The anarchist, and especially the anarchist in the United States, is merely one type of criminal, more dangerous than any other because he represents the same depravity in a greater degree. The man who advocates anarchy directly or indirectly, in any shape or fashion, or the man who apologizes for anarchists and their deeds, makes himself morally accessory to murder before the fact. The anarchist is a criminal whose perverted instincts lead him to prefer confusion and chaos to the most beneficent form of social order. His protest of concern for working men is outrageous in its impudent falsity; for if the political institutions of this country do not afford opportunity to every honest and intelligent son of toil, then the door of hope is forever closed against him. The anarchist is everywhere not merely the enemy of system and of progress, but the deadly foe of liberty. If ever anarchy is triumphant, its triumph will last for but one red moment, to be succeeded for ages by the gloomy night of despotism.

For the anarchist himself, whether he preaches or practises his doctrines, we need not have one particle more concern than for any ordinary murderer. He is not the victim of social or political injustice. There are no wrongs to remedy in his case. The cause of his criminality is to be found in his own evil passions and in the evil conduct of others, who urge him on in any failure by others or by the state to do justice to him or his. He is a malefactor and nothing else. He is in no sense, in no shape or way, a "product of social conditions," save as a highwayman is "produced" by the fact that an unarmed man happens to have a purse. It is a travesty upon the great and holy names of liberty and freedom to permit them to be invoked in such a cause. No man or body of men preaching anarchistic doctrines should be allowed at large any more than if preaching the murder of some specified private individual. Anarchistic meetings are essentially seditious and treasonable.

I earnestly recommend to the Congress that in the exercise of his wise discretion it should take into consideration the coming to this country of anarchists or persons professing principles hostile to all government and justifying the murder of those who urge them to be stopped. Such individuals as those who not long ago gathered in open meeting to glorify the murder of King Humbert of Italy perpetrate a crime, and the law should insure their rigorous punishment. They and those like them should be kept out of this country; and if found here they should be promptly deported to the country whence they came; and far-reaching provision should be made for the punishment of those who stay. No matter calls more urgently for the wisest thought of the Congress.

The Federal courts should be given jurisdiction over any man who kills or attempts to kill the President or any man by the Constitution or by law is in line of succession for the presidency, while the punishment for an unsuccessful attempt should be proportioned to the enormity of the offense against our institutions.

Anarchy is a crime against the whole human race; and all mankind should band against the anarchist. His crime should be made an offense against the law of nations, like piracy and that form of manstealing known as the slave-trade; for it is of far blacker infamy than either. It should be so all, with civilized powers. Such treaties would give to the Federal Government the power of dealing with the crime.

A grim commentary upon the folly of the anarchist position was afforded by the attitude of the law toward this very criminal who had just taken the life of the President. The people would have torn him limb from limb if it had not been that the law he defied was at once invoked in his behalf. So far from his deed being committed on behalf of the people against the Government, the Government was obliged at once to exert its full police power to save him from instant death at the hands of the people. Moreover, his deed worked not the slightest dislocation in our governmental system, and the danger of a recurrence of such deeds, no matter how great it might grow, would work only in the direction of strengthening and giving harshness to the forces of order. No man will ever be restrained from becoming President by any fear as to his personal safety. If the risk to the President's life became great, it would mean that the office would more and more come to be filled by men of a spirit which would make them resolute and merciless in dealing with every friend of disorder. This great country will not fall into anarchy; and if anarchists should ever become a serious menace to our institutions, they would not merely be stamped out, but would involve in their own ruin every active or passive sympathizer with their doctrines. The American people are slow to anger, but a threatened attack is once kindled it burns like a consuming flame.

During the last five years business confidence has been restored, and the nation is to be congratulated because of its present abounding prosperity. Such prosperity can never be created by law alone, although it is easy enough to destroy it by mischievous laws. If the hand of the Lord is heavy upon any country, if flood or drought comes, human wisdom is powerless to avert the calamity. Moreover, no law can guard us against the consequences of our own folly. The men who are idle or crouched, writing, and such meetings are essentially seditious and treasonable.

I earnestly recommend to the Congress that in the exercise of his wise discretion it should take into consideration the coming to this country of anarchists or persons professing principles hostile to all government and justifying the murder of those who urge them to be stopped. Such individuals as those who not long ago gathered in open meeting to glorify the murder of King Humbert of Italy perpetrate a crime, and the law should insure their rigorous punishment. They and those like them should be kept out of this country; and if found here they should be promptly deported to the country whence they came; and far-reaching provision should be made for the punishment of those who stay. No matter calls more urgently for the wisest thought of the Congress.

The Federal courts should be given jurisdiction over any man who kills or attempts to kill the President or any man by the Constitution or by law is in line of succession for the presidency, while the punishment for an unsuccessful attempt should be proportioned to the enormity of the offense against our institutions.
corporate fortunes. The creation of these great fortunes has not been due to the tariff nor to any other governmental action, but to natural causes in the business world, operating in other countries as they operate in our own.

The process has been whereby a man, a great part of which is wholly without warrant. It is not true that as the rich have grown richer the poor have grown poorer. On the contrary, never have the wage-earner, the worker, the farmer, the small trader, been so well off as in this country and at the present time. There have been abuses connected with the accumulation of wealth; yet it remains true that a fortune accumulated in legitimate business can be accumulated by the person specially benefited only on condition of conferring immense incidental benefits upon others. Successful enterprise, of the type which benefits all mankind, can only exist if the conditions are such as to offer great prizes as the rewards of success.

The captains of industry, who have driven the railway systems across this continent, who have built up our commerce, who have developed our manufactures, who have made good and great good to our people. Without them the material development of which we are so justly proud could never have taken place. Moreover, we should recognize the importance to this material development of leaving as unhampered as is compatible with the public good the strong and forceful men upon whom the success of business operation inevitably rests. The slightest study of business conditions will satisfy any one capable of forming a judgment that the personal equation is the most important factor in a business operation; that the business ability of the man at the head of any business concern, big or little, is usually the factor which fixes the gulf between striking success and hopeless failure.

An additional reason for caution in dealing with corporations is to be found in the international commercial conditions of to-day. The same business conditions which have produced the great aggregations of corporate and individual wealth have made them very potent factors in international commercial competition. Business concerns which have the largest means at their disposal are stronger than those which have the smallest means. The abecond men are naturally those which take the lead in the strife for commercial supremacy among the nations of the world. America has only just begun to take this commanding position in the international business world, which we believe will more and more be hers. It is of the utmost importance that this position be not jeopardized, especially at a time when the overflowing abundance of our own natural resources and the skill, business energy, and mechanical aptitude of our people make foreign markets essential. Under such conditions it would be most unwise to cramp or to fetter the youthful strength of our nation.

Moreover, it can not too often be pointed out that in our efforts to strike with ignorance what are ends the interests of one set of men almost inevitably endanger the interests of all. The fundamental rule in our national life—the rule which underlies all the natural laws that control the human mind, and in the long run, we shall go up or down together. There are exceptions; and in times of prosperity some will prosper far more, and in times of depression some will prosper far less than others; but speaking generally, a period of good times means that all share more or less in them, and in a period of hard times all feel the stress to a greater or less degree. It surely ought not to be necessary to enter into any proof of this statement; the memory of the lean years which began in 1893 is still vivid, and we can contrast them with the conditions in this very year which is now closing. Disaster to great business enterprises can never have its effects limited to the men at the top. It spreads throughout, and while it is bad for everybody, it is worst for those farthest down. The capitalist may be aborn of his luxuries, but the wage-earner may be deprived of even bare necessities.

The mechanism of modern business is so delicate that extreme care must be taken not to interfere with it in a spirit of rashness or ignorance. Many of those who have made it their vocation to denounce the great industrial combinations which are popular, although with technical inaccuracy, known as trusts, appeal especially to hatred and fear. These are precisely the two emotions, particularly when combined with ignorance, which unfit men for the exercise of cool and steady judgment. In facing new industrial conditions, the whole history of the world shows that legislation will generally be both unwise and unworkable after calm inquiry and with sober self-restraint. Much of the legislation directed at the trusts would have been exceedingly mischievous had it not also been entirely ineffective. In accordance with a well-known sociological law, the ignorant or reckless agitator has been the really effective friend of the evils which he has been nominally opposing. In dealing with business interests, for the Government to undertake by crude and ill-considered legislation to do what may turn out to be bad, would be to incur the risk of such far-reaching national disaster that it would be preferable to undertake nothing at all. The men who demand the impossible or the undesirable serve as the allies of the forces with which they are nominally at war, for they hammer those who would endeavor to find out in rational fashion what the wrongs really are and to what extent and in what manner it is practicable to apply remedies.

All this is true; and yet it is also true that there are real and grave evils, one of the chief being overcapitalization because of its many baleful consequences; and practical effort must be made to correct these evils.

There is a wide-spread conviction in the minds of the American people that the great corporations known as trusts have certain features and tendencies hurtful to the general welfare. This springs from no spirit of envy or uncharitableness, nor lack of pride in the great industrial achievements that have placed this country at the head of the nations struggling for commercial supremacy. It does not rest upon a lack of intelligent appreciation of the necessity of meeting changing and changed conditions of trade with new methods, nor upon ignorance of the fact that combination of capital in the effort to accomplish great things is necessary when the world's progress demands that great things be done. It is based upon sincere conviction that combination and concentration should be, not prohibited, but supervised and within reasonable limits only, and in my judgment this conviction is right.

It is no limitation upon property rights or freedom of contract to require that when men receive from Government more, than others; but speaking generally, a period of good times means that all share more or less in them, and in a period of hard times all feel the stress to a greater or less degree. It surely ought not
ful representations as to the value of the property in which the capital is to be invested. Corporations engaged in interstate commerce should be required if they are to exercise a license working to the public injury. It should be as much the aim of those who seek for social betterment to rid the business world of crimes of running as to rid the entire body politic of crimes of violence. Great corporations exist only because they are created and safeguarded by our institutions; and it is therefore our right and our duty to see that they work in harmony with these institutions.

The first essential in determining how to deal with the great industrial combinations is knowledge of the facts—publicity. In the interest of the public, the Government should have the right to inspect and examine the workings of the great corporations engaged in interstate business. Publicity is the only sure remedy which we can now invoke. What further remedies are needed in the way of governmental regulation, or taxation, can only be determined after publicity has been obtained, by process of law, and in the course of administration. The first requisite is knowledge, full and complete—knowledge which may be made public to the world.

Artificial bodies such as corporations and joint-stock or other associations, depending upon any statutory law for their existence or privileges, should be subject to proper governmental supervision, and full and accurate information as to their operations should be made public regularly at reasonable intervals.

The large corporations, commonly called trusts, should be prohibited to do business in many States, often doing very little business in the State where they are incorporated. There is utter lack of uniformity in the State laws about them; and as no State has any exclusive interest in or power over their acts, it has in practice proved impossible to get adequate regulation through State action. Therefore, in the interest of the whole people, the nation should, without interfering with the power of the States in the matter itself, also assume power of supervision and regulation over all corporations dealing with the national business. This is especially true where the corporation derives a portion of its wealth from the existence of some monopolistic element or tendency in its business. These facts should be brought to the attention of the investor; banks are subject to it, and in their case it is now accepted as a simple matter of course. Indeed, it is probable that supervision of corporations by the National Government need not go so far as is now the case with the supervision exercised over them by so conservative a State as Massachusetts, in order to produce excellent results.

When the Constitution was adopted, at the end of the eighteenth century, no human wisdom could foretell the sweeping changes, alike in industrial and political conditions, which were to take place by the beginning of the twentieth century. At that time it was accepted as a matter of course that the several States were the proper authorities to regulate, so far as was then necessary, the comparatively insignificant and strictly localized corporate bodies of the day. The conditions are now wholly different and wholly different action is called for. I believe that a law can be passed which will prevent the above indicated; profiting by the experience gained through the passage and administration of the interstate commerce act. If, however, the judgment of the Congress is that it lacks the constitutional power to pass such an act, then a constitutional amendment should be submitted to confer the power.

There should be created a Cabinet officer, to be known as Secretary of Commerce and Industries, as provided in the bill introduced at the last session of the Congress. It should be his province to deal with commerce in its broadest sense; including among many other things whatever concerns labor and all matters affecting the great business corporations and our merchant marine.

The course proposed is one phase of what should be a comprehensive and far-reaching scheme of constructive statesmanship for the purpose of broadening our markets, securing our business interests on a safe basis, and making firm our new position in the international industrial world; while scrupulously safeguarding the rights of wage-worker and capitalist, of investor and private citizen, so as to secure equity as between man and man in this republic.

With the sole exception of the farming interest, no one matter is of such vital moment to our whole people as the welfare of the wage-workers. If the farmer and the wage-worker are well off, it is absolutely certain that all others will be well off, too. It is therefore a matter for hearty congratulation that on the whole wages are higher to-day in the United States than ever before in our history, and far higher than in any other country. The standard of living is also higher than ever before. Every effort of legislator and administrator should be bent to secure the permanency of this condition of things and its improvement, if ever possible. Not only must our labor be protected by the tariff, but it should also be protected so far as it is possible from the presence in this country of any laborers brought over by contract, or of those who, coming freely, yet represent a standard of living so depressed that they can undersell our men in the labor market and drag them to a lower level. I regard it as necessary, with this end in view, to reenact immediately the law excluding Chinese laborers and to strengthen it wherever necessary in order to make its enforcement entirely effective.

The National Government should provide the highest quality of service from its employees; and in return it should be a good employer. If possible legislation should be passed, in connection with the act in such supervision, will render effective the efforts of different States to do away with the competition of convict contract labor in the open labor market. So far as practicable under the conditions of Government work, provision should be made to render the enforcement of the eight-hour law easy and certain. In all industries carried on directly or indirectly for the United States Government women and children should be protected from excessive hours of labor, from night work, and from work under unsanitary conditions. The Government should provide in its contracts that all work should be done under "fair" conditions, and in addition to setting a high standard should uphold it by proper inspection. Extending if necessary to the subcontractors. The Government should forbid all night work for women and children, as well as excessive overtime. For the District of Columbia a good factory law should be passed; and, as a powerful the National Government to exercise control along the lines above indicated; profiting by the experience gained through the passage and administration of the interstate commerce act. If, however, the judgment of the Congress is that it lacks the constitutional power to pass such an act, then a constitutional amendment should be submitted to confer the power.
American wage-workers work with their heads as well as their hands. Moreover, they take a keen pride in what they are doing; so that, independent of the reward, they wish to turn out a perfect job. This is the great secret of our success in competition with the labor of foreign countries.

The most vital problem with which this country, and for that matter the whole civilized world, has to deal, is the problem which has for one side the betterment of social conditions, moral and physical, in large cities, and for another side the effort to deal with that tangle of far-reaching questions which we group together when we speak of "labor." The chief factor in the success of each man-wage worker, farmer, and capitalist alike—must ever be the sum total of his own individual qualities and abilities. Second only to this comes the power of acting in combination or association with others. Very great good has been and will be accomplished by associations or unions of wage-workers, when managed with forethought, and when they combine insistence upon their own rights with law-abiding respect for rights of others. The display of these qualities in such bodies is a duty to the nation no less than to the associations themselves. Finally, there must also in many cases be active pressure from the frantic effort to safeguard the rights and interests of all. Under our Constitution there is much more scope for such action by the State and the municipality than by the nation. But perhaps most of all, as those touched on above the National Government can act.

When all is said and done, the rule of brotherhood remains as the indispensable prerequisite to success in the kind of national life for which we strive. Each man must work for himself, and unless he works outside help cannot avail him; but each man much remember also that he is indeed his brother's keeper, and that while no man who refuses to walk can be carried with advantage to himself or any one else, yet that each at times stumbles or halts, that each at times needs to have the helping hand outstretched to him. To be permanently effective, aid must always take the form of helping a man to help himself; and we can all best help ourselves to the power that in the work that is of common interest to all.

Our present immigration laws are unsatisfactory. We need every honest and efficient immigrant, and our immigration laws should be such as to attract every immigrant who comes here to stay, who brings here a strong body, a stout heart, a good head, and a resolute purpose to do his duty well in every way and to bring up his children as law-abiding and God-fearing members of the community. But there should be a comprehensive law enacted with the object of working a threefold improvement over our present system. First, we should aim to exclude absolutely not only all persons who are known to be believers in anarchistic principles or members of anarchistic societies, but also all persons who are of a low moral tendency or of unsavory reputation. This means that we should require a more thorough system of inspection abroad and a more rigid system of examination at our immigration ports, the former being especially necessary.

The second object of a proper immigration law ought to be to secure by a careful and not merely perfunctory examination test some intelligent capacity to appreciate American institutions and act sanely as American citizens. This would not keep out all anarchists, for many of them belong to the intelligent criminal class. But it would do what is also in point, that is, tend to decrease the sum of ignorance, so potent in producing the envy, suspicion, malignant passion, and hatred of order, out of which anarchistic sentiment inevitably springs. Finally, all persons should be excluded who are below a certain standard of economic fitness to enter our industrial field as competitors with American labor. There should be proper proof of personal capacity to earn an American living and enough money to insure a decent start under American conditions. This would stop the influx of cheap labor, and the resulting competition which gives rise to so much of bitterness in American industrial life; and it would dry up the springs of the pestilential social conditions in our great cities where anarchistic organizations have their greatest possibility of growth.

Both the educational and economic tests in a wise immigration law should be designed to protect and elevate the general body politic and social. A very close supervision should be exercised over the steamship companies which mainly bring over the immigrants, and they should be held to a strict accountability for any infringement of the law.

There is general acquiescence in our present tariff system as a national policy. The first requisite to our prosperity is the certainty and stability of this economic policy. Nothing could be more unwise than to disturb the business interests of the country by any general tariff change at this time, when, doubt, apprehension, uncertainty are exactly what we most wish to avoid in the interest of our commercial and material well-being. Our experience in the past has shown that sweeping revisions of the tariff are apt to produce conditions closely approaching panic in the business world. Yet it is not only possible, but eminently desirable, to combine with the stability of our economic system a supplementary system of reciprocal benefit and obligation with other nations. Such reciprocity is an incident and result of the firm establishment and preservation of our present economic policy. It was specially provided for in the present tariff law.

Reciprocity must be treated as the handmaiden of protection. Our first duty is to secure the protection granted by the tariff in every case where it is needed is maintained, and that reciprocity be sought for so far as it can safely be done without injury to the citizen, every immigrant who comes here to stay, who brings here a strong body, a stout heart, a good head, and a resolute purpose to do his duty well in every way and to bring up his children as law-abiding and God-fearing members of the community. But there should be a comprehensive law enacted with the object of working a threefold improvement over our present system. CONGRESS. (The President's Message)

tariff as to enable us to take from them those products which we can use without harm to our own industries and labor, or the use of which will be marked beneficent.

It is most important that we should maintain the high level of our present prosperity. We have now reached the point in the development of our interests where we are not only able to supply our own markets, but to produce a constantly growing surplus for which we must find markets abroad. To secure these markets we can utilize the rating duties in any case where they are no longer needed for the purpose of protection, or in any case where the article is not produced here and the duty is no longer necessary for revenue, giving us something to offer in exchange for what we ask. The cordial relations with other nations which are so desirable will naturally be promoted by the course thus required.

The natural line of development for a policy of reciprocity will be in connection with those of our productions which no longer require all of our surplus output, to establish them upon a sound basis, and with those others where either because of national or of economic causes we are beyond the reach of successful competition.

I ask the attention of the Senate to the reciprocity treaties laid before it by my predecessor.

The condition of the American merchant marine must be such as to call for immediate remedial action by the Congress. It is discreditable to us as a nation that our merchant marine should be utterly insignificant in comparison to that of other nations which overtop in other forms of business. We should not longer submit to conditions under which only a trifling portion of our great commerce is carried in our own ships. To remedy this state of things would not merely serve to build up our shipping interests, but it would also result in benefit to all who are interested in the permanent establishment of a wider market for American products, and would provide an auxiliary force for the navy. Ships work for their own countries just as railroads work for their terminal points. Shipping lines, if established to the principal countries with which we deal, would be of political as well as commercial benefit. From every standpoint it is unwise for the United States to continue to rely upon the ships of competitors for certain portions of our trade. It should be made advantageous to carry American goods in American-built ships.

At present American shipping is under certain great disadvantages when put in competition with the shipping of foreign countries. Many of the fast foreign steamships, at a speed of 14 knots or above, are subsidized; and all our ships, sailing-vessels and steamers alike, cargo carriers of slow speed and mail-carrying of high speed, have to meet the fact that the original cost of building American ships is greater than is the case abroad; that the wages paid American officers and seamen are very much higher than those paid the officers and seamen of foreign competing countries; and that the standard of living on our ships is far superior to the standard of living on the ships of our commercial rivals.

Our Government should take such action as will remedy these inequalities. The American merchant marine is greater than ever before.

The act of March 14, 1900, intended unequivocally to establish gold as the standard money and to maintain at a parity therewith all forms of money medium in use with us, has been shown to be timely and judicious. The price of our Government bonds in the world's market, when compared with the price of similar obligations issued by other nations, is a flattering tribute to our public credit. This condition it is evidently desirable to maintain.

In many respects the national banking law furnishes sufficient liberal scope for the exercise of the banking function; but there seems to be need of better safeguards against the deranging influence of commercial crises and financial panics. Moreover, the currency of the country should be made responsive to the demands of our domestic trade and commerce.

The collections from duties on imports and internal taxes continue to exceed the ordinary expenditures of the Government, thanks mainly to the reduced army expenditures. The utmost care should be taken not to reduce the revenues so that there will be any possibility of a deficit; but, after providing against any such contingency, means should be adopted which will bring the revenues more nearly within the limit of our actual expenses. In this connection the Secretary of the Treasury considers all these questions at length, and I ask your attention to the report and recommendations.

I call special attention to the need of strict economy in expenditures. The fact that our national needs forbid us to be niggardly in providing whatever is actually necessary to our well-being should not be doubted; but it is doubly hard to husband our national resources, as each of us husbands his private resources, by scrupulous avoidance of anything like wasteful or reckless expenditure. Only by avoiding of spending money on what is needless or unjustifiable can we legitimately keep our income to the point required to meet our needs that are genuine.

In 1887 a measure was enacted for the regulation of interstate railways, commonly known as the interstate commerce act. The cardinal provisions of that act were that railway rates should be just and reasonable and that all shippers, localities, and commodities should be accorded equal treatment. A commission was created and endowed with what were supposed to be the necessary powers to execute the provisions of this act.

That law was largely an experiment. Experience has shown the wisdom of its purposes, but it has also shown, possibly that some of its requirements are not practical; and the law has been devised for the enforcement of its provisions are defective. Those who complain of the management of the railways allege that established rates are not maintained; that rebates and similar devices are habitually resorted to; that these preferences are usually in favor of the large shipper; that they drive out of business the smaller competitor; that while many rates are too low, many others are excessive; and that gross preferences are made, affecting both localities and commodities. Upon the other hand, the railways assert that the law, by its very terms tends to produce many of these illegal practices by depriving carriers of that right of concerted action which they claim is necessary to establish and maintain non-discriminating rates.

The act should be amended. The railway is a public servant. Its rates should be just to and open to all shippers alike. The Government wants it to be seen to it if it is to the ocean.

The act of March 14, 1900, intended unequivocally to establish gold as the standard money and to maintain at a parity therewith all forms of money medium in use with us, has been
CONGRESS. (THE PRESIDENT'S MESSAGE.)

life-blood of this nation flows. Nothing could be more foolish than the enactment of legislation which would unnecessarily interfere with the development and operation of these commercial agencies. The subject is of great importance and calls for the earnest attention of the Congress.

The Department of Agriculture during the past fifteen years has steadily broadened its work on economic lines, and has accomplished results of real value in upbuilding domestic and foreign trade. It has gone into new fields until it is now in touch with all sections of our country and with two of the island groups that have lately come under our jurisdiction, whose people must look to agriculture as a livelihood. It is searching the world for grains, grasses, fruits, and vegetables specially fitted for introduction into localities in the several States and Territories where they may add materially to our resources. By scientific attention to soil survey and possible new crops, to breeding of new varieties of plants, to experimental shipments, to animal industry and applied chemistry, very practical aid has been given. The data thus collected and published shows what may be accomplished.

The products of the farm have taken an unprecedented place in our export trade during the year that has just closed.

The opinion throughout the United States has moved steadily toward a just appreciation of the value of forests, whether planted or of natural growth. The great part played by them in the nutrition of our national wealth is now more fully realized than ever before.

Wise forest protection does not mean the withdrawal of forest resources, whether of wood, water, or grass, from contributing their full share to the welfare of the people, but, on the contrary, gives the assurance of larger and more certain supplies. The fundamental idea of forestry is the perpetuation of forests by use. Forest protection is not an end of itself; it is a means to increase and sustain the resources of our country and the industries which depend upon them. The protection of the forests is an inherent part of the business necessity. We have come to see clearly that however destroys the forest, except to make way for agriculture, threatens our well-being.

The practical usefulness of the national forest reserves to the mining, grazing, irrigation, and other interests of the regions in which the reserves lie has led to a wide-spread demand by the people for the extension of the forest for the future. The forest reserves will inevitably be of still greater use in the future than in the past. Additions should be made to them whenever practicable, and their usefulness should be increased by a thoroughly business-like management.

At present the protection of the forest reserves rests with the General Land Office, the mapping and description of their timber with the United States Geological Survey, and the preparation of plans for their conservative use with the Bureau of Forestry, which is also charged with the general advancement of practical forestry in the United States. These various functions should be united in the Bureau of Forestry, to which they properly belong. The present diffusion of responsibility is bad from every standpoint. It prevents that effective cooperation between the Government and the men who utilize the resources of the reserves without which the interests of both must suffer. The scientific bureaus generally should be put under the Department of Agriculture. The President should have by law the power of transferring lands for use as forest reserves to the Department of Agriculture. He already has such power in the case of lands needed by the Departments of War and the Navy.

The wise administration of the forest reserves will be not less helpful to the interests which depend on water than to those which depend on wood and grass. The water-supply itself depends upon the forest. In the arid region it is water, not land, which measures production. The western half of the United States would sustain a population greater than that of our whole country to-day if the waters that now run to waste were saved and used for irrigation. The forest and water problems are perhaps the most vital internal questions of the United States.

Certain of the forest reserves should also be made preserves for the wild forest creatures. All of the reserves should be better protected from fires. Many of them need special protection because of the great injury done by live stock, above all by sheep. The increase in deer, elk, and other animals in the Yellowstone Park area shows what may be accomplished. Certain forests are properly protected by law and properly guarded. Some of these areas have been so denuded of surface vegetation by overgrazing that the ground-breeding grouse and quail, and many mammals, including deer, have been exterminated or driven away. At the same time the water-storing capacity of the surface is destroyed or destroyed, thus promoting floods in times of rain and diminishing the flow of streams between rains.

In cases where natural conditions have been restored for a few years, vegetation has again carpeted the ground; birds and deer are coming back, and hundreds of persons, especially from the immediate neighborhood, come each summer to enjoy the privilege of camping. Some at least of the forest reserves should afford perpetual protection to the native fauna and flora, safe refuges to our rapidly diminishing wild animals of the larger kinds, native burial grounds for the ever-increasing numbers of men and women who have learned to find rest, health, and recreation in the splendid forests and flowing meadows of our mountains. The forest reserves should be set apart forever for the use and benefit of our people as a whole and not sacrificed to the short-sighted greed of a few.

The forests are natural reservoirs. By restraining the streams in flood and replenishing them in drought they make possible the use of waters otherwise wasted. They prevent the soil from washing, and so protect the storage-reservoirs from filling up with silt. Forest conservation is therefore an essential condition of water conservation.

The forests alone can not, however, fully regulate and conserve the waters of the arid region. Great storage-works are necessary to equalize the flow of streams and to save the flood waters. Their construction has been conclusively shown to be an undertaking too vast for private effort. Nor can it be best accomplished by the individual States acting alone. Far-reaching interstate problems are involved; and the resources of single States would often be inadequate. It is properly a national function, at least in some of its features. It is as right for the National Government to make the necessary steps and to see that the resources of the arid region useful by engineering works for water storage as to make useful the rivers and harbors of the humid region by engineering.

VOL. XLII.—10 A
works of another kind. The storing of the floods in reservoirs at the head waters of our rivers is but an enlargement of our present policy of river control, under which levees are built on the lower reaches of the same streams.

The Government should construct and maintain these reservoirs as it does other public works. Where their purpose is to regulate the flow of streams, the water should be turned freely into the channels in the dry season to take the same course under the same laws as the natural flow.

The reclamation of the unsettled arid public lands presents a different problem. Here it is not enough to regulate the flow of streams. The object of the Government is to dispose of the land to settlers who will build homes upon it. To accomplish this object water must be brought within their reach.

The pioneer settlers on the arid public domain chose their homes along streams from which they could themselves divert the water to reclaim their holdings. Such opportunities are practically gone. There remain, however, vast areas of public land which can be made available for homestead settlement, but only by reservoirs and main-line canals impracticable for private enterprise. These irrigation works should be built by the Government. The lands reclaimed by them should be reserved by the Government for actual settlers, and the cost of construction should so far as possible be repaid by the land reclaimed. The distribution of the water, the division of the streams among irrigators, should be left to the settlers themselves in conformity with State laws and without interference with those laws or with vested rights. The policy of the National Government should be to aid irrigation in the several States and Territories in such manner as will enable the people in the local communities to help themselves, and as will stimulate needed reforms in the State laws and regulations governing irrigation.

The reclamation and settlement of the arid lands will enrich every portion of our country, just as the settlement of the Ohio and Mississippi valleys brought prosperity to the Atlantic States. But what can and what cannot be safely attempted, by the early efforts, which must of necessity be partly experimental in character. At the very beginning the Government should make clear, beyond shadow of doubt, its intention to pursue this policy on lines of the broadest public interest. No reservoir or canal should ever be built to satisfy selfish personal or local interests, but only to what can not be safely attempted, by the early efforts, which must of necessity be partly experimental in character. At the very beginning the Government should make clear, beyond shadow of doubt, its intention to pursue this policy on lines of the broadest public interest. No reservoir or canal should ever be built to satisfy selfish personal or local interests, but only to what can not be safely attempted, by the early efforts, which must of necessity be partly experimental in character. At the very beginning the Government should make clear, beyond shadow of doubt, its intention to pursue this policy on lines of the broadest public interest. No reservoir or canal should ever be built to satisfy selfish personal or local interests, but only to what can not be safely attempted, by the early efforts, which must of necessity be partly experimental in character. At the very beginning the Government should make clear, beyond shadow of doubt, its intention to pursue this policy on lines of the broadest public interest. No reservoir or canal should ever be built to satisfy selfish personal or local interests, but only to what can not be safely attempted, by the early efforts, which must of necessity be partly experimental in character. At the very beginning the Government should make clear, beyond shadow of doubt, its intention to pursue this policy on lines of the broadest public interest. No reservoir or canal should ever be built to satisfy selfish personal or local interests, but only to what can not be safely attempted, by the early efforts, which must of necessity be partly experimental in character. At the very beginning the Government should make clear, beyond shadow of doubt, its intention to pursue this policy on lines of the broadest public interest. No reservoir or canal should ever be built to satisfy selfish personal or local interests, but only to what can
largest number of people, but to create for this industry the best possible social and industrial conditions; and this requires that we not only understand the existing situation, but avail ourselves of the best experience of the time in the solution of its problems. A careful study should be made, both by the nation and the localities, of the irrigation laws and conditions here and abroad. Ultimately it will probably be necessary for the nation to cooperate with the several arid States in proportion as these States by their legislation and administration show themselves fit to receive it.

In Hawaii our aim must be to develop the territory on the traditional American lines. We do not wish a region of large estates tilled by cheap labor; we wish a healthy American community of men who themselves till the farms themselves; who should be shaped with this end in view; the well-being of the average home-maker must afford the true test of the healthy development of the islands. The land policy should be nearly as possible be modeled on our homestead system.

It is a pleasure to say that it is hardly more necessary to report as to Porto Rico than as to any other of our territories within our continental limits. The island is thriving as never before, and it is being administered efficiently and honestly. Its people are now enjoying liberty and order under the provisions of the organic law, and upon this fact we congratulate them and ourselves. Their material welfare must be as carefully and jealously considered as the welfare of any other of our territories. We have given them the great gift of free access for their products to the markets of the United States. I ask the attention of the Congress to the need of legislation concerning the public lands of Porto Rico.

In Cuba such progress has been made toward putting the independent government of the island upon a firm footing that before the present session of the Congress closes I think for an accomplished fact. Cuba will then start as her own mistress; and to the beautiful Queen of the Antilles, as she unfolds this new page of her development, we extend the best wishes which elsewhere I have discussed the question of reciprocity. In the case of Cuba, however, there are weighty reasons of morality and national interest which would be held to have a peculiar application, and I most earnestly ask your attention to the wisdom, indeed to the vital need, of providing for a substantial reduction in the tariff duties on Cuban imports into the United States. Cuba has in her Constitution affirmed what we desired, that she should stand, in international matters, in closer and more friendly relations with us than with any other power; and we are bound by every consideration of honor and expediency to pass commercial measures in the interest of her material well-being.

In the Philippines our problem is larger. They are very rich tropical islands, inhabited by many varying tribes, representing widely different stages of progress toward civilization. Our earnest effort is to help these people upward along the stony and difficult path that leads to self-government. We hope to make our administration represent the people, not merely as the delegate of the United States, by making it of the highest benefit to the Filipinos themselves; and as an earnest of what we intend to do, we point to what we have done. Already a great part of the islands have already acquired a substantial degree of governmental autonomy, and our system of governmental honesty and efficiency has been attained in the Philippines than ever before in their history.

It is no light task for a nation to achieve the temperamental qualities without which the institutions of free government are but an empty mockery. Our people are now successfully governing themselves, because for more than a hundred years they have been slowly fitting themselves, sometimes consciously, sometimes unconsciously, toward this end. What has taken us thirty generations to achieve, we can not expect to see another race accomplish out of hand, especially when large portions of that race start very far behind the point which our ancestors had reached even thirty years ago. In dealing with the Philippine people we must show both patience and strength, forbearance and steadfast resolution. Our aim is high. We do not desire to do for the islands the same things that have been done for tropic peoples by even the best foreign governments. We hope to do for them what has never before been done for any people of the tropics—to make it fit for self-government after the fashion of the really free nations.

History may safely be challenged to show a single instance in which a people so unequal in means as ours, having been forced by the exigencies of war to take possession of an alien land, has behaved to its inhabitants with the disinterested zeal for their progress that has been shown in the Philippines. To leave the islands at this time would mean that they would fall into a welter of murderous anarchy. Such desertion of duty on our part would be a defect to our own humanity. The character of Gov. Taft and of his associates and subordinates is a proof, if such be needed, of the sincerity of our effort to give the islanders a constantly increasing measure of self-government exactly as fast as they show themselves fit to exercise it. Since the civil government was established not an appointment has been made in the islands with any reference to considerations of political influence, or ought else save the fitness of the man and the needs of the service.

In our anxiety for the welfare and progress of the Philippines, it may be that here and there we have gone too rapidly in giving them independence and self-government. It is on this side that our error, if any, has been committed. No competent observer, sincerely desirous of finding out the facts and influenced only by a desire to see the islands, can assert that we have not gone far enough. We have gone to the very verge of safety in hastening the process. To have taken a single step farther or faster in advance would have been folly and weakness, and might well have been crime. We are extremely anxious that the natives shall show the power of governing themselves. We are anxious first, for their sakes, and next, because it relieves us of a great burden. There need not be the slightest fear of our not continuing to give them all the liberty for which they are fit.

The only fear is lest in our overanxiety we give them a degree of independence for which they are not fit, thereby inviting reaction and disaster. As fast as possible we should hold to a plan that in a given district the people can govern themselves, self-government having been given in that district. There is not a locality fitted for self-government which is not. But we hope that it may well be that in certain cases it will have to be withdrawn because the inhabitants show themselves unfit to exercise it; such instances will be few. The words of our President are not the slightest chance of our failing to show a
sufficiently humanitarian spirit. The danger comes in the opposite direction. The idea of loss and a claim may be secured in the islands. The insurrection has become an affair of local banditti and marauders, who deserve no higher regard than the brigands of portions of the Old World. Encouragement, direct or indirect, to these insurgents stands on the same footing as encouragement to hostile Indians in the days when we still had Indian wars. Exactly as our aim is to give to the Indian who remains peaceful the fullest and amnestiest consideration, but to have it understood that we will show no weakness if he goes on the war-path, so we must make it evident, unless we are false to our own traditions and to the demands of civilization and humanity, that while we will do everything in our power for the Filipino who is peaceful, we will take the sternest measures with the Filipino who follows the path of the insurrecto and the ladrone.

The heartiest praise is due to large numbers of the natives of the islands for their steadfast loyalty. The Macabebees have been conspicuous for their courage and devotion to the flag. I recommend that the Secretary of War be empowered to take such action in the way of aiding those of these men who are crippled in the service and the families of those who are killed.

Time has come when there should be additional legislation for the Philippines. Nothing better can be done for the islands than to introduce industrial enterprises. Nothing would benefit them more than throwing them open to industrial development. The connection between idleness and mischief is proverbial, and the opportunity to do remunerative work is one of the surest preventives of war. Of course no business man will go into the Philippines unless it is to his interest to do so; and it is immensely to the interest of the islands that he should go in. It is therefore necessary that the Congress should pass laws by which the resources of the islands can be developed; so that franchises (for limited terms of years) can be granted to companies doing business in them, and every encouragement be given to the incoming of business men of every kind.

Not to permit this is to do a wrong to the Philippines. The franchise laws must be granted and the business permitted only under regulations which will guarantee the islands against any kind of improper exploitation. But the vast natural wealth of the islands must be developed, and the capital willing to develop it must be given the opportunity. The field must be thrown open to individual enterprise, which has been the real factor in the development of every region over which our flag has flown. It is urgently necessary to enact suitable laws dealing with general transportation, mining, banking, currency, homesteads, and the use and ownership of the lands and timber. These laws will give free play to industrial enterprise; and the commercial development which will surely follow will afford to the people of the islands the best proofs of the sincerity of our desire to aid them.

I call your attention most earnestly to the crying need of a cable to Hawaii and the Philippines. We are continuing from the Philippines to points in Asia. We should not defer a day longer than necessary the construction of such a cable. It is demanded not merely for commercial but for political and military considerations. Either the Congress should immediately provide for the construction of a Government cable, or else an arrangement should be made by which like advantages to those accruing from a Government cable may be secured to the Government by contract with a private cable company.

No single great material work which remains to be undertaken on this continent is of such consequence to the American people as the building of a canal across the isthmus connecting North and South America. Its importance to the nation is by no means limited merely to its material effects upon our business prosperity; and yet with view to these effects alone it would be to the last degree important for us immediately to begin it. While its beneficial effects would perhaps be most marked upon the Pacific coast and the Gulf and South Atlantic States, it would also greatly benefit other sections. It is emphatically a work which it is for the interest of the entire country to begin and complete as soon as possible; it is one of those great works which only a great nation can undertake with prospects of success, and which when done are not only permanents to the national material interests, but standing monuments to its constructive ability.

I am glad to be able to announce to you that our negotiations with Great Britain, conducted on both sides in a spirit of friendliness and mutual good-will and respect, have resulted in my being able to lay before the Senate a treaty which if ratified will enable us to begin preparations for an isthmian canal at any time, and which guarantees to this nation every right that it has ever asked in connection with the canal. In a word, a fuller treaty, so long recognized as inadequate to supply the base for the construction and maintenance of a necessarily American ship-channel, is abrogated. It specifically provides that the United States alone shall do the work of building and assume the responsibility of safeguarding the canal and shall regulate its neutral use by all nations on terms of equality without the guaranty or interference of any outside nation from any quarter. The signed treaty will at once be laid before the Senate, and if approved the Congress can then proceed to give effect to the advantages it secures us by providing for the building of the canal.

The true end of every great and free people should be self-determining peace; and this nation most earnestly desires sincere and cordial friendship with all others. Over the entire world, of recent years, wars between the great civilized powers have become less and less frequent. Wars with barbarous and semibarbarous peoples come in an entirely different category, being merely a most regrettable but necessary international police duty which must be performed for the sake of the welfare of mankind. Peace can only be kept with certainty where both sides wish to keep it; but more and more the civilized peoples are realizing the wicked folly of war and are attaining that condition of just and intelligent regard for the rights of others which will in the end, as we hope and believe, make world-wide peace possible. The peace conference at The Hague gave definite expression to this hope and belief and marked a stride toward their attainment.

The same peace conference acquiesced in our statement of the Monroe doctrine as compatible with the purposes and aims of the conference. The Monroe doctrine should be the cardinal feature of the foreign policy of all the nations of the two Americas, as it is of the United States. Just seventy-eight years have passed since Presi-
dent Monroe in his annual message announced
not to be considered as subjects for future coloni-
ization by any European power." In other words,
the Monroe doctrine is a declaration that there
must be no territorial aggression by any non-
American power at the expense of any
American power on American soil. It is no wise
intended as hostile to any nation in the Old
World. Still less is it intended to give cover to
any aggression by one New World power at the
expense of any other. It is simply a step, and a
long step, toward assuring the universal peace
of the world by securing the possibility of perma-
nent peace on this hemisphere.

During the past century other influences have
established the permanence and independence of
the smaller states of Europe. Through the Mon-
roe doctrine we hope to be able to safeguard
the right of independence and secure like permanence for
the lesser among the New World nations.

This doctrine has nothing to do with the com-
cercial relations of any American power, save
that it in truth allows each of them to form
such as it desires. In other words, it is really a
safeguard of the independence of the
American states. We do not ask under this doc-
trine for any exclusive commercial dealings with
any other American state. We do not guaran-
tee any state against punishment if it miscon-
ducts itself, provided that punishment does not
take the form of the acquisition of territory by
any non-American power.

Our attitude by itself is a sufficient guaranty of
our own good faith. We have not the slightest
desire to secure any territory at the expense of
any of our neighbors. We wish to work with
them hand in hand, so that all of us may be
uplifted together, and we rejoice over the good
fortunes of any of them, we gladly hail their mat-
terial prosperity and political stability, and are
concerned and alarmed if any of them fall into
industrial or political chaos. We do not wish to
see any Old World military power grow up on
this continent, or to be compelled to become a
military power ourselves. The peoples of the
Americas can prosper best if left to work out
their own salvation in their own way.

The work of upbuilding the navy must be
steadily continued. No one point of our policy,
foreign or domestic, is more important than this
to the honor and material welfare, and above all
to the peace, of our nation in the future. Wheth-
er we are at war or at peace we must recog-
nize that we have international duties no less
than international rights. Even if our flag were
hoisted in the Philippines and Porto Rico, even
if we decided not to build the isthmian canal,
we should need a thoroughly trained navy of ade-
quate size, or else be prepared definitely and for
all time to abandon the idea that our nation
is among those whose sons go down to the sea
in ships. Unless our commerce is always to be
carried in foreign bottoms, we must have war
craft to protect it.

Inasmuch, however, as the American people
have no thought of abandoning the path upon
which they have entered, and especially in view
of the fact that the building of the isthmian
canal is fast becoming one of the matters in
which the whole people are united in demanding, it is
imperative that our navy should be put and
kept in the highest state of efficiency, and should
be so built as to meet our growing needs. So far
from being in any way a provocation to war, an
adequate and highly trained navy is the best
guaranty against war, the cheapest and most ef-
fective peace insurance. The cost of building and
maintaining such a navy is equal to the lightest premium for insuring peace which this
nation can possibly pay.

Probably no other great nation in the world
is so anxious for peace as we are. There is not
a single civilized power which has anything
whatever to fear from aggressiveness on our part.
All we want is peace; and toward this end we
wish to be able to secure the same respect for
our rights from others which we are eager and
anxious to extend to their rights in return, to
insure fair treatment to us commercially, and to
guarantee the safety of the American people.

Our people intend to abide by the Monroe doc-
trine and to insist upon it as the one sure means
of securing the peace of the Western Hemisphere.
The navy offers us the only means of making
our insistence upon the Monroe doctrine any-
thing but a subject of derision to whatever na-
tion chooses to disregard it. We desire the peace
which comes as of right to the just man armed;
not the peace granted on terms of ignominy to
the craven and the weakling.

It is not possible to impose a navy after war
breaks out, and it is clear that the ships must be built and the men trained long in advance. Some auxiliary ves-
sels can be turned into makeshifts which will do
in default of any better for the minor work, and
there will be a proportion of men who can be mixed with the
highly trained, shortcomings being made
good by the skill of their fellows; but the effi-
cient fighting force of the navy when pitted
against an equal opponent will be found to be
exclusively in the war-ships that have been regu-
larly built and in the officers and men who
through years of faithful performance of sea
duty have been trained to handle their formidable
but complex and delicate weapons with the
highest efficiency. In the late war with Spain
the ships that dealt the decisive blows at Manila
and Santiago had been launched from two to
fourteen years, and they were able to do as they
did because the men in the conning towers, the
gun turrets, and the engine-rooms had through
long years of practise at sea learned how to do
their duty.

Our present navy was begun in 1882. At that
period our navy consisted of a collection of anti-
quated wooden ships of the galleys of Alcibiades and Hamilcar—certainly as the
ships of Tromp and Blake. Nor at that time
did we have men henceforth recognized as
war. Under the wise legislation of the Congress
and the successful administration of a succession
of patriotic Secretaries of the Navy, belonging
to both political parties, the work of upbuilding
the navy went on, and ships equal to any in
the world of their kind were continually added;
and what was even more important, these ships
were exercised at sea singly and in squadrons
until the men aboard them were able to get the
best possible service out of them. The result
was seen in the short war with Spain, which
was decided with such rapidity because of the
infinitely greater preparedness of our navy than
of the Spanish navy.

While awarding the fullest honor to the men
who actually commanded and manned the ships
which destroyed the Spanish sea forces in the
Philippines and in Cuba, we must not forget that
an equal meed of praise belongs to those without
whom neither blade nor gun was struck. The
congressmen who voted years in advance the
money to lay down the ships, to build the guns,
to buy the armor-plate; the department officials
and the business men and wage-workers who furnished what the Congress had authorized; the Secretaries of the Navy who asked for and expended vast sums; and finally the officers who, in fair weather and foul, on actual sea service, trained and disciplined the crews of the ships when there was no war in sight—all are entitled to a portion of the glory of Manila and Santiago, and the respect accorded by every true American to those who wrought such signal triumph for our country. It was forethought and preparation which secured us the overwhelming triumph of 1898. If we fail to show forethought and preparation now, there may come a time when disaster will befal us instead of triumph; and should this time come, the fault will rest primarily, not upon those whom the accident of events puts in supreme command at the moment, but upon those who have failed to prepare in advance.

There should be no cessation in the work of completing our navy. So far ingenuity has been wholly unable to devise a substitute for the great war craft whose hammering guns beat out the music of triumphant ships. It is unwise and unwise to provide this year for several additional battle-ships and heavy armored cruisers, with auxiliary and lighter craft in proportion; for they provide a cash flow and a better record number and character I refer you to the report of the Secretary of the Navy. But there is something we need even more than additional ships, and this is additional officers and men. The provision of battleship and cruiser forces would then lay them up, with the expectation of leaving them unmanned until they are needed in actual war, would be worse than folly; it would be a crime against the nation.

To send any war-ship against a competent enemy unless those aboard it have been trained by years of actual sea service, including incessant gunnery practise, would be to invite not merely disaster, but the bitterest shame and humiliation. Four thousand additional seamen and 1,000 additional marines should be provided; and an increase in the officers should be provided by making a large addition to the classes at Annapolis. There is one small matter which should be mentioned in connection with Annapolis. The precious and unmeaning title of "naval cadet" should be abolished; the title of "midshipman," full of historic association, should be restored.

But the time of peace a war-ship should be used until it wears out, for only so can it be kept fit to respond to any emergency. The officers and men alike should be kept as much as possible on blue water, for it is there only they can learn their duties as they should be learned. The big vessels should be maneuvered in squadrons containing not merely battle-ships, but the necessary proportion of cruisers and scouts. The torpedo-boats should be handled by the younger officers in such manner as will best fit the latter to take responsibility and meet the emergencies of actual warfare.

Every detail ashore which can be performed by a civilian should be so performed, the officer being kept for his special duty in the sea service. Above all, gunnery practise should be unremitting. It is important to have our navy of adequate size, but it is even more important that ship for ship it should equal in efficiency any in the world. This is possible only with highly drilled crews and officers, and this in turn imperatively demands continuous and progressive instruction in target practise, ship handling, squadron tactics, and general discipline. Our ships must be assembled in squadrons actively cruising away from harbors and never long at anchor. The resulting wear upon engines and hulls must be ended; a battle-ship worn out in long training of officers and men is well paid for by the results, while, on the other hand, no matter in how excellent condition, it is entirely useless if the glory of Manila and Santiago is not maintained.

We now have 17 battle-ships appropriated for, of which 9 are completed and have been commissioned for actual service. The remaining 8 will be ready in from two to four years, but, it will take at least that time to recruit and train the men to fight them. It is of vast concern that we have trained crews ready for the vessels by the time they are commissioned. Good ships and good guns are simply good weapons, and the best weapons are useless save in the hands of men who know how to fight with them. The men must be trained and drilled under a thorough and well-planned system of progressive instruction, while the recruiting must be carried on with still greater vigor. Every effort must be made to exalt the real function of the officer—the command of of the Naval Academy should be assigned to the combatant branches, the line and marines.

Many of the essentials of success are already recognized by the General Board, and as the central office of a growing staff, is moving steadily toward a proper war efficiency and a proper efficiency of the whole navy, under the Secretary. This General Board, reviewing the condition of a general staff, is providing for the official and then the general recognition of our altered conditions as a nation and of the true meaning of a great war fleet, which meaning is, first, the best men, and, second, the best ships.

The naval militia forces are State organizations, and are trained for coast service, and in event of war they will constitute the inner line of defense. They should receive hearty encouragement from the General Government.

But in addition we should at once provide for a national navy reserve, organized and trained under the direction of the Navy Department, and subject to the call of the Chief Executive whenever war becomes imminent. It should be a real auxiliary of the main navy, the seaplaning peace establishment, and offer material to be drawn on at once for manning our ships in time of war. It should be composed of graduates of the Naval Academy, graduates of the naval militia, officers and crews of coast-line steamers, longshore schooners, fishing vessels, and steam-yachts, together with the coast population about such centers as life-saving stations and lighthouses.

The American people must either build and maintain an adequate navy or else make up their minds definitely to accept a secondary position in international affairs, not merely in political, but in commercial matters. It has been well said that there is no surer way of courting national disaster than to be "opulent, aggressive, and unarmed."

It is not necessary to increase our army beyond its present size at this time. But it is necessary to keep it at the highest point of efficiency. The individual units who as officers and enlisted men compose this army are, we have good reason to believe, at least as efficient as those of any other army in the entire world. It is a further duty of the Government to see that their training is of a kind to insure the highest possible expression of power to these units when acting in combination.

The conditions of modern war are such as to
Our army is so small and so much scattered that it is very difficult to maintain a capacity to carry on a great war (as well as the lower officers and the enlisted men) a chance to practise maneuvers in mass and on a comparatively large scale. In time of need no amount of individual efficiency would avail against the paralysis which would follow inability to work as a coherent whole, under skilful and daring leadership. The Congress should provide means whereby it will be possible to have field exercises by at least a division of regulars, and if possible also a division of National Guardsmen once a year. These exercises might take the form of field maneuvers; or, if on the Gulf coast or the Pacific or Atlantic seaboard, or in the region of the Great Lakes, the army corps when assembled could be marched from some inland point to some point on the water, there embarked, disembarked after a couple of days’ journey at some other point, and again marched inland. Only by actual handling and providing for men in masses while they are marching, camping, embarking, and disembarking, will it be possible to train the higher officers to perform their duties well and smoothly.

A great debt is owed to the public to the men of the army and navy. They should be so treated as to enable them to reach the highest point of efficiency, so that they may be able to render instant response to any demand made upon them to sustain the interests of the nation and the honor of the flag. The individual American enlisted man is probably on the whole a more formidable fighting man than the regular of any other army. Every consideration should be shown him, and in return the highest standard of usefulness should be exacted from him. It is well worth while for the Congress to consider whether the pay of enlisted men upon second and subsequent enlistments should not be increased to correspond with the increased value of the veteran soldier.

Much good has already come from the act reorganizing the army, passed early in the present year. The three prime reforms, all of them of literally inestimable value, have been the substitution of four-year details from the line for permanent appoints in the so-called staff divisions; second, the establishment of a corps of artillery with a chief at the third, the establishment of a maximum and minimum limit for the army. It would be difficult to overestimate the improvements in the efficiency of our army which these three reforms are making, and have in part already effected.

The reorganization provided for by the act has been substantially accomplished. The improved conditions in the Philippines have enabled the War Department materially to reduce the military charge upon our revenue and to arrange the number of soldiers so as to bring this number much nearer to the minimum than to the maximum limit established by law. There is, however, need of supplementary legislation. Thorough military education must be provided, and in addition to the regulars the advantages of this education should be given to the officers of the National Guard and others in civil life who desire intelligently to fit themselves for possible military duty. The officers should be given the chance to perfect themselves by study in the higher branches of this art. At West Point the education should be of the kind most apt to turn out men who are good in actual field service; too much stress should not be laid on mathematics, nor should proficiency therein be held to establish the right of entry to a corps.
d'élite. The typical American officer of the best kind need not be a good mathematician; but he must be able to master himself, to control others, and to show boldness and fertility of resource in every emergency.

Action should be taken in reference to the militia and to the raising of volunteer forces. Our militia law is obsolete and worthless. The organization and armament of the National Guard of the several States, which are treated as militia in the appropriations by the Congress, should be made identical with those provided for the regular forces. The obligations and duties of the guard in time of war should be carefully defined, and a system established by law under which the method of procedure of raising volunteer forces should be prescribed in advance. It is utterly impossible in the excitement and haste of impending war to do this satisfactorily if the arrangements have not been made long beforehand. Provision should be made for utilizing the first volunteer organizations called out the training of those citizens who have already had experience under arms, and especially for the selection in advance of the qualified men who may be raised; for careful selection of the kind necessary is impossible after the outbreak of war.

That the army is not at all a mere instrument of destruction has been shown during the last three years. In the Philippines, Cuba, and Porto Rico it has proved itself a great constructive force, a most potent implement for the upbuilding of peaceful civilization.

No other citizens deserve so well of the republic as the veterans, the survivors of those who saved the Union. They did the one deed which if left undone would have meant that all else in our history went for nothing. But for their steadfast prowess in the greatest crisis of our history, all our annals would be meaningless, and our great experiment in popular freedom and self-government a gloomy failure. Moreover, they not only left us a united nation, but they left us also as a heritage the memory of the military service in which they are kept united. We are now indeed one nation, one in fact as well as in name; we are united in our devotion to the flag which is the symbol of national existence and unity, and we are as true to the Constitution as the Union is perfect, until the day when one of us may die for the Union. The men who in the last three years have done so well in the East and the West Indies and on the mainland of Asia have shown that this remembrance is not lost. In any serious crisis the United States must rely for the great mass of its fighting men upon the volunteer soldier who do not make a permanent profession of the military career; and whenever such a crisis arises the deathless memories of the civil war will give to Americans the lift of lofty purpose which comes to those whose fathers have stood valiantly in the forefront of the battle.

The merit system of making appointments is in its essence as democratic and American as the common-school system itself. It simply means that in clerical and other positions where the duties are entirely non-political, all applicants should have a fair field and no favor, each standing on his merits as he is able to show them by public examination, which is the only way by which it is possible to test unpremeditated judgment. The examinations offer the only available means in many cases for applying this system. In other cases, as where laborers are employed, a system of registration undoubtedly can be widely extended.

There are, of course, places where the written competitive examination can not be applied, and others where it offers no means an ideal solution, but where under existing political conditions it is, though an imperfect means, yet the best present means of getting satisfactory results.

Wherever the conditions have permitted the application of the merit system in its fullest and widest sense, the gain to the Government has been immense. The navy-yards and postal service illustrate, probably better than any other branches of the Government, the great gain in economy, efficiency, and honesty due to the enforcement of this principle.

I recommend the passage of a law which will extend the classified service to the District of Columbia, or will at least enable the President to extend it. In my judgment all laws providing for the temporary employment of clerks should hereafter contain a provision that they be selected under the civil-service law.

It is important to have this system obtain at home, but it is even more important to have it applied rigidly in our Insular possessions. Not long ago an office should have been raised in Porto Rico with any regard to the man's partizan affiliations or services, with any regard to the political, social, or personal influence which he may have at his command; in short, heed should be paid to absolutely nothing save the man's own character and capacity and the needs of the service.

The administration of these islands should be as wholly free from the suspicion of partizan politics as the administration of the army and navy. All that we ask from the public servant in the Philippines or Porto Rico is that he reflect honor on his country by the way in which he makes that country's rule a benefit to the people who have come under it. This is all that we should ask, and we can not afford to be content with less.

The merit system is simply one method of securing honest and efficient administration of the Government, by which the justification of any type of government lies in its proving itself both honest and efficient.

The consular service is now organized under the provisions of a law, under which the posts are entirely inadequate to existing conditions. The interest shown by so many commercial bodies throughout the country in the reorganization of the service is heartening and demands consideration. Several bills providing for a new consular service have in recent years been submitted to the Congress. They are based upon the just principle that appointments to the service should be made only after a practical test of the applicant's fitness, that promotions should be governed by trustworthiness, adaptability, and zeal in the performance of duty, and that the tenure of office should be unaffected by partizan considerations.

The guardianship and fostering of our rapidly expanding foreign commerce, the protection of American citizens resorting to foreign countries in lawful pursuit of their affairs, and the maintenance of the dignity of the nation abroad, combine to make it essential that our consuls should be men of character, knowledge, and enterprise. It is true that the service is now, in the main, efficient, but a standard of excellence can not be permanently maintained. I refer to this matter in the bills heretofore submitted to the Congress on this subject are enacted into law.

In my judgment the time has arrived when
we should definitely make up our minds to recognize the Indian as an individual and not as a member of a tribe. The general allotment act is a mighty pulverizing engine to break up the tribal mass. It acts directly upon the family and the individual. Under its provisions some 60,000 Indians have already become citizens of the United States. We should now break up the tribal funds, doing for them what allotment does for the tribal lands; that is, they should be divided into individual holdings. There will be a transition period during which the funds will in many cases have to be held in trust. This is the case also with the lands. A stop should be put upon the indiscriminate permission to Indians to lease their allotments. The effort should be steadily to make the Indian work like any other man on his own ground. The marriage laws of the Indians should be made the same as those of the whites.

In the schools the education should be elementary. The need of higher education among the Indians is very, very limited. On the reservations care should be taken to try to suit the teaching to the needs of the people. It is not in attempting to induce agriculture in a country suited only for cattle-raising, where the Indian should be made a stock-grower. The ration system merely the reservation system, is highly detrimental to the Indians. It promotes beggary, perpetuates pauperism, and sthices industry. It is an effectual barrier to progress. To a greater or less degree as long as tribes are held on reservations and have everything in common. The Indian should be treated as an individual—like the white man. During the change of treatment inevitable hardships will occur; every effort should be made to minimize these hardships; but we should not because of them hesitate to make the change. There should be a continuous reduction in the number of agencies.

In dealing with the aboriginal races few things are more important than to preserve them from the terrible physical and moral degradation resulting from the liquor traffic. We are doing all we can to save our own Indian tribes from this evil. Wherever by international agreement this same end can be attained by other races where we do not possess exclusive control, every effort should be made to bring it about.

I bespeak the most cordial support from the Congress and the people for the St. Louis Exposition to Commemorate the One Hundredth Anniversary of the Louisiana Purchase. This purchase was the greatest instance of expansion in our history. It definitely decided that we were to become a great continental republic, by far the foremost power in the Western Hemisphere. It is one of three or four great landmarks in our history—the great turning points in our development. It is uniquely fitting that all our people should join with heartiest good-will in commemorating it, and the citizens of St. Louis, of Missouri, of all the adjacent region, are entitled to every aid in making the celebration a noteworthy event in our annals. We earnestly hope that foreign nations will appreciate the deep interest our country takes in this exposition, and our view of its importance from every standpoint, and that they will participate in securing its success. The National Government should be represented by a full and complete set of exhibits. Treasure, art, and industry, with great energy and civic spirit, are carrying on an exposition which will continue throughout most of the present session of the Congress. I heartily commend this exposition and ask all men and women to come. It deserves all the encouragement that can be given it. The managers of the Charleston Exposition have requested the Cabinet officers to place thereat the Government exhibits which have been at Buffalo, promising to pay the necessary expenses. I have taken the responsibility of directing that this be done, for I feel that it is due to Charleston to help her in her praiseworthy effort. In my opinion the management should not be required to pay all these expenses. I earnestly recommend that the Congress appropriate at once the small sum necessary for this purpose.

The Pan-American Exposition at Buffalo has just closed. Both from the industrial and the artistic standpoint this exposition has been in a high degree creditable and useful, not merely to Buffalo but to the United States. The terrible tragedy of the President's assassination interfered materially with its being a financial success. The exposition was peculiarly in harmony with the trend of our public policy, because it represented an effort to bring into closer touch all the people and to give them an increasing sense of unity. Such an effort was a genuine service to the entire American public.

The advancement of the highest interests of national science and learning and the custody of objects of art and of the valuable results of scientific expeditions conducted by the United States have been greater or less. The Smithsonian Institution. In furtherance of its declared purpose—for the "increase and diffusion of knowledge among men"—the Congress has from time to time given it other important functions. Such trusts have been executed by the institution with notable fidelity. There should be no halt in the work of the institution, in accordance with the plans which its secretary has presented, for the preservation of the vanishing races of great North American animals in the National Zoological Park. The urgent needs of the National Museum are recomended to the favorable consideration of the Congress.

Perhaps the most characteristic educational movement of the past fifty years is that which has created the modern public library and developed it into broad and active service. There are now over 5,000 public libraries in the United States, the product of this period. In addition to accumulating materials there are many libraries, by organization, by improvement in method, and by cooperation, to give greater efficiency to the material they hold, to make it more widely useful, and by avoidance of unnecessary duplication in process to reduce the cost of its administration.

In these efforts they naturally look for assistance to the Federal library, which, though still the Library of Congress and so entitled, is the one national library of the United States. Already the largest single collection of books on the Western Hemisphere, and certain to increase more rapidly than any other through purchase, exchange, and the operation of the copyright law, this library has a unique opportunity to render to the libraries of this country—American scholarship—service of the highest importance. It is housed in a building which is the largest and most magnificent yet erected for library uses. Resources are now being provided with the collection properly, equip it with the apparatus and service necessary to its effective use, render its bibliographic work widely avail-
able, and enable it to become, not merely a center of research, but the chief factor in great cooperatives for the diffusion of knowledge and the advancement of learning.

For the sake of good administration, sound economy, and the advancement of science, the Census Office as now constituted should be made a permanent Government bureau. This would insure better, cheaper, and more satisfactory work, in the interest not only of our business but of statistic, economic, and social science.

The remarkable growth of the postal service is shown in the fact that its revenues have doubled and its expenditures have nearly doubled within twelve years. Its progressive development compels constantly increasing outlay, but in this period of business energy and prosperity its receipts grow so much faster than its expenses that the annual deficit has been steadily reduced from $11,411,779 in 1897 to $3,923,727 in 1901. Among recent postal advances the success of rural free delivery wherever established has been so marked, and actual experience has made its benefits so plain, that the demand for its extension is general and urgent.

It is just that the great agricultural populations should share in the improvement of the service. The number of rural routes now in operation is 6,009, practically all established within three years, and there are 6,000 applications awaiting action. It is expected that the number in operation at the close of the current fiscal year will reach 8,000. The mail will then be daily carried to the doors of 5,700,000 of our people who have heretofore been dependent upon distant post offices, and one-third of all that portion of the country which is adapted to it will be covered by this kind of service.

The full measure of postal progress which might be realized has long been hampered and obstructed by the heavy burden imposed on the Government through the entrenched and well-understood abuses which have grown up in connection with second-class mail-matter. The extent of this burden appears when it is stated that while the second-class matter makes nearly three-fourths of the weight paid for the last fiscal year only $4,294,445 of the aggregate postal revenue of $111,631,193. If the pound-rate of postage, which produces the large loss thus estimated, were to be fixed with the purpose of encouraging the dissemination of public information, were limited to the legitimate newspapers and periodicals actually contemplated by the law, no just exception could be taken. That expense would be the recognized and accepted cost of a liberal public policy deliberately adopted for a justifiable end. But much of the matter which enjoys the privileged rate is wholly outside of the intent of the law, and has secured admission only through an evasion of its requirements or through lax construction. The proportion of such wrongly included matter is estimated by postal experts to be one-half of the whole volume of second-class mail. If it be only one-third or one-quarter, the magnitude of the burden is apparent. The Post-Office Department has now undertaken to remove the abuses so far as is possible by a stricter application of the law; and it should be sustained in its effort.

Owing to the rapid growth of our power and our interests on the Pacific, whatever happens in China must be of the keenest national concern to us. Saving general terms of the settlement of the questions growing out of the antiforeign risings in China of 1900, having been formulated in a joint note addressed to China by the representatives of the injured powers in December last, were promptly accepted by the Chinese plenipotentiaries. After protracted conferences the plenipotentiaries of the several powers were able to sign a final protocol with the Chinese plenipotentiaries on the 7th of September, setting forth the measures taken by China in compliance with the demands of the joint note, and expressing their satisfaction therewith. It will be laid before the Congress with a report of the plenipotentiary on behalf of the United States, Mr. William Woodville Rockhill, to whom high praise is due for the tact, good judgment, and energy he has displayed in performing an exceptionally difficult and delicate task.

The agreement reached dispose in a manner satisfactory to the powers of the various grounds of complaint, and will contribute materially to a better future relations between China and the powers. Reparation has been made by China for the murder of foreigners during the uprising, and punishment has been inflicted on the officials, however high in rank, recognized as responsible for or having participated in the outbreak. Official examinations have been forbidden for a period of five years. By them all powers have been murdered or cruelly treated, and edicts have been issued making all officials directly responsible for the future safety of foreigners and for the suppression of violence against them.

Provisions have been made for insuring the future safety of the foreign representatives in Pekin by setting up an exclusive security a'quarter of the city which the powers can make defensible and in which they can if necessary maintain permanent military guards; by dismantling the military works between the capital and the sea; and by allowing the temporary maintenance of foreign military posts along this line. An edict has been issued by the Emperor of China prohibiting for two years the importation of arms and ammunition into China. China has agreed to pay adequate indemnities to the states, societies, and individuals for the losses sustained by them for the expenses of the military expeditions sent by the various powers to protect life and restore order.

Under the provisions of the joint note of December, 1900, by the Congress of last year the treaties of commerce and navigation and to take such others steps for the purpose of facilitating foreign trade as the foreign powers may decide to be needed.

The Chinese Government has agreed to participate financially in the work of bettering the water approaches to Shanghai and to Tientsin, the centers of foreign trade in central and northern China, and an international conservancy board, in which the Chinese Government is largely represented, has been provided for the improvement of the Shanghai river and the control of its navigation. In the same line of commercial advantages a revision of the present tariff on imports has been assented to for the purpose of substituting specific for ad valorem duties, and an expert has been sent abroad on the part of the United States to assist in this work. A list of articles to remain free of duty, including four, cereal, and silver, is available, and bullion, has also been agreed upon in the settlement.

During these troubles our Government has unswervingly advocated moderation, and has materially aided in bringing about an adjustment which tends to enhance the welfare of China.
and to lead to a more beneficial intercourse be-
tween the empire and the modern world; while
in the period of the mad massacre we did
our full share in safeguarding life and prop-
erty, restoring order, and vindicating the na-
tional interest and honor. It behooves us to con-
tinue in these paths, doing what lies in our
to power to foster feelings of good-will, and leav-
ing no effort untried to work out the great policy
of full and fair intercourse between China and the
nations, on a footing of equal rights and
advantages to all. We advocate the "open door"
with all that it implies; not merely the procure-
ment of enlarged commercial opportunities on the
coasts, but access to the interior by the water-
ways with which China has been so extraordi-
narily favored. Only by bringing the people of
China into peaceful and friendly community of
trade with all the peoples of the earth can the
work now auspiciously begun be carried to frui-
tion. In the attainment of this purpose we neces-
sarily claim parity of treatment, under the con-
ventions, throughout the empire, promising advan-
tage to the great family of American common-
wealths, as well in their relations among them-
se1ves as in their domestic advancement and in
their intercourse with the outside world, with
this discrimination among their citizens with those of all other powers.

We view with lively interest and keen hopes of
beneficial results the proceedings of the Pan-
American Congress, recently held at Havana, Cuba,
and now sitting at the Mexican capital. The delegates of the United States are under
the most liberal instructions to cooperate with their colleagues in all matters promising advan-
tage to the great family of American common-
wealths, as well in their relations among them-
se1ves as in their domestic advancement and in
their intercourse with the outside world, with
this discrimination among their citizens with those of all other powers.

And I may well ask, if it be true that we have "no right but what we have earned to protect our
people," whether it be also true that we have no right, and no need, to protect our government.

The Filipino Insurrection. Dec. 17 the House of Representatives took up the consideration of a
measure, "temporarily to provide revenue for the Philippine Islands, and other purposes," and
two days were allowed, under special order, for
debate. Mr. Payne, of New York, who was in
charge of the measure, made a fine speech in favor of
merit in its favor. Among other things, he said:
"It becomes necessary at this time because of
the recent decision of the Supreme Court of the
United States holding that the Philippine Islands not
being foreign territory, and the existing law for
the collection of tariff duties including only those
articles imported from foreign countries, that it
does not apply to imports from the Philippine Islands,
and that no collection of duties upon such imports
can be made.

"But the bill goes further than that. It gives
the force of an act of Congress to the tariff act
already enacted by the Philippine Commission.
That act depends for its force upon the war
power of the Government and also upon the legis-
lation of Congress on what is known as the
Spooner amendments, giving the Executive au-
thority to legislate, to execute the laws, and to
exercise judicial functions in the Philippine Is-
lands. The war of our forefathers was fought
within ten days of the cession of these islands by Spain—on Feb. 15—a conspiracy was formed to
overthrow the power of the United States—in
the language of the times, to exterminate our
army, and after they were out of the way to
massacre the inhabitants of Manila who were
not Filipinos. This made the Philippine Islands hostile territory. They were under the laws of nations,
and under the repeated decisions of the Supreme
Court, gave the war power to the Executive of
this country to govern those islands with a mili-
tary government, or, at large discretion to that
by appointing persons from civilian life to
execute the offices.

"The organized opposition to the Government
of the United States was overthrown in March,
1900, and since then the war on the part of the
Filipinos has been a guerrilla warfare—sporadic,
spasmodic, and at times carried on with great
 cruelty and without any regard on the part of
some of these men to the rules of civilized war-
fare. As the insurgent forces were dispersed the
President of the United States thought it best
to send out to these islands the Philippine Com-
mission, known as the Taft Commission, which
was appointed March 16, 1900, and which reached
the islands about Sept. 1 of that year. These
commissioners were instructed generally by the
President.

"Those instructions are varied in their char-
acter. They provided for separating the judi-
cial, the executive, and the legislative power;
for the establishment of government where it
could be done in the different cities and towns
and provinces of the island. They provided gen-
erally for giving to the Filipinos a good and,
for the time being, a stable and honest and
 equitable government throughout all the islands,
and for levying such taxes and imports as, in the
judgment of the commission, should be right and
necessary.

"Afterward, on March 2, 1901, the Spooner
amendments were passed, amplifying the power
of the President of the United States, enforcing
the authority which the President already had
under the military power of the Government by
the legislative arm of the Government, and legis-
lating to him from the full authority, which he already
perhaps possessed under the military power.
Under this power the Taft Commission was au-
thorized to impose taxes. We found when we
went there a churn in law in force under the old
Spanish régime.

"Some of the duties imposed by that law were
very high, especially the duties upon the necessaries of life. The commission went to work almost immediately to gather information, to amend the old Spanish tariff code, and to make it more suitable to American ideas, American possession, and American government.

"A great deal of care was exercised by this commission in fixing these rates. In the first place, they made what they called a tentative bill, which was published and widely distributed in the Philippine Islands and criticisms invited. Then this bill was amended, due regard being given to the criticisms which were offered. Then the bill came here and was published by the War Department in several hundred trade journals throughout the United States, criticisms being invited and received. The War Department recommended some amendments, and sent all these criticisms and all the other information obtained to the commission. After the bill had been considered, back and forth, with such light as was thrown upon it in this public way, for more than a year, the commission finally enacted their tariff.

"Now, this tariff is not only a duty upon imports into the Philippine Islands, but embraces also a small duty upon some exports from the Philippine Islands, such as hemp, sugar, tobacco, and so forth—a continuation of the Spanish method of taxation. The entire sum realized from these export duties since the occupation of the islands by the United States is $1,700,000, while the total tariff receipts for the whole period of occupation does not exceed $30,000 last amounting to $15,625,000. So that the export tax was not comparatively large, and the export tax is nearly the only direct tax that is collected in the Philippine Islands.

"Mr. Chairman, in addition to this we found that by the decision of the court and the ruling of the Treasury the ports of Porto Rico as well as the ports of the Philippine Islands and the ports of the United States were in such relation that the coastwise laws applied, and that under the law no vessel carrying a foreign flag could bring goods from the Philippines to any port in the United States. We take care of that in this bill; but we hope the time will soon come, and we are assured that it will soon come, when American citizens will furnish American vessels, to be sailed under the American flag, fully equal to the demand, to carry all the commerce coming from the Philippine Islands to ports of the United States. When that time comes, this side of the House will see to it that these coastwise laws are extended to the ports of the Philippine Islands, as well as to all other ports that are under the flag of the United States.

"Mr. Chairman, in addition to this, in the last section of the bill we have endeavored to apply the drawback laws, providing for drawbacks in duties and in internal-revenue collections, and also to apply the exemption laws for goods manufactured in bonded warehouses, to the shipment of goods from United States ports to the ports of the Philippine Islands.

"Then we have provided, as in the Porto Rican bill, that all these taxes collected in the Philippine Islands, and all duties collected in the United States upon goods brought from the Philippine Islands into the United States shall not be covered into the general fund of the Treasury, but be paid into the treasury of the Philippine Islands for the use and benefit of the Philippine Islands."

Mr. Payne did not accept the commission tariff as an ideal one; but he defended it as a good working measure, to meet an emergency, and he went on to describe in detail the work carried on and to be carried on under American rule in the Philippines, for which ample revenue is needed.

"Mr. Swanson, of Virginia, led the discussion in opposition to the measure. He said:

"Mr. Chairman, the Republican party of this country has definitely determined to enter into a system of colonial conquest and government. When this question was last up for debate in this House we of the opposition contended that such a policy was not only unwise and dangerous to the continued liberty and prosperity of our people, but also not permissible under the plain provisions of our Federal Constitution. Recently the Supreme Court of the United States, by a decision reversing former decisions, has seen proper to amend the Federal Constitution and declare that Congress can govern acquired territory outside the prohibitions and requirements of the Constitution. It has specifically decided that that clause in the Constitution which declares that "all duties, imposts, and excises shall be uniform throughout the United States" applies to the States only and not to the Territories and other possessions.

"By this decision it declares that Congress has power to impose duties upon goods coming from the Territories into the States and also from the States into the Territories. It confers upon Congress absolute power of taxation in the Territories, unrestrained by any provision in the Federal Constitution. By a recent decision the court has declared that the Philippine Islands and other possessions are not foreign but domestic territory, and, as the Dingley bill, by its terms, limits its collection of duties to importations from foreign countries, it does not apply to the Philippines; hence no duty can be collected on importations from those islands until Congress shall so direct. Ever since we have had control of these islands, until this decision, the duties imposed by the Dingley bill have been collected on all goods brought into this country from them. This bill proposes to continue the rates of the Dingley bill upon all importations into this country from the Philippine Islands.

"In this respect it proposes to treat those islands and the inhabitants as absolutely as for- eigners. Their commerce, their trade, and their importations are to be subjected to the same heavy exactions, the same rigorous restrictions, that are applied to foreign nations. This bill provides that every article of this bill fixes absolutely all customs duties to be collected on importations into the Philippines, and, in addition, an export duty on certain goods when shipped from there. This feature of the bill treats the inhabitants of the Philippine Islands as subjects of this country, to be governed absolutely by the will of Congress. Thus, by this bill, when concessions and trade benefits are needed by the unfortunate inhabitants of the Philippine Islands, they are treated as strangers and foreigners, but when exactions and taxation are to be imposed, they are treated as subjects. This irreconcilable, dual position of subject and stranger is created by this bill and illustrates the policy of the Republican party in the formulation of its colonial system. The principle on which such a bill is based is not only repugnant to every principle of justice and right and antagonistic to all our traditions and institutions.

"By this bill Congress assumes the right and does exercise the power to fix the conditions upon which the goods of the Philippines can be sold in the markets of the United
States and also the rates and conditions upon which our goods can be sold in the markets of those islands. In other words, we practically fix the price at which they must sell their goods to us, and to the extent that they do this, we must purchase ours. This is precisely the same power that was claimed by the British Parliament when we were colonies. The British Parliament then contended that the power of Parliament was absolute in the American colonies and that Parliament had the right to impose taxes here and to fix the duty on imports from the colonies into Great Britain and also the duty on imports from Great Britain into the colonies.

"Our fathers denounced this assumption of power as tyranny and despotism. When it was sought to be exercised they rebelled, separated themselves from Great Britain, and established this Union. Our fathers contended that the vast power to control absolutely the trade and commerce, all the buying and selling of the commodities of our nation by another, is such a dangerous power, so liable to abuse, that no just nation would ever try to exercise it, and that it should never be conceded. Yet by this bill this right will be sanctioned in the most formal, precisely the same power claimed and sought to be exercised against us by the British Parliament when we were colonies. Great Britain could not have succeeded in the Revolutionary War without destroying British institutions and ultimately the liberty and freedom of her people. We can not enact this bill without destroying our institutions without abandoning all our glorious traditions and perverting our principles of justice and liberty, which have been the foundations of our governmental structure."

Mr. Swanson, after considering the provisions of the bill in detail, denounced its injustice and harshness as compared to the policy of reciprocity proposed for foreign countries.

"The President in his annual message says that we are under moral obligations to give Cuban imports into the United States a substantial reduction from present tariff duties. The Secretary of War is in accord with this for rates of the President. The two chief products of Cuba, like those of the Philippines, are sugar and tobacco. This administration favors a great reduction from the duties on sugar when imported from Cuba, and yet sustains this bill, which collects the entire Dingley rates on sugar and tobacco imported from the Philippines, and we are told that the American people will not sanction this. Our obligations to Cuba must have been fully and completely discharged when they have established a free and independent government and we have withdrawn from the island. This will soon happen. They owe us a boundless debt of gratitude. When they were oppressed by Spain and their cause was hopeless, we espoused their cause, drove their oppressors from the island, and gave to them freedom and independence.

"At much expense we have kept peace and order there and administered the government pending the formation by them of a safe and stable government. No other nation has ever bestowed upon another more generous, substantial, and disinterested favors than we have bestowed upon Cuba. With the Filipinos the case is reversed. The Filipinos had overthrown Spanish authority, expelled the Spaniards, and anything else. They could have driven their oppressors from the islands without our aid. They were the valuable allies in a war that we had undertaken for the liberation of Cuba. They desired to establish an independent government under our guidance, which would have made to us generous trade concessions. We denied this request, and by war and conquest extended our dominion over them. We now hold them as colonies and as a part and parcel of this country. We have granted to Cuba, and she has decided to become, a state free and independent of us.

"I can see no moral obligations on our part to make any concessions to Cuba except such as our own interest may demand. If reductions in tariff duties are to be made for the introduction of sugar and tobacco into our market, the claims of the Philippines are vastly superior to those of Cuba. The profits to be derived from the sale of these two products in the markets of this country should certainly go, if possible, to our own people instead of to foreigners. I can not understand the wisdom of a policy that urges such generous concessions to Cuba and imposes such heavy excursions and restricitions upon the Philippines. So long as the Philippine Islands are a part of this country, justice and wisdom both demand that their sugar and tobacco interests be developed rather than the sugar and tobacco interests of Cuba.

"But, Mr. Chairman, the hostility of the Republican party and of those in power to the Philippine Islands is further exemplified, and in a manner that can admit of no excuse, no defense. As I have previously said, this bill imposes on the sugar and tobacco importer of the Philippines the high rates of the Dingley bill. Our Government has already signed treaties with Great Britain for the Barbados, for British Guiana, for Jamaica, and for Bermuda, which have been sent to the Senate and are being pressed by the present administration and the Republican party for ratification, and all provide for a reduction of 25 per cent. from the duties imposed by the Dingley bill upon all sugar imported from them into the United States. A treaty has also been signed with Argentina, which has been sent to the Senate and is in receipt of a letter from the President that provides for a reduction of 20 per cent. from the rates of the Dingley bill on sugar imported into the United States from Argentina.

"The Republican party squarely before the people and the country as favoring that sugar shall be imported into this country from British possessions and from Argentina at a much greater rate than it shall be imported from our own possessions in the Philippine Islands. No moral obligation can be urged for the extermination of the extension of these rebates and privileges to foreigners while they are denied to our own people. If this policy is to prevail, in order to obtain trade advantages with the United States, it is better to be a British subject than to be a citizen of the United States. History will fail to furnish another such example where a government has so wantonly and openly ignored the rights and privileges of its own people in order to subserve foreigners and strangers. I believe the American people will repudiate a discrimination so suicidal, so unjust as this. They would greatly prefer consuming sugar raised by the unfortunate inhabitants of the Philippine Islands than sugar raised by British subjects.

"Mr. Chairman, I appeal to this Congress, to its sense of justice, its humanity, its statesmanship, and its wisdom, not to inflict upon these defenseless and helpless people such hardships and such inequalities. Do not teach them that dependence
on America means spoliation. Let them feel that we are their friends, not their foes; that our purposes are to aid them, not to despoil them; to open, and not to close, avenues of commerce.

Mr. Littlefield, of Maine, opposed the measure, but he made his argument against the soundness of the recent Supreme Court decision in the island case. The debate tended, among other speakers on both sides, toward the discussion of the policy of a colonial system.

Dec. 18 the bill was passed by the following vote:

Answered "Present"—Griffith, Hedge, Rup pert—3.

The measure was reported to the Senate with amendments, Jan. 10, 1902, and edited. At length, amended and passed, Feb. 24, by the following vote:

Nays—Bacon, Bailey, Bate, Barry, Carmack, Clark of Montana, Clay, Cockrell, Culberson, Dobaio, Foster of Louisiana, Gibson, Heitfeld, McLaurin of Mississippi, Mallory, Martin, Money, Patterson, Pettus, Rawlin, Simmons, Taliaferro, Teller, Turner, Vest, Wellington—26.

The discussion in the Senate took a wide range, going so far afield that no little time was spent in reviewing the record of various colonies in the Revolutionary War. The main attack on the measure, however, was in regard to the transfer of the powers of the congress to the islands, and through him to the Philippine Commission, made the previous year in an amendment to an appropriation bill. The Senate amendments to this tariff act reduced the duty on goods from the Philippine Islands imported into the United States 25 per cent. on the regular rates; allowed a rebate on goods paying export duty from the islands to the extent of that duty, regulated the coast-trade, and provided safeguards for individual rights. The House non-concurred on these amendments, a conference committee was appointed, and its report was adopted, March 1 and March 3. The measure was approved by the President March 8, 1902. The text of it is as follows."

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the provisions of an act entitled "An Act to revise and amend the tariff laws of the Philippine Archipelago, enacted by the United States Philippine Commission on the 17th day of September, 1901, shall be and remain in full force and effect, and there shall be levied, collected, and paid upon all articles
coming into the Philippine Archipelago from the United States the rates of duty which are required by the said act to be levied, collected, and paid upon like articles imported from foreign countries into said archipelago.

"SEC. 2. That on and after the passage of this act there shall be levied, collected, and paid upon all articles coming into the United States from the Philippine Archipelago the rates of duty which are required to be levied, collected, and paid upon like articles imported from foreign countries. Provided, That upon all articles the growth and product of the Philippine Archipelago coming into the United States from the Philippine Archipelago there shall be levied, collected, and paid only 75 per cent. of the rates of duty aforesaid: And provided further, That the rates of duty which are required hereby to be levied, collected, and paid upon products of the Philippine Archipelago coming into the United States shall be less any duty or taxes levied, collected, and paid thereon the shipment thereof from the Philippine Archipelago, as provided by the act of the United States Philippine commission of January 28, 1901, as amended, and under such rules and regulations as the Secretary of the Treasury may prescribe, but all articles, the growth and product of the Philippine Archipelago, shall be covered by the provisions of the act of the United States free of duty under the provisions of this act and coming directly from said islands to the United States for use and consumption therein shall be exempt from any export duties imposed in the Philippine Islands.

"SEC. 3. That on and after the passage of this act the same tonnage taxes shall be levied, collected, and paid upon vessels coming into the United States from the Philippine Archipelago which are required by law to be levied, collected, and paid upon vessels coming into the United States from foreign countries: Provided, however, That until July 1, 1904, the provisions of law restricting to vessels of the United States the transportation of passengers and merchandise directly or indirectly from one port of the United States to another port of the United States shall not be applicable to foreign vessels engaging in trade between the Philippine Archipelago and the United States or between ports in the Philippine Archipelago: And provided further, That the Philippine Commission shall be authorized and empowered to prescribe by regulations the limits in which to engage in lightering or operating exclusively harbor business to vessels or other craft actually engaged in such business at the date of the passage of this act, and to vessels or other craft built in the Philippine Islands or in the United States and owned by citizens of the United States or by inhabitants of the Philippine Islands.

"SEC. 4. That the duties and taxes collected in the Philippine Archipelago in pursuance of this act, and all duties and taxes collected in the United States upon articles coming from the Philippine Archipelago and upon foreign vessels coming into the United States, shall be held as a separate fund and paid into the treasury of the Philippines, to be expended and expended for the government and benefit of said islands.

"SEC. 5. That when duties prescribed by this act are based upon the weight of merchandise deposited in said warehouse, said duties shall be levied and collected upon the weight of such merchandise at the time of its entry.

"SEC. 6. That all articles manufactured in bonded manufacturing warehouses in whole or in part of imported materials, or of materials subject to internal-revenue tax and intended for shipment from the United States to the Philippine Islands, shall, when so shipped, under such regulations as the Secretary of the Treasury may prescribe, be exempt from internal-revenue tax, and shall not be charged with duty except the duty levied under this act upon imports into the Philippine Islands.

"That all articles subject under the laws of the United States to internal-revenue tax, or on which the internal-revenue tax has been paid, and which may under existing laws and regulations be exported to a foreign country without the payment of such tax, or with benefit of drawback, as the case may be, may also be shipped to the Philippine Islands with like privilege, under such regulations and the filing of such bonds, bills of lading, and other security as the Commissioner of Internal Revenue may, with the approval of the Secretary of the Treasury, prescribe. And all taxes paid upon such articles shipped to the Philippine Islands under the act of August 24, 1901, under the decision of the Secretary of the Treasury of that date, shall be refunded to the parties who have paid the same, under such rules and regulations as the Secretary of the Treasury may prescribe, and a sum sufficient to make such payment is hereby appropriated, out of any money in the Treasury not otherwise appropriated.

"That where materials on which duties have been paid are used in the manufacture of articles manufactured or produced in the United States, there shall be allowed on the shipment of said articles to the Philippine Archipelago a drawback equal in amount to the duties paid on the materials used, less 1 per cent. of such duties, under such rules and regulations as the Secretary of the Treasury may prescribe.

"SEC. 7. That merchandise in bonded warehouse or otherwise in the custody and control of the officers of the customs, upon which duties have been paid, shall be entitled, on shipment to the Philippine Islands within three years from the date of the original arrival, to a return of the duties paid less 1 per cent, and merchandise upon which duties have not been paid may be shipped without the payment of duties to the Philippine Islands within said period, under such rules and regulations as may be prescribed by the Secretary of the Treasury.

"SEC. 8. That the provisions of the act entitled 'An Act to simplify the laws in relation to the collection of revenues,' approved June 10, 1890, as amended by an act entitled 'An Act to provide for the government and to encourage the industries of the United States,' approved July 24, 1897, shall apply to all articles coming into the United States from the Philippine Archipelago.

"SEC. 9. That no person in the Philippine Islands shall, under the authority of the United States, be convicted of or imprisoned by any tribunal, civil or military, unless on the testimony of two witnesses to the same overt act, or on confession in open court.

"March 31, 1902, there was reported from the Senate Committee on the Philippines, with amendments, 'An Act temporarily to provide for the administration of the affairs of civil and military government in the Peded war commission.' April 18 the discussion of the measure in the Senate began; and it continued at intervals until June 3, various Senators en-
CONGRESS. (The Philippine Islands.)

tering into elaborate and interesting discussion of the provisions of the measure, the policy of holding the islands as a colony, the conduct of the Spanish, and kindred matters. Mr. Raw-llins, of Utah, speaking in opposition to the bill, denounced it as the establishment of a despotism.

He said:

"Across the water there are more than 10,000 suffering people silent and unheard, but whose souls doubtless cry out against wrongs, cruel, unspeakable, beyond the ken of mortal language to describe. There are more than 70,000 people on this side of the water wanting to know the truth hitherto stifled and suppressed.

"Mr. President, it seems to me that it is a time when it is a patriotic duty to give utterance to the truth that the American people may be advised, and that we may intelligently deal with the important questions which confront us.

"Friends of justice, champions of liberty, have ever been jealous of the encroachment of executive or kingly power, and those who, irrespective of consequences to themselves, have resisted its aggression and refused to be seduced by its blandishments have gone into history with enduring and honorable fame, while those who have catered to it and sought to profit by the favors which it had to bestow have sunk in ignominy, or re- membered only remembered to be despised.

"What is this bill? The Senator who introduced it has not explained it; but upon its examination we find that it continues if it does not establish in perpetuity a presidential despotism—not a benevolent despotism, but a cruel, a remorseless, and a predatory despotism.

"For this they have no warrant in our history or our traditions. To do this they must trample under foot the precepts of our Constitution and the axioms of our liberty. This bill reaches backward as well as forward. It strikes its roots into and receives its support from that precedence upon the army appropriation bill of 1901 known as the 'Spooner amendment.' The qualification of the absolute power therein conferred, adopted at the instance of the Senator from Massachusetts, by this bill is eliminated. After the bill shall have passed, this absolute power will still stand upon every qualification and limitation. In order to comprehend this bill, therefore, it is necessary to read into it as a part of it that grant of absolute authority."

Discussing more in detail the scope of the measure, he said:

"You will see an outline here of wonderfully complicated machinery. These various departments and bureaus, covering every conceivable subject of administration, are to be supported by the taxes derived from the people of the Philippine Islands. The heads of these bureaus and all the subordinates and employees connected with them are dependent for the tenure of their office and the amount and payment of their salaries upon the United States Philippine Commission. They are subservient in all respects to the edicts and behests of that commission. The persons now in office, so far as we are enabled to determine from an inspection of the law and from anything in the bill which we now have under consideration, are to continue to hold those offices during life; and that is true of the membership of the United States Philippine Commission, and is hereby selected by the President, and now constitute the sole depository of all power in the islands. They are to hold their positions during life, nothing being said about good behavior. The concurrence of the Senate is only required as to future appointments, and the bill is very careful to prevent the possibility of the Senate passing upon the fitness of the persons who are, during their lives it may be, to exercise these unusual and contrary powers to which I have already made reference.

"When we come to consider the judiciary, which is provided for in the next section, we shall find that that, too, is absolutely dependent upon the will of the United States Philippine Commission and will be subservient to its purposes. When we proceed further to ascertain if there be any limitations circumscribing the authority mentioned in the Spooner amendment which I have read, we look in vain. They have control of the courts. They have control of the salaries and the tenure of judges. The extent of the jurisdiction which any one of them may exercise, if any, is dependent wholly upon the action of the commission. All property and rights—rights in the generic sense, without qualification, as distinguished from property, embracing thereby, as it does, according to every reasonable implication, the sovereignty, if any, that we acquired from Spain by purchase, from 800 islands; more than 67,000,000 acres of land embracing mountains, volcanoes, valleys, lakes, rivers, and swamps, timber resources, whatever they may be— they all these things are over absolutely to the control and the disposition of the United States Philippine Commission. Of the 76,000,000 acres of land to-day, according to the reports, there are but 5,000,000 acres subject to private ownership, and this bill is not consistent to leave that in the hands of the people who have acquired it, because there is a provision in the bill authorizing the same United States Philippine Commission to appropriate it in the exercise of the power of eminent domain and to dispose of it, to sell it, or give it away, as they may deem proper. In order to acquire it they are given authority to issue mortgages and if mortgaged, mortgaging the future of the islands and their people.

"All these lands, every acre and every foot of land within the archipelago, including all appurtenances, all rights of every description, under the provisions of this bill are to be disposed of absolutely without limitation, according to the rules and regulations which may be enacted or prescribed by the United States Philippine Commission. I said 'without limitation.' Practically so. This limitation is provided in one of the sections of the bill. When the rules of the United States Philippine Commission are passed, they are to be submitted to the President, and not to take effect until approved by him. They are to be submitted to Congress, and if not disapproved by Congress before the expiration of the next session of Congress, then they become effective and go into operation.

"The despotism is continued upon the President of the United States and the United States Philippine Commission is therefore in no degree limited with respect to the rules and regulations providing for the disposal of power in the islands, except to the extent that Congress may be able, after the rules are submitted for its consideration, to disapprove of those rules within the time limited. Either House may prevent such
CONGRESS. (THE PHILIPPINE ISLANDS.)

161

Disapproval, and delay may prevent such disapproval, although a majority of each house may so desire.

In this cursory review of the general powers of the commission it follows, it seems to me, without possibility of controversy, that the commission, under the direction of the President, may declare war and make peace. The President and such person or persons as he may designate and under his direction possess all civil, judicial, and military power necessary to govern the islands. That covers and includes every conceivable power. They may declare war and make peace, because the Constitution does not restrict them. That reservation to Congress is of no potency when we step beyond the shores of the continental republic. That is the theory of the friends and supporters of this bill:

The same oligarchy can raise armies and provide arms, and create commerce among the islands and with foreign countries, with any sort of discrimination as to islands and ports. It may lay taxes to the extent of the destruction of the subjects of taxation, with a justice and without uniformity, because there is no such limit circumscribing its authority. It may coin money and regulate the value thereof, and it has also a lien and a right to coinage and currency as well as banking. It may pass ex-post-facto laws and bills of attainder, working corruption of the blood to the remotest generation, without limitations, as in the case of Philippine Island crimes, and those crimes causing proceedings now pending therein or hereafter determined thereby in which the Constitution or any statute, treaty, title, right, privilege, or obligation of the United States is involved, or in cases in which the value in controversy exceeds $5,000, or in which the title or possession of real estate exceeding in value the sum of $5,000, to be ascertained by the oath of either party or of other competent witnesses, is involved or brought in question; and such final judgments or decrees may be enforced, reviewed, reversed, modified, or affirmed by said Supreme Court of the United States on appeal or writ of error by the party aggrieved, in the same manner, under the same regulations, and by the same procedure, as for cases in the courts of first instance, and the final judgments and decrees of the circuit courts of the United States.

Mr. President, it will be noted that there is no jurisdiction given the Supreme Court of the United States except such as the Philippine Commission may see fit to allow to be exercised.

Having absolute control of the jurisdiction of the supreme court of the islands, that commission can cut off any case from reaching the Supreme Court of the United States which they do not wish to have come before that tribunal for determination. So we have the courts constructed upon such a plan as to be subject absolutely to the control of the United States Philippine Commission; and those courts, therefore, no safeguard against the exercise of any power which that commission may undertake to employ, and the victim of its oppression, if it shall practise oppression, can have no remedy except such remedy as the commission may see fit to provide.

If it is desired by the commission to appropriate lands to subserve purposes which they may wish to subserve, and to employ the judiciary to that end, they have a subservient tool to carry out that wish. If they want to deprive of liberty any man who becomes obnoxious to them or dares to assert a policy which may be antagonistic to that which they desire, they have
the courts as subservient tools for his suppression. Section 10 reads as follows:

"That all the property and rights which may have been acquired in the Philippine Islands by the United States under the treaty of peace with Spain, 1898, are hereby placed under the control of the government of the Philippine Islands to be administered for the benefit of the inhabitants of the islands, except as hereinafter provided."

The purpose of that is self-evident. I have already made sufficient comment upon it. The next section is as follows:

"Sec. 11. That the government of the Philippines, subject to the provisions of this act and except as hereinafter provided, shall make rules and regulations for the lease, sale, or other disposition of the public lands other than timber or mineral lands, but such rules and regulations shall not go into effect or have the force of law until they have received the approval of the President, by and through the Secretary of War, and they shall also be submitted to Congress, and unless disapproved or amended by Congress at the next ensuing session after their submission they shall at the close of such session have the force and effect of law in the Philippine Islands, when they shall have received the approval of the President, as hereinafore provided."

Those two sections put together place lands of every description within the islands subject to these rules and regulations for lease, sale, or other disposition. The power which this section confers upon the President and the commission may be employed to any conceivable iniquitous end. It is looking wholly upon the honor, the disposition, or the integrity of the men who may happen to constitute the government.

We already know the ends really to which these powers are to be employed. They have been pointed out to us by the civil governor of the islands. It is designed that leases may be made to cover a period in the neighborhood of a hundred years. The nature or terms of those leases of course may be prescribed by the commission. The tenure under which those lands may be held may be of a feudal nature. The right to hold the lands in large quantities, as large as 20,000 acres, if not more, to syndicates and corporations, with a view to their exploitation."

Mr. Rawlins subsequently took up the origin of the war in the Philippine Islands, which he described as without justification, and he attacked the method in which it had been carried on as barbarous and cruel, citing general orders and other instances of military outrage to sustain the charge.

Mr. Lodge, of Massachusetts, who was in charge of the measure, said, in the way of general explanation of the bill. He said it was his purpose to secure a marked improvement in this debate over the last debate which was held upon the question of Philippine affairs, because in this debate, so far as it has proceeded, there has been more or less said about the pending measure. I am aware that we devoted one afternoon to a discussion of politics and election methods in North Carolina, but possibly it was not amiss for the sake of the clemency of mercy exhibited in certain parts of our common country as well as in the Philippines. It is true also that we devoted one afternoon to trying to decide whether Aguinaldo caused the assassination of Gen. Luna, whether he had him assassinated in self-defense, or whether Luna was merely killed by the guard. Nothing like the guard did not like his manners. But all these things, Mr. President, have more connection with the matter before us than the discussions about the revolutionary history and the character of a judge at Nome, in which we before indulged. I think, Mr. President, I am not too optimistic, therefore, if I express the hope and the belief that the time will come, and come before long, when we shall discuss measures in regard to the Philippines as we discussed the Chinese-exclusion bill, with a view to getting the best legislation possible in the interests of the people of the islands and the people of the United States.

"The Senate from Tennessee, with the grace of phrase characteristic of his eloquence, asked if any one was prepared to defend the pending bill. In all humility, Mr. President, I will say that I have the effrontery not only to defend the bill, but in my feeble way to advocate it. I believe it to be a well-considered measure, dealing with subjects of great difficulty, to which the committee have given careful attention, over which they have labored assiduously, and the parts of which the minority of the committee have made valuable contribution, for which I am happy to make acknowledgment."

The minor provisions of this bill occupy 28 pages. The major provisions, which are the provisions of the bill are founded was prepared by the Philippine Commission with great labor and attention. It has been revised by a subcommittee of the Senate of the Philippine Islands, and the bill, speaking as a layman in regard to mining laws, that we have embodied in this bill as excellent a mining law as stands on any statute-book. I think the obligation for it due to the subcommittee of the Committee of the Senate, and in a large measure to the Senator from Utah, who brought to the work an expert knowledge which was of great value. I shall not detain the Senate by discussing the details of those mining provisions. That is a task which I leave to the better instructed members who prepared it."

"The coinage sections of the bill occupy 6 pages and provide for coinage in the Philippine Islands. I will only say in regard to the coinage provisions that the committee were satisfied after a careful investigation of the subject, unanimously, with one possible exception, that no greater mistake could be made than to change the standard to which the people have been accustomed for many years. It is always a dangerous thing to change the money standard of a people; and it seemed to the committee that at this time it would be perilous. They are now, and have long been,
upon the single silver standard, with the free coinage of Mexican dollars as the unit of value and the single silver standard, with no change in the standard. We simply substitute for the Mexican dollar an American Filipino dollar, to be coined at the mint of Manila and at the mints in the United States, following in that respect the example of Great Britain in Hong Kong, Singapore, and the Straits Settlements, for which she has coined what is known as the Bombay dollar, which has been of very great advantage to her and to her trade in the commerce of the East. I shall not go further into this question. The sections were prepared by the Senator from Iowa, and I shall leave him, abler and more skilled than any other man in public life to deal with such a question as this, to explain these provisions fully and in detail to the Senate.

The remainder of the bill occupies 19 pages. We begin by continuing the present Philippine Commission. The only change we make in the existing conditions is to require that the commissioners shall be appointed by the President and confirmed by the Senate, and we apply the confirmation of the Senate also to the judges of the supreme court. That, Mr. President, is necessary; there is no need for it. It is designed to leave the government of the islands in the hands of the present commission until the provisions of the succeeding sections may be carried into effect. Those sections provide for taking a census of the islands, which shall give not only the numbers of the people, but all the information that can possibly be desired in order to enable us to establish there a permanent, popular, representative government. It will require, in the nature of things, some time to take such a census, and it is impossible, as it seemed to the committee, to enter suddenly upon the establishment of representative government until we know the numbers of the people, until we have differentiated the wild tribes, who are said to number nearly a million, from the Christianized Filipinos, and also to determine our relations with the Mohammedan tribes of the south. The object of the census sections is to enable Congress to legislate intelligently with a view to giving those people a "popular representative government"; in the meantime, while we take the census to which I refer, the bill continues the commission, and to extend as far as possible the municipal and provincial governments, to be chosen by the people, with the suffrage to be enlarged as rapidly as they think it safe; and to continue to build up in that way the self-government of the people of the islands.

We provide also for the public lands. That, again, is a temporary provision. There is a vast body of public land in the Philippine Islands. The total area of the islands is estimated at 72,000,000 acres, and it is believed that not more than 5,000,000 of those 72,000,000 acres are now in private ownership. That leaves in the hands of the United States, as the heir of Spain, some 67,000,000 acres of public land. The committee felt that it was necessary to have a proper land law—one adapted to the conditions of the islands. It has been left to the commission to prepare such a law, to be transmitted to Congress for its consideration and approval. Until that law is reenacted, we give to the commission power only to make leases of the public lands.

We also provide that they shall give good title to the lands of those who have made improvements upon the land, and the title to the little homesteads or farms which they live on and cultivate, and which, in many cases, they have lived on and cultivated for generations. I think that that is one of the most necessary and beneficent provisions of the bill.

There are also sections which provide and give authority for the issuance of municipal loans, intended for municipal improvements, which are greatly needed, especially in the city of Manila.

We also have provisions in the bill in regard to timber lands, and we have followed the same careful policy in regard to those lands that we have pursued in regard to the public lands generally. We permit the commission only to issue licenses to cut timber, and not to sell any more land than is necessary for the establishment of a sawmill or the opening of a road to give access to the forests.

We have also made provision for the purchase of the friars' lands, as they are called. That is a difficult and unusual question. We authorize the commission to buy the lands of the friars for the purpose of selling them immediately to the people who now occupy them. However witnesses or experts may differ in regard to the affairs in the Philippine Islands, there is but one opinion as to the necessity of taking these friars' lands and giving them over to the people who actually live upon them and cultivate them. The possession of lands by the friars is one of the bitterest grievances of the Filipino people against Spain. The testimony is universal as to their desire to have those lands restored to them. The sections in regard to these lands, of course, in the nature of things, give a large power to the commission, but there is no other way that I have seen suggested to get those lands out of the hands of these religious corporations and back into the hands of the people who cultivate them.

We have also clauses in the bill providing for franchises. They are guarded with the utmost care. I cannot undertake to read, and I shall not detain the Senate by reading, those franchise clauses, but I invite Senators to examine them with care. They are guarded in every possible way compatible with giving any reasonable opening to capital to enter into the islands with the hope of profitable investment.

The main object of the bill, Mr. President, is, in a word, to replace military by civil government—to advance self-government; and yet it is delayed in this chamber and opposed by those who proclaim themselves the especial foes of military rule.

The second object of the bill is to help the development of the islands, and yet, as the committee felt, to help that development only by taking the utmost pains that there should be no opportunity given for undue or selfish exploitation. The opponents of this legislation have dwelt almost continuously, when they have spoken on this bill, on the point that it is intended to open the islands to exploiters, to syndicates, and to carpetbaggers. Why, Mr. President, if we go on the proposition that it is a crime for an American to make money, undoubtedly there is opportunity in this bill for men or corporations of men to enter into the islands and make money in a legitimate way. I am aware, after many years of experience, of the hostility of the Democratic party to any man who has made money, of whom there are a great many among the natives, who have never been able to secure from Spain any title to the little homesteads or farms which they live on and cultivate, and which, in many cases, they have lived on and cultivated for generations. I think that that is one of the most necessary and beneficent provisions of the bill.
with complete success during their last tenure of power. Few, if any, Americans at that time knew what the Philippines were, but the present administration, without prompting, gives us a traffic in them. It is true that the Filipinos are a warlike people, and that the United States has a treaty with them, but the Filipinos are a warlike people. The Filipinos are not a peace-loving people, and the United States is not a warlike people.

Mr. Patterson, of Colorado, proposed to amend the measure by inserting the provision: "The trial of all crimes except in cases of impeachment shall be by jury; and such trial shall be held in the province where the said crime shall have been committed." The amendment was defeated by a vote of 47 to 29.

Mr. Teller, of Colorado, proposed the following amendment:

"It is not the intention of the Government of the United States to harass or oppress the inhabitants of the islands in any way. The Filipinos, from which our laws expressly exclude them, the dismal picture is then drawn of what will happen to the islands if we do not let the Filipinos go. The testimony in the case is very clear to my mind that the Filipinos, if they have an opportunity to earn good wages and to have them regularly paid—something which has never happened to them under Spanish rule—they will be found quite capable of doing all the work that is needed in the islands. They are skilful workers in the factories they have there, such as the cigarette factories; they are noted as good machinists; they are dealt with ingenuously with their hands; they work in the rice-fields under a sun which is too much even for Chinamen, and they carry on all the cultivation of the islands. If we once give them an opportunity to perform this new work and receive regular wages and be properly paid, I am sure we shall find that the labor is there, so that the Filipinos can develop their own territory. It may be a slower process than if we should throw the islands open now to sudden exploitation in large masses of territory with great boom of capital and with Chinese labor; but that it is simple justice to the people of those islands, and that it is infinitely better to give them the arrangement that we have given them is, to my mind, too clear for argument."

The great part of Mr. Lodge's speech, however, was devoted to an argument in vindication of the conduct of the army rather than a discussion of the policy of the bill. In conclusion he said, after the presentation of much evidence on the subject:

"Now, Mr. President, I do not seek to defend any cruelty, but I do want to have justice done to the American army. I want the people of the country to know when they read of cruelties to the hostile Filipinos what the provocation has been; I want them to think of what our men have suffered and endured; I want, and we can afford to give, absolute justice to the American army. I do not wish to be put in a position of being the defender of cruelties; but if I must take my choice between men, then I am for the friendly native, the friend of America, against the cruel, the savage, the murderer. I am for the American army against the insurgents. I do not like to hear that army assailed as it has been assailed. It is our army; its glory is our glory. We cannot tarnish that glory without tarnishing the glory of the United States, and the name of the country abroad. When we heap obloquy upon them on account of these cruelties, I say again, remember the provocation, remember the faces of the dead boys under the sands of Luxon—not dead by battle, but dead by murder; remember the dead and the treatment of captured prisoners, and let us show some little understanding of the trials which those officers and those soldiers have had to undergo."

Preliminary to the final vote on the passage of the bill in the Senate several important amendments were proposed and rejected.

Mr. Patterson, of Colorado, proposed to amend the measure by inserting the provision: "The trial of all crimes except in cases of impeachment shall be by jury; and such trial shall be held in the province where the said crime shall have been committed." The amendment was defeated by a vote of 47 to 29.

Mr. Teller, of Colorado, proposed the following amendment:

"It is not the intention of the Government of the United States to harass or oppress the inhabitants of the islands, or to deprive them of their liberty, but, on the contrary, to assist them to establish a government of their own that shall secure to them all privileges, advantages, and blessings enjoyed by a free people, and ultimate independence under the protection of the United States against foreign powers and domestic violence. And to secure these ends as speedily as possible, the Government of the United States invites and urges the people of said islands to aid the United States authorities now exercising power in the islands to secure peace and order."

This was defeated by a vote of 47 to 30.

Mr. Carmack, of Tennessee, proposed the following amendment:

"That the United States regard with extreme disfavor any movement having for its object the early or ultimate admission of the Philippine Islands as a State or States of the Union; and any action on the part of persons holding office under the authority of the United States that gives sanction or encouragement to such movement is hereby condemned."

"That to the rights and privileges of citizens upon the inhabitants of the Philippine Islands would tend to destroy the integrity of the citizenship and to degrade the character of the Government of the United States."

"That to maintain the relation of sovereign and subject between the Government of the United States and a people under its dominion would be repugnant to the principles of the Constitution."

The first clause alone was defeated by a vote of 46 to 28, and the second and third clauses by a vote of 49 to 23.

Mr. Culberson, of Texas, proposed as an amendment in the way of a substitute to strike out all after the enacting clause of the bill and insert the following:

"That subject to the provisions hereinafter set forth for the United States of America hereby relinquish all claim of sovereignty over and title to the archipelago known as the Philippine Islands."

"Sec. 2. That the United States shall continue to occupy and govern said archipelago until the people thereof have established a government in accordance with the provisions of this act, with sufficient guaranties for the performance of our treaty obligations with Spain and for the safety
of those inhabitants who have adhered to the United States, and for the maintenance and protection of all which shall be secured under the authority thereof, as heretofore provided.

"SEC. 3. That upon the cessation of organized armed opposition to the temporary sovereignty of the United States Government the President of the United States shall proclaim the fact, and within ninety days after the issuance of such proclamation the United States Philippine Commission shall make and promulgate rules and regulations for the holding of an election in the various provinces of said Philippine Archipelago for members of a house of representatives and a senate, to constitute a temporary congress, which shall be vested with full legislative power and also with the power of appointing such judges as may to them seem proper and necessary. The said Philippine congress shall prescribe rules and regulations for the election or appointment of all other officers, provincial or municipal, as may to them seem proper and necessary. The members of the said senate and house shall hold their offices for the term of four years from and after their election and qualification, unless said terms of office are sooner terminated by resignation or removal by the United States government created by the constitutional convention hereinafter provided for, and all other officers shall hold office for such terms as may be prescribed by said congress. Sentinels and representatives in congress are to receive compensation at the rate of — dollars per annum and other officers shall receive such compensation as may be prescribed by the congress.

"The chief executive shall be appointed by the President of the United States, by and with the advice and consent of the Senate of the United States, and shall hold his office for a term of four years unless the temporary government shall within that time be superseded by the inauguration of the permanent government herein provided for, and said president shall receive a compensation of $10,000 per annum, to be paid out of the Philippine treasury. There shall be other executive officers receiving such compensation and performing such duties as may be prescribed by the Philippine congress, and they shall be appointed or elected in such manner as may be prescribed by law.

"During the period of the existence of the temporary government herein provided for, which shall in no event extend beyond four years from and after the date of its inauguration, the United States guarantee to the people of said Philippines their independence and a republican form of government, and shall protect them against invasion and, upon application by the congress thereof, against domestic violence.

"That all male inhabitants of said archipelago twenty-one years of age and over who can speak and write either the English or Spanish language, or any of the native languages of said archipelago, shall have resided therein for one year, shall be qualified to vote for members of congress and other elective officers, and any person so qualified as an elector shall be qualified to be a member of said congress or to hold any elective office.

"The house of representatives shall be composed of 100 members and the senate of 30 members, and shall be appointed by the United States Philippine Commission among the several provinces of said archipelago, so that the distribution of membership in the house of representatives shall be in proportion to their population, as near as may be, and so that the membership of the senate shall be as nearly representative of separate provinces as may be; and when said apportionment has been determined upon, the said commission shall by proclamation order an election of the members of said congress to be held throughout the said archipelago, at such time as shall be fixed by the said commission, which election shall be held not more than one hundred and twenty days from the date of the proclamation by the President of the United States herebefore provided for, and ample time shall be given before said election to circulate said proclamation throughout the archipelago and arrange for the holding of said election.

"SEC. 4. That the members of the congress thus elected shall meet at the city of Manila on a day to be fixed by the United States Philippine Commission, not less than ninety days nor more than one hundred and twenty days subsequent to the day of election, the time for which meeting shall be stated in the proclamation aforesaid; and after organization the said congress and president shall hold by the temporary government herein provided for, shall proceed to the performance of their duties as the temporary government of the Philippine Archipelago: Provided, That said congress shall provide by legislation and treaty, irrevocable without the consent of the United States —

"First. That there shall belong to the United States, and continue to be the property thereof, such lands and waters as the President of the United States shall designate to the Philippine government, and shall be agreed to by it, for naval, military, and coaling stations, and terminal facilities for submarine cables, the same to continue under the control and sovereignty of the United States.

"Second. To carry into effect the treaty obligations of the United States with the Kingdom of Spain and for the maintenance and protection of all rights and property acquired under the authority of the United States.

"Third. That no inhabitant of said archipelago shall ever be molested in person or property on account of his or her adherence to the United States.

"SEC. 5. That when the election herein provided for shall have taken place and the congress thereby elected shall have convened, in compliance with the provisions of the act, the said United States Philippine Commission shall certify the fact to the President of the United States, whereupon it shall be the duty of the President to issue his proclamation declaring the independence of the people of said archipelago and that they constitute an independent state and nation; subject, however, to the control and regulation by the United States of their intercourse with foreign nations during the period of the existence of the temporary government herein provided for.

"SEC. 6. That immediately after the President shall have proclaimed that all organized armed resistance to the United States has ceased in said archipelago, he is requested to proclaim full amnesty to all inhabitants thereof on account of political offenses and the bearing of arms against the United States, and all Philippines
or inhabitants of said archipelago who have been deported shall be returned to the place whence they were deported; Provided, That such amnesty shall not apply to any who have violated the rules of civilized warfare or who have been guilty of murder or torture; that the latter, if any, shall be afforded a speedy trial for their offenses in the civil courts of said archipelago and be punished or acquitted, as the facts and law may warrant.

"Sec. 7. That within sixty days from the election of officers under the temporary government to be formed by the people of the Philippine Archipelago, in accordance with the provisions of this act, and the inauguration of said officers, the President shall cause the armed forces of the United States to be withdrawn from said archipelago as speedily as may be, except such forces as may be retained in such parts thereof as have been retained by the United States for naval, military, and coasting stations and terminal facilities for cables, and the President of the United States and the Secretary of War shall make all needful regulations to carry into effect the provisions of this section.

"Sec. 8. That it shall be the duty of the Philippine Congress herein provided for to prescribe rules and regulations and qualifications for electors for the election and holding of a constitutional convention which shall be charged with the duty of framing a permanent government for the people of the Philippine Archipelago. Said constitutional convention shall be called to meet at such place and at such time, not later than the first Monday of December, 1905, as may be prescribed by said Philippine congress. Upon the completion of the labors of said convention and the inauguration of the government consequent thereupon, it shall be the duty of the President of the United States to issue his proclamation declaring the absolute and unconditional independence of the people of the Philippine Archipelago and that they constitute an independent state and nation, and upon the issuance of said proclamation the United States Government and the Philippine government shall become and be as fully separate and independent as if those were separate and independent nations: Provided, however, That if the Philippine government request it, the United States Government hereby agrees to assume the protectorate over the Philippine Archipelago for a period additional to the period of the temporary government herein provided for, said additional period of protectorate not to exceed, however, the period of sixteen years: Provided further, That the said Philippine government agree during the said period of additional protectorate to surrender to the keeping of the United States Government the regulation and control of the foreign affairs of the Philippine Archipelago.

"Sec. 9. That all terms of office of legislative, executive, and judicial officers of the temporary government hereinbefore provided for, including the term of office of the president, and the terms of office of the senators and representatives in congress hereinbefore prescribed, shall terminate with the existence of the temporary government herein provided for, and said temporary government shall ipso facto cease to exist upon the inauguration of the permanent government to be called into existence by the constitutional convention herein provided for; and nothing herein contained shall be so construed as to prevent the continued residence of the President and of the members of the Assembly of the Philippine Islands at said place.
This also provides for two commissioners, to be elected by the legislature.

"The occupation and possession of the forces of the United States, together with the subsequent amendments of said order, are hereby approved, ratified, and confirmed, and the actions of the authorities of the government of the Philippine Islands, taken in accordance with the provisions of said order and annexes to 1,084 hectares. The Senate has further agreed to the House provisions restricting the ownership and control by members of corporations, and corporations, of mining and agricultural lands, with additional stringent provisions limiting these holdings.

"In the coinage provision reported, the Senate receded from the Senate for the coinage of a Philippine silver dollar, and the House receded from its provision for the establishment of a gold standard. The report agrees upon the provisions for subsidiary coins and minor coins, the names of which are to be those contained in the House bill, and substantially as provided for in the House bill.

"The provisions relating to banks are eliminated from the bill.

"The bill contains the legislative limitations and bill of rights, complete, as in the House bill.

"The mining provisions of the bill reported are to be subject to the discretion of the citizens of the Philippine Islands and as such entitled to the protection of the United States, except such as shall have elected to preserve their allegiance to the Crown of Spain in accordance with the provisions of the treaty of peace between the United States and Spain signed at Paris, Dec. 10, 1898.

"SEC. 5. That no law shall be enacted in said islands which shall provide for the possibility of any person of life, liberty, or property without due process of law, or deny to any person therein the equal protection of the laws.

"That in all criminal prosecutions the accused shall enjoy the right to be heard by himself and counsel, to demand the nature and cause of the accusation against him, to have a speedy and public trial, to meet the witnesses face to face, and to have compulsory process to compel the attendance of witnesses in his behalf.

"That no person shall be held to answer for a criminal offense without due process of law; and no person for the same offense shall be twice put in jeopardy of punishment, nor shall be compelled in any criminal case to be a witness against himself.

"That all persons shall before conviction be bailable by sufficient surties, except for capital offenses.

"That no law impairing the obligation of contracts shall be enacted.

"That no person shall be imprisoned for debt.

"That the privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion, insurrection, or invasion the public safety may require it, in either of which events the same may be suspended by the President, or by the governor, with the approval of the Philippine Commission, wherever during such period the necessity for such suspension shall exist.

"That no ex post facto law or bill of attainder shall be enacted.

"That no law granting a title of nobility shall be enacted, and no person holding any office of profit or trust or employ of the United States shall, with the consent of the Congress of the United States, accept any present, emolument, office, or title of any kind whatever from any king, queen, prince, or foreign State.

"That excessive bail shall not be required, nor
excessive fines imposed, nor cruel and unusual punishment inflicted.

"That the right to be secure against unreasonable searches and seizures shall not be violated.

"That neither slavery, nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist in said islands.

"That no law shall be passed abridging the freedom of speech or of the press, or the right of the people peaceably to assemble and petition the Government for redress of grievances.

"That no law shall be made respecting an establishment of religion or prohibiting the free exercise thereof, and that the free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever be allowed.

"That no money shall be paid out of the treasury except in pursuance of an appropriation by law.

"That the rule of taxation in said islands shall be uniform.

That no private or local bill which may be necessary to laws shall embrace more than one subject, and that such bill shall be expressed in the title of the bill.

That no warrant shall issue but upon probable cause, supported by an oath or affirmation, and particularly describing the place to be searched and the person or things to be seized.

That all money collected on any tax levied or assessed for any public purpose shall be treated as a special fund in the treasury and paid out for such purpose only.

SEC. 8. That whenever the existing insurrection in the Philippine Islands shall have ceased and a condition of general and complete peace shall have been established therein and the fact shall be certified to the President by the Philippine Commission, the President, upon being satisfied thereof, shall order a census of the Philippine Islands to be taken by said Philippine Commission; such census in its inquiries relating to the population shall take and make so far as practicable full report for all the inhabitants, of name, age, sex, race, or tribe, whether native or foreign born, literacy in Spanish, native dialect or language, ownership of homes, industrial and social statistics, and such other information separately for each island, each province, and municipality, or city, as the President shall direct, as the Philippine and said commission may deem necessary: Provided, That the President may, upon the request of said commission, in his discretion, employ the service of the Census Bureau in compiling and promulgating the statistical information above provided for, and may commit to such bureau any part or portion of such labor as to him may seem wise.

SEC. 7. That two years after the completion and publication of the census, in case such condition of general and complete peace with recognition of the authority of the United States shall have continued in the territory of said islands not inhabited by Moros or other non-Christian tribes and such facts shall have been certified to the President by the Philippine Commission, the President upon being satisfied thereof shall direct said commission to hold and the commission shall call, a general election to the delegates in specified districts to the Philippine Assembly, which shall be known as the Philippine Assembly. After said assembly shall have convened and organized, all the legislative power heretofore conferred on the Philippine Commission in all that part of said islands not inhabited by Moros or other non-Christian tribes shall be vested in a legislature consisting of two houses—the Philippine Commission and the Philippine Assembly. Said assembly shall consist of not less than 50 nor more than 100 members to be appointed by said commission among the provinces as nearly as practicable according to population: Provided, That no province shall have less than one member: And provided further, That provinces entitled by population to more than one member may be divided into such convenient districts as the said commission may deem best.

Public notice of such division shall be given at least ninety days prior to such election, and the election shall be held under rules and regulations to be prescribed by law. The qualifications of electors in such election shall be the same as is now provided by law in case of electors in municipal elections. The members of assembly shall hold office for two years from the first day of January next following their election, and their successors in office shall be elected by the people every second year thereafter. No person shall be eligible to such election who is not a qualified elector of the election district in which he may be residing, unless he is a citizen of the United States, and twenty-five years of age.

"The legislature shall hold annual sessions, commencing on the first Monday of February in each year and continuing not exceeding ninety days thereafter (Sundays and holidays not included): Provided, That the first meeting of the legislature shall be held upon the call of the governor within ninety days after the first election: And provided further, That if at the termination of any session the appropriations necessary for the support of government shall not have been made, an amount equal to the sums appropriated in the last appropriation bills for such purposes shall be deemed to be appropriated; and until the legislature shall act in such behalf the treasurer may, with the advice of the governor, make the payments necessary for the purposes aforesaid.

"The legislature may be called in special session at any time by the chief executive officer for general legislation, or for action on such specific subjects as he may designate. No special session shall continue longer than thirty days, exclusive of the President and said commission may be deemed necessary: Provided, That the President may, upon the request of said commission, in his discretion, employ the service of the Census Bureau in compiling and promulgating the statistical information above provided for, and may commit to such bureau any part or portion of such labor as to him may seem wise.

"The assembly shall be the judge of the elections, returns, and qualifications of its members. A majority shall constitute a quorum to do business, but a smaller number may adjourn from day to day and may be authorized to compel the attendance of absent members. It shall choose its speaker and other officers, and the salaries of its members and officers shall be fixed by law. It may determine the rule of its proceedings, punish its members for disorderly behavior, and with the concurrence of two-thirds expel a member. It shall keep a journal of its proceedings, which shall be published, and the yeas and nays of the members on any question shall, on the demand of one-fifth of those present, be entered on the journal.

"SEC. 8. That at the same time with the first meeting of the Philippine legislature, and brieﬂingly thereafter, there shall be chosen by said legislature, each of the territories to select a resident commissioner to the United States, who shall be entitled to an ofﬁcial recognition as such by all departments upon presentation to the President of a certiﬁcate of election by the
CONGRESS. (THE PHILIPPINE ISLANDS.)

nated by the President of the United States for military and other reservations of the Government of the United States of $5,000 per annum, and $2,000 additional to cover all expenses: Provided, That no person shall be eligible to such election who is not a qualified elector of said islands, owing allegiance to the United States, and who is not thirty years of age.

"Sec. 9. That the supreme court and the courts of first instance of the Philippine Islands shall possess and exercise jurisdiction as heretofore provided and such additional jurisdiction as shall hereafter be prescribed by the government of said islands, subject to the power of said government to change the practice and method of procedure. The municipal courts of said islands shall possess and exercise jurisdiction as heretofore provided by the Philippine Commission, subject in all matters to such alteration and amendment as may be hereafter enacted by law; and the chief justice and associate justices of the supreme court shall hereafter be appointed by the President, by and with the advice and consent of the Senate, and shall receive the compensation heretofore prescribed by the commission until otherwise provided by Congress. The judges of the court of first instance shall be appointed by the civil governor, by and with the advice and consent of the Philippine Commission: Provided, That the admiralty jurisdiction of the United States supreme court and courts of first instance shall not be changed except by act of Congress.

"Sec. 10. That the Supreme Court of the United States shall have jurisdiction to review, revise, reverse, modify, or affirm the final judgments and decrees of the supreme court of the Philippine Islands in all actions, cases, causes, and proceedings now pending therein or hereafter determined therein in which the Constitution or any statute, treaty, title, right, or privilege of the United States is involved, or in causes in which the value in controversy exceeds $25,000, or in which the title or possession of real estate exceeding in value the sum of $25,000, to be ascertained by the oath of either party or of other competent witnesses, is involved or brought in question; and such final judgments or decrees may and can be reviewed, revised, reversed, modified, or affirmed by said Supreme Court of the United States, in all cases, causes, and matters of error by the party aggrieved, in the same manner, under the same regulations, and by the same procedure, as far as applicable, as the final judgments and decrees of the circuit courts of the United States.

"Sec. 11. That the government of the Philippine Islands is hereby authorized to provide for the needs of commerce by improving the harbors and navigable waters of said islands and to construct and maintain in said navigable waters and upon the shore adjacent thereto bonded warehouses, wharves, piers, lighthouses, signal and life-saving stations, buoys, and like instruments or objects for the purpose of preventing and to adopt and enforce regulations in regard thereto, including bonded warehouses wherein articles not intended to be imported into said islands nor milled with the property therein, but brought into a port of said islands for reshipment to another country, may be deposited in bond and reshipped to another country without the payment of customs duties or charges.

"Sec. 12. That all the property and rights which may have been acquired in the Philippine Islands by the United States under the terms of the treaty of peace with Spain, signed Dec. 10, 1898, except such land or other property as shall be desi-
show no other proof of title than possession, shall not apply to more than 16 hectares in any one tract.

"SEC. 17. That timber, trees, forests, and forest products on lands leased or demised by the government of the Philippine Islands under the provisions of this act shall not be cut, destroyed, removed, or appropriated except by special permission of said government and under such regulations as it may prescribe.

"All moneys obtained from lease or sale of any portion of the public domain or from licenses to cut timber by the government of the Philippine Islands shall be covered into the insular treasury and be subject only to appropriation for insular purposes according to law.

"SEC. 18. That the forest laws and regulations now in force in the Philippine Islands, with such modifications and amendments as may be made by the government of said islands, are hereby continued in force, and no timber lands forming part of the public domain shall be sold, leased, or entered until the government of said islands, upon the certification of the forestry bureau that said lands are more valuable for agriculture than for forest uses, shall declare such lands so certified to be agricultural land. Provided, That the said government shall have the right and is hereby empowered to issue licenses to cut, harvest, or collect timber or other forest products on reserved or unreserved public lands in said islands in accordance with the forest laws and regulations hereinbefore mentioned and under the provisions of this act, and the said government may lease land to any person or persons holding such licenses, sufficient for a mill-site, not to exceed 4 hectares in extent, and may grant rights of way to enable such person or persons to get access to the lands to which such licenses apply.

"SEC. 19. That the beneficial use shall be the basis, the measure, and the limit of all rights to water in said islands, and the government of said islands is hereby authorized to make such rules and regulations for the use of water, and to make such reservations of public lands for the protection of the water-supply, and for other public purposes not inconsistent with the provisions of this act, as it may deem best for the public good.

"MINERAL LANDS.

"SEC. 20. That in all cases public lands in the Philippine Islands valuable for minerals shall be reserved from sale, except as otherwise expressly directed by law.

"SEC. 21. That all valuable mineral deposits in public lands in the Philippine Islands, both surveyed and unsurveyed, are hereby declared to be free and open to exploration, occupation, and purchase, and the land in which they are found to occupation and purchase, by citizens of the United States, or of said islands: Provided, That when on any lands in said islands entered and occupied as agricultural lands under the provisions of this act, but not patented, mineral deposits have been found, the working of such mineral deposits is hereby forbidden until the person, association, or corporation who or which has entered and is occupying such lands shall have paid to the government of said islands such additional sum or sums as will make the total amount paid for the mineral claim or claims in which said deposits are located equal to the amount charged by the government for the same as mineral claims.

"SEC. 22. That mining claims upon land contain-ing gold, silver, cinnabar, lead, tin, copper, or other valuable deposits, located after the passing of this act, whether located by one or more persons qualified to locate the same under the preceding section, shall be located in the following manner and under the following conditions: Any person so qualified desiring to locate a mineral claim shall, subject to the provisions of this act with respect to land which may be used for mining, enter upon the same and locate a plot of ground measuring, where possible, but not exceeding, 1,000 feet in length by 1,000 feet in breadth, in as nearly as possible a rectangular form; that is to say: All angles shall be right angles, except in cases where a boundary-line of a previously surveyed claim is adopted as common to both claims, but the lines need not necessarily be meridional. In defining the size of a mineral claim, it shall be measured horizontally, irrespective of inequalities of the surface of the ground.

"SEC. 23. That a mineral claim shall be marked by two posts placed as nearly as possible on the line of the ledge or vein, and the posts shall be numbered one and two, and the distance between posts numbered one and two shall not exceed 1,000 feet, the line between posts numbered one and two to be known as the location line; and upon posts or in some one and two shall be written the name given to the mineral claim, the name of the locator, and the date of the location. Upon post numbered one there shall be written, in addition to the following paragraph: Initial post, the approximate compass bearing of post numbered two, and a statement of the number of feet lying to the right and to the left of the line from post numbered one to post numbered two, thus: Initial post. Direction of post numbered two —— feet of this claim lie on the right and —— feet on the left of the line from number one to number two post. All the particulars required to be put on number one and number two posts shall be furnished by the locator to the provincial secretary, or such other officer as by the Philippine government may be described as mining recorder, in writing, at the time the claim is recorded, and shall form part of the record of such claim.

"SEC. 24. That when a claim has been located the holder shall immediately mark the line between posts numbered one and two so that it can be distinctly seen. The locator shall also place a post at the point where he has found minerals in place, on which shall be written: Discovery post: Provided, That when the claim is surveyed the surveyor shall be guided by the records of the claim, the sketch plan on the back of the declaration made by the owner when the claim was recorded, posts numbered one and two, and the notice on number one, the initial post.

"SEC. 25. That it shall not be lawful to move number one post, but number two post may be moved by the deputy mineral surveyor when the distance between posts numbered one and two exceeds 1,000 feet, in order to place number two post 1,000 feet from number one post on the line of location. When the distance between posts
numbered one and two is less than 1,000 feet the deputy mineral surveyor shall have no authority to record the claim and the record book to be kept for the purpose of recording the location of the claim shall be entitled to all minerals which may lie within his claim, but he shall not be entitled to mine outside the boundary-lines of his claim continued vertically downward: Provided, That this act shall not prejudice the rights of claim owners nor claim holders whose claims have been located under existing laws prior to this act.

"SEC. 29. That no miner shall record his claim of the full size shall be recorded without the application being accompanied by an affidavit made by the applicant or some person on his behalf cognizant of the facts, or by a solemn declaration made by the applicant or some person on his behalf cognizant of the facts: That the legal posts and notices have been put up; that mineral has been found in place on the fractional claim proposed to be recorded; that the ground applied for is unoccupied by any other person. In the said declaration shall be set out the name of the applicant and the date of the location of the claim. The words written on the number one and number two posts shall be set out in full, and as accurately a description as possible of the position of the claim given with reference to some natural object or permanent monument.

"SEC. 30. That no miner claim which at the date of its record is known by the locator to be less than a full-sized mineral claim shall be recorded without the word 'fraction' being added to the name of the claim, and the application being accompanied by an affidavit or solemn declaration made by the applicant or some person on his behalf cognizant of the facts: That the legal posts and notices have been put up; that mineral has been found in place on the fractional claim proposed to be recorded; that the ground applied for is unoccupied by any other person. In the said declaration shall be set out the name of the applicant and the date of the location of the claim. The words written on the posts numbered one and two shall be set out in full, and as accurately a description as possible of the position of the claim given. A sketch plan shall be drawn by the applicant on the back of the declaration, showing as near as may be the position of the adjoining mineral claims and the shape and size, expressed in feet, of the fractional or fraction desired to be recorded: Provided, That the failure on the part of the locator of a mineral claim to comply with any of the foregoing provisions of this section shall not be deemed to invalidate such location, if upon the facts it shall appear that such locator has actually discovered mineral in place on said location, and that there has been on his part a bona fide attempt to comply with the provisions of this act, and that the non-observance of the formalities hereinbefore referred to is not of a character calculated to mislead other persons desiring to locate claims in the vicinity.

"SEC. 31. That in cases where, from the nature of the ground, it is impossible to mark the location line of the claim as provided by this act, then the claim may be marked by placing posts as nearly as possible to the location line, and noting the distance and direction such posts may be from such location line, which distance and direction shall be set out in the record of the claim.

"SEC. 32. That in case of any dispute as to the location of a mineral claim the title to the claim shall be recognized according to the priority of the location of the claim, subject to any question as to the validity of the record itself and subject to the holder having complied with all the terms and conditions of this act.

"SEC. 33. That no holder shall be entitled to hold in his, its, or their own name or in the name of any other person, corporation, or association more than one mineral claim on the same vein or lode.

"SEC. 34. That a holder may at any time abandon any mineral claim by giving notice, in writing, of such intention to the provincial secretary or such other officer as by the government of the Philippine Islands may be described as mining recorder, and from the date of the record of such notice all interest in such claim shall cease.

"SEC. 35. That proof of citizenship under the clauses of this act relating to mineral lands may consist, in the case of an individual, in the filing of a certified copy of his charter or certificate of incorporation; and in the case of a corporation organized under the laws of the United States, or of any State or Territory thereof, or of the Philippine Islands, by the filing of a certificate of the charter or certificate of incorporation.

"SEC. 36. That the United States Philippine Commission or its successors may make regulations, not in conflict with the provisions of this act, governing the location, manner of recording, and amount of work necessary to hold possession of a mining claim, subject to the following requirements:

"On each claim located after the passage of this act, and until a patent has been issued therefor, not less than $100 worth of labor shall be performed or improvements made during each year: Provided, That upon a failure to comply with these conditions the claim or mine upon which such failure occurred shall be open to re-location in the same manner as if no location of the same had ever been made, provided that the original locators, their heirs, assigns, or legal representatives have not resumed work upon the claim after failure and before such location. Upon the failure of any one of several coowners to contribute his proportion of the expenditures required thereby, the coowners who have performed the labor or made the improvements may, at the expiration of the year, give such delinquent co-owner personal notice in writing, or notice by publication in the newspaper published nearest the claim, and in two newspapers published at Manila, one in the English language and the other in the Spanish language, to be designated by the chief of the Philippine insular bureau of public lands, for at least sixty days prior to the expiration of the year, and if, at the expiration of ninety days after such notice in writing or by publication such de-
linguent shall fail or refuse to contribute his property to the exploration of the claim; and by this section his interest in the claim shall become the property of his co-owners who have made the required expenditures. The period within which the work required to be done annually on all unpatented mineral claims shall commence on the 1st day of January succeeding the date of location of such claim.

"Sec. 37. That a patent for any land claimed and located for valuable mineral deposits may be obtained in the following manner: Any person, association, or corporation authorized to locate a claim under this act, having claimed and located a piece of land for such purposes, who has or have complied with the terms of this act, may file in the office of the provincial secretary, or such other officer as by the government of said islands may be described as mining recorder of the province wherein the land claimed is located, an application for a patent, under oath, showing such compliance, together with a plat and field-notes of the claim or claims in common, made by or under the direction of the chief of the Philippine insular bureau of public lands, showing accurately the boundaries of the claims or claims in common by monuments on the ground, and shall post a copy of such plat, together with a notice of such application for a patent, in a conspicuous place on the land or lands in such plat previous to the filing of the application for a patent, and shall file an affidavit of at least two persons that such notice has been duly posted, and shall file a certified copy of such notice, with reasonable diligence to final judgment, and shall thereupon be entitled to a patent for the land, in the manner following: The provincial secretary, or such other officer as by the Philippine government may be described as mining recorder, upon the filing of such application, plat, field-notes, notices, and affidavits, shall publish a notice that such an application has been made, once a week for the period of sixty days, in a newspaper to be by him designated as nearest to such claim in and in two newspapers published at Manila, one in the English language and one in the Spanish language, to be ordered by the chief of the Philippine insular bureau of public lands; and he shall also post such notice in his office for the same period. The claimant at the time of filing this notice shall deposit with him the sum of $500.00, which sum shall be held by him until after the expiration of the sixty days of publication, and shall be paid to the provincial secretary or such other officer as by the Philippine government may be described as mining recorder, at the expiration of thirty days after filing his claim, to commence proceedings in a court of competent jurisdiction to determine the question of the title to the land, and to prosecute the same with reasonable diligence to final judgment, and to failure so to do shall be a waiver of his adverse claim. After such judgment shall have been rendered the party entitled to the possession of the claim, or any portion thereof, may, without giving further notice, file a certified copy of the judgment roll with the provincial secretary or such other officer as by the government of the Philippine Islands may be described as mining recorder, together with the certificate of the chief of the Philippine insular bureau of public lands that the requisite amount of labor has been expended or improved on the land described in such claim, and shall pay to the provincial treasurer or the collector of internal revenue of the province in which the claim is situated, as the same may be ascertained, the sum of $50.00, and shall thereupon be entitled to a patent for the land, subject to the payment of any other duty or fees required by law.

"Sec. 38. That the applicants for mineral patents, if residing beyond the limits of the province or military department wherein the claim is situated, may make oath and affidavit for proof of citizenship before the clerk of any court of record, or before any notary public of any province of the Philippine Islands, or any other official in said islands authorized by law to administer oaths.

"Sec. 39. That where an adverse claim is filed during the period of publication it shall be upon the oath of the person or persons making the same, and shall show the nature, boundaries, and extent of such adverse claim, and all proceedings, except the publication of notice and making and filing of the affidavit where such claim is marked by monuments on the ground, and shall post a copy of such plat, together with a notice of such application for a patent, in a conspicuous place on the land or lands in such plat previous to the filing of the application for a patent, and shall file an affidavit of at least two persons that such notice has been duly posted, and shall file a certified copy of such notice, with reasonable diligence to final judgment, and shall thereupon be entitled to a patent for the land, in the manner following: The provincial secretary, or such other officer as by the Philippine government may be described as mining recorder, upon the filing of such application, plat, field-notes, notices, and affidavits, shall publish a notice that such an application has been made, once a week for the period of sixty days, in a newspaper to be by him designated as nearest to such claim in and in two newspapers published at Manila, one in the English language and one in the Spanish language, to be ordered by the chief of the Philippine insular bureau of public lands; and he shall also post such notice in his office for the same period. The claimant at the time of filing this notice shall deposit with him the sum of $500.00, which sum shall be held by him until after the expiration of the sixty days of publication, and shall be paid to the provincial secretary or such other officer as by the Philippine government may be described as mining recorder, at the expiration of thirty days after filing his claim, to commence proceedings in a court of competent jurisdiction to determine the question of the right of possession, and prosecute the same with reasonable diligence to final judgment, and to failure so to do shall be a waiver of his adverse claim. After such judgment shall have been rendered the party entitled to the possession of the claim, or any portion thereof, may, without giving further notice, file a certified copy of the judgment roll with the provincial secretary or such other officer as by the government of the Philippine Islands may be described as mining recorder, together with the certificate of the chief of the Philippine insular bureau of public lands that the requisite amount of labor has been expended or improved on the land described in such claim, and shall pay to the provincial treasurer or the collector of internal revenue of the province in which the claim is situated, as the same may be ascertained, the sum of $50.00, and shall thereupon be entitled to a patent for the land, subject to the payment of any other duty or fees required by law.
by the government of said islands may be described as mining recorder shall certify the proceedings and judgment roll to the secretary of the interior for the Philippine Islands, as in the preceding case, and patents shall issue to the several parties according to their respective rights. If in any action brought pursuant to this section title to the ground in controversy shall not be established by either party, the court shall so find, and judgment shall be entered accordingly. In such case costs shall not be allowed to either party, and the claimant shall not proceed in the office of the provincial secretary or such other officer as by the government of said islands may be described as mining recorder or be entitled to a patent for the ground in controversy until he shall have perfected his title. Nothing herein contained shall be construed to prevent the alienation of a title conveyed by a patent for a mining claim to any person whatever.

SEC. 42. That the description of mineral claims upon surveyed lands shall designate the location of the claim with reference to the lines of the public surveys, but need not conform therewith; but the surveyor general of the unsurveyed lands the chief of the Philippine insular bureau of public lands in extending the surveys shall adjust the same to the boundaries of the claims, according to the plat or description thereof, but so as in no case to interfere with or change the location of any such patented claim.

SEC. 43. That any person authorized to enter lands under this act may enter and obtain patent to lands that are chiefly valuable for building-stone under the provisions of this act relative to placer mineral claims.

SEC. 44. That no location of a placer claim shall exceed 64 hectares for any association of persons, irrespective of the number of persons composing such association, and no such location shall include more than 8 hectares for an individual claim. Such location on unsurveyed land shall conform to the laws of the United States Philippine Commission, or its successors, with reference to public surveys, and nothing in this section contained shall defeat or impair any bona fide ownership of land for agricultural purposes or authorize the sale of the improvements of any bona fide settler to any purchaser.

SEC. 45. That placer claims are located upon surveyed lands and conform to legal subdivisions no further survey or plat shall be required, and all placer mining claims located after the date of passage of this act shall conform as nearly as practicable to the Philippine system of public-land surveys and the regular subdivisions of such surveys; but where placer claims can not be formed to legal subdivisions, survey and claimant. Such location on unsurveyed land; and where by the segregation of mineral lands in any legal subdivision a quantity of agricultural land less than 16 hectares shall remain, such fractional portion of agricultural land may be entered by any party qualified by law for homestead purposes.

SEC. 46. That where such person or association in whose favor their grantors have held and worked their claims for a period equal to the time prescribed by the statute of limitations of the Philippine Islands, evidence of such possession and working of the claims for such period shall be sufficient to establish a right to a patent thereto under this act, in the absence of any adverse claim; but nothing in this act shall be deemed to impair any lien which may have attached in any way whatever prior to the issuance of a patent.

SEC. 47. That the chief of the Philippine insular bureau of public lands may appoint competent deputy mineral surveyors to survey mining claims. The expenses of the survey of vein or lode claims and of the survey of placer claims, together with the cost of publication of notices, shall be paid by the applicants, and they shall be at liberty to obtain the same at the most reasonable rates, and they shall also be at liberty to employ any such deputy mineral surveyor to make the survey. The chief of the Philippine insular bureau of public lands shall also have power to establish the maximum charges for surveys and publication of notices under this act; and in case of excessive charges for publication he may designate any newspaper published in a province where mines are situated, or in Manila, for publication of such notices and fix the rates to be charged by such paper; and to the end that the chief of the bureau of public lands may be fully informed on the subject such application shall be made to the provincial secretary, or such other officer as by the government of the Philippine Islands may be described as mining recorder, a sworn statement of all charges and fees paid by such applicant for publication and surveys, and of all fees and money paid the provincial treasurer or the collector of internal revenue, as the case may be, which statement shall be transmitted, with the other papers in the case, to the secretary of the interior for the Philippine Islands.

SEC. 48. That all affidavits required to be made under this act may be verified before any officer authorized to administer oaths within the province or military department where the claims may be situated, and all testimony and proofs may be taken before any such officer, and when duly certified by the officer taking the same, shall have the same force and effect as if taken before the proper provincial secretary or such other officer as by the government of the Philippine Islands may be described as mining recorder. In cases of contest as to the mineral or agricultural character of land the testimony and proofs may be taken as herein provided or personal notice of at least ten days to the opposing party; or if such party can not be found, then by publication at least once a week for thirty days in a newspaper to be designated by the provincial secretary or such other officer as by said government may be described as mining recorder published nearest to the location of such land and in two newspapers published in Manila, one in the English language and one in the Spanish language, to be designated by the chief of the Philippine insular bureau of public lands; and the provincial secretary or such other officer as by said government may be described as mining recorder shall require proofs that such notice has been given.

SEC. 49. That where non-mineral land not contiguous to the vein or lode is used or occupied by the proprietor of such vein or lode for mining or milling purposes, such non-adjacent surface ground may be embraced and included in an application for a patent for such vein or lode; and the same may be patented therewith, subject to the same preliminary requirements as to survey and notice as are applicable to veins or lodes;
but no location of such non-adjacent land shall exceed 2 hectares, and payment for the same must be made at the same rate as fixed by this act for the superficies of the lode. The owner of a quartz-mill or reduction-works not owning a mine in connection therewith may also receive a patent for his mill site as provided in this section.

"Sec. 49. That as a condition of sale the government of the Philippine Islands may provide rules for working, policing, and sanitation of mines, and rules concerning easements, drainage, water rights, right of way, right of government survey and inspection, and other necessary means to their complete development not inconsistent with the provisions of this act, and those conditions shall be fully expressed in the patent. The Philippine Commission or its successors are hereby further empowered to fix the bonds of deputy mineral surveyors.

"Sec. 50. That whenever by priority of possession rights to the use of water for mining, agricultural, manufacturing, or other purposes have vested and accrued the same are recognized and acknowledged by the local customs, laws and usage of the people, the possessors and owners of such vested rights shall be maintained and protected in the same, and the right of use for the construction of ditches and canals for the purpose herein aforesaid acknowledged and confirmed, but whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage.

"Sec. 51. That all patents granted shall be subject to any vested and accrued water rights, or rights to ditches and reservoirs used in connection with such water rights as may have been acquired under or recognized by the preceding section.

"Sec. 52. That the government of the Philippine Islands is authorized to establish land districts and provide for the appointment of the necessary officers wherever they may deem the same necessary for the public convenience, and to further provide that in districts where land offices are established proceedings required by the act of Congress shall be had before the proper officers of such land offices.

"Sec. 53. That every person above the age of twenty-one years who shall make the declaration in writing prescribed in the preceding section, may be made by legal subdivisions, which shall conform as nearly as practicable with the subdivisions of land provided for in this act, to include as near as may be the forty acres of land specified in the act. The government of the Philippine Islands is authorized to issue all needful rules and regulations for carrying into effect the provisions of this and preceding sections relating to mineral lands.

"Sec. 54. That any person or association of persons, severally qualified as above provided, who have opened and improved, or shall hereafter open and improve, any coal-mine or mines upon the public lands, and shall be in actual possession of the same, shall be entitled to a preference right of entry under the preceding section of the mines so opened and improved.

"Sec. 55. That all claims under the preceding section must be presented to the proper provincial secretary within sixty days after the date of actual possession and the commencement of improvements on the land by the filing of a declaratory statement therefor; and where the improvements shall have been made prior to the expiration of three months from the date of the passage of this act, sixty days from the expiration of such three months shall be allowed for the filing of a declaratory statement; and no sale under the provisions of this act shall be allowed until the expiration of six months from the date of the passage of this act shall be allowed under or recognized by the preceding section.

"Sec. 56. That the three preceding sections shall be held to authorize only one entry by the same person or association of persons; and no new or additional association of persons shall have taken the benefit of such sections either as an individual or as a member of any other association, shall enter or hold any other lands under the powers and purport of any number of any association which shall have taken the benefit of such section shall enter or hold any other lands under their provisions; and all persons claiming the benefit of such section shall be required to prove their respective rights and pay for the lands filed upon within one year from the time prescribed for filing their respective claims; and upon failure to file the proper notice or to pay for the land within the required period, the same shall be subject to entry by any other qualified applicant.

"Sec. 57. That in case of conflicting claims upon coal lands where the improvements shall have commenced prior to the date of the passage of this act, priority of possession and improvements, followed by proper filing and continued good faith, shall determine the preference right to purchase. And also where improvements have already been made prior to the passage of this act, division of the land claimed may be made by legal subdivisions, which shall conform as nearly as practicable with the subdivisions of land provided for in this act, to include as near as may be the forty acres of land specified in the act. The government of the Philippine Islands is authorized to issue all needful rules and regulations for carrying into effect the provisions of this and preceding sections relating to mineral lands.

"Sec. 58. That whenever it shall be made to appear to the secretary of any province or the commander of any military department in the Philippine Islands that any lands within the province are saline in character, it shall be the duty of said provincial secretary or commander, under the regulations of the government of the Philippine Islands, to take testimony in reference to such lands, to ascertain their true character, and to report the same to the secretary of the interior for the Philippine Islands; and if, upon such testimony, the secretary of the interior shall find that such lands are saline and incapable of being purchased under any of the laws relative to the public domain, then and in such case said lands shall be offered for sale at the office of the provincial secretary or other officers as by the said government may be described as mining recorder of the province or department in which the same shall be situ-
CONGRESS. (THE PHILIPPINE ISLANDS.) 1175

said, as the case may be, under such regulations as the government shall adopt. Said sale shall be sold to the highest bidder, for cash, at a price of not less than $3 per hectare; and in case such lands fail to sell when so offered, then the same shall be subject to private sale at such office, for cash, at a price not less than $3 per hectare, in the same manner as other lands in the said islands are sold. All executive proclamations relating to the sales of public saline lands shall be published in only two newspapers, one printed in the English language and one in the Spanish language, at Manila, which shall be designated by the said secretary of the interior.

"SEC. 59. That no act granting lands to provinces, districts, or municipalities to aid in the construction of roads, or for other public purposes, shall be so construed as to embrace mineral lands, which, in all cases, are reserved exclusively, unless otherwise specially provided in the act or acts making the grant.

"SEC. 60. That nothing in this act shall be construed to affect the rights of any person, partnership, or corporation having a valid, perfected mining concession granted prior to April 11, 1899. The mining or the sale of said islands under the provisions of the law in force at the time they were granted, subject at all times to cancellation by reason of illegality in the procedure by which they were obtained, or for failure to comply with the conditions prescribed as requisite to their retention in the laws under which they were granted: Provided, That the owner or owners of the property or concession shall cause the corners made by its boundaries to be distinctly marked with permanent monuments within six months after this act has been promulgated in the Philippines, and that any concessions the boundaries of which are not so marked within this period shall be free and open to explorations and purchase under the provisions of this act.

"SEC. 61. That mining rights on public lands in the Philippine Islands shall, after the passage of this act, be acquired only in accordance with its provisions.

"SEC. 62. That all proceedings for the cancellation of perfected Spanish concessions shall be conducted in the courts of the Philippine Islands having jurisdiction of the subject matter, and of the parties, under the United States Philippine Commission, or its successors, shall create special tribunals for the determination of such controversies.

"AUTHORITY FOR THE PHILIPPINE ISLANDS GOVERNMENT TO PURCHASE LANDS OF RELIGIOUS ORDERS AND OTHERS AND ISSUE BONDS FOR PURCHASE PRICE.

"SEC. 63. That the government of the Philippine Islands is hereby authorized, subject to the limitations and conditions prescribed in this act, to acquire real estate for public uses by the exercise of the right of eminent domain.

"SEC. 64. That the powers hereinbefore conferred in section 63 may also be exercised in respect of any lands, easements, appurtenances, and hereditaments which on the 15th of August, 1899, were owned or held by associations, corporations, communities, religious orders, or private individuals in such large tracts or parcels and in such manner as in the opinion of the congress will best promote the peace and welfare of the people of the Philippine Islands. And for the purpose of providing funds to acquire the lands mentioned in this section said government is hereby empowered to incur indebtedness, to borrow money, and to issue, and to sell at not less than par value, in gold coin of the United States of the present standard value or the equivalent in value in money of said islands, upon such terms and conditions as it may deem best, registered or coupon bonds of said government for such amount as may be necessary, said bonds to be in denominations of $50 or any multiple thereof, bearing interest at a rate not exceeding 4½ per centum per annum, payable quarterly, and to be payable at the pleasure of said government after dates named in said bonds not less than five nor more than thirty years from the date of their issue, together with interest thereon, in gold coin of the United States of the present standard value or the equivalent in value in money of said islands; and said bonds shall be exempt from the payment of all taxes or duties of said government, or any local authority therein, or of the Government of the United States, as well as from taxation in any form by or under state, municipal, or local authority in the United States or the Philippine Islands, the proceeds of which may be realized or received from the issue and sale of said bonds shall be applied by the government of the Philippine Islands to the acquisition of the property authorized by this section, and to no other purposes.

"SEC. 65. That all lands acquired by virtue of the preceding section shall constitute a part and parcel of the property of the government of the Philippine Islands, and may be held, sold, and conveyed, or leased temporarily for a period not exceeding three years after their acquisition by said government on such terms and conditions as it may prescribe, subject to the limitations and conditions provided for in this act: Provided, That all deferred payments and the interest thereon shall be payable in the money prescribed for the payment of principal and interest of the bonds authorized to be issued in payment of said lands by the preceding section and said deferred payments shall bear interest at the rate borne by the bonds. All moneys realized or received from sales or other disposition of said lands or by reason thereof shall constitute a trust fund for the payment of principal and interest of said bonds, and also constitute a sinking-fund for the payment of said bonds at their maturity. Actual settlers and occupants at the time said lands are acquired by the government shall have the preference over all others to lease, purchase, or acquire their holdings within such reasonable time as may be determined by said government.

"MUNICIPAL BONDS FOR PUBLIC IMPROVEMENTS.

"SEC. 66. That for the purpose of providing funds to construct sewers, to furnish adequate sewer and drainage facilities, and to secure a sufficient supply of water, and to provide all kinds of municipal betterments and improvements in municipalities, the government of the Philippine Islands, under such limitations, terms, and conditions as it may prescribe, with the consent and approval of the President and the Congress of the United States, may permit any municipality of said islands to incur indebtedness, borrow money, and to issue and sell (at not less than par value, in gold coin of the United States) registered or coupon bonds in such amount and payable at such time as may be determined by the government of said islands, with the consent of the several 5 per centum per annum: Provided, That the entire indebtedness of any municipality under
this section shall not exceed 5 per centum of the assessed valuation of the property in said municipality, and any obligation in excess of such limit shall be null and void.

Sec. 67. That all municipal bonds shall be in denominations of $60, or any multiple thereof, bearing interest at a rate not exceeding 5 per centum per annum, payable quarterly, such bonds to be payable at the pleasure of the government of the Philippine Islands, after dates named in said bonds not less than five nor more than thirty years from the date of their issue, together with the interest thereon, in gold coin of the United States of the present standard value, or its equivalent in value of money of the said islands; and said bonds shall be exempt from the payment of all taxes or duties of the government of the Philippine Islands, or any local authority therein, or the Government of the United States.

Sec. 68. That all moneys which may be realized or received from the issue and sale of said bonds shall be utilized under authorization of the government of the Philippine Islands in providing the municipal improvements and betterment which increased the value and sale of said bonds, and for no other purpose.

Sec. 69. That the government of the Philippine Islands shall, by the levy and collection of taxes on the number of inhabitants in said islands, their property, or by other means, make adequate provision to meet the obligation of said bonds, and shall create a sinking-fund sufficient to retire and pay the interest thereon in accordance with the terms of issue: Provided, That if said bonds or any portion thereof shall be paid out of the funds of the government of said islands, said city shall reimburse said government for the sum thus paid, and said government is hereby empowered to collect said sum by the levy and collection of taxes on said city.

Sec. 70. That for the purpose of providing funds to construct sewers in the city of Manila and to furnish it with an adequate sewer and drainage system and supply of water the government of the Philippine Islands, with the approval of the President of the United States first had, is hereby authorized to permit the city of Manila to issue bonds not exceeding $4,000,000 lawful money of the United States, payable at such time or times as may be determined by said government, with interest thereon not to exceed 5 per centum per annum.

Sec. 71. That said coupon or registered bonds shall be in denominations of $60 or any multiple thereof, bearing interest at a rate not exceeding 5 per centum per annum, payable quarterly, such bonds to be payable at the pleasure of the government of the Philippine Islands, after dates named in said bonds not less than five nor more than thirty years from the date of their issue, together with the interest thereon in gold coin of the United States of the present standard value, or the equivalent in value in money of the said islands; and said bonds shall be exempt from the payment of all taxes or duties of the government of the said islands, or of any local authority thereof, or of the Government of the United States.

Sec. 72. That all moneys which may be realized or received from the issue and sale of said bonds shall be utilized under authorization of the government of the Philippine Islands in providing a suitable sewer and drainage system and adequate supply of water for the city of Manila and for no other purpose.

Sec. 73. That the government of the Philippine Islands shall, by the levy and collection of taxes on the city of Manila, its inhabitants and their property, or by other means, make adequate provision to meet the obligation of said bonds and shall create a sinking-fund sufficient to retire them and pay the interest thereon in accordance with the terms of issue: Provided, That if said bonds or any portion thereof shall be paid out of the funds of the government of said islands, said city shall reimburse said government for the sum thus paid, and said government is hereby empowered to collect said sum by the levy and collection of taxes on said city.

Sec. 74. That the government of the Philippine Islands may grant franchises, privileges, and concessions, including the authority to exercise the right of eminent domain for the construction and operation of works of public utility and service, and may authorize said works to be constructed and maintained over and across the public property of the United States, including streets, highways, and reservations, and over similar property of the government of said islands, and may adopt rules and regulations under which the provincial and municipal governments of the islands may grant the right to use and occupy such public property belonging to said provinces or municipalities: Provided, That no private property shall be taken for any purpose under this section without just compensation paid or tendered therefor, and that such authority to take and occupy land shall not authorize the taking, use, or occupation of any land except as is required for the actual necessary purposes for which the franchise is granted, and that no franchise, privilege, or concession shall be granted to any corporation except under the conditions that it shall be subject to amendment, alteration, or repeal by the Congress of the United States, and that lands or rights of use and occupation of lands thus granted shall revert to the government of the United States, as provided by Acts of Congress, by the terms of which they were respectively granted upon the termination of the franchises and concessions under which they were granted or upon their revocation or repeal. That all franchises or grants under this act shall forbid the issue of stock or bonds except in exchange for actual cash, or for property at a fair valuation, equal to the par value of the stock or bonds so issued; shall forbid the declaring of stock or bond dividends, and, in the case of public-service corporation, shall provide for the effective regulation of the charges thereof, for the official inspection and regulation of the books and accounts of such corporations, and for the payment of a reasonable percentage of gross earnings into the treasury of the Philippine Islands or of the province or municipality within which such franchises are granted and exercised: Provided further, That it shall be unlawful for any corporation organized under this act, or for any person, company, or corporation receiving any grant, franchise, or concession from the government of said islands, to use, employ, or contract for the labor of persons claimed or alleged to be held in involuntary servitude, or for any person, company, or corporation so violating the provisions of this act shall forfeit all charters, grants, franchises, and concessions for doing business in said islands, and in addition shall be
deemed guilty of an offense, and shall be punished by a fine of not less than $10,000.

"SEC. 75. That no corporation shall be authorized to conduct the business of buying and selling real estate or be permitted to hold or own real estate except such as may be reasonably necessary to enable it to carry out the purposes for which it is created, and every corporation authorized to engage in agriculture shall by its charter be restricted to the ownership and control of not to exceed 1,024 hectares of land; and it shall be unlawful for any member of a corporation engaged in agriculture or mining and for any corporation organized for any purpose except irrigation to be in any wise interested in any other corporation engaged in agriculture or in mining. Corporations, however, may loan funds upon real estate security and purchase real estate when necessary for the collection of loans, but they shall dispose of real estate so obtained within five years after receiving the title. Corporations not organized in the Philippine Islands, and doing business therein, shall be bound by the provisions of this section so far as they are applicable.

"COINAGE.

"SEC. 76. That the government of the Philippine Islands is hereby authorized to establish a mint at the city of Manila, in said islands, for coinage purposes, and the coins hereinafter authorized may be coined at said mint. And the said government is hereby authorized to enact laws necessary for such establishment: Provided, That no other banks of the United States and other vessels arriving from or going to foreign ports shall apply to voyages each way between the Philippine Islands and the United States and the possessions thereof, and all laws relating to the collection and protection of customs duties not inconsistent with the act of Congress of March 8, 1892, 'temporarily to provide revenue for the Philippine Islands,' shall apply in the case of vessels and goods arriving from said islands in the United States and its aforesaid possessions.

"SEC. 77. That the government of the Philippine Islands is authorized to coin, for use in said islands, a coin of the denomination of 50 centavos and of the weight of 192.4 grams, a coin of the denomination of 20 centavos and of the weight of 77.4 grams, and a coin of the denomination of 10 centavos and of the weight of 38.7 grams, and the standard of said silver coins shall be such that of 1,000 parts by weight 900 shall be of pure metal and 100 of alloy, and the alloy shall be of copper.

"SEC. 78. That the subsidiary silver coins authorized by the preceding section shall be coined under the authority of the government of the Philippine Islands in such amounts as it may determine, with the approval of the Secretary of War of the United States, from silver bullion purchased by government, and with the approval of the Secretary of War of the United States: Provided, That said government may in addition and in its discretion coin the Spanish Filipino dollars and subsidiary silver coins issued under the authority of the Spanish Government for use in said islands into the subsidiary coins provided for in the preceding section at such rate and under such regulations as it may prescribe, and the subsidiary silver coins authorized by this section shall be legal tender in said islands to the amount of $10.

"SEC. 79. That the government of the Philippine Islands is also authorized to issue minor coins of the denominations of 1 centavo, 1 centavo, and 5 centavos, and such minor coins shall be legal tender in said islands for amounts not exceeding $1. The alloy of the 5-centavo piece shall be of copper and nickel, to be composed of 3 copper and 2 nickel. The alloy of the 1-centavo and 5-centavo pieces shall be 90 per cent copper and 10 per cent tin and zinc, in such proportions as shall be determined by said government. The weight of the 5-centavo piece shall be 17.75 grains, and of the 1-centavo piece 8.35 grains, and of the 5-centavo piece 40 grains.

"SEC. 80. That for the purchase of metal for the subsidiary and minor coinage, authorized by the preceding sections, an appropriation may be made by the government of the Philippine Islands from its current funds, which shall be reimbursed from the coinage under said sections; and the gain or seigniorage arising therefrom shall be paid into the treasury of said islands.

"SEC. 81. That the subsidiary and minor coinage hereinafter authorized may be coined at the mint of the government of the Philippine Islands in Manila, or arrangements may be made by the said government with the Secretary of the Treasury of the United States for their coinage at any of the mints of the United States, at a charge covering the reasonable cost of the work.

"SEC. 82. That the subsidiary and minor coinage hereinafter authorized shall bear devices and inscriptions to be prescribed by the government of the Philippine Islands and such devices and inscriptions shall express the sovereignty of the United States, that it is a coin of the Philippine Islands, the denomination of the coin, and the year of the coinage.

"SEC. 83. That the government of the Philippine Islands shall have the power to make all necessary appropriations and all proper regulations for the redemption and reuse of worn or defective coins and for carrying out all other provisions of this act relating to coinage.

"SEC. 84. That the laws relating to entry, clearance, and manifest, laws relating to vessels and other vessels arriving from or going to foreign ports shall apply to voyages each way between the Philippine Islands and the United States and the possessions thereof, and all laws relating to the collection and protection of customs duties not inconsistent with the act of Congress of March 8, 1892, 'temporarily to provide revenue for the Philippine Islands,' shall apply in the case of vessels and goods arriving from said islands in the United States and its aforesaid possessions.

"The laws relating to seamen on foreign voyages shall apply to seamen on vessels going from the United States and its possessions aforesaid to said islands, the customs officers there being for this purpose substituted for consular officers in foreign ports.

"The provisions of chapters vi and vii, title 48, Revised Statutes, so far as now in force, and any amendments thereof, shall apply to vessels making voyages each way between the United States and its aforesaid possessions and ports in said islands; and the provisions of law relating to the public health and quarantine shall apply in the case of all vessels entering a port of the United States or its aforesaid possessions from said islands, where the customs officers at the port of departure shall perform the duties required by such law of consular officers in foreign ports.

"Section 3005, Revised Statutes, as amended, and other existing laws concerning the transit of merchandise through the United States, shall apply to merchandise arriving at any port of the United States destined for any of its insular and continental possessions, or destined from any of them to foreign countries.

"Nothing in this act shall be held to repeal or alter any part of the act of March 8, 1902, aforesaid, or to apply to Guam, Tutuila, or Manua, except that section 9 of said act entitled 'An Act to revise and amend the tariff laws of the Philippine Archipelago,' enacted by the Philippine Commission on the 17th of September, 1901,
and approved by an act entitled « An Act temporarily to provide revenues for the Philippine Islands, and for other purposes, » approved March 8, 1902, is hereby amended so as to authorize the civil governor to issue his discretion to establish the equivalent rates of the amount in circulation in said islands with the money of the United States as often as once in ten days.

"SEC. 85. That the treasury of the Philippine Islands and such banking associations in said islands with a paid-up capital of not less than $2,000,000 and chartered by the United States or any State thereof as may be designated by the Secretary of War and the Secretary of the Treasury of the United States shall be depositories of public money of the United States, subject to the provisions of existing law governing such depositories in the United States: Provided, That the Treasury of the government of said islands shall not be required to deposit bonds in the Treasury of the United States, or to give other specific securities for the safe-keeping of public money except as prescribed, in his discretion, by the Secretary of War; and Provided further, That all laws passed by the government of the Philippine Islands shall be reported to Congress, which hereby reserves the power and authority to annul the same, and the Philippine Commission is hereby directed to make annual report of all its receipts and expenditures to the Secretary of War.

"BUREAU OF INSULAR AFFAIRS.

"SEC. 87. That the Division of Insular Affairs of the War Department, organized by the Secretary of War, is hereby continued until otherwise provided, and shall hereafter be known as the Bureau of Insular Affairs of the War Department. The business assigned to said bureau shall embrace all matters pertaining to civil government in the island possessions of the United States subject to the jurisdiction of the War Department; and the Secretary of War is hereby authorized to detail an officer of the army whom he may consider especially well qualified, to act under the authority of the Secretary of War as the chief of said bureau; and said officer while acting under said detail shall have the rank, pay, and allowances of a colonel.

"SEC. 88. That all acts and parts of acts inconsistent with this act are hereby repealed."
rule that is presented here this morning that I shall not offer any opposition to it. I believe there are other matters that should have been considered at this time, and especially those relating to the maintenance of tariff duties on sugar and the reduction of duties on iron and steel. But after consultation with the members who were in sympathy with me on this proposition I find the sentiment is that nothing should be done that would in any way hazard the passage of the war-revenue repeal bill; that they believe it to be their duty to their constituents to vote for this repeal and not jeopardize its passage by presenting other legislation in the shape of amendments; and further, that Congress is, under moral obligation to pass this bill at the earliest date possible and relieve the country from this burdensome tax. For these reasons, Mr. Speaker, I shall vote for the rule; but I wish to say at this time that I shall take the first opportunity that presents itself after the passage of this bill to press for consideration House bill 9636, amending the iron and steel schedule.

Mr. Richardson, of Tennessee, challenged Republicans in favor of a modification of tariff rates to make their opinion effective by voting against the special rule.

Now, if you want to afford your constituents some relief, if you want an opportunity to give your people a chance to have relief from high taxation on any one of the 4,000 articles now upon the tariff schedule, which are paying a tax of from 50 to 100 and even 150 per cent, this is the opportunity. You gentlemen will go back to your people and some of you will tell them that you would not offer a relief measure. I wish to tell them you could have done so by voting down this rule. You are willing to vote to take all the tax off of inheritances under this bill. You are willing to take all of the tax off of 'bucket-shops.' You are willing to take the tax off of corporations which are now taxed, which you do in this bill, and all the other war-taxes, including tax on beer, tea, tobacco, etc., but you leave the tariff, averaging more than 50 per cent, on over 4,000 articles, many of them of prime necessity to the people of this country. You have an opportunity now to give them some relief; but instead of voting against the rule, instead of speaking against the rule, which you refuse to do, you come by your vote and told down the rule, and so tie your hands that you can not offer amendments reducing taxes, etc., and have them considered. Then you purpose to go home to your people, who are crying for relief, with the statement that the House Representatives tied our hands and would not permit us to offer an amendment.

Now, gentlemen on the other side, there is no escape from the result of your vote here. If you desire to offer any amendments to any one of the tariff schedules, reducing taxes on any one of the 4,000 articles now taxed, you have the opportunity by voting down this rule. You bring 21 of your 200 members on that side of the House against this rule, and we will vote it down. We will give you 150 or 160 votes from this side of the House. We will vote down the rule; and then what would be the situation? We would go into the committee of the whole under the five-minute rule, take the bill from Wisconsin, and tender your relief measure.

"Other gentlemen, on both sides of the House, who have relief measures in which their people are vitally concerned, could tender them, and after reasonable debate we would have a vote upon them. But, instead of that, you come up voluntarily and surrender your prerogatives to represent the 180,000 or 200,000 free people whom you each represent, and tie your own hands so that you can offer no measure of relief and no amendment of any kind?"

Mr. Cannon, of Illinois, put the case for the Republican majority as follows: "Mr. Speaker, I recollect well when the legislation was enacted which the House of Representatives will trust, so far as it can, in the next two days repeal. War had been declared with Spain. It was necessary to have additional revenues collected from the people. The Republican party, then in power as now in this House, under the leadership of the late distinguished representative from Maine, Mr. Dingley, passed the law which we now propose to repeal, with certain statements and pledges. One was that it was apparent that the enactment was necessary, and the other, in which we all on the Republican side participated by vote, and many by voice, was that when the war closed and these revenues were no longer necessary the Republican party, if in power, would see to it that they were repealed.

"I recollect quite well the debates that occurred. On the other side of the House there were various propositions. The most statesmanlike of all was that we should pay the expenses of that war by coining the silver bullion in the Treasury, etc., which when the vote came, in the face of denunciations on the other side of the House that we were enacting that legislation with a high hand and that the House was lowering its dignity, the Republican party passed a bill, and, with a few honorable exceptions, the gentlemen on the other side of the Chamber voted 'no.'

"Now, those revenues are no longer necessary; and a party or administration that collects from its citizens more than enough to carry on the Government is derelict, and if they should continue to do so they ought to and would lose power.

"Again, unnecessary revenues in the Treasury and coming into the Treasury are but a prize, which, I started to an opportunity to give them some relief; but instead of voting against the rule, instead of speaking against the rule, which you refuse to do, you come by your vote and told down the rule, and so tie your hands that you can not offer amendments, reducing taxes, etc., and have them considered. Then you purpose to go home to your people, who are crying for relief, with the statement that the House of Representatives tied our hands and would not permit us to offer an amendment.

But, instead of that, you come up voluntarily and surrender your prerogatives to represent the 180,000 or 200,000 free people whom you each represent, and tie your own hands so that you can offer no measure of relief and no amendment of any kind?"

The resolution embodying the special rule was carried by a vote of 158 to 121; and Mr. Richardson proposed that the vote be taken, by unanimous consent, on the amendment and passage of the bill as recommended by the Committee on Ways and Means, since it would be folly to spend a day in committee of the whole, considering a measure to which no amendment could be offered. And so the bill was passed.

March 21, it was amended and passed by the Senate. The main point in the amendments was the exclusion of the tax on bucket-shop transactions from the act of repeal. The House non-concurred in the Senate amendments, and after conference a report was made in which the Senate receded from the most important amendment.
CONGRESS. (Repeal of War-Revenue Taxation.)

The measure was approved by the President April 12, 1902, in the following form:

"An Act to provide ways and means to meet war expenditures, and for other purposes, approved March 2, 1901, entitled 'An Act to amend an act entitled 'An Act to provide ways and means to meet war expenditures, and for other purposes, approved June 13, 1898, as amended by the act of March 2, 1901, entitled 'An Act to provide ways and means to meet war expenditures, and for other purposes, approved June 13, 1898, and to reduce taxation thereunder,' be, and hereby, further amended so as to read as follows:

"Section 1. That there shall be paid on all beer, lager-beer, ale, porter, and other similar fermented liquor, brewed or manufactured and sold, or stored in warehouse, or removed for consumption or sale, within the United States, by whatever name such liquors may be called, in lieu of the tax now imposed by law, a tax of $1 for every barrel containing not more than 31 gallons; and at a like rate for any other quantity or for any fractional part of a barrel, as authorized and defined by section 3339 of the Revised Statutes of the United States: Provided, That in lieu of or in addition to the present requirements of law in respect to all stamps used for denoting the tax upon fermented liquors or other taxes may, in the discretion of the Commissioner of Internal Revenue, be canceled by perforations to be made in such manner as shall be prescribed by the Commissioner, by regulations, prescribe.

"Section 2. That section 2 of said act of June 13, 1898, and all amendments thereof, are hereby repealed.

"Section 3. That section 3 of said act and amendments thereof be amended to read as follows:

"Section 3. That upon tobacco and snuff manufactured and sold, or removed for consumption or use, there shall be levied and collected, in lieu of the tax now imposed by law, the following taxes:

"On snuff, manufactured of tobacco or any substitute for tobacco, ground, dry, damp, pickled, scented, or otherwise, of all descriptions, when prepared for use, a tax of 6 cents per pound. And snuff-drawer, when sold, or removed for use or consumption, prepared by hand, or by machinery, of every description; on tobacco twisted by hand or reduced into a condition to be consumed, or in any manner other than the ordinary mode of drying and curing, prepared for sale or consumption, even if prepared without the use of any machine or instrument, and without being pressed or sweetened; and on all fine-cut shorts and refuse scraps, clippings, cuttings, and sweepings of tobacco, a tax of 6 cents per pound.

"That the internal-revenue tax on cigars or cigarettes weighing more than 3 pounds per 1,000 shall be $3 per 1,000; and the tax on cigars weighing not more than 3 pounds per 1,000 shall be 18 cents per pound, and on cigarettes weighing not more than 3 pounds per 1,000 and of a wholesale value or price of not more than $2 per 1,000 shall be 18 cents per pound; and the tax on cigarettes weighing not more than 3 pounds per 1,000 and of a wholesale value or price of more than $2 per 1,000 shall be 36 cents per pound; and all such cigars and cigarettes weighing not more than 3 pounds per 1,000 shall, for purposes of taxation, be held and considered as weighing 3 pounds.

"In addition to the packages of smoking tobacco and snuff now authorized by law there shall be packages of 1 1/4 ounce, 2 ounces, 2 1/2 ounces, 3 ounces, 3 1/2 ounces, and 4 ounces; and there may by 1 ounce package containing 1 ounce of smoking tobacco.

"Section 4. That on all original and unbroken factory packages of smoking and manufactured tobacco and snuff sold by manufacturers or dealers on July 1, 1902, upon which there has been paid a higher tax than that provided for in the preceding section of this act, there shall be allowed a drawback or rebate equal to the full amount of the difference between such higher tax and the tax imposed by this act, after making the proper allowance for discounts and rebates heretofore authorized, but the same shall not apply in any case where the claim has not been presented within sixty days after July 1, 1902; and no claim shall be allowed or drawback paid for a less amount than $10. It shall be the duty of the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, to adopt such rules and regulations and to prescribe and furnish such blanks and forms as may be necessary to carry this section into effect.

"Section 5. That section 4 of the act of June 13, 1898, is hereby repealed.

"Section 6. That section 5 of the act of June 13, 1898, as amended to read as follows:

"Section 5. That until appropriate stamps are prepared and furnished, the stamps heretofore used to denote the rate of the internal revenue tax on fermented liquors, tobacco, and snuff may be stamped or imprinted with a suitable device to denote the new rate of tax, and shall be affixed to all packages containing such articles on which the tax imposed by this act is paid. And any person having possession of unaffixed stamps heretofore issued for the payment of the tax upon fermented liquors, tobacco, and snuff shall present the same to the collector of the district, who shall receive them at the price paid for such stamps by the purchasers and issue in lieu thereof of new or imprinted stamps at the rate provided by this act.

"Section 7. That section 4 of said act of March 2, 1901, and sections 6, 12, 18, 20, 21, 22, 23, 24, 25, and 26 of Schedule A, Title 4, of the act of June 13, 1898, and all amendments of said sections and schedules be, and the same are hereby repealed.

"Section 8. That all taxes or duties imposed by section 29 of the act of June 13, 1898, and amendments thereof, prior to the taking effect of this act, shall be subject, as to lien, charge, collection, and otherwise, to the provisions of section 30 of said act of June 13, 1898, and amendments thereof, which are hereby continued in force, as follows:

"Section 30. That the tax or duty aforesaid shall be due and payable in one year after the death of the testator and shall be a lien and charge upon the property of every person who may die as aforesaid for twenty years, or until the same shall, within that period, be fully paid to and discharged by the United States; and every executor, administrator, or trustee having in charge or trust any legacy or distributive share, as aforesaid, shall give notice thereof, in writing, to the collector or deputy collector of the district where the deceased grantor or bargainer last resided, or if within thirty days after his death, and all such charge of such trust, and every executor, administrator, or trustee, before payment and distribution to the legatees, or any parties entitled to the beneficial interest therein, shall pay to the collector or deputy collector of the district of which
the deceased person was a resident, or in which
the property was located in case of non-residents,
the amount of the duty or tax assessed upon such
legacy or distributive share, and shall also make
and render to the said collector or deputy coll-
lector a schedule, list, or statement, in duplicate,
of the amount of such legacy or distributive
share, together with the amount of duty which
has accrued, or shall accrue, thereon, verified by
his oath or affirmation, to be administered and
certified thereon by some magistrate or officer
having lawful power to administer such oaths,
in such form and manner as may be prescribed
by the Commissioner of Internal Revenue, which
schedule, list, or statement shall contain the
names of each and every person entitled to any
benefit or share; and upon such proof of such pro-
delivery of such schedule, list, or statement said
collector or deputy collector shall grant to such
person paying such duty or tax a receipt or rec
recognition of the laws of such state or territory,
commonly used for baking purposes: Provided,
That the product resulting from the grind-
ing or mixing together of wheat, or
wheat-flour, as the principal constituent in quan-
tity, with any other grain, or the product of any
other grain, or of a mixture of such grains,
and not the product of any grain, as is
commonly used for baking purposes: Provided,
That when the product resulting from the grind-
ing or mixing together of wheat, or
wheat-flour, as the principal constituent in quan-
tity, with any other grain, or the product of any
other grain, or of a mixture of such grains,
and not the product of any grain, as is
commonly used for baking purposes: Provided,
That when the product resulting from the grind-
ing or mixing together of wheat, or
wheat-flour, as the principal constituent in quan-
tity, with any other grain, or the product of any
other grain, or of a mixture of such grains,
and not the product of any grain, as is
commonly used for baking purposes: Provided,
That when the product resulting from the grind-
ing or mixing together of wheat, or
wheat-flour, as the principal constituent in quan-
tity, with any other grain, or the product of any
other grain, or of a mixture of such grains,
and not the product of any grain, as is
commonly used for baking purposes: Provided,
That when the product resulting from the grind-
ing or mixing together of wheat, or
wheat-flour, as the principal constituent in quan-
tity, with any other grain, or the product of any
other grain, or of a mixture of such grains,
and not the product of any grain, as is
commonly used for baking purposes: Provided,
That when the product resulting from the grind-
ing or mixing together of wheat, or
wheat-flour, as the principal constituent in quan-
tity, with any other grain, or the product of any
other grain, or of a mixture of such grains,
and not the product of any grain, as is
commonly used for baking purposes: Provided,
is there the slightest probability of an overproduction of small grains as a result of the successful operation of the project.

"First, the cost is limited to the proceeds from the sale and disposal of public lands in the 13 States and Territories named in the bill. This would involve a sum aggregating, perhaps, $2,500,000 per annum, according to official reports on the present income from this source. It is provided in the bill that the cost of construction of each irrigation project shall be paid by the persons directly benefited. Thus the money expended would constantly be recouped or repaid to the reclamation fund, making the system automatic and self-sustaining.

"Second, as to the fear of overproduction of farm-products, there is no ground whatever for alarm. While it is true that there are in the great West about 800,000,000 acres of lands which might be irrigated, the essential fact is that there is not sufficient water available, and more will be, to reclaim more than 10 per cent. of the whole area, or about 80,000,000 acres. It should not be taken for granted, however, that the whole of this area would be irrigated from Government works. The irrigation experts of the Geological Survey, basing their calculations upon the most thorough investigations in the field, give it as their opinion that 20,000,000 acres would be the limit of land irrigated from waters conserved by Government enterprises, but that this would serve as a nucleus about which private effort would reclaim an equal amount, or 40,000,000 acres in all. On this the most interesting and instructive letter from the director of the Geological Survey to be found in the report accompanying this bill:

"The surveys and examinations made in different parts of the arid region show that the cost of water conservation ranges from $5 per acre in the most favorable cases up to $20 or $25 per acre where the conditions are less favorable. Moreover, whereas $25 per acre may be prohibitory in Montana for raising alfalfa, it is reasonable in Arizona, where high-class products are produced. An arbitrary statement, therefore, of the cost per acre reclaimed bears little relation to the feasibility of the enterprise.

"The cost of reclamation also depends upon the land itself, which is always a variable. For example, the irrigation of 10,000 acres may cost only $10 per acre, but the irrigation of 15,000 additional acres may cost $15 per acre. Whereas in the aggregate the irrigation of 25,000 acres may be the most profitable in such a case to irrigate the smaller acreage; but as a matter of larger benefits to the people, the creation of new homes, it might be wiser to advocate the more favorable system, under the general principle that in developing the resources of the country the larger benefits consistent with economy should be sought, and not merely the cheapest or the immediately profitable.

"The reclamation of 20,000,000 acres of arid land by means of irrigation, would, on an average, cost probably from $10 to $15 per acre, and the ultimate average value would be three times as much.

"It has been variously estimated that there is available water for from 60,000,000 to 100,000,000 acres. It is not necessary for the Government to conserve all of this water. If the Government should build the great dams and divert the large rivers, the cost would be able to put the water upon the greater part of the land. It is estimated that if the Government should conserve water for 20,000,000 acres individuals be able to obtain water for the remaining reclaimable land.

"The limit of 20,000,000 acres has been set for Government work as being a liberal allowance when consideration is had of the projects which are of sufficient size or importance to justify construction by the Government. It is assumed that it will not be the intention of Congress to irrigate the land, but merely to build some of the larger works. The possibilities of construction of these are limited by the character of the country. Taking the vast extent of the arid region as a whole, and the number of projects called to public attention, there are comparatively few of these which would justify more than a survey and careful examination. The facts developed by impartial work conclusively prove that for some of these projects there is no reasonable demand for Government work.

"If the Government provides the larger storage works and regulates the rivers, it will then be possible for private enterprise to again take up the work of bringing water to the land.

"From the experience already acquired in the development of the arid regions, it may be assumed that what Government work could do directly in 1 acre there are ultimately brought in use 2 or 3 acres through the possibility of taking advantage of floods, through the use of seepage, through pumping-plants, and by various other devices. In short, if the Government, by means of large storage-works, or by taking water from great rivers, should provide water directly, and 2 or 3 acres otherwise would not be irrigated, this act would render possible the gradual utilization of the greater part of the remainder through construction of smaller individual systems.

"In the present state of engineering science, and at existing values of land, it will not be possible to now utilize all the waste waters within practical limits of expense. The influence of new inventions, cheaper appliances, and the increased demand for land make it impossible to place any definite limits upon the development.

"At an estimated average of $15 per acre for construction of works, the reclamation and settlement of this 20,000,000 acres would bring to the fund the total sum of $300,000,000, not from the Treasury of the United States, but from the lands themselves. Now, it is unreasonable to suppose that the whole of this 20,000,000 acres would be reclaimed in one or ten, or even in twenty years. I might be found more profitable in such a case to irrigate the smaller acreage; but as a matter of larger benefits to the people, the creation of new homes, it might be wiser to advocate the more favorable system, under the general principle that in developing the resources of the country the larger benefits consistent with economy should be sought, and not merely the cheapest or the immediately profitable.

"The reclamation of 20,000,000 acres of arid land by means of irrigation, would, on an average, cost probably from $10 to $15 per acre, and the ultimate average value would be three times as much.
In opposing the adoption of the rule Mr. Robi
son, of Indiana, argued against the policy of the
measure.

Mr. Speaker, to a casual observer of legisla
tion and to those who have only casually looked
into the important questions involved it may
seem that two or three days' time would be
ample for the discussion of the features presented
by this bill. But, involving, as it does in one
form or another, nearly all the principles of gov
ernment for which we have stood, involving all
the questions of change in the administration of
the public lands, involving the abdication by the
House of Representatives of its powers over ap
propriations, involving the constitutional ques
tions of State and national powers, and involving
home rule, for State rule is home rule, for which
this side of the House for a century has stood,
two days' time for the discussion of these ques
tions is not ample to present them to the House of
Representatives. It involves the whole field of
appropriation, economy in expenditure, wasteful
extravagance, special and political influence, jobs
and dead political and financial power in the
public domain along untied and experi
mental paths.

"I do not mean that irrigation is an experi
ment, for it has been successfully and profitably
employed by State and private enterprise for
ages. But to the Government it is new, experi
mental, and dangerous.

This change involves the abdication by Cong
ress of its rights and duties to appropriate
money derived from taxation, money derived from
the sale of land owned by all the people, and
it is a surrender of these rights of the people
and this prerogative of Congress to a Federal
officer in the expenditure of a mountain of money,
the cost of which irrigation projects is vari
ously estimated by experts at the lowest,$300,000,000, to the highest, $600,000,000, being
the reclamation of 60,000,000 acres of irrigable
land at from $5 to $10 an acre on the average.

"While this estimate of 60,000,000 acres of
irrigable land is made, there are yet 54,000,000
in the arid regions, and we may confidently as
sume, in the light of all past experiences, that
the efforts of experts and officers in charge will
not exhaust the water, and the flood and snow waters are
no more. Cum grano salis is a good rule in passing
on preliminary estimates of experts when their
hearts are set on a project.

"I congratulate the gentlemen of the arid re
gions, who have a special interest not common
to the whole country, on securing consideration
for this measure of interest in their districts and
States, but trouble-some and dangerous to every
other section of the country.

"That it will affect them advantageously and
ruinously affect all the rest of us I firmly be
lieve. That is the reason it has been made plain by a
reading of the bill and the majority and minority
reports. I can not speak in unkindness, but in
praise, of Representatives of the States whose
states are not flooded away in the flood, and losing
their luster, and preparing to join the
Milky Way, but my constituency can not
contribute to its own downfall to rescue them from the
grave snare of nationalizing of railroad enter
tprises by the Government. I凫 the same rights that Representatives always exercise
on this floor, to protect my people as I have the
understanding to perceive and the power to exe
cute. An attempt has been made, unjustly and
inordinately, to control the Democratic congress
ional committee and to divert it into an unwar
anted and dangerous path, and culminated a
brief time ago in a minority acting on some sort of
an irrigation resolution.

"This new scheme involves the complicated,
complex, litigious, and dangerous questions of
condemnation of private property in a State ju
risdiction by a Federal officer, and which power
and property so condemned is to be used in and
for another State to irrigate public land not only,
but private land as well. To illustrate: Nevada
must go to California and invoke all the compli
cated machinery of law—must wade through the
perplexing problems of condemnation and inter
state rights—or get no water, and this is rendered
still more difficult by the invoking of the law
within a State jurisdiction by a Federal officer for
uses not wholly within the State and not exclu
sively concerning United States land.

"Such a conflict and litigation would arise
like unto that which might come were the dead
to arise and attempt to trace their ancient pos
sessions. This scheme involves the purchase
without condemnation by a United States officer
from the public-land fund belonging to all the
people, at exorbitant figures, as it must be when
the United States is the purchaser in a State
jurisdiction, of private property for the uses and
purposes I have just named.

"It involves the United States Government in
the execution of an enterprise and which will
cluster, like banqueteers at a feast, those patriotic
American citizens, with too many of which we
unfortunately are cursed, who are always ready
to encourage as they are by the Government,
however stupendous, because there is something
in it for themselves.

"It involves the robbery of peoples of self-gov
ernment in States, and while some speak for
them, saying that American citizens will abjectly
submit to a surrender of their sovereignty to re
ceive these gifts of the people's lands, and submit
to be governed 2,000 and 3,000 miles away, I be
lieve that Representatives of other States
should save this misguided people from their
friends and at once protect the interest of their
own States, their own constituents.

"It is charged that the land-grant railroads
are the principal promoters of this legislation.
This is not met with a disclaimer, but by the
question, 'Suppose of heaven is it, my head
haunted and the flood and snow waters are
no more. Cum grano salis is a good rule in passing
on preliminary estimates of experts when their
hearts are set on a project.

"I congratulate the gentlemen of the arid re
gions, who have a special interest not common
to the whole country, on securing consideration
for this measure of interest in their districts and
States, but trouble-some and dangerous to every
other section of the country.

"That it will affect them advantageously and
ruinously affect all the rest of us I firmly be
lieve. That is the reason it has been made plain by a
reading of the bill and the majority and minority

ional committee and to divert it into an unwar
anted and dangerous path, and culminated a
brief time ago in a minority acting on some sort of
an irrigation resolution.

"This new scheme involves the complicated,
complex, litigious, and dangerous questions of
condemnation of private property in a State ju
risdiction by a Federal officer, and which power
and property so condemned is to be used in and
for another State to irrigate public land not only,
but private land as well. To illustrate: Nevada
must go to California and invoke all the compli
cated machinery of law—must wade through the
perplexing problems of condemnation and inter
state rights—or get no water, and this is rendered
still more difficult by the invoking of the law
within a State jurisdiction by a Federal officer for
uses not wholly within the State and not exclu
sively concerning United States land.
ment in the employment of its machinery of gov-
ernment to force values and utility in land by a
stupendous outlay to control the elements by
conquering nature's course, thereby exacting gov-
ernment powers in fields that should be exploited
and will be exploited by State and private enter-
prises as fast and as far as and prudently as the
needs of the people and localities may require.

It is aimed to deter the slow but steady tide of
immigration now setting in from the North to
the rich mining-fields of Tennessee, Alabama, and
the South; to check those who, from my State and
others, go South to find your sweet Southern
hospitality and reach your blooming fields, and,
mingling with you, give a force for the future
that no arid region irrigated in the world can
compare with the results of this combination,
and no States can rank your Southern States in
the industrial development thereby produced."

Several able speeches were made for and
against the bill, its advocates dwelling on the
necessity of controlling and guiding our rivers
and streams, and the advantage of developing
vast tracts of land now worthless, and its oppo-
ents insisting on the unfairness of the measure,
the waste and misappropriation of the lands of
the task undertaken and those indirectly in-
volved, and the lack of constitutional authority.

The vote on the passage of the measure was
146 years to 55 nays, not present 18, not vot-
ing 132.

The bill was approved by the President June
17, 1902; and the text of it is as follows:

"The Senate and House of
Representatives of the United States of America
in Congress assembled, That all moneys received
from the sale and disposal of public lands in
Arizona, California, Colorado, Idaho, Kansas,
Montana, Nebraska, Nevada, New Mexico, North
Dakota, Oklahoma, Oregon, South Dakota, Utah,
Washington, and Wyoming, beginning with the
fiscal year ending June 30, 1901, including the
surplus of fees and commissions in excess of al-
lowances to registers and receivers, and except-
ing the 5 per centum of the proceeds of the sales
of the public lands in the several States set aside
by law for educational and other purposes, shall
be, and the same are hereby, reserved, set aside,
and appropriated as a special fund in the Trea-
ury under the name of the coastation fund, to
be used in the examination and survey for and
the construction and maintenance of irrigation
works for the storage, diversion, and develop-
ment of waters, including artesian wells, and to report to Con-
gress at the beginning of each regular session as
to the results of such examinations and surveys,
giving estimates of cost of all contemplated
works, the quantity and location of the lands
which can be irrigated therefrom, and all facts
relative to the practicability of each irrigation
project; also the cost of works in process of con-
struction as well as of those which have been
completed.

"SEC. 3. That the Secretary of the Interior
shall, before giving the public notice provided
for in section 4 of this act, withdraw from public
entry the lands required for any irrigation works
contemplated under the provisions of this act,
and shall restore to public entry any of the
lands so withdrawn when, in his judgment, such
lands are not required for the purposes of this
act; and the Secretary of the Interior is hereby
authorized, at or immediately prior to the time
of beginning the surveys for any contemplated
irrigation works, to withdraw from entry, ex-
cept under the homestead laws, any public lands
believed to be susceptible of irrigation from said
works: Provided That the entries made under the homestead
laws within areas so withdrawn during such withdrawal shall
be subject to all the provisions, limitations, charges, and condi-
tions of this act; that said sur-
veys shall be prosecuted diligently to completion,
and upon the completion thereof, and of the nec-

essary maps, plans, and estimates of cost, the
Secretary of the Interior shall determine whether
or not said project is practicable and advisable,
and if determined to be impracticable or unavis-
able he shall thereupon restore said lands to entry;
that public lands which it is proposed to irrigate
by means of any contemplated works shall be
subject to entry only under the provisions of the
homestead laws in tracts of not less than 40 nor
more than 160 acres, and shall be subject to the
limitations, charges, terms, and conditions herein
provided: Provided, That the commutation pro-
visions of the homestead laws shall not apply to
entries made under the provisions of this act:

"SEC. 4. That upon the determination by the
Secretary of the Interior that any irrigation pro-
ject is practicable, he may cause to be let con-
tracts for the construction of the said works in
portions or sections as it may be practicable to
construct and complete as parts of the whole
project, providing the necessary funds for such
portions or sections of the construction out of the
reclamation fund, and thereupon he shall give public
notice of the lands irrigable under such project,
and limit of area per entry, which limit shall rep-
resent the acreage which, in the opinion of the
Secretary, may be reasonably required for the
support of a family upon the lands in question;
also of the charges which shall be made per acre
upon said entries, and upon lands in private
ownership which may be irrigated by the waters
of the said irrigation project, and the number of
annual instalments, not exceeding 10, in which
such charges shall be paid and the time when
such payments shall commence. The said
charges shall be determined with a view of re-
turning to the reclamation fund the estimated
cost of construction of the project, and shall be
apportioned equitably: Provided. That in all con-
struction work eight hours shall constitute a
day's work, and no Mongolian labor shall be em-
ployed thereon.

"SEC. 5. That the entryman upon lands to be
irrigated by such works shall, in addition to compliance with the homestead laws, reclaim at
least one-half of the total irrigable area of his entry for agricultural purposes, and before receiving patent for the lands covered by his entry shall pay to the Government the charges apportioned against such tract, as provided in section thirty-six.

4. No right to the use of water for land in private ownership shall be sold for a tract exceeding 100 acres to any one landowner, and no such right shall be mortgaged or assigned unless he be an actual bona fide resident on such land, or occupant thereof residing in the neighborhood of said land, and no such right shall permanently attach until such payments therefor are made. The annual installments shall be paid to the receiver of the local land-office of the district in which the land is situated, and a failure to make the two payments when due shall render the entry subject to cancellation, with the forfeiture of all rights under this act, as well as of any moneys already paid thereon. All moneys received from the sale of water shall be paid into the reclamation fund. Registers and receivers shall be allowed the usual commissions on all moneys paid for lands entered under this act.

Sec. 8. That the Secretary of the Interior is hereby authorized to use the reclamation fund for the operation and maintenance of all reservoirs and irrigation works constructed under the provisions of this act. Provided, That the Secretary of the Interior is hereby authorized to acquire the same for the United States by purchase or by condemnation under judicial process, and to pay for such land as may be needed for that purpose, and it shall be the duty of the Attorney-General of the United States upon every application of the Secretary of the Interior, under the provisions of this act, to institute a bill to be commenced for condemnation within thirty days from the receipt of the application at the Department of Justice.

Sec. 9. That in any way interfere with the laws of any State or Territory relating to the control, appropriation, and distribution of water shall be construed as being in violation of the provisions of this act, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof. Provided, The right to the use of water acquired under the provisions of this act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right.
will meet the approval of the members of the House.

"Then came the next question, Mr. Chairman, Should the exclusion of the Chinese be extended to the colonial possessions? Now, the committee can see in one moment that the conditions existing in, for instance, the Philippine Islands, are totally different from the conditions existing in the United States. Here we have a large body of intelligent, educated, industrious laborers, and we owe it to them that they are not subjected to any unfair competition from men brought here who live on a different scale, who are willing to work for less price, who are content to live on a lower degree of comfort and civilization; but the members of the committee can see that those conditions do not exist in our colonial possessions.

"There is in the Philippine Islands, for instance, no body of educated, industrious, intelligent laborers, and the question was, What is the best thing for the interests of the Philippine Islands? And, Mr. Chairman, that question is by no means as free from doubt as is the question of the introduction of Chinese laborers into this country.

But was it beyond the power of Mr. Chairman, and is it the doctrine, it is the principle, of the Republican party—of, I think, all members of Congress, regardless of party—to do for the Filipinos what within reasonable means they themselves ask should be done. The committee was convinced that the desire of the Filipinos themselves was that they should not be subjected to the further competition of Chinese labor; that they were not ready to compete with them, and certainly they are not, and for that reason the committee has reported, by the bill before this committee of the whole, that Chinese laborers be excluded from the colonial possessions of the United States upon the same terms and in the same manner that they are excluded from the mainland of the United States.

"Now, Mr. Chairman, a word or two more about some provisions of detail in this bill that I wish to explain very briefly to the committee. The chairman of the Committee on Foreign Affairs said that we have taken in its general outline the Kahn bill, which was introduced in behalf of the members from California. The question of Chinese exclusion is more important in California than in any other part of the country, and it was our endeavor in every way to carry out the desire of the California delegation to make the law as stringent as possible. It cannot be denied that Chinese laborers should be excluded, but should furnish the means and the appliances and the requirements for making that exclusion effectual, which should check the fraudulent introduction of Chinese into this country.

"There were, however, two or three questions of detail in which the committee differed from some provisions of the Kahn bill, which I desire to submit to the judgment of the committee of the whole. By your judgment we will be guided. The Committee on Foreign Affairs had but one desire, namely, to have a bill which would be most effective, most just and most wise, to carry out the principle of Chinese exclusion, but on questions of detail we all have our judgment. Now, there are substantially three questions which will be very briefly mentioned of the committee. The first was this: The bill provides that the Chinese shall be excluded from the Philippine Islands.

"This bill as it was introduced—not the committee bill—provided that the Treasury Department should appoint officials who should go to the Philippine Islands, who should there make a registration of all Chinese in the Philippine Islands or any other foreign possession, who should carry out the enforcement of this law in reference to Chinese landing and the preventing of their landing. In reference to the removal of Chinese from one possession to another, Mr. Chairman, we did not regard that provision as conducive, and I feel confident that the committee will agree with us. What would be the necessary result? Why, Mr. Chairman, it would take 10,000 employees of the Treasury Department. Ten thousand employees would have to be shipped from San Francisco to the colonial possessions, to the foreign possessions of this country, to take charge of making that registration, to take charge of that detail.

"Now, what has the Committee on Foreign Affairs done? The Government has appointed a Philippine Commission, thoroughly familiar with all local questions. Gov. Taft, the head of that commission, appeared before the Committee on Foreign Affairs and gave his evidence. He is in thorough sympathy with the exclusion of the Chinese. What he said before the committee had, I think, more weight in leading the committee to the conclusion that the exclusion of the Chinese from the Philippine Islands was judicious. We have reported in our bill a brief provision, embracing half a dozen lines, in which we propose to authorize and direct the Philippine Commission to take such measures as may be necessary to carry out the provisions of the bill, and to the exclusion of the Chinese from the islands and to attend to registration or whatever else may be requisite with reference to the regulation of this subject."

Another point of difference was on the proposition of the original bill, that the Treasury Department keep a record of Chinese children born in the United States or its dominions. The committee, in view of the fact that a permanent Census Bureau has been created, regarded this provision as needless. A third point of difference was in regard to the employment of Chinese seamen. A minority report recommended the provision of the original bill, forbidding their employment on American ships, but the majority report favored a provision forbidding their landing at an American port, no matter on what ship they sailed. Mr. Perkins said:

"First, I should say, gentlemen, that among the restrictions against the unlawful landing of Chinese we have not only said that a ship comes alongside any wharf or dock of the United States upon which Chinese coolies who are not to be landed, the steamer must give bond in the penal sum of $2,000 for every Chinaman on board, to see to it that such Chinamen whom they have on board do not get on board— that the ship that brings them carries them away. If, certainly the provision is stringent enough to keep these ships out of American ports—men employed on the ships—from allowing them to land. If a ship has Chinamen on board who are to be landed, there must be the certificates and the necessary paper work that they are Chinamen who are entitled to land; but this provision refers to ships having Chinamen on board who are not to land. There must be the certificates and the necessary paper work that they are Chinamen who are entitled to land; but this provision refers to ships having Chinamen on board who are not to be landed. There must be the certificates and the necessary paper work that such Chinamen are not to be landed. All ships, when they come to our harbors, must submit to this law. As so you see, gentlemen, these Chinamen employed on the ships that
CONGRESS. (CHINESE EXCLUSION.)

187

... on the great seas are not going to get into this country. We have made stringent provisions that they shall not come in. But the bill as drawn, as submitted to the committee, contains this provision, that no ship carrying the American flag, no ship admitted to American registry, shall employ on it any Chinese. We struck out this provision, because, as the committee can see, it was no more needed for the protection of American laboring men living in America, and it has no more to do with them than it has with British laboring men living in England, not one bit."

Mr. Clark, of Missouri, advocated the more stringent policy. He said:

"When we annexed the Sandwich Islands we took twenty odd thousand Chinese. When we acquired the Philippines we took in a number of Chinese variously stated at from 200,000 to 1,750,000. Consequently, for the first time, the Congress is in a position, with an exceedingly bold, candid, and clairvoyant policy of holding our newly acquired provinces, colonies, or insular possessions—whichever or whatever you please to call them—subject to the laborers to death dealing competition with the cheap labor of the Orient."

"The truth is that it is high time the laborers of this country were waking up to the fact that their competition, not only with European cheap labor, but from unrestricted competition with the labor of Asia, is for us to to once and forever cut loose from the Philippines Islands. It is their only salvation. Suppose the Supreme Court of the United States decides that the subjects of Spain residing in the islands annexed became American citizens by the act of annexation, then what? The probability in the case is that Congress has no power to restrict the free locomotion of an American citizen into any part of the territory over which the Stars and Stripes now fly, and be no more experience with Chinese than the rest of our people, they understand the Chinese character better and are better fitted to know what legislation is necessary to solve the numerous and difficult problems connected with Chinese immigration."

"Individually, I go further and say that the Chinese question is the race question of the Pacific coast. There is no use dodging it. The Chinese problem is to the Pacific coast what the negro problem is to the Southern States, except..."
that the race question of the South is entirely a
domestic question, while the race question on the
Pacific is complicated with international ques-
tions. I believe, moreover, that the white people of the South are the most capable of dealing with their race question, just as the white people of the Pacific coast are most competent to deal with their Chinese race question.

Upon these race questions I unhesitatingly take my position with the white people of the South and the white people of the Pacific coast.

The substitute reported by the Democratic minority is substantially the bill desired by our Pacific coast citizens and by the laborers of the whole country, which is a very persuasive reason why it should be adopted by the House.

The House passed the bill without a division
April 7, after adopting certain amendments, which it was claimed by Mr. Clark, embodied everything for which the minority contended, and which, according to Mr. Hit, of Illinois, made the measure identical with that reported by a
Senate committee as a modification of the original or Kahn bill.

In the course of the debate in both houses it was commonly conceded that the policy of ex-
clusion was to be continued; and that the only
matter open to discussion was the method of ex-
clusion. A more generous course was advocated at times. Mr. Gallinger, of New Hampshire, said in the Senate:

Mr. President, to my mind this bill is uncalled for, unnecessary, unAmerican, and . It is
harsh in its provisions, unjust in its definitions, and clearly violative of solemn treaty stipula-
tions. It is the kind of legislation that prejudice engenders and unhinging agitation produces. It is a measure aimed at a weak people, and which would never be dreamed of in connection with any nation able to defend itself. It is narrow, bigoted, intolerant, and indefensible legislation. It assumes conditions that do not exist, and aims to correct evils that are purely imaginary. It suggests the want of laws to prevent undesirable Chinese immigration, but the
fact is that existing laws are entirely adequate to accomplish that purpose.

He quoted at length the letter of protest ad-
dressed by the Chinese Minister to the Secretary of State, which set forth various objections to
the measure as follows:

I do not wish to go into the different provi-
sions of this bill for the present. I have been
asked to call your attention in a general way to its
effects. It restricts the privileged Chinese persons,
other than laborers, to come to the United States
to only five classes, viz., officials, teachers, stu-
dents, merchants, and travelers, in direct contra-
vention to the treaty of 1880, in Article I, where it
states that the limitation or suspension of Immigration shall apply only to laborers, 'other
classes not being included in the limitation.' So
also the history of the negotiation shows that it
was the intention of the two governments that
laborers alone were to be excluded. Under the
bill there would be excluded bankers, capitalists,
commercial agents or brokers, and even mer-
chants who come only to make purchases: also
scholars and professors, of which there are many
in China of high attainments: also physicians,
clergymen, and many other classes which do not
fall under the five classes exempt by the bill.

This seems to me, if the five exempt classes are so restrictive as to practically nullify the treaty in regard to them. The definitions as to
teachers, students, and merchants are so con-
trary to the spirit of the treaty as to make them
almost impossible of observance.

A woman married according to the Chinese
custom to a person of the exempt classes would
be prohibited from entering the country, because
according to the provision of the bill it is neces-
sary that the marriage shall be legal and binding
by the laws of the United States.

The bill requires that all Chinese laborers
now in the United States shall undergo a new
registration. It will be remembered that my
Government remonstrated against the first regis-
tration that was proposed under the Geary law,
and only consented to it at the earnest request
of the Secretary of State at the time. All the
Chinese laborers submitted to that requirement
and were registered, and now it is proposed to
nullify all that and subject them to the annoy-
ance and trouble of a new registration. It is an
unnecessary hardship and should not be re-
quired.

The bill also contemplates the registration of
all merchants and of others of the exempt class.
This can not be required under the treaty, but
the bill attempts to obviate that obstacle by
making the failure to register a serious prejudice
of their rights.

I have heretofore complained to you of the
great hardships to which laborers, merchants,
and others are subjected after they have been
admitted to the United States and are lawfully
domiciled in this country. Past experience shows
that Chinese have been arrested by the wholesale,
placed in jejunum, and subjected to molestation
and insult. When found innocent, no redress
is obtained for such illegal arrest. Persons
charged with being unlawfully in the country
and taken before a court are denied the privilege
of bail, but must remain in jail until their case
is decided. The bill, in place of providing some
relief for these hardships, rather adds restrictions
thereto.

The provisions with regard to transit across
the United States imposed by this bill are almost
impossible to be complied with, because people who
are passing through the country to other
countries do not know the laws of the country,
and they can not understand the intricate rules and regulations made by the Commis-
sioners.

The report of the committee says that 'the
greatest degree of fairness and justice to the ex-
empt classes will be insured by the provisions of
the bill, which I should like to reserve an
investigation and disposition of their claims.'
And again it says: 'The features of the bill ...
will tend to protect the worthy immigrant in his
treaty rights and privileges.'

I have referred to the fact that the provisions
as to the admission of the exempt classes are in
direct violation of the treaty; and in addition to
this the bill provides that the exempt or classes
must submit their right to admission to the
adjudication of the Immigration Bureau, which,
as I showed in my note to you of Dec. 10, last,
was a purely ex parte investigation, where the
claimant was not permitted to confront the wit-
nesses, was deprived of the privilege of counsel,
and was excluded from an appeal to the courts.
I can not understand how the committee can
style this 'the greatest degree of fairness and
justice,' or how the 'worthy immigrant is pro-
tected in his treaty rights and privileges.' It
seems to me, if the five exempt classes are so restrictive as to practically nullify the treaty in regard to them. The definitions as to
teachers, students, and merchants are so con-
restrictions upon Chinese persons and require them to comply with such strict provisions that no Chinese having the least respect for himself would submit to such indignities and come to this country. I fear the effect of the bill, if it becomes a law, will be that Chinese merchants will not come here to buy goods nor students come for educational purposes.

Another feature of the bill must be alluded to. The new possessions of the United States, such as Porto Rico, the Hawaiian Islands, the Philippines, and others which may hereafter be acquired, are subject to its provisions. It can not be claimed that they were considered when the treaty was negotiated, and it is hardly just or in accordance with international comity that the treaty should be extended to them without the consent of China.

"I have received repeated instructions from the Imperial Government, in view of the reenactment of the exclusion laws, to exert myself to see that treaty rights are observed and that no unnecessary hardships are placed upon Chinese subjects, and I feel that on account of the pendency of the legislation referred to I could not refrain from asking your Government in making the treaty provision for the views above set forth. You know that in regard to the exclusion of laborers my Government and myself have stood ready to cooperate with your Government in making the treaty prohibition effective. But with regard to the exempt classes who seek to come here for trading, educational, and other legitimate purposes, I must earnestly protest against the unwarranted and unjust provisions of the bill. In place of "insuring the greatest degree of fairness and justice," as stated by the Immigration Committee, it would impose such indignities and hardships upon these classes that few, if any, would come here. And notwithstanding the sincere wish of my Government and myself to maintain and cement closer the friendly relations between the two countries, I greatly fear that those friendly relations would be endangered by the enforcement of the act."

So to obviate the Senate adopted, instead of the committee measure, a brief substitute offered by Mr. Platt, of Connecticut, and passed the measure by a vote of 76 to 1. April 17 this substitute was passed as an amendment to the House bill.

After the usual non-concurrence and two conferences, it was modified slightly and accepted by the Senate.

It was approved by the President, April 29, 1902, in the following form:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all laws now in force prohibiting and regulating the coming of Chinese persons, and persons of Chinese descent, into the United States, and the residents of such persons therein, including sections 5, 6, 7, 8, 9, 10, 11, 13, and 14 of the act entitled 'An Act to prohibit the coming of Chinese laborers into the United States,' approved Sept. 13, 1888, be, and the same are hereby, reenacted, extended, and continued so far as the same are not inconsistent with treaty obligations, until otherwise provided by law, and said laws shall also apply to the island territory under the jurisdiction of the United States, and prohibit the immigration of Chinese laborers, not citizens of the United States, upon the island territory of the United States, whether in such island territory at the time ofcession or not, and from one portion of the island territory of the United States to another portion of said island territory: Provided, however, That said laws shall not apply to the transit of Chinese laborers from one island to another island of the same group; and any island within the jurisdiction of any State or the District of Alaska shall be considered a part of the mainland under this section.

"Sec. 2. That the Secretary of the Treasury is hereby authorized and empowered to make and prescribe, and from time to time to change, such rules and regulations not inconsistent with the laws of the land as he may deem necessary and proper to execute the provisions of this act and the acts hereby extended and continued and of the treaty of Dec. 8, 1894, between the United States and China; and with the approval of the President to appoint such agents as he may deem necessary for the efficient execution of said treaty and said acts.

"Sec. 3. That nothing in the provisions of this act or any other act shall be construed to prevent, hinder, or restrict any foreign exhibitor, representative, or citizen of any foreign nation, or the holder, who is a citizen of any foreign nation, of any privilege, certificate of fair or exposition authorized by act of Congress from bringing into the United States, under contract, such mechanics, artisans, agents, or other employees, natives of their respective foreign countries, to the arts, sciences, or manufactures of the United States, such as may be lawfully authorized or permitted under or by virtue of or pertaining to any concession or privilege which may have been or may be granted by any said fair or exposition, in carrying on their business, or which have been or may be lawfully authorized or permitted under or by virtue of or pertaining to any concession or privilege which may have been or may be granted by any said fair or exposition, for the purpose of making preparation for installing or conducting their exhibits or are preparing for installing or conducting their exhibits or for making preparation for installing or conducting their exhibits or for installing or conducting their exhibits or for installing or conducting their exhibits.

"Sec. 4. That it shall be the duty of every Chinese laborer, other than a citizen, rightfully in, and entitled to remain in any of the insular territory of the United States (Hawaii excepted) at the time of the passage of this act, who remains within one year thereafter a certificate of residence in the insular territory wherein he resides, which certificate shall entitle him to reside therein, and upon failure to obtain such certificate as herein provided he shall be deported from such insular territory; and the Philippine Commission is authorized and required to make all regulations and prohibitions necessary for the enforcement of this section in the Philippine Islands, including the form and substance of the certificate of residence so that the same shall clearly and sufficiently identify the holder thereof and enable officials to prevent fraud in the transfer of the same: Provided, however, That, if said Philippine Commission shall find that it is impossible to complete the registration herein provided for within one year from the passage of this act, said commission is hereby authorized and empowered to extend the time for such registration for a further period not exceeding one year."

The Isthmian Canal. Jan. 9, 1902, the House of Representatives passed by a vote of 308 to 2 says a bill "to provide for the construction of a canal connecting the waters of the Atlantic and Pacific Oceans." It authorized the President to act on the matter; but it determined upon the Nicaragua route, disregarding any other. It was on this point that the only difference of opinion arose. After many years of discussion there has come substantial agreement as to the
good policy of constructing such a canal, as to the necessity for Government ownership, and as to the propriety of immediate action; but the Panama route had some advocates in the House, and amendments to the measure were proposed favoring this route or leaving the choice of a route to the judgment of the President. These amendments were defeated. In the Senate, however, the sentiment in favor of the Panama route was much stronger, and Mr. Spooner, of Wisconsin, offered a substitute for the House bill, recommending the purchase of the Panama Canal and its completion as the best course, if feasible, and suggesting the Nicaragua route as an alternative. He said:

"No one can overstate the importance of the subject. The construction of a canal connecting the two oceans has been for many, many years the dream of statesmen and the prayer of mariners. It is a colossal enterprise; and one which I believe the people of the United States, with less division of sentiment than I have ever known upon any other subject, desire shall be inaugurated and carried forward as speedily as consists with the public interest; a great public work to stand for the future, as the inaugurations of our public policy stand for the uses of the present. And, Mr. President, as the years go on, it obviously is to become more and more important to the country and its commerce, to the world, if the world shall use it, and to the commerce of the world.

"He would be a very reckless and bold man who should attempt to set a limit upon what a hundred years may do for our population, our wealth, and the extent of our commerce; and, Mr. President, no higher or more solemn duty, in my judgment, ever rested upon men in public position—as this work is to subsist not simply the purposes of commerce, but to promote the defense of the nation—than rests upon the Congress to reach the wisest possible conclusion upon this subject. It is too broad to be affected by sectionalism; it is a project of the whole country and of the whole people for all time, and it is not to be belittled, Mr. President, or it should not be acted upon by malice, by prejudice, by jealousy, or by assumed local interest.

"If there ever was a question to the solution of which ought to be brought the broadest views from all sources, to my mind this is that problem. I have not supposed it could be debated, that what the people of the United States expect of us and demand of us and have a right to receive from us, is the best solution of this question, to the best of our ability, unfettered by any extraneous considerations. The people are to build this canal, they are to maintain it, and it is not debatable that they wish, and they are entitled to have the best canal route.

"It has seemed to be considered by some Senators evidence of disloyalty to the project of an isthmian canal that an amendment has been offered to this bill, or proposed to be offered to it, projecting into the discussion consideration of the Panama route. In other words, it seems to have been thought novel, rather unjustified, and necessarily, therefore, with ulterior purpose, that the Senate did not find itself ready unanimously to adopt without debate the bill known as the Hepburn bill, which lies upon our table, providing for the construction of the Nicaragua Canal. I am quite unable to find any foundation or justification for that suggestion.

"The route of the Panama Canal was so enveloped with the thick fog of scandal as not to be perceptible to the people of the United States and as to be considered entirely out of the question. How does it come to us to-day? In 1889 Congress passed a law making it the duty of the President to 'make a full and complete investigation of the Isthmus of Panama with a view to the construction of a canal by the United States across the same to connect the Atlantic and Pacific Oceans; that the President is authorized to make investigation of any and all practicable routes for a canal across said Isthmus of Panama, and particularly to investigate the two routes known respectively as the Nicaraguan route and the Panama route.' What for? 'With a view to determining the most practicable and feasible route for such canal.' I have never heard that law criticized. I believe it commended itself to the American people as a sensible proposition made in their obvious interest, the inspiration of it being to secure, through adequate investigation by fit men, an examination of the various routes and a report to the President and to the Congress of that route which possessed the greatest relative merit and advantage.

"Does any one say that after the enactment of that law we were only to look at the Nicaragua route; that thereafter the people did not expect us to act upon the report of the investigation in-"
they have acted upon any other motive than a desire for large portion, and the party and in
telligently and in the public interest; and nobody
can impeach them. They point out the ad
vantages of one route over the other; this reduc
tion in price of the Panama Canal property; and
they unanimously recommend the Panama route
as the route which should be secured.

"Congress is asked to act aside incontinently
that report of distinguished experts and to act in
opposition to it in a way; to substitute the
judgment of lawyers and laymen; and those of us
who are sent here, most of us without experience
or skill in engineering, are asked to adopt the
plan, not which the commission recommends, but
which we think is better.

"I have not been able—although I want a
channel, and I want it under this bill, and if we
can not secure the Panama Canal I want the
Nicaragua route—to cast aside the solemn report
and judgment of these experts chosen by Presi
dent McKinley, carrying out this work under an
appropriation of $1,000,000, taking abundance of
time to do it, and making a report in such detail,
and to substitute my own judgment for it. Other
beginning may be made of it, as we have by our treaty
land made it, in a sense, a provincial canal (in
other words, we are the sole guarantor of its
neutrality, with a right to close it against an
enemy), with this map, the difference in the length of the canals. A canal
49 miles long as against one 183 miles long. The
shorter the canal, every one can see, the better. A
canal which can be made to go in the
daylight, through which a sailing ship with a tug
can go in the daylight, between sunrise and sun
set, as against one that will require thirty-five
hours! That is an insalvable advantage. It is
an advantage in the matter of safety, and be
cause it is an advantage in the matter of safety it is an advantage for all time, too, in the matter
of insurance.

"Panama is farther from some of our ports,
measured by miles, but measured by time, so far
as the steamship is considered, there is not an ap\
preciable difference. Taking it as a layman's
view, I think a man—lawyer or layman—
being interrogated as to which canal would be
preferable, one through which ships could pass
between sunrise and sunset, one through which
it would take three days to pass in daylight,
would not hesitate long to say that the former
possessed a tremendous advantage.

"There is another thing, speaking only as
a layman, which has commended to me the
Panama route, since the report of the commission
as against the Nicaragua route, although I want
the canal built on that if we can not build it on
the other. That point is this: The Panama Canal,
however it is built now, the testimony shows, can
be made in the future a sea-level canal. The
Nicaragua Canal can not. It is a mere matter of
money, the estimate in the report, the statement
in the report of the commission. It is so stated in the testimony of the
experts before the committee.

"It may become of infinite importance to the
people of the United States 'in the long reach of
time' to make a sea-level canal of it. Is it worth
nothing to adopt the shorter canal? Is it worth
nothing to have the certainty that in the future,
if the public interest and safety demand it, with
the expenditure of the requisite money, this can
be made a sea-level canal? I think it is worth a
great deal. Senators may think it is worth
nothing.

"But given the practicability of it, Mr. Presi
dent, in the long years to come, when our popula
tion has grown to 300,000,000, and our wealth in
proportion to a large portion, and the party and in
telligently and in the public interest; and nobody
can impeach them. They point out the ad
vantages of one route over the other; this reduc
tion in price of the Panama Canal property; and
they unanimously recommend the Panama route
as the route which should be secured.

"Congress is asked to act aside incontinently
that report of distinguished experts and to act in
opposition to it in a way; to substitute the
judgment of lawyers and laymen; and those of us
who are sent here, most of us without experience
or skill in engineering, are asked to adopt the
plan, not which the commission recommends, but
which we think is better.

"I have not been able—although I want a

be made a sea-level canal? I think it is worth a
great deal. Senators may think it is worth
nothing.

"But given the practicability of it, Mr. Presi
dent, in the long years to come, when our popula

eral party of Colombia had declared its hostility to the contract with the Panama Canal Company, and that the corporation in reality had nothing to sell for the $40,000,000 which it now asks for the canal. He said,

"Now I have established it in a formal way, in protests that have been issued and notified to the Panama Canal Company, notified to the Colombian Government, and then notified to the United States, that the Liberal party in Colombia, now professing to have, and having, the support of the great majority of that people, will never ratify these agreements that we are bidding $40,000,000 for.

"Mr. President, we might as well throw the money into the sea as to appropriate it to this broken-down company that is now speeding to its last moments of existence when it knows that this bribe to Sanclemente of $1,000,000, which he paid in gold, is not going to hold good, that they can not realize anything from it, and that the Colombian Government, after 1894, two years ago, will repudiate the whole thing and claim the property, as they have a perfect right to do.

"They commit an act of bankruptcy in falling for $40,000,000 for $100,000, it is a very obvious thing to sell that property. There is not a bankrupt court in the United States, nor in France, nor in the world that would sustain a sale made by an acknowledged bankrupt by one who becomes a bankrupt and files his petition for a discharge when he claimed to hold a property worth $100,000,000 and had sold it for $40,000,000.

"And yet we find in the Records of this House our learned friends in the minority of this committee insist that that is a valid transaction and binding, not only upon Colombia but upon the clean conscience of this great and noble republic. I repudiate it. I deny the impeachment against my country that it is capable of entering into as questionable a contract as that.

"Now, Mr. President, I have presented the points I desired to present to show that this contract is not of the value of a last year's bird's-nest. It is void, and not only void, but it is fraudulent, and the Liberal party, by the Liberal Government repudiate it and give us notice that they intend in future to repudiate it. Are we still to persist in paying $40,000,000 to the Panama Canal Company? Is it a contract that is to be assailed and proved to be not merely void, but fraudulent; for that is what these men charge?"

"Now, sir, that war is going on. It has been flagrant every day since that transaction took place and since that Congress adjourned. They did resolve before they went out that the presidency was vacant, and thereupon the President of the provisional Government assumed that he was in lawful authority. From that day to this he has so contended. He has had his armies in the field and fought heavy battles, in which there have been great losses on both sides.

"This controversy in a minor way represents, not in principle, but in the action of the people concerned, that great and terrific controversy in which we were concerned in 1861-65. They fight with desperate determination, and they are at it to-day. The latest accounts in the newspapers, by telegraph, on yesterday were that the Government, or the Conservatives, as they are called, were attacking the Liberals, who are fortified in Panama, and that those outside the walls had 7,000 men, and those inside the walls had about 4,000. There are 10,000 or 12,000 men to-day engaged in battle originating out of these unlawful acts, about which we are quietly legislating, with a view of paying the company that have got up the row $40,000,000 for their interference.

"That is the situation to-day.

"There is another fact connected with this war which I want to call to the attention of the American people. I have the honor of being listened to by a faithful and splendid Democrat, almost the only one who is here. The Senate is not my audience. I wish to distinctly understand that I am speaking to the American people, and through them I will speak to the Senate.

"I have presented now these facts, but I want to connect another one with it as another cause of the war. Why are these men called Liberals and Conservatives? It is an old political division, commencing on the first outbreak after the revolution in Mexico, and it has followed all the Spanish-American States after their first organization. The revolutions in those different governments found the bonds of Church and state irrevocable in all these Spanish provinces, and they revolted at that. Mexico in consequence of it had 52 presidents in fifty years, and Panama has had about that number of governors in sixty years. There are few states, if any, exempt; perhaps Chile and Argentina. I know of few states, if any, in South America or in North America or in Central America that have escaped this same conflict that is raging to-day in Colombia. The division of parties is the Liberal and the Church party, or Conservatives.

"I read to the Senate the other day a paper from Pope Leo XIII, a concordat made with Colombia in 1882. It is a very remarkable thing that is established as a part of the fundamental government of that republic, not an established Church—Leo would not have it that way—but an independent Church, represented by the Holy See and negotiating in its political capacity with Colombia as an independent republic. The two governments came to an agreement and made a compact, which is set forth in that concordat.

"The establishment of that concordat so long after Panama and Colombia had their struggles to maintain independence was a serious blow at the Liberal party. The Liberal party, by the Liberal Government repudiate it and give us notice that they intend in future to repudiate it. Are we still to persist in paying $40,000,000 to the Panama Canal Company? Is it a contract that is to be assailed and proved to be not merely void, but fraudulent; for that is what these men charge?"

Is it a contract that is to be assailed and proved to be not merely void, but fraudulent; for that is what these men charge?"
a provision that the annual budget shall contain at least $100,000 for the maintenance of the Church in the country.

"Now, I am presenting these facts to the American people to make them think about them, but I know the people will take note of it. I know the people of the United States do not want to go to Colombia under a contract with such a man as the majesty and superiority of the laws of that state over a canal bill where honorable men, though they may be workmen, may desire to go and conduct their business there and stay for the purpose of maintaining a little shop to make some money for his wife and children. I know that our people are not going to consent to a provision getting a canal, to pay $40,000,000 for the opportunity of placing themselves beneath the yoke of that concordat.

"The people will make points upon Senators on either side of this Chamber who undertake to put them and their affairs in that category by an expenditure of $40,000,000 and then deal with a corporation that is denounced by the Liberal party, now in arms and fighting around Panama, as one not only contrary but destructive of the Constitution of Colombia of 1866.

"That is as far as I care to go, Mr. President, in the presentation of that question. So in the very threshold of this legislation we are met by a company that is denounced by more than half of Colombia as a fraud and an outrage and as a conspirator in favor of the Church party and against liberal government. Whether it is true or not, what difference does it make? It shows the state of feeling there.

June 18, the House bill was radically amended by the Senate, and then passed by a vote of 67 to 6 nays. The House non-concorded, but after conference receded from its disagreement to the Senate amendment. The President approved the measure in the following form June 25, 1902:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States, hereby from the Republic of Colombia, and on behalf of the United States, at a cost not exceeding $40,000,000, the rights, privileges, franchises, concessions, grants of land, right of way, unmolded works, plans, drawings, records on the Isthmus of Panama, and in Paris, including all the capital stock, not less, however, than 65,863 shares of the Panama Railroad Company, owned by or held for the use of said company, provided for a satisfactory title to all of said property can be obtained.

"Sec. 2. That the President is hereby authorized, for and on behalf of the United States, upon such terms as he may deem reasonable, perpetual control of a strip of land, the territory of the Republic of Colombia, not less than 6 miles in width, extending from the Caribbean Sea to the Pacific Ocean, and the right to use and dispose of the water thereon, and to excavate, construct, and to operate a point to the Isthmus of Panama, and thence a canal, of such depth and capacity as will afford convenient passage of ships of the greatest tonnage and draft now in use, from the Caribbean to the Pacific Ocean, said canal shall include the right to perpetually maintain and operate the Panama Railroad, if the ownership thereof, or a controlling interest therein, shall have been acquired.

"The President may acquire such additional territory and rights from Colombia as in his judgment will facilitate the general purpose hereof.

"Sec. 3. That when the President shall have arranged to secure a satisfactory title to the property of the New Panama Canal Company, as provided in section 2 hereof, and shall have obtained by treaty control of the necessary territory from the Republic of Colombia, as provided in section 2 hereof, he is authorized to pay for the property of the Pan-American Canal Company $40,000,000 and to the Republic of Colombia such sum as shall have been agreed upon, and a sum sufficient for both said purposes is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be paid on warrant or warrants drawn by the President.

"The President shall then through the Isthmian Canal Commission hereinafter authorized cause to be excavated, constructed, and completed, utilizing to that end as far as practicable the work heretofore done by the New Panama Canal Company, of France, and its predecessor company, a ship-canal from the Caribbean Sea to the Pacific Ocean. Such canal shall be of sufficient capacity and depth as shall afford convenient passage for vessels of the largest tonnage and greatest draft now in use, and such as may be reasonably anticipated, and shall be supplied with all necessary locks and other appliances to meet the necessities of vessels passing through the same from ocean to ocean; and he shall also cause to be constructed such safe and commodious harbors at the termini of said canal, and make such provisions for defense as may be necessary for the construction, protection, and maintenance of said canal and harbors. That the President is authorized for the purposes aforesaid to employ such persons as he may deem necessary, and to fix their compensation.
meet the necessities of vessels passing through the isthmus en route to ocean; and he shall also construct such safe and commodious harbors at the termini of said canal as shall be necessary for the safe and convenient use thereof, and shall make such provision for the defense as may be necessary for the safety and protection of said harbors and canal; and such sum or sums of money as may be agreed upon by such treaty as compensation to be paid to Nicaragua and Costa Rica for the concessions and rights hereunder provided to be acquired by the United States, are hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be paid on warrant or warrants drawn by the President.

"The President shall cause the said Isthmian Canal Commission to make such surveys as may be necessary for said canal and harbors to be made, and in making such surveys and in the construction of said canal may employ such persons as he may deem necessary, and may fix their compensation.

"In the excavation and construction of said canal the San Juan river and Lake Nicaragua, or such parts of each as may be made available, shall be avoided."

"SEC. 5. That the sum of $10,000,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, toward the project herein contemplated by either route so selected."

"And the President is hereby authorized to cause to be entered into such contract or contracts as may be deemed necessary for the proper excavation, construction, completion, and defense of said canal, having the advice and consent of the President by the route finally determined upon under the provisions of this act. Appropriations therefor shall from time to time be hereafter made, not to exceed in the aggregate the additional sum of $155,000,000 or such sum the Panama route be adopted, or $180,000,000 or the Nicaragua route be adopted."

"SEC. 6. That in any agreement with the Republic of Columbia, or with the states of Nicaragua and Costa Rica, the President is authorized to guarantee to said republic or to said states the use of said canal and harbors, upon such terms as he may think proper, for vessels owned by said states or by citizens thereof."

"SEC. 7. That to enable the President to construct the canal and works appurtenant thereto as herein in the act in this act provided the Isthmian Canal Commission, the same to be composed of 7 members, who shall be nominated and appointed by the President, and with the advice and consent of the Senate, and who shall serve until the completion of said canal unless sooner removed by the President, and one of whom shall be named as the chairman of said commission. Of the 7 members of said commission at least 4 of them shall be persons learned and skilled in the science of engineering, and of the 4 at least one shall be an officer of the United States army, and at least one other shall be an officer of the United States navy, the said officers respectively being either upon the active or the retired list of the army or of the navy. Said commissioners shall each receive such compensation as the President shall prescribe until the same shall have been otherwise fixed by the Congress. In addition to the members of said Isthmian Canal Commission, the President is hereby authorized through said commission to employ in said service any of the engineers of the United States army at his discretion, and likewise to employ any non-commissioned or petty officers of the United States army at his discretion and any other persons necessary for the proper and expeditious prosecution of said work. The compensation of all such engineers and other persons employed under the said commission, subject to the approval of the President. The official salary of any officer appointed or employed under this act shall be deducted from the amount apportioned for the payment of the compensation provided for or which shall be fixed under the terms of this act. Said commission shall in all matters be subject to the direction and control of the President, and shall make to the President annually and at such other periods as may be required, either by law or by the order of the President, full and complete reports of all their actions and doings and of all moneys received and expended in the construction of said work and in the performance of their duties in connection therewith, which said reports shall be by the President transmitted to Congress. And the said commission shall further give to Congress, or either House of Congress, such information as may at any time be required by either act of Congress or by the order of either House of Congress. The President shall cause to be provided and assigned for the use of the commission such offices as may, with the suitable equipment of the same, be necessary and proper in his discretion, for the proper discharge of the duties thereof."

"SEC. 8. That the Secretary of the Treasury is hereby authorized to borrow on the credit of the United States from time to time, as the proceeds may be required to defray expenditures authorized by this act (such proceeds when received to be used only for the purpose of meeting such expenditures), the sum of $120,000,000, or so much thereof as may be necessary, and to prepare and issue therefor coupon or registered bonds of the United States in such form as he may prescribe, and in denominations of $20 or some multiple of that sum, redeemable in gold coin at the pleasure of the United States after ten years from the date of their issue, and payable thirty years from such date, bearing interest payable quarterly in gold coin at the rate of 2 per centum per annum; and the bonds herein authorized shall be exempt from all taxes or duties of the United States, and from taxation in any form by or under State, municipal, or local authority: Provided, That said bonds may be disposed of by the Secretary of the Treasury at par, and with the advice and consent of the Senate, and with such regulations as he may prescribe, giving to all citizens of the United States an equal opportunity to subscribe therefor, but no commissions shall be allowed or paid thereon; and a sum not exceeding one-tenth of one cent per annum of the amount of the bonds herein authorized is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to pay the expense of preparing, advertising, and issuing the same.

The Census Bureau.—The Congress passed a measure to provide for a permanent Census Office. The House committee, which reported in favor of the measure, said among other things:

"It is estimated that the sum required to complete the principal inquiries ordered by the temporary census act, and included in the proposed bill, will be about $3,600,000, spreading it over the next four years. This involves an office force of not far from 800 people, including the present executive force of about $160,000 per annum; including also rental, miscellaneous expenses, etc. Under the proposed bill, however, with the changes that have been made, it is estimated that it will cost about $815,000 for the next six years. This involves a material reduction in the clerical force during
the time indicated; also a reduction of about $114,000 per year in the executive force and a corresponding reduction in general expenses, rental, etc., so that in effect the actual expenditures of the Government would be practically the same. It is the belief of your committee that when all phases of the question are taken into consideration there will be in the end an actual saving of money to the Government as a result of establishing a permanent Census Office at this time, to say nothing of the enormous gain from a scientific point of view, and increase in the value and accuracy of future censuses which would result from this legislation.

"There will also be a very handsome saving in the amount required to prepare for the ordinary decennial census. The appropriation for preliminary work at the last two decades has been $1,000,000 each. In view of the fact that there would be a trained force in the Census Office and ample time, at least one-half of this sum could be saved in the work of preparation for the next census, and a further sum of $40,000 saved in the way of furniture and fixtures.

"The question has been raised how the clerical force of a permanent Census Office can be kept during the twelfth census, a period that must elapse between the completion of the work on the special reports and the commencement of preparation for the thirteenth census. There is work enough provided for in section 8 of the existing law to keep a force of skilled clerks busy for the entire interval from July 1, 1902, to say, October, 1908, when the preparation for the thirteenth census should be well under way. The special inquiries required by section 8 can be distributed over the whole period; and this distribution would undoubtedly result advantageously in the quality of the work done. For instance, in addition to the annual report upon births and deaths in registration areas, provided for in the new section of the present bill, the division of vital statistics would be employed upon a special report upon the deaf and dumb, a special report upon the blind, a special report upon the insane and feeble-minded, a special report upon criminals and juvenile delinquents, and a special report upon pauperism and benevolence; and these special reports would be made, one in each year, until completed.

"In the same way the report on public indebtedness, valuation, taxation, and expenditures, provided for in section 8, would divide itself into special reports upon public indebtedness, upon public receipts and expenditures, upon assessments and taxation, and upon true valuation of real and personal property. These separate reports, it is estimated, would occupy one division of the permanent Census Office until the spring of 1907, the publication of the results of the several parts of the investigation to take place from time to time as the same are completed.

"In another division the inquiries as to streets, sewers and bridges, street car system, and electric light and power would be taken up and brought to completion, or substantially so, before the investigation of mines and mining is entered upon. Upon the completion of the latter report, the investigation of transportation by water, a difficult and important field of inquiry, would follow in due order. Thus the Census Office would be occupied on all parts of the subject where a saving to the Government in addition to the fact that the materials that are obtained under the operations of the bureau will be vastly more important by reason of their greater accuracy and the scientific manner in which they are presented to the general public.

"I take it that every member of the House who has given any study to the subject where the investigation of various important subjects under the Constitution of the United States have been and appreciated the wasteful expenditure of money under these temporary bureaus, and they have seen that by the establishment of a permanent bureau there can be an actual saving to the Government, in addition to the fact that the materials that are obtained under the operations of the bureau will be vastly more important by reason of their greater accuracy and the scientific manner in which they are presented to the general public.

"I take it that every member of the House who has given any study to the subject where the investigation of valuable reports upon topics which Congress has already determined that it shall investigate. It would be entirely feasible, with a permanent Census Office, to divide the work into sections of corresponding reports for the next census in such a way that the report on each topic would be ten years distant from the last. This whole class of reports could thus be disassociated from the census year, with all its pressure, without destroying their comparability in point of time.

"Another clause of section 8 provides for a series of special reports on the social statistics of cities, and it will readily be seen that the work of making these reports, which will possess great value and interest, can be distributed to the best advantage over the entire period that will elapse before the next census. This course would involve the taking of the social statistics of the cities of certain sections of the country in one year and of other sections in another year, according as the facilities and opportunities of the permanent Census Office permit.

"Provision should be made also, in the event of a permanent census organization, for a careful review of the conditions governing the taking of the present census, in order that the plan of enumeration may be so arranged as to afford a very much closer supervision of the work of the census enumerators. Considerable progress has been made in this direction in the work of the present census, but the prescience of experience that very much more time must be given to the initiation of the preparatory work and steps taken at a comparatively early date to develop a better and more complete system, involving the possible separation of the enumeration of the population in cities from that in the rural sections of the country, and, in the latter case, making the country the unit for census supervision."

Mr. Hopkins, of Illinois, said, in presenting the measure:

"Mr. Chairman, if I can have the attention of the committee, I will take a few minutes briefly to explain the bill. I will say, however, that the report that was published in the Record this morning fully explains the character of the bill proposed here, the various provisions, and the expenditure necessarily incurred by the establishment of the bureau.

"I shall not take very much of the time of the committee to speak of the importance or the necessity of establishing a permanent Census Office.

"This is a question which has been before the people of this country for more than thirty years, and it is a question that has been favored by every statistician and every scientist in this country during that period. Every superintendent of the census since the taking of the ninth census has recommended the establishment of a permanent bureau.

"These men who have been charged with the duty of taking the census under the Constitution of the United States have seen and appreciated the wasteful expenditure of money under these temporary bureaus, and they have seen that by the establishment of a permanent bureau, wherever it can be an actual saving to the Government, it will not only be vastly more important by reason of their greater accuracy and the scientific manner in which they are presented to the general public.

"I take it that every member of the House who has given any study to the subject where the investigation of valuable reports upon topics which Congress has already determined that it shall investigate. It would be entirely feasible, with a permanent Census Office, to divide the work into sections of corresponding reports for the next census in such a way that the report on each topic would be ten years distant from the last. This whole class of reports could thus be disassociated from the census year, with all its pressure, without destroying their comparability in point of time.

"Another clause of section 8 provides for a series of special reports on the social statistics of cities, and it will readily be seen that the work of making these reports, which will possess great value and interest, can be distributed to the best advantage over the entire period that will elapse before the next census. This course would involve the taking of the social statistics of the cities of certain sections of the country in one year and of other sections in another year, according as the facilities and opportunities of the permanent Census Office permit.

"Provision should be made also, in the event of a permanent census organization, for a careful review of the conditions governing the taking of the present census, in order that the plan of enumeration may be so arranged as to afford a very much closer supervision of the work of the census enumerators. Considerable progress has been made in this direction in the work of the present census, but the prescience of experience that very much more time must be given to the initiation of the preparatory work and steps taken at a comparatively early date to develop a better and more complete system, involving the possible separation of the enumeration of the population in cities from that in the rural sections of the country, and, in the latter case, making the country the unit for census supervision."

Mr. Hopkins, of Illinois, said, in presenting the measure:

"Mr. Chairman, if I can have the attention of the committee, I will take a few minutes briefly to explain the bill. I will say, however, that the report that was published in the Record this morning fully explains the character of the bill proposed here, the various provisions, and the expenditure necessarily incurred by the establishment of the bureau.

Considerable progress has been made in this direction in the work of the present census, but the prescience of experience that very much more time must be given to the initiation of the preparatory work and steps taken at a comparatively early date to develop a better and more complete system, involving the possible separation of the enumeration of the population in cities from that in the rural sections of the country, and, in the latter case, making the country the unit for census supervision."
me that it will be a saving of money by establishing the bureau as proposed in this bill.

As the first step, the director suggested this matter, he called the attention of the members of our committee to the extravagant expenditure of money in establishing some of the subheads in the bureau, and I have no confidence in calling the attention of the members of this House to the fact that in taking the agricultural census alone there was an expenditure of $600,000 more than would be required under a trained force of clerks for the same work.

As was stated by the director of the twelfth census, not a person, from the highest officer down to the lowest clerk, had any specific knowledge upon the subject that would enable him to properly and economically plan the work and then see that it was properly executed. It was only by experience, groping in this direction first, and then in that, they were enabled to gather statistics and make a report as required by law; and it is by reason of such experience, had in this special department of the bureau itself, that the director came to the conclusion that in the interest of economy alone it was important to the interest of the efficiency of the officers that a bureau of this character be established.

The main point of discussion was the provision in the bill as reported making permanent the appointment of employees already engaged in census work temporarily, and putting them under the civil-service rules. This occasioned some controversy, and the civil-service law came in for harsh criticism from both sides. In the Senate, Mr. Stewart, of Nevada, said:

"Mr. President, while this matter of putting clerks who have been in the service under the protection of the civil service is before the Senate, I desire to put myself on record as being totally opposed to the present method of securing service in the departments. It has an element in it which in all ages, so far as we have any record, has led to unfair means and, perhaps, corruption. It has the element of secrecy about it. The public at large, although a few people may know it, do not know how it is gotten into through the civil service. They do not know upon what basis they are marked; they do not know how they are selected, and how it is all done. The secret would undoubtedly be explained if the people had access to the information, but they have not. It is all much of a mystery. Thousands of people have made trial to get in, have been examined, and they are now on the waiting list."

"I do not believe that this is the best way to select men for office. I think we should bring to bear some of the practical experience that great corporations—the railroad companies, who are so successful in the management of their affairs—use in selecting their employees. There should be more attention paid to the effectiveness of the parties in the particular line. Six months or a year of service is a great deal better test than any casual examination. There are a great many questions which are entirely irrelevant. Some persons can not get in who make the best and most efficient clerks. They can not answer these far-fetched questions; they are not right from school.

"And then we have thousands of people on the waiting list. I do not believe in the system at all. The great objection to the system is that the people do not know how it is done."

"I do not believe that there is always a chance for fraud and an opportunity to go into fraud. There is undoubtedly favoritism. We hear of it every day. As an example, a new administration comes in and asks about this service. It is a mystery to them. I believe in that portion of the civil service which retains competent and meritorious officials. I do not believe in the system being turned out every time a new administration comes into power."

"The mode of selecting these officials is, I think, entirely defective. The old mode, which was called 'the spoils system,' had some defects, but it was better in many respects than the present, and secured for the Government better clerks. Before the civil service was inaugurated there was a chance for the departments to secure good clerks, for the reason that the heads of the departments had more discretion in the selection; but it was defective by reason of the fact that it permitted Senators and Representatives to make their recommendations orally. If the old system could be corrected and its defects cured by securing publicity, it would give us a most efficient service."

"So far as this bill is concerned, I have no doubt that the employees who have had experience in the Census Office have been much more fairly examined than would have been appointed after examinations which have very little to do with the particular work to which they are to be assigned. If the census clerks should be transferred to other departments, we should get a better class of clerks than we now get under the mysterious system which prevails, for many of the civil-service questions are abstract and mysterious and can only be answered by those who have just come from colleges and schools. An ordinary man can not answer such questions as are propounded. I do not suppose that five members of the Senate could go through a civil-service examination for a clerkship in any department. That does not prove the fact that Senators would not make fair clerks—that is, those of them who can write well enough—but still they could not pass the civil-service examinations. Such examinations, as I have said, can only be passed by those who are fresh from schools and colleges, who have had no experience in clerical work, and who have had no trained habits of work or industry, but who have the education which enables them to answer these conundrums."

"I do not believe that is the way to get an efficient service. I do not believe there is any railroad company desirous of employing a conductor, for instance, who would examine him in astronomy or in botany, or in a great many of the things the Civil-Service Commissioners require. No railroad company would subject a conductor or anybody who was to be placed in an important position on the railroad to any such examination. I think most of the questions asked in these examinations are entirely irrelevant and relate to matters with which persons will have nothing to do in the event of their appointment, but the persons who have been in the Census Bureau and have proved their efficiency will make the best clerks that can be obtained for the departments. There is no doubt about that, because they have had the experience and have already undergone such an examination as tended to develop their capacity for this kind of work. The civil-service examinations as they are conducted are of no consequence, and great harm has been naturally the thought that clerks are now on the waiting list being kept out of other employment. This is doing injury to the coun-
try. I think we should try some other mode of putting men in office."

Mr. Gallinger, of New Hampshire, said:

"If it could be known—and no one can furnish that information but the Civil-Service Commis-
sion, and I think I shall ask for it some of these
days—how many young men and young women who
have left their homes have gone to the cities
and spent from $5 to $10 on each pilgrimage to
take the civil-service examination, who have
passed the examination and have been put on the
eligible list, have waited for one year and been
dropped from it, and have gone again and been
examined and been dropped from it—if the truth
could be known and the expense it has been to the young men and the young
women of this country could be aggregated, I
think it would appal the Congress of the United
States, and we can all imagine the disappoint-
ments it has brought to these young people.

"I have in my mind a young lady who passed
three examinations, a year apart, in this city,
and she passed at a very high rate. She is from
my own State. She did not get an appointment.
She waited a year and a half for the approval of
her work; and all over our country this condition of things
exists, and yet the commission are holding ex-
aminations all the time. One is scheduled for
my city in the near future. And yet the eligible
list is loaded down with hundreds and thousands
of names that never will be reached for certifica-
tion, and these young men and women are des-
tined to disappointment.

"Not only that, Mr. President, but the young
man who takes the civil-service examination and
passes it nine times out of ten is not worth any-
thing for business purposes. He expects to get a
Government job, as he calls it, and he waits a
year and he takes the examination again, and
he waits another year, and he is enervated. I
have a pathetic letter in my desk in the commit-
tee room from the father of a young boy who
took the examination two years ago. He tells
me that the boy is not worth anything because
he expects to get Government employment, and
he appeals to me to get him something to do in
the Government service. I have known many
and many such cases.

"So far as my State is concerned I do not
know whether it is properly cared for in the
departments or not. I know it to be true that
the rolls of every department of this Govern-
ment as far as New Hampshire is concerned, are loaded down with people
who never have been heard of in the State of
New Hampshire for the last twenty-five years.
The son of a dead Senator from a Western State
is on the rolls at a high salary credited to
the State of New Hampshire, and the only claim he
has upon the State is that his mother was born
in New Hampshire. I do not know who put him
there. Such men, even if they once belonged to
the State, do not come home to vote. They do
not contribute for political purposes. They are
of no earthly account to the State, and do not
belong to the State, and there ought to be some
way of weeding them out. But there is not. The
Civil-Service Commission say they are there and
they have to go on, until they die, and I
presume that if I am a fact."

The bill passed the House of Representatives
Jan. 30, 1902, and was amended and passed the
Senate Feb. 9, 1902, without a division. After
a conference the measure was modified and ap-
broued by the President, March 6, 1902, in the
following form:

"Be it enacted by the Senate and House of
Representatives of the United States of America
in Congress assembled, That the Census Office
temporarily established in the Department of the
Interior in accordance with an act entitled 'An
Act to provide for the taking the twelfth and
subsequent censuses,' approved March 3, 1899, is
hereby made a permanent office.

"SEC. 2. That the work pertaining to the
twelfth census shall be carried on by the Census
Office under the existing organization until the
1st day of July, 1902, when the permanent Cen-
sus Office herein provided for shall be organized
by the director of the census.

"SEC. 3. That the permanent Census Office shall
be in charge of a director of the census, appointed
by the President, by and with the advice and con-
sent of the Senate, who shall receive an annual
salary of $6,000. It shall be his duty to super-
intend and direct the taking of the thirteenth
and subsequent censuses of the United States and
to perform such other duties as may be imposed
upon him by law.

"SEC. 4. That there shall be in the Census Of-
fice, to be appointed by the director thereof, with
the approval of the President, 4 assistant clerks
for which the said Census Office is attached, 4 chief
statisticians, who shall be persons of known
and tried experience in statistical work, at an annual
salary of $2,500 dollars each; a chief clerk, at an
annual salary of $2,500, who, in the absence of
the director, shall serve as acting director; a dis-
bursing clerk, who shall also act as appointment
clerk, at an annual salary of $2,500; 1 stenogra-
pher, at an annual salary of $1,500; 4 expert chiefs
of division, at an annual salary of $1,500 each;
6 clerks of class three; 10 clerks of class two; and
such number of clerks of class one, and of clerks
of commissariat, typists, computers, and skilled laborers, with
salaries at the rate of not less than $600 nor more
than $1,000 per annum, messengers, assistant mes-
sengers, watchmen, and charwomen as may be
necessary for the proper and prompt performance of
the duties required by law. The disbursing
clerk herein provided for shall, before entering
upon his duties, give his oath to the Department of
the Treasury in the sum of $25,000, which bond shall
be conditioned that the said officer shall render a
true and faithful account to the proper accounting
officers of the Treasury quarter-monthly of all
moneys and properties which shall be received by
him by virtue of his office, with surety, to be
approved by the solicitor of the Treasury. Such
bond shall be filed with the Department of the
Treasury, to be by him put in suit upon
any breach of the conditions thereof.

"SEC. 5. That all employees of the Census Of-
fice, at the date of the passage of this act, except
unskilled laborers, may be appointed by the di-
rector of the census with the approval of the head
of the department to which said Census Office is
attached, and when so appointed shall be and
they are hereby placed, without further examina-
tion, under the provisions of the civil-service act
approved Jan. 16, 1883, and the amendments
tereto and the rules established thereunder; and
persons who have served as soldiers in any war in
which the United States may have been engaged,
who have been honorably discharged from the
service of the United States, and the widows of
such soldiers, shall have preference in the matter
of employment; and all new appointments to the
permanent clerical force of the Census Office here-
by created shall be made in accordance with the
requirements of the civil-service act above men-
tioned in so far as may have application thereto.

"SEC. 6. That all the provisions of the act of
March 3, 1899, relating to the twelfth census, not inconsistent with the provisions of this act, shall remain in full force and effect for the taking of the thirteenth and subsequent censuses.

SEC. 7. That section 8 of the act of March 3, 1899, is hereby amended so as to read as follows: That after the completion and return of the enumeration and of the work upon the schedules relating to the products of agriculture and to manufacturing and mechanical establishments provided for in section 7 of this act, the director of the census is hereby authorized decennially to collect statistics relating to special classes, including the insane, feeble-minded, deaf, dumb, and blind; to crime, pauperism, and benevolence, including prisoners, paupers, juvenile delinquents, and inmates of benevolent and reformatory institutions; to social statistics of cities; to public indebtedness, valuation, taxation, and expenditure; to religious bodies; to electric light and power, telephone, and telegraph business; to transportation by water, express business, and street railways; to mines, mining, quarries and minerals, and the production and value thereof, including gold in divisions of placer and vein, and silver; and, in general, the number of men employed, the average daily wage, average working time, and aggregate earnings in the various branches and aforesaid divisions of the mining and quar- rying industries on July 1, 1904. And the director of the census shall prepare schedules containing such interrogatories as shall be in his judgment be best adapted to elicit the information required under these subjects, with such provisions, divisions, and particularizations under each head as he shall deem necessary to that end, and all reports prepared under the provisions of this section shall be designated as "Special reports of the Census Office." For the purpose of securing the statistics required by this section, the director of the census may appoint special agents when necessary, and such special agents shall receive compensation as hereinafter provided: Provided, That the statistics of special classes, and of crime, pauperism, and benevolence specified in this section shall be restricted to all institutions containing such classes and the director of the census is authorized and directed to collect statistics relating to all of the deaf, dumb, and blind, notwithstanding the restrictions and limitations contained in section 8 of said act entitled: 'An Act to provide for taking the twelfth and subsequent censuses': Provided, That in taking the census of said classes the inquiries shall be confined to the following 4 questions, namely: Name, age, sex, and post-office address.

SEC. 8. That there shall be a collection of the statistics of the births and deaths in registration areas for the year 1902, and annually thereafter, the data for which shall be obtained only from and restricted to such registration records of such States and municipalities as in the discretion of the director possess records affording satisfactory data in necessary detail, the compensation for the transcription of which shall not exceed 2 cents for each birth or death reported.

SEC. 9. That in the year 1905, and every ten years thereafter, there shall be a collection of the statistics of manufacturers, confined to manufacturing establishments conducted under what is known as the factory system, and in the so-called neighborhood and mechanical industries; and the director is hereby authorized to prepare such schedules as in his judgment may be necessary to carry out the provisions of this section; and in addition to the statistics now provided for by law the director of the census shall annually collect the statistics of the cotton production of the country as ascertained by the gazette and bulletins giving the results of the same shall be issued weekly beginning Sept. 1 of each year and continued till Feb. 1 following; and that the director of the census shall make, from time to time, any additional special collections of statistics relating to any branch of agriculture, manufacture, mining, transportation, fisheries, or any other branch of industry that may be required of him by Congress.

"SEC. 10. That section 17 of the act of March 3, 1899, is hereby amended so as to read as follows:"

"SEC. 17. That the special agents appointed under the provisions of this act have like authority with the enumerators in respect to the subjects committed to them under this act and shall receive compensation at rates to be fixed by the director of the census: Provided, That the same shall in no case exceed $6 per day and actual necessary traveling expenses and an allowance in lieu of subsistence not exceeding $3 per day during their necessary absence from their usual place of residence: And provided further, That no pay or allowance in lieu of subsistence shall be paid to any special agents when employed in the Census Office on other than the special work committed to them, and no appointments of special agents shall be made for clerical work: And provided further, That the director of the census is hereby authorized in his discretion to employ the clerical force of the Census Office for such field-work as may be required to carry the provisions of sections 7, 8, and 9 in lieu of employing special agents for that purpose; and such employees when so employed shall be allowed, in addition to their regular compensation, actual necessary traveling expenses and an allowance in lieu of subsistence not exceeding $3 per day during their necessary absence from the Census Office. All employees of the Census Office shall be citizens of the United States.

"SEC. 11. That the printing-office established in the Census Office is hereby abolished to take effect July 1, 1899, and the outfit and equipment thereof shall be turned over to the Postmaster-General and the director of the census is hereby authorized and directed to have printed, published, and distributed, from time to time, bulletins and reports of the preliminary and other results of the various investigations authorized by law; and all of said printing and binding shall be done by the public printer at the Government Printing-Office.

"SEC. 12. That the supplemental acts amendatory of the act of March 3, 1899, approved Feb. 1, 1900, May 10, 1900, June 23, 1901, are hereby repealed; and all provisions of the act of March 3, 1899, inconsistent with this act are hereby repealed."

Oleomargarine and Dairy-Products.—A bill "to make oleomargarine and other imitation dairy-products subject to the laws of the State or Territory or the District of Columbia into which they are transported, and to change the tax on oleomargarine, and to amend an act entitled 'An Act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine' approved Aug. 2, 1880," was taken up for discussion in the House of Representatives Feb. 3, 1902. It provided that oleomargarine brought into one State from another for sale be subject to the laws of the locality, and that a tax of 10 cents a pound be levied on the manufacture of this article in imitation of yellow butter. In support of the measure, Mr. Haskins, of Connecticut, speaking
for the majority of the Committee on Agriculture, said:

"The proposed legislation is not intended to be oppressive or unduly severe. It is the manifest duty of the governing power to prevent fraud and imposition upon those unable to protect themselves. Legislation tending to this end is as legitimate as laws for the prevention and punishment of crime and misdemeanors. Pure food of all kinds should be guaranteed to every citizen. The purchaser of all articles of food has a right to know what he is buying and consuming. If disguised, mixed, or blended, the manufacturer should be compelled to disclose the kind and quality of the ingredients used and certify to the purity and wholesomeness of the materials sold to a trusting public. It is not unjust or inquisitorial to subject producers and manufacturers to governmental inspection and control. Police supervision has long been exercised over the production and sale of milk and other dairy-products. Proper supervision is sought rather than opposed by the honest manufacturer and dealer. Reputable and inviolate trade-marks are invaluable. Manufacturers in all branches of textile and other industries fully realize this fact and are held by high standards of excellence. This is equally true of the producers of cereals and other food-products. Why should manufacturers of oleomargarine or butter be an exception to the rule? Indeed, it is difficult to understand upon what reasonable grounds manufacturers of honestly made oleomargarine object to the proposed legislation."

"The substitution of an uncolored article for butter in the substitute bill, if enacted into law, will, hopefully, make the manufacture of oleomargarine colored in imitation of butter and deceptively sold unprofitable. To this end the internal-revenue tax upon colored oleomargarine is increased from 2 cents to 10 cents per pound, while the tax upon the uncolored article is reduced to one-fourth cent per pound, a nominal tax, merely imposed to maintain Government supervision and police control."

"The discrimination between the colored and uncolored will not and is not intended to ruin a legitimate industry. Your committee were strengthened in this conviction by testimony given at the committee hearings by manufacturers of oleomargarine. One manufacturer stated that one-half of his monthly product of 700,000 pounds, or almost 350,000 pounds, is uncolored. Another manufacturer, when asked 'If, in his opinion, uncolored oleomargarine can be profitably made and sold,' replied: 'It is sold to some extent already, and I am one of those who believe that oleomargarine, having been used for more than a quarter of a century, there are some people at least who have learned that it is a wholesome and cheap article of food, and will continue to use it. These people, if the colored is not obtainable, will use the uncolored.'"

"Properly manufactured from pure materials, the substitutes of oleomargarine is not challenged. The only question at issue is: Shall or shall not oleomargarine be colored and sold in the semblance of yellow butter?' Using the words of the ex-Gov. V. W. S. Ali, who ably argued the case from a dairyman's standpoint before the Committee on Agriculture, 'It is not oleomargarine the substitute for butter that we are fighting. No, the substitute for butter. We do not care how much oleomargarine is made and sold as long as it is so manufactured as not to conflict through deception with the sale of our product. If a man prefers a mixture of lard, tallow, and cotton-seed oil to butter, there is no reason why he should not have it. We do not ask that a single ingredient that is nourishing to be omitted from the only proper substitute. We desire only to distinguish that article which may be used to imitate butter in taste, smell, grain, and consistency—we concede him all this. We only ask one thing—that there be about the product itself some characteristic by which the public can readily distinguish it from an article of food which has been known for four thousand years in the form it is now produced. We demand the distinction in color because there is no nutrition in color.

"The great consuming public are still unprotected from the imposition of unscrupulous manufacturers. The present Federal laws are obviously inadequate to correct a growing evil, and more stringent measures are demanded. Farmers and dairymen in all sections of the country believe that the bill reported by the majority of your committee, if enacted into law, will, without injustice to the honest manufacturers of oleomargarine, afford a fair and just degree of protection and give needed encouragement to the great farm industries of the country—industries that all will admit form the bed-rock foundation of our national prosperity."

"The minority of the members of the committee presented a substitute bill described as not shaped to prevent the manufacture of oleomargarine or its legitimate sale, but to prevent its fraudulent sale as butter."

"The purpose of the substitute bill, offered by the minority, is not to prevent the manufacture of oleomargarine or its legitimate sale, but to prevent it from being fraudulently sold as butter. To accomplish this end it throws such safeguards about the retail sale of the article (the only operation in which, under existing laws, it is possible for fraud to be committed) as, in our opinion, to entirely eliminate all possibility of fraud in such retail sales and compel all dealers in oleomargarine to sell it for what it really is and not for butter. The substitute offered is really an amendment to sections 3 and 6 of the existing oleomargarine law. The annual licenses for the manufacture and sale of oleomargarine ($800 for manufacturers, $400 for retailers) are not lessened, while the penalties imposed for violation of the law are materially increased." In advocating the minority measure, Mr. Foster, of Illinois, said:

"Mr. Chairman, in my judgment the bill relating to oleomargarine as reported by the majority of the Committee on Agriculture is the most unjust and vicious measure in principle ever submitted to a legislative body. To begin with, the bill is not properly named. It should be entitled 'A bill to create a butter monopoly, by throttling legitimate industry.' I can not understand, Mr. Chairman, how any fair-minded man can vote for this bill, especially when he has the alternative of voting for the entirely just and proper measure proposed by the minority of the committee."

"Let us examine briefly these two measures and see what it is they would accomplish if enacted. The majority bill on its face provides that oleomargarine shall be subject in any State to the laws of that State. Now 32 States, through their legislatures, have been prevailed upon to pass laws forbidding the manufacture and sale therein of oleomargarine colored in semblance of butter. If this bill should become a law such colored oleomargarine manufactured in other States could not be taken into and sold in those 32 States, even in the original packages. This would at once deprive oleomargarine of the larger part of
its market, and the rest of it would also be swept away by the other provision of the bill, namely, that all oleomargarine colored to resemble butter shall be taxed 10 cents a pound. In other words, this bill is solely aimed at the total and utter destruction of the oleomargarine industry.

"This is plainly evident from the wording of the bill, and what is more, it is acknowledged openly and defiantly by the promoters of the bill. Several of them have testified before the committee, and all the others might as well have done so, for their purpose is perfectly obvious. This absolutely all there is to the committee's bill—a barefaced, naked attempt to break up and ruin an industry which is just as proper and legitimate as the butter industry, and has been pronounced so by the Supreme Court of the United States and by other courts, and also by leading scientists, and by the great American public at large speaking through their representatives in Congress."

"The Supreme Court's language was, in its celebrated decision of 1898, the Schollenberger case, that 'oleomargarine had become a proper subject of commerce among the States and foreign countries.' Yet in the face of this decision of our highest court it is now coolly proposed by the promoters and sponsors of this bill to wipe out the entirely proper and legitimate industry of the manufacture and sale of oleomargarine. And why? This is not stated in the bill; but in the reports and remarks on the subject oleomargarine is referred to as an 'adulterated article of food,' and a 'deceitful article of food.'"

"The charge of adulteration, Mr. Chairman, is absolutely false. The ingredients of oleomargarine are as pure and wholesome as the ingredients of butter. They have been so characterized by dozens of the highest scientific authorities in the country, as is well known by everybody—by such men as Prof. Chandler, of Columbia University; Prof. Barker, of the University of Pennsylvania; Prof. Johnson of Yale University; Prof. Atwater and Prof. Wiley, of the United States Agricultural Department; and by many others as eminent."

"The article has been in common use by millions of people for many years, and no injury has been received from it by any one, nor any complaint made about it by the dairy and butter monopolists. It is as nutritious and as wholesome as butter, and in many respects it is more so. It is as sweet and as palatable, and it is cheaper, thereby enabling those of moderate or restricted means to obtain a perfectly satisfactory substitute for butter at a price within their ability to pay. And now these butter monopolists would deny to thousands—I might say to millions—of poor people the use of this, a perfectly pure and healthful substitute, on the false charge of adulteration. They make a great ado with their sneers about 'hog fat,' but, Mr. Chairman, it is not the oleomargarine men, but the butter men, who are showing a disposition to 'hog' it in this competition."

"Coming now to the charge of deceit, what do they mean by that? Much has been said about it by the distinguished gentleman from Vermont, and what is meant by deceit? If it is meant that the manufacturers and sellers of oleomargarine practise any deceit in the disposing of oleomargarine as oleomargarine, that charge is as false as the charge of adulteration; but if it is meant that the adulterated and dishonest dealers sell oleomargarine as butter, that, of course is deceit, and the friends of oleomargarine are just as anxious as the friends of butter that it should be punished and put a stop to. No doubt much of that sort of deceit has been practiced in various parts of the country from time to time, and that is in reality the only complaint made against the present oleomargarine law that will hold water at all."

"Now, the friends of the pending bill propose to prevent this deceit, not by punishing those who are guilty of it, nor by preventing them from having any opportunity hereafter to pursue it, but—no—but by proscribing the whole oleomargarine industry! That is very much, Mr. Chairman, like curing a man's cough by cutting his head off."

"The friends of the minority or substitute bill, on the other hand, earnestly urge the members of this body and the public at large to examine this measure and judge of it fairly and impartially. If examined in this spirit the substitute bill will certainly convince anybody and everybody that it covers fully this point of 'deceit,' which is the only valid point against oleomargarine, and that it provides fully for the prevention and punishment of those who are guilty of deceit in the premises."

"By the terms of this substitute bill each 1 and 2 pound package is made an original package, and retail dealers in oleomargarine shall sell only the original package to which the tax-paid stamp is affixed. In that way, Mr. Chairman, every separate piece of oleomargarine exposed or offered for sale would bear its title on its face and would be known to all men for what it really was. What more than this could be asked by any reasonable man? Here is oleomargarine, already recognized and defined by our Supreme Court as a lawful article of commerce between the States, and here are those who manufacture and sell it, ready and willing and anxious to manufacture and sell it for what it really is, and to stamp its proper name on each and every package of it."

"And here, on the other hand, are the butter monopolists, who are hurt by its sale, and who say, 'No; we will not let oleomargarine be sold at all—we will crush it out of existence.' For that, Mr. Chairman, is what they will do if they can pass their bill. They will impose a prohibitory tax of 10 cents a pound on oleomargarine, which would raise its price to a level where nobody could afford to buy it; and, more than this, they will forbid it to be sold in 32 States of the Union at any price.

"The measure of the majority of the Committee on Agriculture was amended and passed Feb. 12. In the Senate the rival methods of dealing with the matter, advocated in the House, were argued; and the bill was passed April 3 with 11 amendments, 10 of which the House accepted, concurring on the eleventh, after amending it. The Senate approved, and the President signed the bill, May 9, 1902. It is as follows:"

"Be it enacted, etc., That all articles known as oleomargarine, butterine, imitation, process, reconstituted, or adulterated butter, or imitation cheese, or any substance in the substance of butter or cheese not the usual product of the dairy and not made exclusively of pure and unadulterated milk or cream, transported into any State or Territory, or the District of Columbia, and remaining therein for use, consumption, or storage therein, shall, upon the arrival within the limits of such State or Territory or the District of Columbia, be and remain subject to the effect of the laws of such State or Territory or the District of Columbia enacted in the exercise of its police powers to the same extent and in the same manner as though such articles or sub-
stances had been produced in such State or Territory or the District of Columbia, and shall not be sold, offered for sale, or otherwise in-
troduced therein in original packages or other-
wise.

"Sec. 2. That the first clause of section 3 of an act entitled 'An Act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine,' approved Aug. 2, 1886, be amended by adding thereto after the word 'oleomargarine,' at the end of said clause, the following words:

"And any person that sells, vends, or furnishes oleomargarine for the use and consump-
tion of others, except to his own family table without compensation, who shall add to or mix with such oleomargarine any artificial coloration that causes it to look like butter of any shade of yellow, shall also be held to be a manufacturer of oleomargarine within the meaning of said act, and subject to the provisions thereof.

"Section 3 of said act is hereby amended by adding thereto the following words:

'And sections 3232, 3233, 3234, 3235, 3236, 3237, 3238, 3239, 3240, 3241, and 3243 of the Revised Statutes of the United States are, so far as applicable, made to extend to and include and apply to the special taxes imposed by this section and to the person upon whom they are imposed.

"Sec. 3. That section 8 of an act entitled 'An Act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine,' approved Aug. 2, 1886, be, and the same is hereby, amended so as to read as follows:

"Sec. 8. That upon oleomargarine which shall be manufactured and sold, or removed for con-
sumption or use, there shall be assessed and col-
clected a tax of 10 cents per pound, to be paid by the manufacturer thereof; and any fractional part of a pound in a package shall be taxed as a pound: Provided, When oleomargarine is free from artificial coloration that causes it to look like butter of any shade of yellow said tax shall be imposed in a tax of 1 cent per pound, by which this section shall be represented by coupon stamps; and the provisions of existing laws govern-
ing the engraving, issue, sale, accountability, effect, inspection, marking, and destruction of tobacco and snuff, as far as applicable, are hereby made to apply to stamps provided for by this section.

"Sec. 4. That for the purpose of this act 'butter' is hereby defined to mean an article of food as defined in 'An Act defining butter, also imposing a tax upon and regulating the manu-
facture, sale, importation, and exportation of oleomargarine,' approved Aug. 2, 1886; that 'adulterated butter' is hereby defined to mean a grade of butter produced by mixing, reworking, rechurning in milk or cream, refining, or in any way producing a uniform, purified, or improved product from different lots or parcels of melted or unmelted butter or butter fat, in which any acid, alkali, chemical, or any substance whatever is introduced or used for the purpose or with the effect of deodorizing or removing therefrom ranc-
idity, or any butter or butter fat with which there is mixed any substance foreign to butter as herein defined, with intent or effect of cheapening in cost the product or any butter in the manufacture or manipulation of which any pro-
cess is used for the purpose of or effect of causing the absorption of abnormal quantities of water, milk, or cream; that 'process butter' or 'renovated butter' is hereby defined to mean but-
ter which has been subjected to any process by which it is melted of being introduced to resemble genuine butter, always excepting 'adulterated butter' as defined by this act.

"That special taxes are imposed as follows:

"Manufacturers of process or renovated butter shall pay $50 per year and manufacturers of adulterated butter shall pay $500 per year. Every person who engages in the production of process or renovated butter or adulterated butter as a business shall be considered to be a manu-
facturer thereof.

"Wholesale dealers in adulterated butter shall pay a tax of $480 per annum. Every person who sells adulterated butter in less quantities than 10 pounds at one time shall be regarded as a retail dealer in adulterated butter.

"Every person who sells adulterated butter shall be regarded as a dealer in adulterated butter. And sections 3232, 3233, 3234, 3235, 3236, 3237, 3238, 3239, 3240, 3241, and 3243 of the Revised Statutes of the United States are, so far as applicable, made to extend to and include and apply to the special taxes imposed by this section and to the person upon whom they are imposed.

"That every person who carries on the business of a manufacturer of process or renovated butter or adulterated butter without having paid the special tax therefor, as required by law, shall, besides being liable to the payment of the tax, be fined not less than $1,000 and not more than $5,000; and every person who carries on the busi-

ness of a dealer in adulterated butter without having paid the special tax therefor, as required by law, shall, besides being liable to the payment of the tax, be fined not less than $500 nor more than $500 dollars for each offense.

"That every manufacturer of process or reno-
vated butter or adulterated butter shall file with the collector of internal revenue of the district in which his manufactory is located such notices, inventories, and bonds, shall keep such books and render such returns of material and products, shall put up such labels as subdivided his factory, and conduct his business under such surveillance of officers and agents as the Com-
misisoner of Internal Revenue, with the approval of the Secretary of the Treasury, may require. But the bond required of such manufac-
turer shall be with sureties satisfactory to the collector of internal revenue, and in a penal sum of not less than $500; and the sum of said bond may be increased from time to time and additional sureties required at the discretion of the collector or under instructions of the Com-
misisoner of Internal Revenue.

"That all adulterated butter shall be packed by the manufacturer thereof in firkins, tubs, or other wooden packages not before used for that purpose, each containing not less than 10 pounds, and marked, stamped, and branded as the Com-
misisoner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe; and all sales made by manufacturers of adul-
terated butter shall be in original stamped pack-
ages.

"Dealers in adulterated butter must sell only original or from original stamped packages, and when such original stamped packages are broken the adulterated butter sold from same shall be placed in suitable wooden or paper packages, which shall be marked and branded as the Com-
misisoner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe.
Every person who knowingly sells or offers for sale, or delivers or offers to deliver, any adulterated butter in any other form than in new wooden or paper packages as above described, or who packs in any package any adulterated butter in either such a manner as may be prescribed by the Secretary of Agriculture, and no process or renovated butter shall be shipped or transported from its place of manufacture into any other State or Territory of the District of Columbia, or to any foreign country, until it has been marked as provided in this section. The Secretary of Agriculture shall make all needful regulations for carrying this section into effect, and shall cause to be ascertained and reported from time to time the quantity and quality of process or renovated butter manufactured, and the character and the condition of the material from which it is made. And he shall have power to ascertain whether or not materials used in the manufacture of said process or renovated butter are deleterious to health or wholesome in the finished product, and in case such deleterious or wholesome materials are found to be used in product intended for exportation or shipment into other States or in the course of exportation, or in the possession of exporters, he shall have power to confiscate the same. Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by a fine of not less than $50 nor more than $500 and by imprisonment not less than one month nor more than six months, or by both said punishments, in the discretion of the court.

Sec. 6. That wholesale dealers in oleomargarine, process, renovated, or adulterated butter shall keep such books and render such returns in relation thereto as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may, by regulation, require; and such books shall be open at all times to the inspection of any internal-revenue officer or agent. And any person who wilfully violates any of the provisions of this section shall for each such offense be fined not less than $50 and not exceeding $500, and imprisoned not less than thirty days nor more than six months.

Sec. 7. This Act shall take effect on the 1st day of July, 1902.

The Congress likewise passed, and the President approved, July 1, 1902, an act "to prevent the false branding or marking of food and food products, a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine," approved Aug. 2, 1886, shall apply to manufacturers of 'adulterated butter' to an extent necessary to enforce the marking, branding, identification, and regulation of the exportation and importation of adulterated butter.

Sec. 5. All parts of an act for an inspection of meats for exportation, approved Aug. 30, 1890, and of an act to provide for the inspection of live cattle, hogs, and the carcasses and products thereof which are the subjects of interstate commerce, approved March 3, 1891, and of an amendment thereto approved March 2, 1895, which are applicable to the subjects and purposes described in this section shall apply to process or renovated butter. And the Secretary of Agriculture is hereby authorized and required to cause a rigid sanitary inspection to be made, at such times as he may deem proper or necessary, of all factories and storehouses where process or renovated butter is manufactured, packed, or prepared for market, and of the products thereof and materials going into the manufacture of the same. All process or renovated butter and the packages containing the same shall be marked with the words 'Renovated Butter' or 'Process Butter' and by such other marks, labels, or brands and in such manner as may be prescribed by the Secretary of Agriculture, and no process or renovated butter shall be shipped or transported from its place of manufacture into any other State or Territory of the District of Columbia, or to any foreign country, until it has been marked as provided in this section. The Secretary of Agriculture shall make all needful regulations for carrying this section into effect, and shall cause to be ascertained and reported from time to time the quantity and quality of process or renovated butter manufactured, and the character and the condition of the material from which it is made. And he shall have power to ascertain whether or not materials used in the manufacture of said process or renovated butter are deleterious to health or wholesome in the finished product, and in case such deleterious or wholesome materials are found to be used in product intended for exportation or shipment into other States or in the course of exportation, or in the possession of exporters, he shall have power to confiscate the same. Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by a fine of not less than $50 nor more than $500 and by imprisonment not less than one month nor more than six months, or by both said punishments, in the discretion of the court.
CONGRESS. (INTERPRETING PENSION LAW—PROTECTION OF THE PRESIDENT.)

INTERPRETING PENSION LAW.—A joint resolution was passed by the Congress and approved by the President on the 1st of July, 1890, creating the act of June 27, 1890. It is as follows:

"Resolved by the Senate and House of Representaties of the United States of America in Congress assembled, That the act approved June 27, 1890, entitled 'An Act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents,' is construed and held to include all persons and the widows and minor children of all deceased persons, subject to the limitations of said act, who served for ninety days in the military or naval service of the United States during the late war of the rebellion and who have been honorably discharged therefrom, and section 4716, Revised Statutes United States, is amended accordingly: Provided, however, That the foregoing shall not apply to those who served in the First, Second, Third, Fourth, Fifth, and Sixth Regiments United States Volunteer Infantry, who had a prior service in the Confederate army or navy and who enlisted in said regiments while confined as prisoners of war under a stipulation that they were not to engage under the laws of the United States, nor to those who, having had such prior service, enlisted in the military or naval service of the United States after the 1st day of January, 1863.

"SEC. 2. That in the administration of the pension laws any enlisted man of the army, including regulars, volunteers, and militia, or any appointed or enlisted man of the navy, or who was honorably discharged from the last contract of service entered into by him during the late war of the rebellion, shall be held and considered to have been honorably discharged from all similar contracts of service previously entered into by him with the United States during said war: Provided, That such enlisted or appointed man served not less than six months under said last enlistment or appointment, that his entire service under said last enlistment or appointment was faithful, and that he did not receive by reason of said last enlistment or appointment any bounty or gratuity other than from the United States in excess of that to which he would have been entitled if he had continued to serve faithfully until honorably discharged under any contract of service previously entered into by him, either in the army, navy, or marine corps, during the war of the rebellion.

PROTECTION OF THE PRESIDENT.—There was much popular discussion of this theme, as the assassination of President McKinley brought home to the people once more the danger to our Chief Magistrate, not so much from treasurable conspiracy as from criminal fools and fanatics. The Congress early in the session undertook the task of protecting the legislation. The Senate passed a bill making it a capital crime to kill or attempt to kill the President, or any official in line of succession to the presidency, or any sovereign or chief magistrate of a foreign country; setting a penalty of twenty years' imprisonment on instigating, advising, or counseling the killing of any of these persons, or conspire for the death of any of them; and proposing imprisoning at hard labor for one threatening or advising such assassination, by spoken, written, or printed words. The Senate bill also provided for a presidential body-guard of regular troops. The House of Representatives passed a substitute by way of amendment to this measure. It

struck out the provision for a military body-guard, drew the distinction that the President, those in line of succession, and the representatives of foreign governments must not be assassinated or assaulted while engaged in the performance of official duties to give the Federal courts jurisdiction over the crime, and added provisions against the general profession or teaching of anarchy. There was no report made by the Conference Committee appointed to harmonize these differences.

RECIPROCITY WITH CUBA.—This policy engaged much of the attention of the Administration, brought on heated discussion in Congress, and became a subject of sharp political controversy in the press. It is understood that President McKinley promised reciprocal trade advantage to Cuba in consideration of the adoption of the Platt amendment by the Cuban constitutional convention; and President Roosevelt urged the concession in his annual message. The Ways and Means Committee of the House of Representatives framed a bill to allow an importation of 20 per cent. on all Cuban imports, on condition that the Cuban Government adopt the immigration and contract labor laws of the United States, the Public Land laws, and the self-executing of the conditions and the operative effect of the law. The Republican majority in the committee could not act together on this bill, and it was reported through the hands of some of the Democratic minority. Republican conferences were held on the subject, and it was found that there was strong opposition to the bill within the dominant marine corps; the difficulty was in the sugar-growing interests in this country; and a serious blow was dealt to the measure when the House adopted the following amendment to the bill, offered by Page Morris, of Minnesota, April 18:

"And upon the making of said agreement, and the issuance of said proclamation, and while said agreement shall remain in force, there shall be levied, collected, and paid, in lieu of the duties thereon now provided by law on all sugars above No. 16 Dutch standard in color, and on all sugar which has gone through the process of re- imported into the United States, 1.825 cent per pound."

This amendment, technical and harmless looking as it is, touched the highly sensitive point, as reported, disturbed the relation between raw sugar and refined sugar established in the existing tariff, and this amendment aimed at restoring the equilibrium, so that the reciprocity should not be at the expense of the American sugar-growers altogether, but also at the expense of the refiners. It was adopted by a vote of 104 yes to 111 nays; and the measure was then passed.

The following day Mr. Teller, of Colorado, offered in the Senate a resolution to investigate the relation of the Sugar Trust to the proposal to reduce the tariff on raw sugar and the rumor that American capitalists have secured large holdings in the Cuban sugar plantations. June 16, he offered a resolution for the investigation of the expenditures of money from Cuban funds to promote reciprocity. The result was to cast suspicion on the reciprocity measure. The Republican Senators, after conferring upon a substitute making it a condition of proclaiming reciprocity that it be proved the Sugar Trust is not a party at interest; but it was thought best to abandon the bill for the action and depend upon the negotiation of a reciprocity treaty.
June 13, the President sent to the Congress the following message on the subject:

To the Senate and House of Representatives:

I deem it important before the adjournment of the present session of Congress to call attention to the following expression in the message which, in the discharge of the duty imposed upon me by the Constitution, I sent to Congress on the first Tuesday of December last:

"Elsewhere I have discussed the question of reciprocity. In the case of Cuba, however, there are weighty reasons of morality and of national interest which could be held to have a peculiar application, and I most earnestly ask your attention to the wisdom, indeed to the vital need, of providing for a substantial reduction in the tariff duties on Cuban imports into the United States. Cuba has in her Constitution affirmed what we desired, that she should stand in international matters in closer and more friendly relations with us than with any other power, and we are bound by every consideration of honor and expediency to pass commercial measures in the interest of her material well-being and safety."

This recommendation was merely giving practical effect to President McKinley's words, when, in his messages of Dec. 5, 1898, and Dec. 5, 1899, he said:

"It is important that our relations with this people (of Cuba) shall be of the most friendly character and our commercial relations close and intimate. We have in our relations with Cuba a trust, the fulfillment of which calls for the sternest integrity of purpose and the exercise of the highest wisdom. The new Cuba, yet to arise from the ashes of the past, must needs be bound to us by ties of singular intimacy and strength if its enduring welfare is to be assured. The greatest blessing which can come to Cuba is the restoration of her agricultural and industrial prosperity."

Yesterday, June 12, I received, by cable from the American minister in Cuba, a most earnest appeal from President Palma for "legislative relief because the tariff is too high and [his] country financially ruined."

The granting of reciprocity with Cuba is a proposition which stands entirely alone. The reasons for granting reciprocity with any other nation, and are entirely consistent with preserving intact the protective system under which this country has thriven so marvelously. The present tariff law was designed to promote the adoption of such a reciprocity treaty, and expressly provided for a reduction not to exceed 20 per cent. upon goods coming from a particular country, leaving the tariff rates on the same articles unchanged as regards all other countries. Objection has been made to the granting of the reduction on the ground that the substantial benefit would not go to the agricultural producer of sugar, but would inure to the American sugar-refiners. In my judgment provision can and should be made which will guarantee us against this possibility: without having recourse to a measure of doubtful policy, such as a bounty in the form of a rebate.

The question as to which, if any, of the different schedules of the tariff ought most properly to be revised does not enter into this matter in any way or shape. We are concerned with getting legally how to use a reciprocal arrangement with Cuba. This arrangement applies to all the articles that Cuba grows or produces. It is not in our power to determine what these articles shall be; and any discussion of the tariff as it affects special schedules, or countries other than Cuba, is wholly aside from the subject-matter to which I call your attention.

Some of our citizens oppose the lowering of the tariff on Cuban products, just as three years ago they opposed the admission of the Hawaiian Islands, lest free trade with them might ruin certain of our interests here. In the actual event their fears proved baseless as regards Hawaii, and their apprehensions as to the damage to any industry of our own because of the proposed measure of reciprocity with Cuba seem to me equally baseless. In my judgment no American industry will be hurt, and many American industries will be benefited by the proposed action.

It is to our advantage as a nation that the growing Cuban market should be controlled by American producers.

The events following the war with Spain and the prospective tariff and economic relations with Cuba will render it certain that we must take in the future a far greater interest than hitherto in what happens throughout the West Indies, Central America, and the adjacent coast and islands. We expect Cuba to treat us on an exceptional footing politically, and we should put her in the same exceptional position economically. The proposed action is in line with the course which we have pursued as regards all the islands with which we have been brought into relations of varying intimacy by the Spanish War. Porto Rico and Hawaii have been included in all our tariff lines, to their great benefit as well as ours, and without any of the feared detriment to our own industries. The Philippines, which stand in a different relation, have been given substantial tariff concessions.

Cuba is an independent republic, but a republic which has assumed certain special obligations as regards her international position in compliance with our request. I ask for her certain special economic concessions in return, these economic concessions to benefit us as well as her. There are few brighter pages in American history than the page which tells of our relations with Cuba during the past four years. On her behalf we waged a war, of which the mainspring was generous indignation against oppression, and we have kept faith with her. It is in my judgment that we will complete in the same spirit the record so well begun, and show in our dealings with Cuba that steady continuity of policy which it is essential for our nation to establish in foreign affairs if we desire to play well our part as a world power.

We are a wealthy and powerful nation; Cuba is a young republic, still weak, who owes to us her birth, whose whole future, whose very life, must depend on our attitude toward her. I ask that we help her as she struggles upward along the painful and difficult road of self-imposed independence. I ask this aid for her because she is weak, because she needs it, because we have already aided her. I ask that open-handed help, of a kind which a self-respecting people can accept, be given to Cuba, for the very reason that we have given her such help in the past.

Our soldiers fought to give her freedom. For three years our representatives, civil and military, have toiled unceasingly, facing disease of a peculiarly sinister and fatal type with patient and uncomplaining fortitude, to teach her how to use a reciprocal arrangement with Cuba. This arrangement applies to all the articles that Cuba grows or produces. It is not in our power to determine what these articles shall be; and any discussion of the tariff as it affects special schedules, or countries other than Cuba, is wholly aside from the subject-matter to which I call your attention.
wise judgment, and such single-minded devotion to the country's interests. Now, I ask that the Cubans be given all possible chance to use to the best advantage the freedom of which Americans have such right to be proud and for which so many American lives have been sacrificed.

THEODORE ROOSEVELT.

WHITE HOUSE, June 15, 1906.

A Senatorial Sensation.—The quarrel between Senator Tillman and Senator McLaury, both of South Carolina, after many dramatic incidents, came to a fight on the floor of the Senate; and perhaps a record of the session requires an account of the affair. Mr. Tillman, on Feb. 22, 1902, in discussing the Philippine tariff bill, reviewed the contest over the ratification of the treaty of Paris, reverted to the influence which Mr. Bryan exerted to procure the necessary votes, and declared it insufficient to control the Democratic Senators. The following colloquy then took place:

Mr. Tillman: But with all Mr. Bryan's influence—and it was very great, because it was recognized broadly—and with the nominee of his party—he did not and could not persuade enough men here to give the necessary votes. After every man whom Mr. Bryan could influence had been induced, and some found out, and some still lacked votes, and you knew it. You know how you got them.

Mr. Spooner: How did we get them?

Mr. Tillman: I say you know how you got them.

Mr. Spooner: I do not know how we got them. I do not know that any man voted for that treaty except in obedience to his convictions. Does the Senator know any different?

Mr. Tillman: I only know that in a court where a senator would be convicted on circumstantial evidence, some men.

Mr. Spooner: Does the Senator impeach any Senator? Let him name him. I do not impeach any Senator, nor do I know any ground for impeaching any.

Mr. Tillman: I have reason to believe from the circumstantial evidence and from things that have been told to me in confidence by men on the other side that improper influences were used.

Mr. Spooner: Name the man. That is due to the country, and due to the man whom you suspect, and by innuendo charge. Who was it? I will answer for himself if he is still a member of this body.

Mr. Tillman: Whom do you mean? I cannot name the man who gave me the information.

Mr. Spooner: Whoever you mean.

Mr. Tillman: I cannot give the name of the man who gave me the information, because he gave it to me in confidence.

Mr. Spooner: Oh, in confidence. A man who would impeach another in confidence is a coward. Mr. Tillman: Cowardice in that case does not rest on my shoulders.

Mr. Spooner: The Senator turned to me. If the Senator knows of any member of this body who voted under corrupt influences for that treaty, name him.

Mr. Tillman: I can not prove it.

Mr. Spooner: Well, I would not say it.

Mr. Tillman: But I can prove this—

Mr. Spooner: I would not say it.

Mr. Tillman: I can prove this: that the patronage of a State has been given to a Democrat who voted for the treaty.

Mr. Spooner: What State?

Mr. Tillman: South Carolina.

Mr. Spooner: Fight it out with your colleague.

Mr. Tillman: I am ready.

Mr. Spooner: Yes, I am ready and he is ready.

Mr. Tillman: Let him—

Mr. Spooner: He is not here—

Mr. Tillman: He has not shown his readiness.

Mr. Spooner: But he will be.

The President pro tempore: The occupants of the galleries must remember that any marks of approbation or disapproval are not permitted under the rules of the Senate, and if there is a violation of the rule the Chair will be obliged to have the galleries cleared.

Mr. Tillman: I will state that after having made a speech in this body two weeks before, replete with cogent arguments and eloquence, against the ratification of the treaty, and after having told us in confidence that he would not vote for it, he did; and since then he has been adopted by the Republican caucus and put upon committees as a member of that party, and has controlled the patronage in South Carolina. I did not expect to bring this in in this way, but I do not dodge or flinch from any responsibility anywhere.

After Mr. Tillman had closed his speech, Mr. McLaury, who had returned to the Senate chamber, rose; and the Record reports what follows:

Mr. McLaury, of South Carolina: Mr. President, I rise to a question of personal privilege. During my absence a few moments ago from the Senate Chamber, in attendance upon the Committee on Indian Affairs, the gentleman who has just taken his seat, the Senator who has just taken his seat, said that improper influences had been used in changing the vote of somebody on the treaty, and then went on later and said that it applied to the Senator from South Carolina, who had been given the patronage in that State. I think I get the sense of the controversy. I desire to state, Mr. President—I would not use as strong language as I intend to had I not, soon after the Senate met, replied to these insinuations and said that they were untrue—I now say that that statement is a willful, malicious, and deliberate lie.

[At this point Mr. Tillman advanced to Mr. McLaury, of South Carolina, and the two Senators met in a personal encounter, when they were separated by Mr. Layton, the acting assistant doorkeeper, assisted by several Senators sitting nearby.]

Mr. Gallingher: Mr. President, I ask that the doors be closed.

The President pro tempore: The Senate will be in order. Senators will please resume their seats.

Mr. Pritchard: Mr. President, if the Senator from South Carolina has concluded——

Mr. McLaury, of South Carolina: Mr. President, I will now proceed with my remarks, which were so unceremoniously interrupted——

Mr. Teller: Mr. President, I call the Senator from South Carolina to order.

Mr. McLaury, of South Carolina: Which one of the Senators?

Mr. Teller: This one, and the other one, too, for that matter.

Mr. Foraker: Mr. President, I join in that. Surely there is some way of protecting the dignity of this body.

Mr. Burrows: Certainly; the Senate can not let this thing pass, Mr. President.

Mr. Gallingher: Mr. President, I asked that the doors might be closed.

Mr. Foraker: Mr. President, I move that the Senate go into executive session.
The President pro tempore: The Senator from Ohio moves that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After two hours and twenty minutes the doors were reopened.

In executive session a resolution was adopted unanimously declaring both South Carolina Senators in contempt and referring the matter to the Committee on Privileges and Elections. In open session the Senate adopted a resolution allowing the Senators, though in contempt, to make explanation. This is what took place:

Mr. Tillman: Mr. President, I have always esteemed it a high honor and privilege to be a member of this body. I had never had any legislative experience when I came here, and my previous service as Governor of South Carolina for four years had unfitted me in a measure to enter this august assembly with that dignity and regard—proper regard, I will say—for its traditions and habits and rules that is desirable.

I have been here seven years. I have in that time tried to be considered in with a little more catholicity of spirit than I did when I came here. I have found a great many people here in whose personal integrity and honor and regard for their obligations as politicians I have implicit confidence; but I have seen so much of partisanship, I have seen so much of what I consider slavish submission to party domination, that I confess I have felt the difficulty that as a judge I judge men who in one aspect appeared to be so high and clean and honorable and in another appeared more or less despicable. I say this because of the fact that one of the Senators has seen fit to allude to some matters that occurred in the debate this morning.

I now want to say that, so far as any action of mine has caused any Senator here, or the Senate as a body, or the people of the United States to feel that I have been derelict and have not shown that courtesy and proper observance of the rules of this body, I regret it; I apologize for it. I was ready to do that two minutes after I had acted; but under the provocation, which was known to all of you, I could not have acted otherwise than I did; and while I apologize to the Senate and am sorry that it has occurred, I have nothing more to say.

Mr. McLaurin, of South Carolina: Mr. President. I did not realize that I was in contempt of the Senate. I do not think now, if my words are read in the Record, that I was, but, at the same time, as the Senate has ruled that I am in contempt of this honorable body, I beg leave to apologize.

I desire to say, Mr. President, that I have been very sorely and severely tried. I was in attendance on the Committee on Indian Affairs when I received a message from a friend in the Senate that my presence was needed here.

The history of the vote on the Spanish treaty is known to all of you. There have been statements made in the newspapers and insinuations that I had been influenced by improper motives in connection with my vote on that treaty. Knowing in my own soul, and knowing that God in heaven also knows that it was false, when I was told that it was centered down to me, I was so outraged by what I considered a most brutal assault upon my honor as a man, and especially in view of the fact that at the beginning of the session, after the action of my party associates, I made a most careful and deliberate statement explaining all these matters, I did not feel as a man that I could ever hold my head up again if I did not resent it in the place where it was delivered, in the strongest and most forcible terms that I could employ.

With that, Mr. President, I am done, except I have this to say: If there is any more talk of that kind or any more—

Mr. Patterson: I beg the Senator to refrain.

Mr. McLaurin, of South Carolina: I will refrain, Mr. President.

Pending further action on the matter, Mr. Tillman presented a protest to the Senate, which was received by that body, Feb. 27. He declared himself ready to submit to whatever action the Senate might take to vindicate its own rights and dignity; but he protested against mere delay as depriving South Carolina of its right as a State to be represented in that body. On the following day the committee in charge of the matter reported a resolution of censure against Senators Tillman and McLaurin, which was adopted by a vote of 54 yeas to 12 nays. Its adoption, under the terms of the resolution, cleared both gentlemen of contempt.

Miscellaneous.—The Senate passed a ship subsidy bill early in the session, but it was not sine die, as considered in the House of Representatives.

The House passed a measure admitting Oklahoma, Arizona, and New Mexico into the Union as States; but the Senate got no further than to make it a Select Committee to consider the question. The House also passed an immigration bill, which the Senate did not take up.

Two treaties were ratified—the modified agreement with Great Britain on the Lusitania Canal, and the agreement with Denmark for the purchase of the Danish West Indies.

The following acts were passed:

1. What is known as the omnibus public building act. It bears the title "An Act to increase the limit of cost of certain public buildings, to authorize the purchase of sites for public buildings, to authorize the erection and completion of public buildings, and for other purposes"; and it deals with public buildings in 186 towns of the United States.

2. An act authorizing the President to reserve public lands and buildings on the island of Porto Rico for public uses, and granting other public lands and buildings to the Government of Porto Rico.

3. An act authorizing the Commissioner of Internal Revenue to return bank checks, drafts, and certificates of deposit, and orders for the payment of money having impressed stamps thereon, to the owners thereof.

4. An act for the allowance of certain claims for property taken for military purposes within the United States during the war with Spain, reported by the Secretary of War in accordance with the requirements of an act contained in the sundry civil appropriation act, approved June 6, 1900, authorizing and directing the Secretary of War to investigate just claims against the United States for private property taken and used in the military service within the limits of the United States.

5. An act authorizing the adjustment of rights of settlers on the Navajo Indian Reservation, Arizona.

6. An act to provide for funding taxes paid upon legacies and bequests for uses of a religious, charitable, or educational character, for the encouragement of art, etc., under the act of June 13, 1898.

7. An act to amend an act to prohibit the passage of special or local laws in the Territories, and to limit the Territorial indebtedness.

8. An act to provide for the homesteads in the Ute Indian Reservation in Colorado.
An act to accept, ratify, and confirm a proposed monument at 207
by the Kansas or Kaw Indians of Oklahoma.

An act relating to the transportation of dutiable merchandise at the seaports of Tacoma and Seattle.

An act to provide for the transfer of the title to the military reservation at Baton Rouge to the Louisiana Agricultural and Mechanical College.

An act to confer jurisdiction on the Court of Claims to render judgments for the principal and interest in actions to recover duties collected by the military authorities of the United States upon articles imported into Porto Rico from the several States between April 11, 1899, and May 1, 1900.

An act to provide for the sale of the unsold portion of the Umatilla Indian Reservation.

An act to vest in the Spanish Treaty Claims Commission certain powers possessed by circuit and district courts of the United States.

An act for the allowance of certain claims for stores and supplies reported by the Court of Claims under the provisions of the act approved March 3, 1883, and commonly known as the Bowman Act.

An act to amend the act of May 12, 1900, authorizing the Commissioner of Internal Revenue to redeem or make allowance for internal-revenue stamps.

An act reserving from the public lands in the State of Oregon, as a national park for the benefit of the people of the United States, and for the protection and preservation of the game, fish, timber, and all other natural objects therein, a tract of 249 square miles, including Crater Lake.

An act to regulate the sale of virulens, serums, toxins, and analogous products in the District of Columbia, to regulate interstate traffic in said articles, and for other purposes. It provides that "no person shall sell, barter, or exchange, or offer for sale, barter, or exchange in the District of Columbia, or send, carry, or bring for sale, barter, or exchange from any State, Territory, or the District of Columbia into any State, Territory, or the District of Columbia, or from any foreign country into the United States, or from the United States into any foreign country, any virus, therapeutic serum, toxin, antitoxin, or analogous product applicable to the prevention and cure of diseases caused by such virus, serum, toxin, antitoxin, or product has been propagated and prepared at an establishment holding an unsuspended and unrevoked license issued by the Secretary of the Treasury, under the provisions of any law or regulations made under said law to control the production, manufacture, sale, or use of such articles, or to propagate and prepare such virus, serum, toxin, antitoxin, or product for sale in the District of Columbia, or for sending, bringing, or carrying from place to place aforesaid; nor unless each package of such virus, serum, toxin, antitoxin, or product is plainly marked with the proper name of the article contained therein, the name, address, and license number of the manufacturer, and the date beyond which the contents can not be expected beyond reasonable doubt to yield their specific result."

An act to provide for the allotment of the lands of the Cherokee Nation and for the disposition of town sites therein.

An act for the relief of the citizens of the French West Indies.

An act to ratify and confirm a supplemental agreement with the Creek Indians, modifying the agreement ratified by Congress, March, 1901, in regard to the allotment of lands, descent and distribution.

An act to fix fees of juries in the United States courts.

An act to provide a commission to secure plans and designs for a monument or memorial to the memory of Abraham Lincoln.

An act to amend an act for the relief and civilizing of the Chippewa Indians in the State of Minnesota approved Jan. 14, 1889.

An act providing that the statute of limitations of the several States shall apply as a defense to actions brought in the United States courts for the recovery of lands patented in severalty to members of any tribe of Indians under any treaty between it and the United States of America.

An act to prevent any consular officer of the United States from accepting any appointment from any foreign state as administrator, guardian, or to any other office of trust, without first executing a bond, with security, to be approved by the Secretary of State.

An act to authorize the sale of part of the Mohave military reservation in the State of Nebraska.

An act for the authorization of the erection of buildings by the International Committee of the Young Men's Christian Associations on the military reservations of the United States.

An act to facilitate the procurement of statistics of trade between the United States and non-contiguous countries.

An act to prevent the sale of firearms, opium, and intoxicating liquors in certain islands of the Pacific, not under the protection of any civilized power.

An act to increase the efficiency, and change the name of the United States Marine-Hospital Service.

An act to promote the efficiency of the Revenue-Cutter service.

An act to extend the provisions, limitations, and benefits of an act entitled "An Act granting pensions to the survivors of the Indian wars of 1832 to 1842, inclusive, known as the Black Hawk war, Creek war, Cherokee disturbances, and the Seminole war," approved July 27, 1892. The measure brings into the scope of the original act Indian wars preceding 1832.

An act authorizing the Comptroller of the Currency to extend the charter of national banks twenty years.

Acts amending the following sections of the Revised Statutes: 82; 548; 658; 683; 822; 1315; 1513; 1580; 1581; 1797; 2294; 2399; 2359; 2354; 2565; 2593; 2743; 3359; 3362; 3384; 4076; 4076; 4307; 4319; 4314; 4400; 4718; 4833; 4929; 5545; 5544. Sections 1594 and 2035 were repealed.

An act for the protection of miners in the Territories.

An act for the protection of game in Alaska, not affecting, however, any law now in force in Alaska relating to the fur seal, sea otter, or any fur-bearing animal other than bears and sea lions, or preventing the killing of any game animal or bird for food or clothing by native Indians or Eskimo, or by miners, explorers, or travelers on a journey when in need of food; but the game animals or birds so killed shall not be shipped or sold, and not to be construed as preventing the collection of specimens for scientific purposes, the capture of shipment of live animals and birds for exhibition or propagation, or the export from Alaska of specimens and trophies, under such restrictions and limitations as the Secretary of Agriculture may prescribe and publish.

Acts authorizing the construction of bridges across the Arkansas river, Fort Gibson, Indian Territory, and in Arkansas; Ashley river, South Carolina; Calumet river, Cummings, Ill., and
COSTA RICA.

COSTA RICA, a republic in Central America. The Congress is a single Chamber of 21 representatives, elected for four years by an electoral college, the members of which are elected by the votes of all settler and property owners. The President is also elected for four years, and may be his own successor. Rafael Fagellas was reelected President for the term which began on May 8, 1892. Anstrito Igelias Lorente and Federico Tinoco were the Vice-Presidents. The Cabinet was composed in the beginning of 1902 as follows: Minister of the Interior, Police, and Public Works, and acting Minister of Foreign Affairs, Worship, Public Instruction, Benevolence, and Justice, Ricardo Pacheco; acting Minister of Finance, E. Truque; acting Minister of War and Marine.

Area and Population.—The area is estimated at 23,000 square miles, and the population on Feb. 18, 1892, was 243,205, comprising 122,480 males and 120,725 females. On Dec. 31, 1891, the population was officially estimated at 209,682. The number of births registered in 1900 was 10,695; deaths, 6,275. San José, the capital, has about 25,000 inhabitants.

Finances.—The revenue in 1901 was 8,700,833 colones, and expenditure 9,319,192 colones. The gold colon was adopted as the monetary unit by the act of Oct. 28, 1896, which established a gold standard at the ratio of 1 to 291, the peso being made exchangeable for the colon, which weighs 0.778 gram, 900 fine. The new currency was put into circulation on July 16, 1896, when 5,000,000 colones had been coined. There were 3,000,000 pesos of paper currency in circulation. About 1,000,000 pesos of fractional silver currency were issued, and this is legal tender up to 10 colones. Foreign gold coins are legal tender, but foreign silver coins are not.

The foreign debt, which in view of the depreciation of silver was scaled down in 1888 and again in 1897 by arrangement with the creditors, amounted on June 30, 1901, to £28,000,000 sterling, the amount in 1887 having been £26,691,300, with £2,119,512 interest in arrear. The interest on £414,000 of the capital was reduced in 1897 to 24 per cent., and on £252,000 to 3 per cent. The unpaid coupons from Jan. 1, 1895, when the Government defaulted, till April, 1897, when the new arrangement went into effect, are due and the first instalments of £25,000 a year for twenty years, £23,562 having been paid at the start. Amortization of the debt will begin in 1917 by the annual payment of £10,000. The foreign debt in 1900 amounted to 6,067,888 pesos, and the total internal debt to 6,918,072 pesos.

Commerce and Production.—Costa Rican coffee brings a high price, and lands adapted for its culture when situated near a railroad are valuable. The banana plantations on the coast are remunerative, and the cultivation of cacao is a growing industry. There are also plantations of rubber-trees. The people are industrious and frugal, but little else is grown besides these products and corn, rice, yams, and potatoes for food. There are herds of cattle and horses on the highlands valued at 12,695,065 pesos in 1897. Gold is mined by American companies, which exported $100,000 worth in 1900. The total value of imports in 1900 was $6,084,395, and of exports $6,321,192. Of the imports, 46.2 per cent. came from the United States, 27.3 per cent. from Great Britain, 13.6 per cent. from Germany, and 12.9 per cent. from other countries. Of exports, 74 per cent. were valued at $3,800,100; bananas, $1,354,390; gold and silver, $500,000; hides and skins, $1,035,330; rubber, $89,070.
CRETE.

Navigation.—The number of vessels entered and cleared at Limon and Punta Arenas during 1900 was 6,260 and 5,690. The merchant fleet of Costa Rica consisted of 2 sailing vessels, of 341 tons, and 3 steamers, of 783 tons.

Railroads, Posts, and Telegraphs.—The railroa from Limon to Alajuela, with its branches, has a length of 137 miles. The line from San José to Tiveves, 59 miles, will, when completed, establish rail communication between the Atlantic and Pacific coasts.

The number of letters and other mail-matter that passed through the post-office in 1899 was 1,172,914 in the internal and 637,163 in the foreign service.

There were 880 miles of telegraph-wire in 1899; number of despatches, 342,572. The telephonelines had a length of 200 miles.

CRETE, an island in the Mediterranean, formerly a Turkish vilayet, since Dec. 21, 1898, an autonomous province under the suzerainty of the Porte administered by a High Commissioner of England, France, Germany, Italy, and Russia. The High Commissioner is Georgios, Prince of Greece, born June 24, 1869, second son of Georgios I, King of the Hellenes. He was appointed for three years on Nov. 21, 1898, but on Dec. 21, 1898, and was reappointed on Dec. 15, 1901. The Constitution was adopted on April 28, 1899. The High Commissioner has supreme command of the military forces. The legislative body is the Boule, 64 members of which, of whom 3 are Mohammedans, are elected by universal suffrage for two years, in the proportion of 1 to 5,000 inhabitants, including 1 Moham medan, are nominated by the Prince. The electoral system provides for minority representation. The Boule sits for two months every two years. The ministers are appointed by the Prince, and take part in the discussions of the Chamber without having the right to vote. The representatives at Rome of the protecting powers are authorized by their governments to decide questions affecting the foreign relations of Crete. The Council appointed on Sept. 7, 1901, was composed as follows: Finance, J. A. Tsouderos; Interior and Public Safety, Manousos R. Koundouras; Public Instruction, Worship, Justice, and Foreign Affairs, A. D. Boreades.

Area and Population.—The island has an area of 3,226 square miles. The native population at the census of 1877, 1900, was 503,543, comprising 209,319 Greek Catholics, 33,396 Mohammedans, and 726 Jews. Compared with 1881 there were 212,254 more Greeks and 39,855 fewer Mohammedans. The number of foreigners in 1900 was 6,096, including 3,593 Hellenes and 1,701 Turks. Canes, the capital, had 21,025 inhabitants; Candia, 22,351.

Revenue.—The revenue for the year ending Aug. 31, 1901, was estimated at 6,471,860 drachmas, and the expenditure at 6,281,277 drachmas. The revenue is derived mainly from direct taxes and from public debts. The total population in 1899 was 689,486, including 29,510 drachmas for justice. The intervening powers promised to advance 4,000,000 drachmas to Crete, and Great Britain and Italy did advance 1,000,000 each in 1899. They were comparatively unaffected. They reaped an abundant grain harvest in 1902 and the grape and olive crops were excellent.

CUBA, a republic in the West Indies. By the treaty of peace at that time, the United States and Spain signed at Paris on Dec. 10, 1898, Spain relinquished the sovereignty of Cuba and the United States assumed the obligations for the protection of life and property of the United States troops, already in occupation of parts of the

Vol. XII. - 14 A
inland, replaced the Spanish garrison when it was withdrawn in December, 1898. The President of the United States appointed a military Governor-General at the head of the administration which the United States undertook to carry on pending the establishment by the Cubans of a settled Government capable of fulfilling international obligations and doing justice to the United States. The first Governor-General, was succeeded, on Dec. 20, 1899, by Brig.-Gen. Leonard Wood. On July 25, 1900, the President of the United States directed that a call be issued for the election of members of a constitutional convention to frame a Constitution for Cuba on such a basis as would insure a stable, independent Government. By order of the military Governor-General the election took place on Sept. 15, 1900, and the convention assembled at Havana on Nov. 5, 1900. Governor-General Wood informed the delegates that it was their duty to frame and adopt a Constitution adequate to secure a stable, orderly, and free Government, and to formulate the relations which, in their opinion, ought to exist between Cuba and the United States, after which the Government of the United States would doubtless take such action as would lead to a final and authoritative agreement between the people of the two countries to the promotion of their common interests. The Constitution was completed and adopted by the Convention on Feb. 11, 1901, and was signed on Feb. 21, 1901. Conditions demanded by the President and Congress of the United States were on June 12, by vote of the convention, embodied in the Constitution. These were that Cuba shall make no treaty which may place her in jeopardy of the independence of the island or any portion thereof; that no loans shall be issued unless a surplus of revenue is available for the service of such obligations; that the acts of the United States military administration were recognized as valid; that proper hygienic measures must be taken to protect public health; that the question whether the Isle of Pines belongs to the United States or to Cuba shall be referred to a Commission; and that the Cuban Constitution vests the legislative power in a Congress consisting of a Senate of 36 members, 6 from each department, and a House of Representatives having as many members as the population contains multiples of 35,000. Senators are elected by the municipalities for six years, one-third retiring every two years. Representatives are elected in separate districts for four years by universal adult male suffrage. The executive power is committed to a President, who, with the Vice-President, is elected for four years by popular suffrage through colleges of electors. Each voter ballot for only two-thirds of the electors allotted to his department. Each department has a Governor and an Assembly elected by popular suffrage for three years. Departments and municipalities have a large measure of local self-government, with power to raise revenues and contract loans. Municipal government is carried on by a mayor and an elective municipal council. Senators and representatives residing in Cuba at the time of the adoption of the Constitution may adopt Cuban citizenship at their option, and so can all Cuban-born children and persons residing in Cuba of foreign birth. The Constitution guarantees freedom of speech, of the press, and of religious worship. Prisoners can not be detained longer than twenty-four hours without judicial authority. The civil and criminal laws can be framed and amended only by Congress, which also has sole power to regulate railroads and telegraphs. Major-Gen. Leonard Wood was military Governor-General at the beginning of 1902. The first Cabinet was composed as follows: Secretary of Foreign Affairs and of the Interior, Diego Tamayo; Secretary of Agriculture, Commerce, and Industry, Perfecto Lacoste; Secretary of Justice, Varela; Secretary of Public Instruction, Varola; Secretary of Finance, Canio; Secretary of Public Works, Villan; Secretary of the Treasury, Roloff. The military commandant of the Oriental Department, with headquarters at Santiago, was Col. Samuel M. Whitls. Gonzales de Quesada was Cuban commissioner at Washington.

Area and Population.—The area of Cuba is 35,994 square miles. The population by the census of Oct. 1, 1899, was 1,572,197. The area and population of the provinces which now constitute the departments of Cuba are shown in the following table:

In Havana province there were 187 inhabitants to the square mile; in Matanzas, 58; in Santa Clara, 47; in Pinar del Río, 34; in Santiago, 32; in Puerto Príncipe, 12. Of the total population 910,299, or 57.92 per cent., were native whites, divided into 447,373 males and 462,926 females; 142,198, or 9.05 per cent., were foreign whites, divided into 115,740 males and 26,458 females; 254,638, or 14.91 per cent., were negroes, divided into 111,898 males and 122,740 females; 270,805, or 17.21 per cent., were of mixed white and negro blood, divided into 125,500 males and 143,305 females; 14,379, or 0.87 per cent., were mulattoes, divided into 14,694 males and 163 females. Of the total population 513,205 were males and 537,592 were females. The total number of colored inhabitants was 443,848; of whom 299,197 followed agriculture, mining, or fishing, 141,936 domestic service, 93,034 manufactures, 79,427 commerce and transportation, and 8,736 the professions. The illiterates among adult male white Cubans numbered 94,301, and among the colored 78,279. Education has been compulsory since 1880.

Commerce and Production.—There were 90,000 estates in Cuba in 1891, of the total estimated value of $220,000,000, the annual rental being estimated at $17,000,000. The total value of imports in 1900 was $847,760,000, and of exports $47,643,000, and other foreigners residing in Cuba in 1891. Of the imports into the United States were $31,371,704 in value, and exports from the United States to Cuba were $286,513,813. In 1901 the imports of Cuban produce into the United States were $43,429,988, and United States exports to Cuba $23,964,801. The chief
imports of Cuban produce into the United States in 1900 were sugar for $18,245,839 and tobacco for $6,705,531, and among the exports of United States produce to Cuba were provisions for $5,214,489, iron and steel manufactures for $3,717,217, breadstuffs for $2,122,553, lumber for $2,122,553, and cattle for $2,045,710. In a special message to the Cuban Congress President Palma requested Congress to pass laws for the reestablishment and development of stock-raising, suggesting that measures be taken to stimulate private enterprise, especially by removing all duties from cows and from bulls of established breeds, stallions, and jacksasses, also for one year from fencing wire. He proposed to prohibit the slaughtering of cows fit for breeding. Of 16,000,000 acres now unproductive, more than half the area of Cuba, nearly the whole is good grazing ground, capable of supporting 4,000,000 head of stock. President Palma estimated that in the first year of his administration 400,000 cattle would arrive, the average consumption for food being 300,000. Half of those arriving he thought ought to be pastured for six months before slaughtering, insuring an addition to the national income estimated at $2,000,000, and he suggested prohibiting the slaughtering of lean cattle for three months after importation.

Railroads, Posts, and Telegraphs.—There are 950 miles of railroads, of which British companies own 551 miles. The length of telegraph lines is 2,300 miles, with 3,450 miles of wire.

Establishment of the Republic.—An electoral law was framed by a committee of the constitution convention, passed January 22, 1902, presidential elections were chosen, who, on February 24, 1902, elected Tomas Estrada Palma President of the republic and Severo Esteban Vice-President. In fulfillment of the joint resolution of the United States Congress, approved on April 20, 1898, for the recognition of the independence of the people of Cuba, demanding that the Government of Spain relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to take such measures as the United States may deem necessary to carry into effect the resolutions of the United States to carry these resolutions into effect, the President of the United States was authorized in the army appropriation act approved on March 3, 1899, to move troops and naval forces of the United States to control the island of Cuba to its people so soon as a Government shall have been established under a Constitution which, either as a part thereof or in an ordinance appended, defines the future relations of the United States with Cuba in substantial agreement with the Platt amendment. These provisions are that the Government of Cuba shall never enter into any treaty, compact or agreement with any foreign power which will impair or tend to impair the independence of Cuba, nor in any manner authorize or permit any foreign power or powers to obtain by colonization or for military or naval purposes or otherwise by force or control over any portion of the island; that it shall not assume or contract any public debt to pay the interest upon which, and to make remittable sinking-fund provisions for the ultimate discharge of which, the ordinary revenues of the island, after defraying the current expenses of government, shall be inadequate; that it consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of Government adequate for the protection of life, property, and individual liberty, and for discharging the obligations imposed by the treaty of Paris on the United States, now to be assumed and undertaken by the Government of Cuba; that all acts of the United States in Cuba during its military occupancy be ratified and validated, and all lawful rights acquired thereunder maintained and protected; that the Government of Cuba execute and as far as necessary extend the plans already devised or other plans to be mutually agreed upon for the sanitation of the cities of the island to the end that a recurrence of epidemic and infectious diseases may be prevented, thereby assuring protection to the people and commerce of Cuba, as well as to the commerce of the Southern ports of the United States and their residents; that the Isle of Pines be omitted from the proposed constitutional boundaries of Cuba, the title thereto being left to future adjustment by treaty; that to enable the United States to maintain the independence of Cuba and to protect her people, as well as for its own defense, the Government of Cuba sell or lease to the United States lands necessary for coaling or naval stations at certain specified points to be agreed upon with the President of the United States; and that by way of further assurance the Government of Cuba embody these in a permanent treaty with the United States.

These conditions having been fulfilled, President Roosevelt in a message to Congress dated March 27, 1902, recommended measures for diplomatic and consular representation in Cuba. The people of Cuba having framed a Constitution and elected a President, preparations were made by the Secretary of War to terminate the military occupation and permit the installation of the Government of Cuba on May 20. The Cuban Senate and House of Representatives was convened by Gov. Wood on May 5 to pass on the credentials of their members, after which they officially informed the American military Governor of the election of Estrada Palma as President of the republic. President Palma selected his Cabinet on May 17 from both the Nationalist and Republican parties and included one Independent. It was composed as follows: Secretary of the Interior, Rufino Méndez; Secretary of Sanitation, the Post-Office, and the Signal Service, Diego Tamayo; Secretary of State and of Justice, Carlos Zaldío; Secretary of Agriculture, Emilio Torremendo; Secretary of Work, Manuel Luciano Diaz; Secretary of Public Instruction, Evaristo Yero; Secretary of Finance, García Montes. Gov. Wood formally transferred the government and control to President Palma and the Cuban Congress on May 20, advising them that the transfer was made on the understanding and condition that the new Government, pursuant to the appendix to the Cuban Constitution adopted by the constitutional convention on June 12, 1901, assumed the obligations which the United States had assumed with respect to Cuba by the treaty with Spain signed at Paris on Dec. 10, 1898. The judicial and subordinate executive officers appointed by the Governor of occupation continued in the discharge of their functions, except such of them as Gov. Wood had already replaced with nominees of the President-elect, and all the laws promulgated by the provisional military Government remained operative until superseded by the new Government. Gov. Wood, in the proclamation of transfer, recited the obligations imposed on Cuba in her relations with the United States by the American Congress as contained in the appendix to the Cuban Constitution of
Feb. 21, 1901, as a part of the organic law of the 
Cuban Republic. He read a message from the 
President of the Provisional Government declar- 
ing the American occupation at an end, and then lowered the American flag and raised the Cuban flag. The 
United States garrison had been gradually with- 
drawn, and the naval forces left with Gen. 
Wood. The forces of 800 of the coast-artillery, left 
to care for three batteries on the coast until these 
should be replaced by a Cuban force. The Cuban 
Congress met and proclaimed the Constitution as 
soon as the Government was installed. President 
Palm in his message to Congress on May 28 
said that the motive of the United States in 
aiding with Cuba in her fight for independence 
was purely disinterested and that Cuba is ca- 
ble of fulfilling all the obligations and promises 
she has contracted. The budget, however, should 
be prepared with care. Cattle-raising and 
encouraged and agricultural stations established to improve the methods of culture of 
sugar and tobacco, and agricultural industries of 
various kinds should be introduced. The crisis 
in the sugar industry was due to the excessive 
production of beet-sugar in Europe. An 
important remedy would be the reduction of the 
American tariff charge on sugar, to obtain which he 
devoted his efforts. If the Government would also devote attention to education and encourage the construction of railroads, he 
at the same time protecting the capital already invested in Cuba must improve cordial relations 
with all nations and secure favorable treaties of 
amity and commerce, and must also take special 
care that her relations with the United States are 
of the freest character. The Government of 
the new Cuban Republic pardoned all convicts in 
America, including the post-office officials Neely, Reeves, and Rathbone, sentenced for ten years. On Aug. 
10 Señor Terry offered his resignation as Secretary 
of Agriculture. The State Department at Wash- 
ington decided that the Isle of Pines passed under 
Cuban control when American authority over 
Cuba was withdrawn and must remain so until 
the question of its ownership is settled by treaty. 
American settlers, who have obtained half the 
grazing ground that constitutes the chief wealth 
of Cuba, are under the protection of the United States Government because 
the Cuban Government neglected to exercise any 
authority or jurisdiction. Rear-Admiral R. B. 
Becraft, who inspected the naval and 
station in the West Indies, recommended that 
the protection of United States stations 
be located at Nipe Bay and at Cienfuegos. 
By means of these the United States could 
control the passes leading to its coasts from the 
Caribbean Sea. The Cubans were not inclined to 
possess these selections except the one that the 
American naval expert considered the most 
important of all, the one in Havana harbor, com- 
mmanding the Bahama, Florida, and Yucatan 
channels and the entrance to the Gulf of Mexico. 
Although it insures the Cuban capital against 
attack without cost to Cuba and provides em- 
ployment and remuneration for many individual Cubans, they would chafe to see the United States 
flag flying in Havana harbor, to be saluted equally 
with the Cuban flag by foreign ships as they enter. It had long seemed an emblem of American 
suzerainty and a sign of their vassalage, and 
appeared to be unnecessary, since without such fortifi- 
cation station the United States could use Havana 
as a naval base in time of war. The Isle of 
Pines, having no good harbor, is valueless for 
a naval or coal station. While the American 
settlers and some of the other inhabitants peti- 
tioned for annexation for nations declaratory 
that the United States, it was asked that it be permitted to remain attached to 
Cuba. It is claimed by Cuba as an island adjacent 
away from the United States, and the House of Representa- 
tives, at the suggestion of Mr. Roosevelt, in his 
message to Congress of March 27, said that the 
commercial and political conditions in the island 
of Cuba while under the Spanish Crown afford 
little basis for estimating the local development of 
tercourse with this country under the influence 
of the new relations which have been created by 
the achievement of Cuban independence and 
which are to be broadened and strengthened in 
every proper way by conventional pacts with the 
Cubans and by wise and beneficent legislation 
aiming to stimulate the commerce between the 
Cuba and the United States. In 1889 it is to be 
fittingly accomplished. Even the 
measure of reciprocity contained in the bill before 
Congress was strongly opposed by a section of the 
party. The Republican party, by the 
decision of the party, pronounced by a major-
DENMARK. 213

ity vote of 54 in the caucus. Early relief was necessary to enable the Cuban planters to market their crop. When a majority of Republicans in the Senate refused to sanction the reciprocity measure, and it could not therefore be put to a vote, President Roosevelt, on June 12, sent a special message to Congress in response to an appeal from President Palma for legislative relief before it is too late and Cuba is financially ruined. Mr. Roosevelt considered that the Cuban question stood alone, and did not raise the question of tariff revision; nor would any American industry be injured, but many would benefit, and the growing Cuban market should be controlled by American producers. If Cuba was expected to treat the United States on an exceptional footing politically, she should be put economically in an exceptional position in relation to the United States. To give all possible chance to the young republic to use to advantage the freedom for which many American lives have been sacrificed was the plain duty of a wealthy and powerful nation like the United States. The national honor was pledged to give the relief needed. Mr. Roosevelt suggested that the substantial benefit of a reduction of duties should go to Cuban producers, not to American sugar-refiners, and advised against recourse to a bounty in the form of a rebate. The deadlock was not broken by the President's message nor by the endorsement of his policy by one Republican State convention after another. The Spooner bill providing for a 20-per-cent. reciprocal reduction of duties for five years, which was amended in the House by a provision to abolish the differential duty protecting American refiners, though retaining the countervailing duties on bounty-fed sugar, was recommended by the Senate Committee on Cuban Relations, considered in a conference of Republican Senators, but the minority opposed to reciprocity remained firm and unbroken. Meanwhile the industrial situation in Cuba grew more acute. Planters were unable to borrow more money to give employment to laborers, and distress prevailed throughout the island. Starvation was in sight, and disorder as its sequel. The finances of the republic were in such shape that there was scarcely money enough to meet expenses. Early in August the Cuban Congress discussed a bill for raising a loan of $4,000,000 at 5 per cent., redeemable in thirty years, to be issued at 90, the proceeds to be devoted to the assistance of cane-growers. It was proposed to issue six months later a loan of $35,000,000 on the same terms, with the customs receipts as security, for the purpose of paying the Cuban army and discharging debts mentioned in the Constitution. A tariff bill was passed increasing to 50 per cent. the duties on fresh and salt beef and pork, codfish, rice, wheat-flour, eggs, coffee, olive-oil, and beer; those on cheese, butter, and snuff, 47 per cent.; on American sugar-refiners, and advised against recourse to a bounty in the form of a rebate. The deadlock was not broken by the President's message nor by the endorsement of his policy by one Republican State convention after another. The Spooner bill providing for a 20-per-cent. reciprocal reduction of duties for five years, which was amended in the House by a provision to abolish the differential duty protecting American refiners, though retaining the countervailing duties on bounty-fed sugar, was recommended by the Senate Committee on Cuban Relations, considered in a conference of Republican Senators, but the minority opposed to reciprocity remained firm and unbroken. The population, not including that of the Faroes, was divided into 1,185,448 males and 1,235,092 females. The increase in population since 1890 was 12.75 per cent., annual increase 1.1 per cent. The increase in the urban population was 29.7 per cent., and in the rural population 4.3 per cent. The population of Copenhagen with its suburbs was 478,235; with suburbs, 478,235. Aarhus had 51,814 inhabitants; Odense, 40,138; Aalborg, 31,457. The number of marriages in 1900 was 9,090; of deaths, 4,994; of births, 31,217. The emigration, mainly to the United States, was 3,570.

FINANCES.—The revenue for the year ending March 31, 1901, was 78,859,567 kroner; expenditure, 78,859,529 kroner. For 1902 the revenue was estimated at 71,512,513 kroner and expenditure at 72,077,975 kroner. The budget estimate of revenue for the year ending March 31, 1903, was 72,871,598 kroner, of which 927,892 kroner are a balance from domain revenues, 3,239,923 kroner are interest on state assets, 10,886,300 kroner come from direct taxes, 51,405,830 kroner are from customs, excise, and other indirect taxes, 136,006 kroner are net revenue from posts and telegraphs, 1,090,000 kroner are the balance accruing to the state from lotteries, 549,377 kroner are separate revenues, and 4,636,468 kroner are revenue from employment of capital and funding of debt. The total expenditure was estimated in the budget at 72,388,598 kroner, of which 1,203,200 kroner are the civil list and appanages, 532,032 kroner are expenses of the Rigs- dag and the Council of State, 7,041,384 kroner are the public debt charges, 3,577,130 kroner are military pensions, 739,300 kroner are for the Ministry of Foreign Affairs, 2,844,977 kroner for the Ministry of Agriculture, 6,035,954
kroner for the Ministry of the Interior, 4,380,168 kroner for the Ministry of Justice, 6,870,705 kroner for the Ministry of Finance, 7,144 kroner for the Ministry of Instruction, 10,228,370 kroner for the Ministry of War, 6,742,635 kroner for the Ministry of Marine, 4,164,765 kroner for the Ministry of Finance, 7,144 kroner for the Ministry for Iceland, 3,836,304 kroner for extraordinary state expenditure, and 13,646,139 kroner for improvement of state property and reduction of debt. The reserve fund kept at the disposal of the Government to provide for sudden emergencies amounted on March 31, 1901, to 17,881,915 kroner. The actual revenue for the financial year 1902 amounted to 96,600,000 kroner and expenditure to 76,700,000 kroner. The receipts included 30,000,000 kroner of the loan concluded in 1901, of which 10,000,000 kroner were used, leaving 20,000,000 kroner unexpended and a total balance in the treasury of 40,000,000 kroner on March 31, 1902. In the budget for the year ending March 31, 1904, the revenue is estimated at 70,200,000 kroner, including a balance in the treasury on April 1, 1903, estimated at 11,000,000 kroner, and the expenditure is estimated at 74,500,000 kroner, showing a probable deficit of 4,300,000 kroner. The public debt at the end of the year, by the aid of which the public debt was reduced Denmark in the first rank of railaying countries, and not only restored but augmented the former prosperity. There were exported 40,578 cattle, 20,643 horses, and 20,432 head of hogs in 1903. The quantity of beetsugar produced was 49,675 tons. The manufacture of oleomargarine was 18,254 tons. There were 21,878,576 gallons of beer brewed, and the distillation of spirits amounted to 747,945 gallons. The catch of fish in 1890 was valued at 7,455,711 kroner. The total value of imports in 1900 was 528,263,000 kroner; of domestic exports, 201,919,000 kroner; total exports, 393,570,800 kroner. The special imports were valued at 416,200 kroner, of which 96,200,000 kroner represent food substances, 81,300,000 kroner articles for personal or domestic use, 43,100,000 kroner fuel, 71,300,000 kroner seeds, manure, and fodder, and 124,300,000 kroner raw products. Of the domestic exports 235,500,000 kroner represent food substances, 42,000,000 kroner colonial produce; of the imports 7,655,000 kroner and of the exports 3,445,000 kroner were beverages; of the imports 58,372,000 kroner and of the exports 6,306,000 kroner were textile manufactures; of the imports 47,081,000 kroner and of the exports 12,079,000 kroner were metals and metal manufactures; of the imports 25,820,000 kroner and of the exports 21,852,000 kroner were timber and wood manufactures; of the imports 47,362,000 kroner and of the exports 4,470,000 kroner were coal; of the imports 2,513,000 kroner and of the exports 1,339,000 kroner were live animals; of the imports 52,037,000 kroner and of the exports 21,288,000 kroner were dairy produce and provisions; of the imports 66,873,000 kroner of the exports 13,339,000 kroner were cereals. The values in kroner of the commerce of Denmark with various foreign countries in 1900 are given in the table on the next page.

The imports of Danish bacon into Great Britain increased from £67,190 in 1870 to £26,925,625 in 1900; exports of eggs, from £67,658 in 1870 to £29,255,761 in 1900; and in the later year £32,035,792 of Danish bacon was imported.

**Navigation.**—The number of vessels in the foreign trade entered at Danish ports during 1900.
was 33,389, of 2,913,849 cargo tons; cleared, 34,315, of 844,667 tons of cargo. There were 33,850 vessels entered and 33,667 cleared coastwise. The merchant fleet of Denmark and the colonies comprised 3,252 sailing vessels above 4 tons, of 158,305 tons, and 521 steamers, of 230,337 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1901 was 1,810 miles, of which the state owned 1,108 miles, built at cost of 247,546,911 kroner. The number of letters and postal cards carried in the mails in 1900 was 95,714,494; of newspapers, circulars, samples, etc., 87,321,958.

The Government telegraph lines in 1900 had a total length of 2,413 miles, with 8,601 miles of wire. The length of telephone lines was 1,351 miles, with 2,620 miles of double and 566 miles of single wire.

Colonies.—Iceland has an area of 39,750 square miles, a small part of which is productive. The population in 1900 was 70,927. The imports in the value of 33,997,000 kroner, and exports at 2,993,000 kroner. The coast and deep-sea fisheries are the principal resource of the population. Fishermen from all the countries bordering on the North Sea visit the fishing-banks. The Althing, the autonomous legislature, passed a law in 1898 by which trawling in Icelandic waters is prohibited, and inhabitants of the island are forbidden under penalties of imprisonment to aid or abet trawling. Fishing with trawling-nets from steamers has depleted the fisheries on which Icelanders depend for a living, and therefore the territorial waters have been closed to them, and by the treaty with the United States are subject to American jurisdiction, but too far from Iceland to be of much value to the British.

The fisheries of Denmark and the colonies are so valuable as to be a source of national wealth. The importers are engaged in these trades, and the trade is carried on by the government.

The Danish colonial possessions in the world, are visited every year by Government steamers which bring the supplies they need and take away the oil, furs, and other Arctic products, which are purchased by the Government and resold in Europe. The value of imports in 1900 was 831,000 kroner; of exports, 840,000 kroner.

The Danish West Indies are the islands of St. Croix, St. Thomas, and St. John. When the West Indian islands were in a more prosperous condition than at present the sugar, rum, and molasses of the Danish Antilles found a ready market in the United States. Of late years they have suffered more than most of the other islands from the depression in their main industries. Negotiations have been going on for years looking to their transfer by purchase to the United States (see West Indies).

Legislation.—The question of the sale of the West Indian possessions of Denmark to the United States was the main subject of discussion in the Rigsdag in 1902. The treaty for their transfer was signed at Washington on Jan. 24, 1902. It was ratified by the United States Senate on Feb. 17. The Danish Steamship Company, which has a large traffic in the Atlantic, opposed the sale, and it was distasteful to the upper classes of Denmark. The signing of the Brussels sugar convention seemed to promise economic advantages for the islands, and the treaty for the islands. When the treaty was laid before the Folketing its opponents debated long against it, but it was ratified on March 18 by an overwhelming majority. The bill to reject it outright and 19 withholding their votes, desiring the matter to be left to a vote of the people of the islands. This proposition found favor in the Landsting, which voted to delay the decision until the qualified electors of the islands indicated their desire by a plebiscite. Meanwhile various enterprises designed for the economic benefit of the islands were promoted in Denmark, chief of which was a new steamship company to start a regular service between the North Sea and Gulf ports, and a plantation company, which intended to buy up land in the islands and have it cultivated scientifically by Danish agriculturists. Objections were made to the treaty on the ground that it did not secure to the islands American citizenship and free trade with the United States. The treaty was ratified by the United States Government had stipulated for these privileges. The Folketing would not accept the provision inserted by the representatives of the island who have the right to vote for members of the colonial councils first take a vote on the question, but agreed by 96 votes to 2, with 5 abstentions, to have a plebiscite taken of all the male inhabitants of the islands, as was done in 1887, when the former treaty for the sale of the islands was made, which failed of ratification in the United States Senate. The plebiscite by 33 votes to 30 insisted on its own amendment, and the matter had to be postponed till another session. The elections to the two colonial councils, to whom the Conservative majority in the Landsting proposed to refer the question, are only 366 in number, while the adult male population exceeds 6,000. There was a possibility that the voters might pronounce in favor of the sale by a slight majority. The amendment of the Landsting was therefore framed so that the Rigsdag would not be bound by the vote unless the feeling in favor of the sale was indicated by it was undoubtedly in favor of the sale. The Agrarians, who constituted an overwhelming majority of the voters of Denmark, were
united in their desire to relieve the country of the financial burden and the trouble of these distant negro colonies. The bankers and merchants of Copenhagen, the university men, and the court circle were as strongly bent on keeping the islands for Denmark. Since ratifications could not be exchanged by the date fixed, July 24, 1902, the time for ratification was, at the proposal of Mr. Hay, extended for a year.

Negotiations for the sale of the Danish Antilles to the United States have been resumed several times since the conclusion of the abortive treaty of 1867. The latest negotiations were suggested to Mr. Hay by a Danish adventurer named Christmas, who brought the information that overtures for the purchase of the islands would be favorably received at Copenhagen. Horace White, secretary of legation at London, was entrusted with an informal mission early in 1900 to sound the views of the Danish Government. Admiral N. F. Ravn, Minister of Marine in the Hithing Cabinet, who was also provisional Minister of Foreign Affairs, was ready to discuss the matter with Mr. White, but turned Christmas, who accompanied him, out of his office. Christmas returned to the United States, pretended to have a part in the business in association with other lobbyists and go-betweens, on the basis of which he demanded money from the Danish Government. His claims were denied, and when the contest over the ratification of the treaty began he turned to the opponents of the sale and supplied them with scandalous tales of secret corrupt dealings. It was asserted that Danish ministers had promised a large sum to be expended in influencing state senators and legislators in Washington and the American press and that he had paid over money for these purposes.

The Rigsdag increased postage rates, chiefly in order to give better pay to employees. The session was closed on May 17 after the Folketing had spent over half a year on the budget, and left it with a prospective deficit of 5,500,000 kroner, making larger military appropriations than the Conservative ministries had ever obtained, yet accomplishing none of the fiscal reforms that Radicals and Social Democrats have called for, such as the abolition of tithes and revision of the whole system of taxation. The Government pronounced that the demands of the Danes for Danish desired to be neutral in all European wars, such as had been made before, and in a consultation with the Cabinets of Sweden and Norway, the political assent of the Scandinavian nations making simultaneous declarations was considered. Elections were held on Sept. 20 to replace half the members. The old Conservative party lost its small majority. Of the new Lands thing 29 were Extreme Conservatives, 8 Independent Conservatives, 3 Conservatives not belonging to any faction, and 25 Radicals, including 1 Social Democrat.

DISCIPLES OF CHRIST. The report of the statistical secretary presented to the General Missionary Convention at Omaha, Neb., in October, furnished the following summaries of the churches of the Disciples of Christ: Number of churches, 10,957; of communicants, 1,207,377; of Bible schools, 8,271, with 796,699 pupils, officers, and teachers; of ministers, 6,477; showing gains for the year of 84 churches, 20,836 members, 259 Bible schools, 22,158 members of Bible schools, and 94 ministers. The report gave as the money raised by the Convention $25,720, including $8,000 for an annuity fund, $18,000 for the Church Extension, and $485 for the Board of Ministerial Relief. The sum of $25,720 had been received in annuity funds, being a gain of $10,020 over the previous year. The Board of Ministerial Relief had raised $9,326 during the year. The Board of Church Extension returned $54,866 of new receipts, $37,551 received from returns of loans, and $16,000 from the sale of land, which, with $84 for insurance, made its total receipts $108,501, showing a net gain of $4,850 over the previous year. Its permanent raising of the fund amounted to $4, from the operations of $180,656 had been returned on loans. $60,289 had been received in interest, 655 churches had been aided, and 249 churches had
ERUPTIONS. The year 1902 was one of unusual volcanic and seismic activity. In Mexico, Guatemala, the West Indies, the Aeolian Islands, and Russia severe disturbances occurred, accompanied by great loss of life, while the volcanoes of Vesuvius and Mauna Loa, displayed marked activity. But two apparently quiescent and long-forgotten volcanoes gave the most striking exhibitions of the impotency of man against the wrath of nature. In one terrible moment a great blast of hot ashes, rocks, and poisonous gases rolling down from the crater of Mont Pelée, in the island of Martinique, wiped out of existence the beautiful city and commercial center of that island and destroyed its entire population of 30,000, except one who escaped, and that one, a commander who more carefully than they are studied in any other part of the world, 1,000 earthquakes have been recorded annually without any unusual volcanic disturbances. However, on Jan. 16, a section of country on the western coast of Mexico was violently shaken, destroying several cities and towns. The earthquake was felt in the City of Mexico, where the people, rushing from their dwellings, crowded beyond the city gates. Telegraph-poles swayed like trees in a gale, but no particular damage was done, and within thirty seconds it was all over, the earth resuming its normal condition of quiescence. But Chilpancingo, the capital of the state of Guerrero, which appears to have been in the center of the earthquake zone, was almost totally destroyed. The earthquake occurred on a quiet, pleasant afternoon, about twenty minutes past five o'clock. The ground heaved and shook with such force that not a building was left in Chilpancingo without some damage. The disturbance began with a slight tremor of the ground, accompanied by a rumbling noise such as that made by a heavy truck driven over a roughly paved street. The rumbling swelled, and then distinct oscillations of the ground were felt, and then came an upheaval and a crash. Walls fell outward, roofs fell in, and clouds of dust ascended amid the shrieks of the wounded and dying and panic-stricken. In their wild terror those who could escape fled over the broken ground. The street that they fled on was their way, never stopping to look back, nor heed ing the cries of the maimed, till they had reached the open fields, the usual goal of safety in countries where the people are accustomed to these violent shakings. As the clouds of dust cleared away and the calmer people looked about them, they saw only their ruined town with its streets blocked with the ruins of their houses. The domed roof of the old Spanish church in which the Mexican Declaration of Independence was signed and in which the houses of their patriot, Gen. Bravo, repose had fallen in, burying beneath it two women who were praying. The pedestal that had supported a statue of the general in the little park fronting the church, now supported only a pair of legs, while the body of the statue lay in two pieces on the ground. The belfries of the two churches were cracked from top to base, and the roofs of one-story houses were shaken in and their walls of solid masonry cracked. Comparatively speaking, there was only small loss of life, owing to the fact that the people fled from their houses upon feeling the first tremor of the earth's crust. At Chilapa, another epicenter was the zone of the shaking, which suffered greatly, the people were gathered in the open plaza, looking at a tight-rope performer. This resulted in many lives being saved that would have otherwise been buried under falling débris; but many people went insane with fright, while many contended
that the earthquake was sent in punishment of
the sacrilege that had been committed in allowing
the performer to tie one end of his rope to the
church tower.

A series of earthquake shocks were reported
from Guatemala on April 8, and on the night of
the 18th they were of such severity that they were
recorded by the seismograph in the Isle of Wight,
and might have been recorded in any part of the
world. It appears that on this night the Cordill-
eras of Central America were relieved of their
seismic strain; villages and towns were shat-
tered and earthquake waves passed over the
world, and other unusual phenomena were re-
corded. On April 23 Mont Pelée showed a plume
of smoke, and on May 3 it showed a fiery glow
at night from the incandescent lava within its
crater. There were slow rumblings in the near-
boring island of St. Vincent, and its long-extinct
volcano, La Soufrière, began its eruptions two
days later. On May 8 a geyser or boiling lake
in Dominica, about 300 feet in length by 200 in
breadth, disappeared completely. About the same
time it was reported from Tacoma that Mount
Redoubt, Cook inlet, in the State of Washington,
was pouring forth dense volumes of smoke, and
that it had become luminous in the night. Vol-
canic ashes fell, and snow near the mountain
was covered with ashes. The last eruption of
Mount Redoubt occurred in 1867. On May 31
earthquake shocks were felt in various parts of
Greece.

Lack of available means of transit comparat-
ively shuts off Guatemala from the rest of the
world, and it was not till about the time the world
was horrified with the news of the eruption of
Mont Pelée and the wiping out of the city of St.
Pierre, as also that of La Soufière, that definite
news came from the Central American republic
that its second largest and richest city, Quezal-
tenango, had been completely destroyed by an
earthquake, undoubtedly the one that had been
recorded on the Isle of Wight in the night of
April 18. Quezaltenango was a well-constructed

City of many imposing edifices of lime and stone
construction, with an estimated population of 25,000
to 30,000 inhabitants. It is supposed by some
to have been built within the crater of an extinct
volcano, but this is doubtful, the belief having
originated from the fact that it is surrounded by
high, jagged mountain peaks at an elevation of
8,000 feet above the sea. The only reliable ac-
count of the seismic disturbances that shook the
Cordilleras and finally destroyed this city ap-
ppears in a communication from Edwin Rockstroh,
a German for a long time in the employ of the
Guatemala Government as an engineer. He says
that at 8:25 p.m., April 18, an earthquake of more
than thirty seconds duration affected a large part
of Guatemala, eastern Chiapas, and western
Salvador and Honduras. The intensity of the
movement was greatest in western Guatemala,
where the second and richest city of the country
was completely destroyed, with the loss of about
500 lives. The cities of Sololá, San Marcos, and
its sister town, San Pedro Sacatepéquez, were also
completely ruined, with a loss of more than 200
lives. Retalhuleu and Mazatenango, important
towns on the Pacific coast plain to the south of
Quezaltenango were also ruined. The cities that
were most violently shaken were those on the
highlands a little north of the great volcanoes
that rise in the vicinity of Quezaltenango. Be-
sides the cities named, nearly every town and
hamlet in the Department of San Marcos, Quezal-
tenango, Retalhuleu, and Suchitepéquez, and
several in Chimaltenango, suffered, and nearly
every one of the many important coffee and sugar
plantations in the western coast regions had its
buildings, aqueducts, and machinery shattered.
At the port of Ocos only 3 houses remained
standing, and the pier extending into the sea was
broken in two. Later it was reported that Ocos
was sinking beneath the sea. The railways be-
tween Retalhuleu and the port of Champerico,
and the one between Ocos and Coatepeque, were in-
terrupted by the falling of bridges and other
damage. Until May 5 earthquakes were frequent,
extending from Guanac, near the Atlantic coast,
to the west, near the Pacific.

It was on the night of May 3 when Mont Pelée
began to throw large quantities of scoriaceous
and volcanic ash into the surrounding country, and
on May 3, two days later, a stream of lava rushed
down the mountainside, reaching the sea 5 miles
distant, in three minutes, it is said. When the
red-hot stream met the sea the water receded
300 feet on the beach, mingling with great force.
Two days later, May 7, a hot blast from the volcano engulfed the town of St.
Pierre, destroying everything. Almost simultane-
ously with the outbreak of the Martinique vol-
cano occurred that of La Soufrière, in St. Vin-
cent.

Forming the arc of a circle, roughly speaking,
a string of islands extends around the western
border of the Caribbean Sea, from Porto Rico
to a point near the continent of South America.
The group begins with Saba on the north, and
ends with Grenada on the south, near the large
island of Trinidad. In this group lie the islands
of Martinique and St. Vincent. The islands ap-
ppear from the sea like mountain peaks, and geol-
ogists tell us that they are merely ancient ash
heaps over which time has weathered a soft
and moisture has nursed a luxuriant tropical vegeta-
tion. On all of the larger ones there are evidences
of their volcanic origin in the form of craters
and boiling springs; but, with the exception of
St. Vincent, none of them seemed to have suf-
fured from any severe eruptions since they were
discovered four hundred years ago; and to such an extent did the inhabitants of Martínique consider themselves as enjoying immunity from such disturbances that they spoke of Mont Pelée, which overshadowed them at a height of 4,428 feet, as an extinct volcano. St. Vincent's volcano, La Soufrière, erupted in 1812, and Caracas, the capital of Venezuela, was destroyed about the same time, when the entire city was shaken down and 10,000 people lost their lives. This fact merits attention because about three months previously to the recent eruption of La Soufrière Caracas and the country about it suffered from considerable seismic perturbation. In both instances the disturbances in the northern part of Venezuela preceded the eruption of the St. Vincent volcano.

La Soufrière mountain rises to an altitude of 3,500 feet. Previously to the recent eruption it had two craters, Old and New. The first was 3 miles in circumference and 500 feet deep, and was separated from that which was known as the new crater, formed in 1812, by a ridge of igneous rock. The Old crater was half a mile in diameter, with a beautiful lake at the bottom, walled in by rocky cliffs to a height of 800 feet, covered with verdure, and fringed over the top with a growth of cedars, and the water from the lake ascended in a stupendous cloud of steam and exploded high in the heavens. Explosions and noises continued till May 6, when a great explosion proceeded from La Soufrière; the old crater and the ridge between were belched forth smoke and stones, forcing the inhabitants of Wallabou and Richmond valley, beneath the volcano, to fly to Chateau Belair for refuge. At midnight a beautiful shower of sand came down from the crater; the lake was destroyed and a school-building and a church suffered severe damages. The disturbances dislodged great masses of rock in the Fuen-Santa mountains, and similar shocks were reported from Bordeaux, Bayonne, Pau, and other places in that region.

On May 8 the London Times published a despatch from the West Indies saying that the Martinièque volcano had destroyed St. Pierre on the 6th, and the 7th, and that the steamer Roddam had returned to St. Lucia at 5 p.m. from that city, almost a total wreck from fire, with 17 of her crew dead and the survivors badly burned. The captain reported that he had barely been able to make his escape from the harbor of St. Pierre, and that the Quebec steamer Roraima was lost with all the crew in the harbor, with the rest of the shipping. May 10 a fuller report was given of the terrible disaster. The French cruiser Sachet attempted to make a landing at St. Pierre, but was forced to desist, owing to the terrible heat. The crew reported dead bodies lying all about the wharves and shore, and 30 survivors, more or less burned, were picked up from the sunken vessels in the harbor. Consul L. H. Ayres, to the State Department from Guadeloupe that 18 vessels were burned and sunk, including 4 American vessels and the steamer Roraima. Among those lost was the cable-ship St. Lucien.

The Roddam carried the first news of the disaster to St. Lucia, whence the outside world was informed, the cable from Martinique being interrupted since Sunday, May 4. The Colonial Office at London received a despatch dated May 8, announcing the outbreak of the St. Vincent volcano, La Soufrière, from the Governor of the Windward Islands, then at Kingston. A despatch from St. Lucia announced that cable communication was broken off with St. Vincent, and a despatch from Bridgetown, Barbados, more than 100 miles away to the east, said that rum like no other like it had been heard in the direction of St. Vincent, and that volcanic dust from the volcano had been falling all over the island in great quantities. Orders were immediately cabled by the British Government to the cruiser Indefatigable at Trinidad to go at once to the relief of St. Vincent. A subsequent cablegram from Barbados reported the continued rumbling sound resembling artillery fire in the direction of St. Vincent, and at 5 p.m. darkness set in, with thunder and a downpour of dust. It was also reported from Pointe à Pitre, Guadeloupe, that La Soufrière had been in a state of eruption for nine consecutive mornings.

The Secretary of the Navy cabled from Washington to Capt. McLain, of the cruiser Cincinnati, at Santo Domingo city, to go with the utmost haste to Martinique and render such assistance as was possible, and at the same time he ordered the commander of the Brooklyn Navy Yard to prepare the Dixie for sea as soon as possible. The State Department ordered Consul Aymé, at Guadeloupe, to go to the scene of the great disaster to report thereon, and inform the United States of the help needed.

A definite report was received from St. Vincent on May 11, which said that on the 5th a loud explosion was heard proceeding from La Soufrière, and that on the 6th, 3 miles in circumference, and the fires both belched forth smoke and stones, forcing the inhabitants of Wallabou and Richmond valley, beneath the volcano, to fly to Chateau Belair for refuge. At midnight a shower of sand came down from the crater; the lake was destroyed and a church and a school-building suffered severe damages. The disturbances dislodged great masses of rock in the Fuen-Santa mountains, and similar shocks were reported from Bordeaux, Bayonne, Pau, and other places in that region.

On May 9 the London Times published a despatch from the West Indies saying that the Martinière volcano had destroyed St. Pierre on the 6th and 7th, and that the steamer Roddam had returned to St. Lucia at 5 p.m. from that city, almost a total wreck from fire, with 17 of her crew dead and the survivors badly burned. The captain reported that he had barely been able to make his escape from the harbor of St. Pierre, and that the Quebec steamer Roraima was lost with all the crew in the harbor, with the rest of the shipping. May 10 a fuller report was given of the terrible disaster. The French cruiser Sachet attempted to make a landing at St. Pierre, but was forced to desist, owing to the terrible heat. The crew reported dead bodies lying all about the wharves and shore, and 30 survivors, more or less burned, were picked up from the sunken vessels in the harbor. Consul L. H. Ayres, to the State Department from Guadeloupe that 18 vessels were burned and sunk, including 4 American vessels and the steamer Roraima. Among those lost was the cable-ship St. Lucien.

The Roddam carried the first news of the disaster to St. Lucia, whence the outside world was informed, the cable from Martinique being interrupted since Sunday, May 4. The Colonial Office at London received a despatch dated May 8, announcing the outbreak of the St. Vincent volcano, La Soufrière, from the Governor of the Windward Islands, then at Kingston. A despatch from St. Lucia announced that cable communication was broken off with St. Vincent, and a despatch from Bridgetown, Barbados, more than 100 miles away to the east, said that rum like no other like it had been heard in the direction of St. Vincent, and
ferred to the Committee on Appropriations; but
when the President informed Congress on the fol-
lowing Monday in a special message that the
French Government had asked for relief, and ur-
ging immediate action, also recommending that
the appropriation be increased to $500,000, the
House increased the Senate appropriation by
$100,000 (on May 12). The War Department
at once ordered the Dixie to load the necessary
stores, and by direction of the President, Secre-
tary Hay cabled Ambassador Choate at London
to express to the British Government the sym-
pathy of the President and the people of the Uni-
ted States in the affliction that had befallen the
island of St. Vincent, and our desire to share in
the work of relief and rescue.

The Dixie sailed from Brooklyn in the night
of May 14, at 9 o'clock, bearing the relief ex-
pedition to the unfortunate islands, including a
special scientific expedition to investigate the re-
gions of the disturbances under the auspices of
the National Geographical Society. Its members
consisted of Prof. Robert T. Hill, of the Geological
Survey; Prof. Israel C. Russell, Professor of Geol-
ogy in the University of Michigan; Comd. C. E.
Borchgrevink, antarctic explorer; Dr. T. A. Jag-
gar, of Harvard University; Mr. G. C. Curtis, of
Cambridge; and Dr. Angelo Heilprin, president
of the Philadelphia Geographical Society. This
was one of the most important and best equipped
expeditions ever sent out to study volcanic action.

Fort de France, Martinique, on the morning of
May 21, and while the explorers proceeded to St.
Pierre in a smaller boat she unloaded a part of
her supplies. A desolate scene met the gaze of
those who debarked among the ruin and piled-up
debris and volcanic ash on what was once the
beautiful city of St. Pierre. There was not a
person in sight or a living thing among all this
ruin, except where a squad of French soldiers
were busy far up the slope piling up the dead to
be cremated. Prof. Russell estimated that about
20 square miles had been devastated on the west-
ern slope of Mont Pelée, and in all that space not a
living thing was left. Fire followed the hurricane
of hot vapor, and a rain of rock dust buried what
the fire left uncovered. Never in the history of
man had such complete destruction been wrought
on an area of equal size. As to the precise
nature of the blast that destroyed the city, the
opinions of the commission seem to differ. Prof.
Russell favors the opinion that the general cause
of death was a blast of steam charged with hot
dust. The people on the border of the devastated
area who escaped, and who in some instances
were injured, suffered from burns inflicted by hot
dust that adhered to the skin. Witnesses who
were on the Roddam in front of St. Pierre at the
time of the disaster say that when the eruption
occurred the vessel was struck with such force by
the material ejected that she was nearly capsized,
and at the same time she seemed to be enveloped

A WEALTHY CITIZEN'S RESIDENCE, QUEZALTENANGO, GUATEMALA, RUINED BY THE EARTHQUAKE.
in a whirlwind of fire. It appeared to them that what burst from the volcano was highly heated gas, carrying with it immense quantities of white-hot volcanic ash. After the vessel reached the harbor of Castries, St. Lucia, a survivor gave the following account of his experience: "No human being could stand against that terrific deluge of molten ashes. Even those who reached the cabin or the hold did not escape, almost every nook and cranny of the ship being filled with the blazing dust. Capt. Freeman sought shelter in the chart-room, but, the port-holes being open, the fire streamed in and burned him horribly on the face and hands. The heat was awful, for the mass of ashes that poured into the ship all aglow retained their heat, and it was only with the greatest difficulty and caution that it was possible to move about."

From such testimony as could be gathered, it appears that a fissure opened on the side of the mountain overlooking the city and belched out lava, superheated steam, and poisonous gases. This rolled in a great cloud like a hurricane down upon the doomed city, and in three minutes, as estimated by some, every living creature, except the man in the underground cell, was dead.

From Martinique the Dixie proceeded to St. Vincent, where more of her supplies were issued to those who had been driven from their homes. Here not so many lives were lost as in Martinique, as there was no large city within the zone of destruction, and those who were within the zone, unlike the people of Martinique, sought refuge at the foot of the extinct craters of the volcano. Nevertheless, the destruction was terrible, due to dust, lapilli, and stones, which rained down upon everything while yet hot. But there appears to have been no hurricane blast of steam or gas charged with burning dust sweeping down upon any part of the island, as in Martinique. The words of a survivor show how most of those who were killed died: "A dark cloud came from La Soufrière about 4 P.M., and a fine leaded powder filled the air, penetrating the doors and windows of the houses. People breathed it, and it was so hot it burned the flesh. The people in the houses began to cry out and struggle, shouting for water; and placing their hands on their stomachs, they gasped, fainted, and died. The hot powder burned into the flesh wherever it touched."

The eruptions appear to have been heard at Maracaibo, Venezuela, 830 miles away. The United States consul at that place reported that on the morning of the eruption of Mont Pelée he heard a noise as of cannonading. Eruptions of both volcanoes continued through the summer. Soufrière was reported in eruption on Oct. 8, causing even greater distress in the island than that which prevailed before. Large areas of land that were considered outside the volcanic zone were buried in sand. Dust continued to fall in Barbados, with a very strong smell of sulfur, for several days, producing a deposit about an eighth of an inch in depth. Again on Oct. 15 and 16 La Soufrière increased its area of destruction.

The eruption of Mont Pelée continued through August. On the night of Aug. 28 a magnificent display of lightning was seen issuing above the mountain. It seemed to shoot out from the mountain in all directions, zigzagging and flickering flashes alternating with or accompanied by reddish globes of fire, which ascended and exploded and shot out stars and long rays. Two days later there was another disastrous eruption of
PELÉE, accompanied by an enormous discharge of steam and hot water, even greater than in the case of the eruption of the islands of the group, owing to a volcanic eruption and continued excitement of the people, who feared a repetition on a smaller scale of the Martianique disaster. Earthquake after earthquake occurred, with great violence and were of exceptional duration. Great stones were sent rolling down the volcano's sides, blocking roads and damaging groves and fields. Great yawning chasms opened in the earth, extending long distances and to an unknown depth. Panic-stricken, the entire population deserted the vicinity of the mountains and fled to the seashore, where they were picked up by German authorities, who ordered the evacuation of the island till such time as the disturbances should subside.

EAST AFRICA. The strip of coast over which the Sultan of Zanzibar formerly exercised sovereign rights was leased to Germany, Great Britain, and Italy, and these three powers subsequently made agreements dividing among themselves the Hinterland as far as the borders of the Congo State and the equatorial provinces of Egypt. German East Africa extends from the Umbo river south of the River Rovuma, which is the northern boundary of the Portuguese possessions on the east coast. British East Africa extends from the Umma northward to the Juba, where the Italian frontier begins, and to the interior borders on Abyssinia. Zanzibar itself was declared a British protectorate in 1890.

GERMAN EAST AFRICA.—The German protectorate has an area estimated at 38,180 square miles and is supposed to have a population of 8,000,000. It is divided into 9 districts, in each of which is an administrator assisted by a council. At the head of the administration is the Imperial Governor, Graf von Götzen, who resides at Dar-es-Salam. A decree was issued in November, 1901, for the mitigation of slavery and its ultimate abolition. The military force consisted in 1901 of 175 German officers and sergeants and 1,692 native troops, the police force of 20 German officers and 570 Askaris. The number of Europeans on June 30, 1900, was 1,780; of whom 872 were Germans. Native planters cultivate bananas, corn, and pulse. German settlers have planted coconut-palms, coffee, vanilla, tobacco, cacao, rubber-trees, and sisal. Many tropical plants have been tried in the Government experiment stations, and new breeds of cattle have been introduced as well as asses, mules, and camels. The natives raise goats and some cattle, hogs, and sheep. Dar-es-Salam and Bagamoyo have about 15,000 inhabitants each; Pangani, Saadani, and Kilwa, 10,000; Lindi, Mikindani, and Tanga, 5,000. A railroad from Tanga to Muhesa, 54 miles, has been continued to Mombu, 26 miles farther, and thence to Kordowe, through which pass the two main trade routes to the lake country. Another will run from Dar-es-Salam to Mrogoro, and a telegraph-line to Kilossa. The seaports are connected with each other by telegraph-lines and with Zanzibar by a cable. The expenditure for 1903 is estimated at 9,601,496 marks, of which 2,186,296 marks are covered by the estimated local revenue, and 6,415,200 marks are contributed by the Imperial Government. In 1900 the value of imports in 10,000 was 11,430,000 marks. The value of exports was 4,283,600 marks. Imports of provisions were 776,000 marks in value; textiles, 2,640,700 marks; machinery, 1,897,300 marks; rice, 1,353,200 marks. Rubber was exported to the amount of
EAST AFRICA.

1,088,700 marks; grain, 373,375 marks; coffee, 274,800 marks.

German enterprise is mainly in the hands of the German East Africa Company, founded in 1889 with a Government grant of 6,500,000 marks. The plantations of the company are constantly being extended at an outlay exceeding the annual sales of produce. The company has the coinage privilege, and makes a small profit out of the difference between the cost of silver and the nominal value of the rupees and half and quarter rupees coined. The privilege of mining in the stream beds of the East Africa Protectorate has been reserved to the Government. German merchants who formerly had agencies in East Africa lost through giving credit to Arabs. The trade of the interior has fallen into the hands of Greeks, Arabs, and Banians. Labor is abundant in the German protectorate at rates which the Government has fixed that are twice as high as those paid on the British side of the border. The pay of the native soldiers and Soudanese in the German military force is equally liberal. The roads in the German protectorate, one from Bagamoyo through Dar-es-Salam to Tabora, whence branch roads lead to Moshi, Ujiji on Lake Tanganyika, another from Kilwa on the coast to Withaven on Lake Nyasa, are the best in central Africa. The Tabora route to the two northern lakes has been selected for a Government railroad or one with a Government guarantee.

British East Africa.—The British East Africa Company, provided with a royal charter from the English Government, took possession of the coast north of the Umba, leased for fifty years from the Sultan of Zanzibar, as far as Kipini, which was recognized as the northern limit of the Sultan's dominions on the mainland. The interior was claimed as a British sphere and ceded as such in the Anglo-German agreement of Nov. 1, 1890, and the supplementary agreement of July 1, 1890. An agreement was made with Italy in 1891 conceding the region north of the Juba river as an Italian sphere of interest. The British East Africa Company, which proclaimed a British protectorate over Uganda on June 19, 1894, and over the region between the coast and Victoria Nyassa on June 13, 1895, occupies the native lands in trust for the British East Africa Protectorate, has an estimated area of 290,000 square miles and a population estimated at 2,506,000, including 25,000 British Indians and 450 Europeans and Eurasians. The British agent and consul-general at Zanzibar is Commissioner and consul-general having control of the administration. The dwellers are Arabs and Swahelis. Parts of the interior are inhabited by Bantu negro tribes, other parts by Masais, Somalis, and Gallas. Mombasa, the seat of the local administration, has a population of 27,000. The revenue in 1901 was £64,750, and the expenditure £157,886. The value of imports was 6,692,131 rupees, and of exports 1,259,385 rupees. Badan merchants carry on the trade. A duty of 5 per cent. is levied on imports under the Brussels act. The Indian code of law has been adopted, modified by local customs. Domestic slavery is legal on the coast strip leased from the Sultan of Zanzibar. There is a military force of 1,000 Soudanese, Swahelis, and Masais, known as the East African rifles, and 300 Soudanese besides; the police force numbers 650. The exports are ivory, rubber, cattle, goats, grain, gum copal, and hides. Cotton cloth is imported from England and India, and the only other considerable imports, except provisions, are brass wire and beads for barter with the natives of the interior. The protectorate embraces Seyyidich, the 10-mile strip leased from the Sultan of Zanzibar; Ukamba, comprising Teita, Kitui, Masailand, Ulu, and Kieni; Tanaalnd, with Lamu for its capital; and Jubaland, the capital of which is Kismayu. The British Government in 1902 made grants in aid of £285,000 to the British East Africa Protectorate and £172,000 to Uganda, and contributed £260,000 to Somaliland and £50,000 to British Central Africa. Under the Uganda Railway act £870,000 were spent in the year ending March 31, 1902, on the railroad, the lake end of which was in Uganda, but in April, 1902, the boundary of the East Africa protectorate was moved so as to include all the country between the lake and the ocean. Slavery still exists in the coast strip under sanction of the law, the British Government having refused to abolish the legal status of slavery, although the Sultan of Zanzibar was forbidden to do so within his own remaining dominions, the islands of Zanzibar and Pemba. In Pemba, where there were 25,000 negro slaves on the clove plantations of the Arabs, 5,000 have obtained emancipation under the decree of April, 1897, which enables any slave to go before a magistrate and obtain emancipation papers by declaring his wish to be free. Of late a few have sought their freedom, only 240 in 1901. The introduction of fresh slaves into the islands or into the coast strip, now a part of the East Africa Protectorate, has been forbidden since 1896. Nevertheless, slaves have been brought in or illegally held by the Arab planters, who have not been restrained by the authorities. Bishop Tucker asserts that 90 per cent. of the slaves are held in illegal bondage. Under the social customs and the regulations in force as to freed slaves the condition of a freedman is worse than that of a slave. There is a rigid limitation of his movements and protection of his master and the society and companionship of his fellows, and is left alone in the world. The Arabs allow these freedmen the use of a house and food, but they must work half the time on their plantations, and thus they get their land cultivated by freedmen as well as by slaves without paying wages. Under the native laws in the British East Africa Protectorate, there is a master for maintenance, care in sickness, and other matters, which he forges when he obtains his freedom. The slaves in Zanzibar and Pemba are generally so comfortably off and some of the freed slaves so much worse off than they were before that the desire for emancipation no longer exists, those who were ill treated having already obtained their freedom in most cases. The fact that any slave who is ill treated can claim his freedom operates to alleviate the condition of the mass who remain in slavery in the immediate dominions of the Sultan. In the 10-mile strip of the mainland, where domestic slavery can be lawfully maintained, there is no such palliating check. Beyond the 10-mile strip slavery is not legal, though it exists where the Arabs have plantations, and the buying and selling of slaves still goes on in many parts of the East Africa Protectorate. The protectorate was opened in 1894 over Uganda and the neighboring countries has been extended since 1896 until it embraces all the British sphere west and north of the East Africa
Protectorate, being bounded by the parallel of north latitude, and the German frontier on the south, and the frontier of the Congo State on the west. The eastern province is to be transferred to the East Africa Protectorate. The estimated area of the Uganda Protectorate with its present limits is 140,000 square miles. Uganda is ruled under British direction by 3 native chiefs in the name of a Kabaka, or King, Daudi Chwa, the infant grandson of Mutesa. Other districts are governed under native laws by native rulers more independently of British control, although in 11 out of 18 districts British supervision is recognized and the position and revenues of the kings are regulated by treaty. The British Commissioner, consul-general, and commander-in-chief of the forces is Lieut-Col. James Hayes Sadler. Uganda proper has a population of about 1,000,000, the majority of whom are Christians. The Eastern, Rudolf, and Central provinces, and the Nile province, which extends from the Victoria Nyanza northward as far as the 1° of east longitude, the provinces of the Soudan, are inhabited by Masai and Soudanese, and the Western province by Bantu and Soudanese and some tribes of dwarfs near the Semiliki river. Including the kingdom of Buganda, the total population is estimated at 4,000,000. The military force under the commander-in-chief numbers about 4,000 men, consisting of a native battalion, the remainder of the Soudanese rifles brought into the country by the British East Africa Company, the rest having mutinied and returned to the Soudan, an armed native constabulary, bodies of native levies, and a battalion of Indian troops who volunteered for native regiments in India to serve three years in Uganda. The Soudanese troops. The native battalion of African rifles consists of 9 companies under 25 British officers. Another battalion of 600 men from the Central African Protectorate, which served in the Ashanti war and is now on active service. The remnant of the Soudanese mutineers who had settled among them and formed with the chiefs the pact of blood brotherhood. The mutineers with their Lango allies were in raiding parties as far as Acholi and entered into a league with Rajoumba and other rebels in Unyoro, who persuaded the natives that Kabarega, their king, would return. When the British officers with their force of loyal Soudanese and Baganda troops entered the Lango country they found that some of the tribes were on bad terms with the mutineers and the chief who had received them, Obokke by name. Others could be induced to take sides with the British if they could be freed from the obligations of blood brotherhood. The English doctors of the British administration were kept in readiness to make them thoroughly sick by an injection of morphine in the ecstaxis, followed by nauseous doses. Since the capture of Mpondwe and the end of the British expeditions had been thorough enough to disturb the Soudanese rebels and the Lango tribes that befriended them. When Major Radcliffe began his operations they offered a strong resistance, which they were encouraged to continue when smallpox broke out among the Government troops. The British persisted, however, and secured the country until they had killed or captured nearly all the mutineers and made a prisoner of the Lango chief who protected them, who were enabled to do by the active aid of three other native chiefs and a force of native levies that operated from the southeast, despatched by Sir Harry Johnston, who as special commissioner was examining the region west of M. Elgon. The operations lasted nearly six months, and the result of the mutinous Soudanese, the Government had to rely mainly on the Soudanese troops that remained loyal: in the wild mountains, and in the heat of the protectorate were stationed in Unyoro near the Semiliki and toward the German frontier, which was delimited by Major Radcliffe and
Major R. G. T. Bright and German commissioners. Major Bright and Major H. H. Austin in 1857-58, explored the great Soudan, in a journey which took them up the Sobat river, and thence overland through the Rudolf province of Uganda, to which the Abyssinians lay claim, to the British post on Lake Baringo, losing in the journey three-fourths of their Soudanese soldiers and attendants, as none of the tribes of the disputed region would furnish them with food.

The railroad has wrought great economical changes in the country through which it runs and in Uganda. Where wire, beads, and cloth were used in exchange rupees are now current. The journey from Mombasa to Port Florence takes two days and a half, the steamer journey of 148 miles to Mengo one day more. The caravan journey occupied seventy days. Sushill is spreading as the language of commerce and general intercourse. There are 90,000 Christian converts in Uganda and 90,000 children in the mission schools. The route of the railroad through the British East Africa Protectorate is mountainous, rising to 7,700 feet above the sea 350 miles from the starting-point, falling to 6,000 feet in the next 75 miles, rising again to 8,300 feet in 65 miles, and finally dropping to 3,700 feet at the lake terminus. Little unskilled and no skilled labor could be found in the country, and this necessitated the importation of 20,000 laborers and mechanics from India, for some supplies had to be brought from India and Great Britain, and in the dry tracts water was transported from 20 to 60 miles. The railroad was the only means of transporting pack animals that could not live in the country, owing to the tsetse fly. The workmen suffered from fevers and from ulcers caused by jiggers, and in some parts they were frightened from their work by man-eating lions. The maximum grade on the line is 1 in 50; the sharpest curves have 800 feet radius.

The Sultanate of Zanzibar, comprising the islands of Zanzibar and Pemba, was declared a British protectorate in 1891. The Sultan, or Seyyid, in the beginning of 1902 was Hamud bin Mohammed bin Said, who was set up by the British. Seyyid bin Said had been on Thwain on Aug. 27, 1896. The Sultan receives an allowance of 195,000 rupees from the public revenue for the maintenance of his court and harem. The British government incurred without the consent of the British agent and consul-general, Sir C. N. E. Elliot. The military and police force of 600 men is commanded by Gen. A. E. Raikes. The Prime Minister is A. S. Rogers, appointed in November, 1901. A duty of 5 per cent. in aid of the suppression of the slave-trade was imposed from Jan. 1, 1899, previous to which date Zanzibar had been since Feb. 1, 1892, a free port. The legal status of slavery on the islands was abolished on April 6, 1897. The area of Zanzibar is 540 square miles; of Pemba, 380 square miles. The population of Zanzibar is about 150,000; of Pemba, 50,000. The foreign population includes about 50 English, 40 Germans, and smaller numbers of American, Greek, French, Italian, and other traders. The native population, aside from about 7,000 East Indians and 10,000 Arabs, consists of negro slaves and esclaves. The town of Zanzibar has about 100,000 inhabitants. The British court is derived from customs and a tax on produce. The value of imports in 1900 was £1,116,041, and of exports £1,157,704, including only the commerce with foreign countries. The value of exports is derived from customs and a tax on produce. The value of imports in 1900 was £225,730, and of exports £204,701; imports of rice at £158,353; imports of ivory at £294,817, and exports at £115,354; imports of grain at £53,492, and exports at £98,351; imports of grocers at £54,123, imports of kerosene at £37,102; imports of cloves at £188,148. Cloves are the chief product. The tonnage entered in 1900 was 348,465 tons. The value of the trade with different countries in 1900 is shown in the following table:

Sultan Hamud died, and Seyyid Ali, his minor son, was on July 20, 1902, proclaimed his successor and A. S. Rogers was appointed regent until the new Sultan attains the age of twenty-one.

British Somaliland, on the Gulf of Aden, formerly a dependency of Egypt, was declared a British protectorate in 1891, delimited by agreement with Italy in 1892, and in 1897 an arrangement was made with the Emperor of Abyssinia by which 7,000 square miles were conceded to him. The present area is about 68,000 square miles. The revenue in 1901 was 334,538 rupees; expenditure, 389,557 rupees. The value of imports at Berbera and Bulhar in 1901 was 2,838,770 rupees, and of exports 2,170,406 rupees. At Aden a duty of 5 per cent. is levied on imports and a 3-per-cent. duty on exports. At Zeyla, where the import duty is 5 per cent. on some articles and on others from 1 per cent. up, and the export duty is only 1 per cent., the imports were 3,070,577 rupees and the exports 3,289,919 rupees in value. Cotton goods, rice, and dates are imported. The exports are hides and skins, cattle, sheep, gum, and ostrich feathers. The administration of the protectorate was left with the Indian officials of Aden till 1898, when it was taken in hand by the Imperial Government.

Col. Swayne, who in 1901, cooperating with an Abyssinian army, carried on an indecisive campaign against the enemy to the British in Somaliland, Mohammed bin Said, a friend of the Mullah, resumed operations in the spring of 1902. When the British force concentrated at Burao the Mad Mullah gathered his followers, who were increased by the hither neutral eastern tribes, against which Col. Swayne led a flying column in May. The combined forward movement followed. The friendly tribes gave aid to the British. The Mad Mullah retired as before into a waterless region, the Haud country. A mounted column under Col. Cobbe seized the camels and sheep of some of the Mullah's allies. Other animals were captured by a second column under Major Phillips. The main column endeavored to get between the Mullah and the tribes that supported him. The British force marched and countermarched on short rations, but were not able to overtake the enemy. The Somalis on their fleet ponies always evaded a fight, although the British formed a camel corps to enable them to move faster. On Oct. 6, the British main column, advancing from the zareba, or fortified camp, against the Mullah at Mudug, was surprised while marching through the dense jungle. The native levies were rallied, and they beat off the tribemen, only to be attacked on the other flank. The transport and the firing-line were
thrown together in confusion and the artillery was driven back. Many camels were captured by the Mullah, and one of the Maxim guns. Col. Swayne finally checked the Mullah's horde by a gallant charge and retook some of the camels. Major Phillips and another officer and 10 men were killed and about 100 wounded. Col. Swayne retreated to Ergo and called for 600 reliable men to reinforce his command, numbering about 3,000, mostly Somalis, whose loyalty and confidence in their leaders were shattered owing to the mishap. A much larger development of force was required to awe the Mullah and the hostile Somalis, who now had allies in the Italian protectorate. Col. Swayne was compelled to continue his retreat northward from the Italian border into the center of British Somaliland. The rainy season was beginning. In which the Somalis, as well as the British, could move more freely. None of the sheikhs or mullahs of Somaliland, of whom there are about 15, each at the head of a village of cultivators, has shown hostility to Europeans until the fanatical Mohammed Abdullah began to preach a holy war against Christians. His supporters came from the Bajadic and the Baddi, who raise sheep, goats, cattle, asses, horses, and camels, and are addicted to plundering. One tribe often sends out a party of horsemen to carry off the live stock and grain of a neighboring tribe, but they never attack the settlements over which the pious mullahs preside. White traders and hunters have usually been respected until the troubles arose in British Somaliland, which has thrown a check to the commerce of Zeila, Berbera, and Bulhar. The Somalis are an active and intelligent race, fine horsemen and skilful fighters with native weapons, proud of their Arab blood, regarding as an inferior race the pure Gallas who live to the west of them. The force that the Mad Mullah led against the British was 12,000 strong at the end of 1901, and in 1902 he had at least 15,000 followers, many of them armed with rifles.

Italian Somaliland. — The sultanate of Obbia was declared an Italian protectorate in 1898, and the Mijjerdist clan led Italian protection for a part of his dominions and agreed not to conclude treaties with other powers regarding the rest. The ports of Brava, Merka, Mogadischu, and Warbark, all on the east coast, were ceded by cession of the Sultan of Zanzibar in 1892 and by agreement with England in 1901 and 1904 were included in the Italian sphere, the total area of which is estimated at 1,100,000 square miles, with about 400,000 inhabitants. The agreed boundary between the British and Italian spheres is the Juba river up to 6° of north latitude, that parallel to 35° of east longitude, and that meridian northward to the Blue Nile.

French Somaliland. — The French occupied Obbo in 1881 and proclaimed a protectorate over Tajura, Sagallo, and Ambado in subsequent years. France claims also the Bay of Adulis. The area of the French sphere is estimated at 45,000 square miles, with 200,000 inhabitants. The port of Jibouti has 15,000 inhabitants, including 2,500 Europeans. The people of the country are Danakils and Gallas. A railroad to Harar has been built for a distance of 100 miles, and is a terminus between the present terminus and Harar. The imports are grain, provisions, tobacco, beverages, and cotton and silk goods. The exports are ivory, sheepskins, and hides. The value of imports in 1900 was 5,029,107 francs, and of exports 695,013 francs. The local revenue and expenditure was 581,000 francs, and the expenditure of France 200,000 francs. The fisheries off the coast are valuable.

Ecuador, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 52 members, 2 for each province, and a House of Representatives, 41 in number, elected for two years by adult male citizens who can read and write. The President is elected for four years by direct popular suffrage, and the Vice-President, who is called upon in certain contingencies to take the place of the President, is elected for the same term at the succeeding biennial election. The President elected for the term ending Aug. 31, 1905, is Gen. Leonidas Plaza. The vice-President is Dr. Frei de Zaldumbide. The Cabinet appointed by President Plaza was composed as follows: Minister of the Interior, Police, Public Works, and Public Charity, A. Moncayo; Minister of Foreign Affairs, Public Instruction, Worship, and Justice, José Peralta; Minister of Finance, T. Gagliardo; Minister of Fomento, Dr. F. Lopez; Minister of War and Marine, Gen. Nicolò Arelano.

Area and Population. — Ecuador has an estimated area of 137,125 square miles. The population is estimated at 1,271,801. Quito, the capital, has about 180,000 inhabitants; Guayaquil, 51,000; Cuenca, 30,000.

Finances. — The ordinary revenue in 1898 was 7,905,191 sules, and the expenditure was 6,662,945 sules for ordinary purposes and 2,234,715 sules for railroads, wharves, debt, etc., under special appropriations which left a deficit of 1,271,829 sules. The total revenue for 1900 was estimated at 8,288,100 sules and the total expenditure at 8,307,783.

The foreign debt, the payment of which was undertaken by the Guayaquil and Quito Railroad Company, was £671,000 on July 1, 1901. The internal debt, which was 4,580,000 sules in 1896, has since been increased. The railroad company was merged in the Ecuadorian Association, and the majority of the shares were transferred from English to American holders, who raised the money to complete the line as Guayaquil and Quito. The cost of completing the whole line was estimated at £200,000.

The coinage law of 1898 adopting the gold standard, which became operative on Nov. 4, 1900, provided for the coinage of gold coins of 10 sules, of the same value as the English sovereign. In 1900 100,000 coins were minted. There were in circulation 1,000,000 silver sules, and 2,000,000 sules were in the vaults of the banks, which are required by law to hold metallic reserves equal to one-half of the bank-notes issued. There are two banks of issue. The Bank of Ecuador on Jan. 1, 1899, had 2,138,170 sules of notes in circulation and 1,955,424 sules of gold and silver in its reserve. The Banco Comercial y Agrícola had 2,322,242 sules of notes out and a reserve of 1,465,251 sules, of which 600,000 sules were gold.

The Army. — The regular army numbers 3,341 officers and men, consisting of 1 brigade of field artillery, 1 brigade of fortress-artillery, 4 battalions of infantry, 2 companies of light infantry, and 1 regiment of cavalry. The naval force consists of a torpedo-launch and a transport. Commerce is carried on by sea and river. The leader product is cacao. There are estimated to be 47,200,000 cacao-trees in the coast provinces, and in 1900 the production was 18,290,000 kilogrammes. Of vegetable ivory, another value, the production rose from 5,620,800 kilogrammes were exported. The export of sugar was 1,733,500 kilogrammes; of coffee, 2,300,
000 kilograms. The rubber export was 501,000 kilograms. The forests of rubber-trees have been nearly exhausted, but many trees have been planted in recent years. The Indians wash gold from stream beds, and at Esmeraldas an American company is working with hydraulic machinery, obtaining both gold and platinum. At Zaruma quartz is mined. Silver is also found. Copper, lead, iron, sulfur, and petroleum exist, but are not exported. The total value of imports in 1900 was 13,431,170 sucre; of exports, 15,419,222 sures. The principal imports are cotton goods, woolens, machinery, and hardware. The export of cacao in 1900 was 10,700,881 sucre; of ivory-nuts, 1,400,783 sures; of rubber, 1,968,698 sures; of silver coin and bullion, 349,876 sures; of Panama hats, 321,367 sures. Of the total imports Great Britain sent 29 per cent., the United States 25 per cent, Germany 9 per cent, and France 9 per cent. Of the exports France took 35 per cent., the United States 20 per cent. Germany 17 per cent, and Great Britain 15 per cent.

Navigation. The number of vessels in the ocean trade entered at the ports of Ecuador during 1900 was 862, of 55,358 tons; cleared, 850, of 50,651 tons.

The Posts, Telegraphs. A railroad from Duran, opposite the port of Guayaquil, to Chimbo, 65 miles, is being built and extended to Quito, 29 miles having been completed beyond Chimbo in 1901. In 1900 there were 61,983 telegrams, 4,801 female were clerks; 4,072 males and 2,553 females were in the professions, 156,023 males and 2,218 females were engaged in religious work and in teaching; 3,471 clergymen and ecclesiastics and Jewish rabbis and 113,483 readers of the Koran, 40,441 students and 20,579 children above the age of ten. 4,934 teachers of all kinds; 29,201,000 letters in the internal and 1,506,000 in the international service and 6,347,000 newspapers and packets.

Egypt, a principality in northern Africa, tributary to Turkey and under the military occupation and the political and financial control of Great Britain. The government is an absolute monarchy of the Mohammedan type, modified by the law of primogeniture and the introduction of a Council of Ministers, and is subject to the control of the British diplomatic agent. The Khedive, or Viceroy, is Abbas Hilmi, born July 14, 1874, who succeeded on the death of his father. His heir apparent is Prince Mohamed, born Feb. 20, 1899. The British occupation has lasted since the suppression of the military revolt led by Arabi Pasha in 1881. The British have exercised a decisive voice in all important measures. The British army, including the Egyptian guards, is 45,000 men, and is engaged in the public force, including the army of occupation, 1,712 males and 2,683 females were domestic servants, 5,308 males and 30,229 females over ten years of age had no occupation and 10,976 males and 10,566 females were under ten years of age. Cairo, the capital, had 570,062 inhabitants in 1867; Alexandria, 318,706. Of the total foreign population over seven years of age 74 per cent. could read and write, of the sedentary Egyptian population only 5.8 per cent.

Finance. The revenue in 1901 was £ E. 11,441,095 and the expenditure £ E. 9,805,224, leaving a surplus of £ E. 1,552,000, of which £ E. 660,000 were paid into the general reserve fund, £ E. 267,000 were paid into the economies fund, £ E. 62,000 were not realizable for the sinking fund, and £ E. 559,000 went to the Egyptian Government. The revenue in 1901 was £ E. 10,484,000, and expenditure £ E. 9,822,728. For 1902 the budget was estimated at £ E. 11,030,000, including £ E. 215,000 contributed from the general reserve fund. The revenue from ordinary sources was estimated at £ E. 10,844,400, of which £ 200,000 came from the land tax, £ 172,000 from other direct taxes,
there is perpetual irrigation, cotton, sugar, rice, corn, wheat, and cucumbers and other vegetables occupy the ground throughout the year. In Upper Egypt the land is irrigated at high Nile and one crop of millet or vegetables is obtained except where the canals permit of repeated irrigation and the cultivation of cotton and sugar-cane. The reservoir at Assiout and the impoundage at Assiout store 1,065,000,000 cubic meters of water, and when the irrigation canals are completed large tracts of new land will be made available for high culture. The cotton crop in 1900 was 6,510,000 kantars of 50 kilograms. The exports of cotton were 4,868,996 kantars, valued at £ 15,030,000; exports of sugar, 53,729,309 kilograms, value £ 573,496. The total value of merchandise imports in 1901 was £ 15,244,939, and of exports £ 15,730,088; imports of specie were £ 3,099,078, and exports £ 2,493,172. Imports of animals and animal food products were £ 855,012, and exports £ 112,588; imports of hides, skins, and leather and its manufactures were £ 219,500, and exports £ 90,562; imports of other animal products were £ 80,551, and exports £ 63,825; imports of cereals and vegetables were £ 1,706,352, and exports £ 2,649,970; imports of provisions and drink were £ 54,315, and exports £ 80,471; imports of spirits and oils were £ 812,867, and exports £ 19,578; imports of books, paper, and paper material were £ 231,641, and placed upon a liberal basis imports of coal, wood, and wood manufactures were £ 2,139,420, and exports £ 15,979; imports of stone, lime, glass, etc., were £ 407,683, and exports £ 1,497; imports of textiles were £ 324,710, and exports £ 25,524; imports of metals and metal manufactures were £ 2,452,241, and exports £ 11,993,307; imports of metals and metal manufactures were £ 1,744,084, and exports £ 4,187; imports of tobacco were £ 565,621; imports of miscellaneous merchandise were £ 880,142, and exports £ 18,008. The value of raw cotton exported was £ 2,414,681. The quantity of raw cotton exported was 6,123,350 kantars, valued at £ 11,533,277. Of £ 14,112,370, the total value of imports of merchandise in 1900, the value of £ 12,429,304, and of £ 16,730,610, the total value of exports, the value of £ 16,488,911 passed through the port of Alexandria. The values of imports and exports to various countries in 1901 are given in the following table:

Navigation.—The number of vessels in the foreign trade entered at the port of Alexandria during 1900 was 2,530, of 2,787,619 tons, of which 673, of 1,022,834, of grain and various kinds in the winter. In Lower Egypt, where

Commerce and Production.—Cotton, sugar, and rice are grown in the summer; rice, sorghum, and wheat in the winter; and grain of various kinds in the winter. In Lower Egypt, where
Austrian; 135, of 222,706 tons, were Italian; 1,399, of 175,938 tons, were Turkish; 84, of 166,425 tons, were Russian; 16, of 90,541 tons, were Greek; 35, of 58,450 tons, were German; 26, of 49,436 tons, were Swedish and Norwegian; and 64, of 58,788 tons, were of other nationalities. The total number cleared was 1,274, of 2,364,572 tons, of which 974, of 1,019,088 tons, were British; 110, of 292,076 tons, were French; 129, of 251,387 tons, were Austrian; 136, of 225,134 tons, were Italian; 1,364, of 175,146 tons, were Turkish; 85, of 163,769 tons, were Russian; 109, of 78,924 tons, were Greek; 35, of 58,427 tons, were German; 22, of 42,038 tons, were Swedish and Norwegian; and 62, of 62,161 tons, were of other nationalities.

Railroads, Posts, and Telegraphs. — The Government railroads on Jan. 1, 1902, had a length of 1,383 miles, and private companies owned 780 miles of agricultural roads. Of the state railroads 658 miles were in the delta and 435 miles in Upper Egypt. The number of passengers carried on the state railroads during 1890 was 15,428,500; of freight, 2,856,000; gross receipts, £ 2,158,877; working expenses, £ 971,495, being 45 per cent. of the receipts; net earnings, £ 1,187,382.

The number of letters and postal cards handled by the Government post is 1,427,000, of which 1,375,000 in the internal and 2,920,000 in the international service; newspapers, etc., 8,461,000 internal and 1,280,000 international; parcels, 197,000 internal and 90,000 international; post-office orders 625,500; value £ 17,191,000.

The telegraphs owned and operated by the Egyptian Government have a total length of 2,193,300 miles. The number of inland telegrams sent in 1901 was 4,250,571.

Internal Affairs. — Egypt under British control is making a slow but appreciable advance in the direction of civilized government. The fiscal system is on a sound basis. In the general administration no radical change is contemplated. The institution of slavery is practically extinct. The corvée has been abolished in its oppressive features. The curfew is no longer employed as an instrument of government. The judicial system and the organization of the police admit of further improvement. The trade law and order are prevailing. New prisons and reformatories have been built, and the treatment of prisoners is in conformity with the principles generally adopted in Europe. Hospitals have been established, where the sick receive proper care. The lunatic is no longer treated as a wild beast. Education in all its branches has received a great impulse. The army is well organized and efficient, and all the abuses of the old recruiting system have been swept away. The principal irrigation works have been completed. Means of locomotion by rail and road have been improved and extended. The Government has taken steps to enable the fellahin to shake themselves free from the grip of the money-lenders. The result of the experiment, which has been going on since 1899, indicates that the peasants will not use the advantages offered them to incur fresh loans. The usurers charge from 40 to 100 per cent. per annum on their loans. In 1902 an agricultural bank was founded with a capital of £2,500,000, which makes advances to fellahin on easy terms. The Government guarantees the repayment of the advances in the event of the failure of the crops. As a special feature of the scheme, cases of slave-dealing and kidnapping come before the courts. In 1902 a provincial governor was retired and an influential pasha and several police officers were imprisoned for applying torture to extract a confession from cattle-thieves who had robbed the Khedive. The plague and the choler appeared in Egypt in 1901 and continued in 1902. Officials found difficulty in dealing with the plague, owing to the habits and prejudices of the people.

The Egyptian Sudan. — The Mahdi and the Khalifa having ruled the Soudan for sixteen years, the latter was defeated by an Anglo-Egyptian army on Sept. 2, 1898, and on Jan. 19, 1899, a convention was signed at Cairo by representatives of the British and the Egyptian governments in accordance with which the territory south of 22° of north latitude is administered by a governor-general appointed by the Khedive with the approval of the British Government; the Egyptian and British flags are used together; laws are made by proclamation; no duties can be levied on imports from Egypt, and duties on goods from other countries shall not exceed those levied by Egypt; the importation or exportation of slaves is prohibited, and special attention is paid to the provisions of the Brussels act of 1890 regulating the importation and exportation of firearms and ammunition and of spirits.

The Soudan is divided into the provinces of Khartoum, Dongola, Berber, Kassala, Senaar, and Kordofan and the districts of Wady halfa, Dosea, and the Eastern, for each of which is a Muqr, or military governor. The estimated revenue of 1901 was £ 224,374, and the expenditure was estimated at £ 614,095, leaving a deficit of £ 389,721 to be paid out of the Egyptian treasury. The total area of the Egyptian Soudan, extending southward to Albert Nyanza and east and west from the Red Sea to Wadal, is estimated at 950,000 square miles. The population which was formerly estimated at 10,000,000, but has declined under the rule of the Dervishes. The frontier between the Italian colony of Erythria and the Soudan has been delimited by a joint commission. The port and district of Massawa, which before the Mahdist revolt were occupied by Egypt, now belong to Italy; Zeila and Berbera belong to Great Britain; and Harar belongs to Abyssinia. The Soudan was placed by the British under an embargo during the Mahdist régime, and all trade ceased excepting a few surreptitious trade laws and orders have been declared open for traffic on Dec. 12, 1899; but the trade in gum arabic, ostrich feathers, ivory, gold dust, and skins has not returned. Ebony, rubber, gum, and other products which can be obtained on the White Nile and the rich lands on the Blue Nile are adapted to grow wheat as well as sesame, millet, diurra, and pulse, which are now cultivated. In the northern part of the country regular government has been restored and industries have in some measure been revived. Khartoum, which has again been made the capital, instead of the neighboring Mahdist city of Omdurman, is connected with Cairo by the Anglo-Egyptian military railroad and by a telegraph-line. The Governor-General of the Soudan is the Sirdar, Sir Reginald Wingate, who has Col. F. J. Nason for his civil secretary and Sir Rudolf von Slatin for inspector-general. The accumulation of swamp vegetation called the sudd, which renders the Nile and its tributaries impassable, has been removed. The Nile is open the entire year from Khartoum to Gondokoro, the northern port of the Uganda Protectorate, which is 15 miles from Meroe. Occasional southern outposts of the Egyptian Soudan. Lado and Kiro are held by a Belgian force, and from those stations officers of the Congo State administer the enceinte on the Nile that was leased to the Congo Government. The Egyptian Soudan has been generally
troubling since its occupation by the Anglo-Egyptian forces. The Sultan of Darfur, who pays tribute to the Sultan of Khartoum, had incurred trouble with his own people, against whom he sent an expedition. Government posts have been established in Kordofan, which is developing rapidly. In January, 1902, a camel caravan near Rumbeck and killed Lieut. Scott Barbour and 40 of his men. They were promptly punished by Lieut.-Col. Hunter from Khartoum with an expedition sent from Shambah to Rumbeck. The Baher-el-Gazal was occupied by an expeditionary force under Lieut.-Col. Sparkes, who has cut the Sudd in the Djur river. In order to permit men to ascend to Wau, the chief military station in the province. The only railroad project favored by the Government is the proposed line from Berber to Suakin, which will furnish a shorter outlet than the river-and-rail route northward through Egypt, and will supply the Soudan with fuel. Beds of coal have been discovered near Rosalite and Abu Harras. The Egyptians, who have provided the money for the conquest and development of the Soudan, regard with dismay the prospect of losing their trade with the Soudan, and European merchants fear that India will capture the market. In the southern part of the Soudan a little roadmaking in the uneven places will enable motor cars to transport freight all over the country. The money taken out of the Egyptian treasury to build the Klashin railroad and for barracks and other purposes in the Soudan is treated as an advance to be repaid at some future date. In 1901 the expenditure of Egypt in the Soudan was £ E. 417,000. The Nile delta has ceased to dispute the financial sacrifices Egypt is called upon to make for the Soudan. Of £ E. 1,287,000 in the special reserve fund on Dec. 31, 1901, the amount pledged for future expenditure, mainly in the Soudan, was £ E. 567,000. The finances of the Soudan are in a more satisfactory condition than was anticipated, but it is not yet possible to balance the budget without a heavy deficit, which for 1902 was £ 2,258,000. Vast tracts of fertile country and valuable mineral lands in the Soudan lie idle because there are no facilities for bringing them to market. Engineers who are studying the question of irrigation have found plenty of water available. Cotton of good medium grade is now grown. Wheat and sugar are grown in Egypt. In 1898, that is, five years before the first dam on the Nile, the British were fighting the Mahdi in the upper reaches of the Soudan. The work was completed and the structure formally accepted by the Kedive and the Duke of Connaught, with due ceremony, on Dec. 10, 1902.

Many changes have taken place in the staff of engineers entrusted with the work—so many that the officials who deserve the credit can not all be named here, but the original plan was carried out with but few changes, and the work was completed under Maurice Fitzmaurice as resident engineer.

The dam is located at what was the head of the first cataract. Its total length is 1,950 meters, or a little less than a mile and a quarter. It is laid in a straight line directly across the channel of the river, and not with the curve up-stream which is often introduced in such structures with a view to increasing their strength. To receive and retain the irrigation, a trench was excavated mainly through solid rock in the river-bed. In this was laid a wall of solid masonry, 29 meters in width at its deepest section and narrowing to 2 meters (nearly 7 feet) at the lower face. The lower face of the dam is very steep, and the
up-stream face is pitched at a less abrupt angle in order to secure greater stability. The height of crest or roadway above the zero mark of the long-established water-gage is 25 meters, and the high-water level as at present designed is 22 meters above the same zero. When full, the reservoir will hold 1,165,000,000 cubic meters of water, and its set-back will reach 143 miles above the dam. The total cost of construction as given by the best English authorities was £2,400,000, and the amount of work accomplished is divided as follows: Excavation, 775,000 cubic meters; masonry, 496,000 cubic meters; brickwork, 7,000 cubic meters; ashlar, 41,400 cubic meters; sluice-gates, 2,240 square meters; lock-gates, 530 square meters. At these figures, the initial rate of water-storage is about 1 cent for each cubic foot, but as this must diminish in a direct but irregular ratio from year to year, it will eventually disappear altogether when balanced against the accruing benefits.

During the period of high water that is beginning about the middle of July, when the percentage of solid matter in suspension is at its highest, the river will be permitted to flow through the sluices with as little hindrance as possible, bearing its rich alluvial tribute to be deposited in the lower valley. When all the sluices are open there will be little perceptible difference in the appearance of the river channel a short distance above and below the dam from what has always existed. As the flood subsides, usually some time in November, the water becomes comparatively clear, and the gates will then be closed. Under average conditions the reservoir should be at its full level in January, and this can be maintained until May, when the need of reserve water begins to be felt in the agricultural regions. From this time until the next flood is due in July the gates will be open, regulating the quantity of water in the lower Nile according to the special climatic conditions of the season.

At the western end of the great dam is a navigable channel with locks, each 75 meters long and 1½ meters wide, affording ample accommodation for any river craft likely to be in use upon the Nile. The lock-gates were designed by F. B. M. Stoney, who is also the designer and patentee of the sluice-gates used in the dam. The heavier lock-gates are worked by hydraulic power.

The present high-water line of the reservoir is as stated above; but the structure was intentionally designed to sustain a pressure resulting from a higher level, 28 meters above the zero mark being contemplated. This will nearly or quite double the capacity of the reservoir, and as the expense of raising the dam will be comparatively small (£250,000), it may be effected before many years.

Curious and interesting problems are involved in this initial step toward harnessing the great river of the Pharaohs. Similar dams or weirs
are in contemplation at the different cataracts, at the sources of the river, and near certain of the natural depressions in the desert lands adjoining. The great lakes Victoria and Albert Nyanza, Lake Tana, and Lake No will all be utilised. Of these lakes, Victoria and Tana are held back by natural dikes of rock, which will only need to be tunnelled or cut to make it possible to draw off the enormous accumulations of water there may be needed. Lake Albert will need to have its level raised by damming its natural outlet; this can be done, however, without asking any one's permission, as the whole region is in British territory and so nearly barren of inhabitants that possible claims for damages may be ignored. These plans, if carried out, would furnish about 16,000,000,000 cubic meters of water per annum. The additional water-supply is not the only question involved, for there are extensive swamps along the White Nile, which in years of extremely low water pollute the whole river, with serious and often fatal results to animal life. With the supply under control at its source, these swamps could be practically eliminated by preventing stagnation and checking the flow of the dreaded "green-water," which at times affects the stream even to Cairo.

It is remarkable that this is the first comprehensive scheme that ever has been attempted for reducing a large river as far as possible to the service of man. Some European rivers have been in a measure harnessed and reduced to service, but the Nile is unique in many of its surroundings and affords opportunities for ingenuity in the matter of engineering that can hardly be found in any other stream. The greater rivers of the world, as, for instance, the Mississippi and the Amazon, are far behind the reach of mortal power in its present development, and indeed their courses for the most part lie through a country that makes it impossible for any great engineering operations to be undertaken, even if they were desirable. Some of the smaller rivers in the arid regions of our own Western States are already largely subjected to a system of management that has already wrought wonderful improvements in the great deserts of the West, but the historic Nile affords thus far the most conspicuous instance of a great river so placed by nature that its productive powers can be readily controlled for the benefit of mankind.

The construction of the dam at Assouan with a view to future enlargement has a curious side issue. The original plans were considered by an international commission, and no sooner was it known among archeologists that the first cataract was chosen as the site for a dam than it became evident to those interested that the structures on the island of Philae would be submerged. This island, with its stately temples and colonnades, is among the most famous localities in a land rich in the treasures of antiquity, and archeologists all over the world raised such an outcry against the desecration that the engineer in charge, being a wise man, announced that the dam should not be built so high as was at first intended. This was something of a subterfuge, for these wonderful and majestic ruins will necessarily be to some extent submerged except when the river is flowing in its natural channel—that is to say, when the sluice-gates are open. Unfortunately, this period of the year corresponds in a general way with the season least attractive to Egyptian tourists, so that some of the finest spectacles of the temple architecture will be less accessible than heretofore to modern observers. The engineers have taken the precaution to strengthen and reinforce the ancient foundations of the temples, so that it is thought no harm will actually result from their periodical submergence.

FARMERS’ NATIONAL CONGRESS. The twenty-second annual meeting of the Farmers' National Congress was called to order by the president, the Hon. George L. Flanders, of New York, in the Masonic Hall, Oct. 7th.

The congress was welcomed to Georgia by Gov. Allen D. Candler, who in the course of his address said: "Most of the men that have shaped the destinies of this republic since it was born were farmers and sons of farmers. It is almost impossible to grow a man on a brick pavement. We propose that Georgia shall be the best place on earth for a good negro, and the worst place for a bad negro."

The congress was welcomed to Macon by the Hon. George A. Smith, president of the Macon Chamber of Commerce. He called attention to the fact that the largest residence in the city was built with the proceeds of one year's peach-crop of the owner. Another mansion was built from one season's hay-cutting. Cotton is not the only crop grown in Georgia. Mr. Smith called attention to the Torrens system of registering the title to lands, and strongly recommended it. He reminded his hearers that Henry W. Bellows had called Macon "the most beautiful city in America."

The addresses of welcome were responded to on the part of the congress by its first vice-president, the Hon. Harvey W. Dean, of Georgia, president of the Cotton Growers' Association of America. In speaking of the meeting just opened, he said: "It will put into motion a sentiment along the lines of national cooperation by the farmers of the country, which will be of untold profit and benefit to the great industry of which the Farmers’ National Congress has become the leading representative organization. The days of individual action are rapidly being relegated to the past, while the cultivation of a closer relationship along the lines of cooperative action is being fast inculcated in the minds of our people all over this country. The unprecedented prosperity of the United States is due in largest measure to the results of labor of our farmers. We are largely feeding and clothing the nations of the civilized world, and it is due to the vast exports of our cotton, meats, and cereals that the United States has within recent years become the creditor nation of the world."

In his annual address, President Flanders said: "The education that has been going on in the interest of the farmers during the past thirty years, at the State agricultural colleges, etc., has produced wonderful results, but all or nearly all are upon one side of the two-sided question, viz., upon the side of production, without touching the question of distribution or the question of the relation of the farmer to the governments under which he lives and by virtue of which he is protected. We are living in an age of organization; an age of corporations and corporate interests united for purposes which to them seem proper and just and
right; an age in which capital, generally speaking, is organized and handled right, so that when any problem arises, from the question of distribution to the question of legislation, they are prepared at short notice to determine that action should be taken, and then act as a unit. What is true of these combinations is not true of the agricultural population, and yet that population is ten-twentieths of the entire number engaged in industrial pursuits in this country. The scope of our educational work should now be such that it will extend to this class of our population as much information and knowledge of some kind of organization or through some means best suited to that end, of the fundamental principles involved in the economic questions of the times and of their political rights and obligations to themselves and others through the governments under which they live."

More than 800 delegates were present, from 31 States.

A Committee on Resolutions of one from each State, selected by the delegates from each State, was announced, and organized by electing Hon. Percival, of Iowa, chairman, and Prof. T. J. Wooster, of Georgia, geographer on an InterOceanic Canal. The chairman said: "Let us not waste too much time quibbling over choice of routes, but push to successful completion one or the other. We need the canal. It is to be our good right hand. Agriculture and manufacture stimulate each other. Agriculture must furnish much raw material; then, as more and more people engage in manufacturing, greater demands are made on agriculture to feed them. Roundly put, then, a stimulation in production of raw materials and increase in manufacturing must inevitably follow lessening cost of transportation and extending the limits of the markets. New England and the Middle Atlantic States, which constitute the most important manufacturing section of the country, have to ship to Europe to contest the home markets of the Old World, or to shift to cheaper supplies of the Pacific States by way of Cape Horn, Cape of Good Hope, and the Isthmus of Suez. These manufacturing regions must get some of their raw materials and foodstuffs from the States on the Pacific Ocean, and in turn these Pacific people desire the manufactured articles of New England. The water distance from New York to San Francisco is 15,000 miles; by an isthmian canal it would be 5,000 miles. The canal will give us a decided advantage over the other nations of the world in the competitive international struggle which is certain to take place to secure the industries of the great Pacific Ocean."

At the morning session, Oct. 8, a paper on Reciprocity—How may it affect Agricultural Interests? was read by the Hon. John K. Campbell, of Michigan. Mr. Campbell said he did not consider it just "to frame a bill that will admit the raw material free to benefit the manufacturer, and then shut the door on the manufactured product by a high tariff that enables the home manufacturer to charge his own price, imposing on the farmer the burden of the tax that benefits only the manufacturer." Referring to the "classical" theory, he said he favored a diversified system of agriculture, and that "every protection should be extended to the farmer that will aid him in developing the resources of his farm and in producing the product that the farmer, under proper protection, can develop."

At the afternoon session a paper on Forestry and the Preservation of Forests was read by George M. Whitaker, editor of the New England Farmer. He declared that not cotton nor corn, but "the tree is king!" He deplored the waste in cutting and incendiary burning, and emphasized the danger of a timber famine. "The supply of oak and hickory in the Northern and Eastern States has been so nearly exhausted as to create a heavy demand for timber lands in Tennessee, Arkansas, and Mississippi. The papers report that all the wagon-manufacturers of the North and East, as well as wood-working companies of all kinds, have their agents in these States for the purpose of buying up every available acre of timber land. This is emphatically a farmer's question. A tree is a product of the soil. The national Department of Agriculture is undertaking to assist the farmer in applying better methods by which the forest on his wood-lot will be improved without appreciably increasing the cost of harvesting the forest crop."

At the opening of the morning session, Oct. 9, Prof. Louis B. Magid, of Georgia, had a few minutes in which to present the claims of silk-growing in the United States. This he did so ably that a strong sentiment manifested favoring the congress favorable to the action of the national Department of Agriculture to determine the feasibility of silk-growing in this country.

Prof. Magid's paper was followed by one in favor of National Irrigation, by C. M. Heintz, of California. This paper presented some striking figures, including the following: "By the building of irrigation works the grazing of the open lands can be created. Take the Colorado delta, for example. Here is a body of about 900,000 acres of land arid and worthless. The Colorado river is of sufficient size, it is estimated, to reclaim 8,000,000 acres. This land was worthless without the water, and the water was worthless without the land. When they are brought together, there are 900,000 acres of land that will be worth, when fully reclaimed, an average of $100 an acre, or a total of $90,000,000. National expansion should be confined to building up our home country first. There is no sense in subduing the Fijian Islands until we have first reclaimed the arid wastes of America."

The opposing view of National Irrigation was presented in a paper by Gilbert M. Tucker, editor of the Country Gentleman. He called attention to the fact that "the vast development of our national contributions to the sustenance of the world has no necessary relation to the welfare of the men that raise the crops." He pointed out that what was wise when the nation was younger might be unjust and foolish when it had attained a certain development. Speaking specifically of the effects of national irrigation, especially as it would bear upon agriculture, he said: "Every district brought from aridity into cultivation, by irrigation, will for a long time export a considerable surplus of foodstuffs, and thus act to a certain extent in bearing down the market price. A second channel of mischief is the absorption by the new lands of the men and women who ought to supply, and in the normal condition of things would supply, an abundance of labor, at moderate prices, for established farmers. If the Government is going into a lucrative irrigation business, we can point out thousands of farms east of the Mississippi where we should like to see it tried, and also tens of thousands of farms east of the Mississippi where we should like to see it stopped, except under the correlative of irrigation—tile drainage—at the public expense. There is no doubt whatever that
the expenditure east of the ninety-eighth meridian of the millions of dollars proposed to be used west of that line, in irrigating and draining farms already operated, would increase their product by a larger volume than will be raised west of it, for generations to come, under the irrigation scheme.

At this point the children of the Georgia Industrial Home for Unfortunate Children marched upon the stage and sang patriotic songs.

At the afternoon session a paper on how can we best build up our merchant marine, by F. B. Thurber, of New York, was read. It favored ship subsidies. Mr. Thurber opened his paper by saying: "Great Britain is our chief competitor, and she has consistently followed the policy of sustaining new lines until sufficient commerce developed to make them self-sustaining, and then gradually reducing the subsidy. That should be our policy." He said further: "The percentage of American products carried in American ships has dwindled from 90 to 9 per cent. If we are to find a market for American products, they must be distributed by American ships. Streamship-lines work for their own countries precisely as rail-way-lines work for their terminal points. The original cost of building American ships is greater than the case abroad, and the wages paid to American officers and seamen are very much higher than those paid to the officers and seamen of competing foreign vessels, and the standard of life on our ships is far superior to the standard of living on the ships of our commercial rivals."

Opposition to ship subsidies was expressed in a paper by the Hon. Oliver A. Wilson, master of the Illinois State Grange. He began by saying that "in treating this important proposition there is but one fair way, and that is in the interest of the mass of citizens," and he declared that "instead of benefiting the masses, it appears that the proposition for subsidizing our merchant marine is a scheme largely to increase the wealth of the few at the expense of the many." He pointed out that the reports of the Leland and other ocean steamship-lines recently bought by American capitalists showed that they did not need Government aid, because, he said, that the high subsidies of the French Government had not built up the shipping of that nation; that "the latest facts and figures go to prove that ship-building can be done in this country as cheaply as in Great Britain or anywhere else." In the opinion of workmen "receive higher wages, they accomplish more in a given time, so that the factor of higher price for labor is eliminated."

At the morning session, Oct. 10, a paper on Farm-Products in the Markets of the World was presented by O. P. Austin, chief of the Bureau of Statistics, Treasury Department. He showed that the American farmer is keeping pace with the world's demand for his products and will retain the market both at home and abroad. He said that "the application of scientific methods has enabled the American farmer not only to prevent the deterioration of the virgin soil which made this country the world's greatest producer, but an intelligent understanding of that soil and its capabilities, coupled with the use of new machinery and new methods, enables him to make its products of more value than he ever had before. The nation has a top lath out of every 40 of his wheat to pay transportation from Chicago to New York, now gets the same transportation for 1 bushel out of every 16."

A paper on A Bird's Eye View of the Farm-Products of the World, by John Hyde, statistician of the national Department of Agriculture, was rendered specially interesting by the use of the stereopticon. Charts that showed at a glance the relative standing of different countries as regards the principal agricultural products showed also the commanding importance of the United States as an agricultural country, and the great importance of our agricultural exports in maintaining a favorable balance of trade. Mr. Hyde also gave incidentally a history of the production of the principal cereals.

At the opening of the afternoon session a paper on The Labor Problem from the Farmer's Stand-point was read by John M. Stahl, editor of the Farmer's Call. He divided his subject into two parts, the first being the labor problem on the farm. He said that that of those things the farmer needed, the hardest for him to get is intelligent, conscientious labor. Among the remedies for the scarcity of farm labor he mentioned agricultural education, beginning in the primary school in the country; better appreciation of the advantages of farm life in developing character; better treatment of farm hands; and the telegraph-line to farms from the cities. In treating the second division of his subject—the labor problem in the city—he pleaded the cause of the "innocent public" which was often the chief sufferer from strikes or lock-outs; opposed compulsory arbitration as impracticable, but favored conciliation, and, that failing, voluntary arbitration; and closed with a denunciation of both the open and the subtle lawlessness that too often appeared in the conflict between labor and capital, which should be good friends.

The following resolutions were adopted by the congress:

"That we favor the policy of reciprocity when it can be used to enlarge the markets for our agricultural products, and we indorse the words of the late President McKinley that we 'should take from our customers such of their products as we can use without harm to our industries and labor.'"

"That we express our sincere regret at the present deplorable conditions of business caused by the conflict between capital and labor, and we declare ourselves strongly in favor of settling all such difficulties either by conference or arbitration."

"That we express our earnest hope that the rural free mail-delivery system, and favor its further extension as rapidly as is consistent with public policy, until the rural population of the entire country receives the benefit of this system."

"That we urge upon Congress the need of the early passage of the bill now pending for the establishment of the Appalachian park and forest reserve."

"That we favor the speedy enactment of a law by the Congress of the United States to prevent the adulteration of any article used for human food in any form; and that such laws should carry sufficient penalties to make them effective."

"That we favor the discontinuance of the distribution of seeds, except of new and improved seeds, which we recommend shall be distributed under the direct supervision of the Department of Agriculture at Washington."

"That we favor and urge on Congress an increase in the appropriation to each State and Territory for experiments in agriculture by the sum of $15,000."

"That we respectfully urge our representatives in Congress to make more liberal appropriations for the Agricultural Department, which embraces within its scope of work the largest and most useful of all the industries of the Union."

"That we recognize with pleasure and gratifica-
tion the growing usefulness of the national Department of Agriculture, and the earnest efforts being made by the heads of that department, the Hon. James Wilson, to encourage scientific and diversified farming, to gather correct statistical information regarding the annual yield and distribution of all crops, and otherwise to foster and protect the agricultural interests of the whole country.

"That we condemn the use of adulterants in the manufacture of food and clothing as being detrimental and injurious to the business interests of the people; and we respectfully request the Congress of the United States to enact such laws, of uniform application in all the States of the Union, as will compel manufacturers of food and clothing to stamp or label their manufactured goods in such a way as to characterize the exact percentage of all articles used in their manufacture, before placing their products on the markets of the country, together with proper penalties for violation of these laws.

"That we commend the efforts of the national Department of Agriculture to determine the practicability of establishing silk-culture as an industry in this country.

"That we ask at the hands of the Congress of the United States a wider and more general recognition of the necessity for improvement of our public highways, and that appropriations be made annually from the general funds of the national treasury to broaden the work already undertaken by the Federal Government along that line.

"That we commend the efforts of the present Secretary of Agriculture to extend and increase the value and efficiency of farmers' institutes by cooperation and closer relationship in this line between the States and the national Department of Agriculture through the inauguration of farmers' institute work in a limited way in one of the present divisions of the Department of Agriculture; and we urge upon the Congress of the United States the importance of this work and the desirability of increasing the support for its maintenance, to be used by the Secretary of Agriculture according to plans that he may deem most wise.

"That corresponding supervision and authority in the expenditure of Government funds appropriated to the agricultural colleges of the States should be vested in the head of the Department of Agriculture in the interest of real agricultural education and the accomplishment of the purposes for which such appropriations were originally made.

"That the early construction of an interoceanic canal is deemed essential and imperative for meeting the objects and purposes above set forth, and we hereby earnestly petition the Congress of the United States to take immediate steps toward the opening of the interoceanic canal; and that said canal shall be built and controlled by the Government of the United States without the aid of any other nation."

The Congress adopted an important amendment to its constitution, offered by the Hon. William L. Ames, of Wisconsin, which reads as follows:

"The membership of this congress shall consist of as many members from each State and Territory as shall be equivalent to one from each congressional district, two at large, one for each State agricultural college and experiment station, and one for each national or State society or organization created and maintained to foster any agricultural interests in the United States having headquarters in that State, proof to be produced, if required, of the standing of such organization; and as many more as to the appointing power may seem wise up to, but not exceeding, 10 from any one congressional district provided by the Governors of the respective States, but if in case of pressure of other business, lack of interest, or other reason the Governors fail to make liberal appointments, a certificate of appointment by the secretary of the State Board of Agriculture or State agricultural society, or by the State vice-president of this congress, shall be sufficient credentials of appointment as delegate to the Farmers' National Congress.

"And, further, it shall be the duty of such appointing power to appoint delegates recommended by any member of this congress up to the prescribed number.

"All appointments shall be for the term of two years, beginning Aug. 1 of the year in which the appointment is made, regardless of where or when the annual meeting of the congress may be held; and should a delegate so appointed fail to attend the first annual meeting after his appointment, and also fail to render a valid excuse for such neglect to the power that appointed him, another may be appointed in his place the following year.

"Provided always, however, that any delegate shall have been properly appointed under the constitution of the Farmers' National Congress and has attended four of its annual meetings shall be a life-member and shall be entitled to every privilege and right of any member of the congress as long as he shall comply with the required annual payment of dues and his conduct continues acceptable to the congress.

"The vote of any State or Territory is not to exceed in any case the number of its congressional districts, plus 2, and 1 for each of its State agricultural institutions and State or national societies or organizations, as prescribed in the first paragraph of this amendment."

The congress was lavishly entertained by Macon and Georgia. At an expense of several thousand dollars a complete display of Southern products had been gathered in large tents near the Academy of Music, where it was convenient for the delegates to the congress to inspect it. A Southern barbecue was enjoyed by more than 2000 delegates and guests. Receptions and carriage drives were given to the ladies accompanying the delegates. At the close of the congress the Georgians Southern and Department of Agriculture in a special train to Palatka, Fla.; and on their return to Macon the Macon, Dublin and Savannah Railway took them on a special train to Savannah, where they were entertained by a trip down the river to the ocean, a banquet being served on board; by a clambake, rides about the city, etc.

FEDERATION OF CHURCHES. The second annual conference of the National Federation of Churches and Christian Workers in the United States was held in Washington, D. C.,
February 4 and 5. Seventy-five delegates were enrolled, representing 7 States, 11 denominations, and 15 organized federations of States and cities. In response to an address of welcome by the Rev. J. N. Butler, of Washington, Mr. J. Cleveland Cady, president of the New York Federation, said that he believed that great as might be the practical power gained for righteousness by the cooperation of the several branches of Christ's Church, the greatest gain would be the spiritual gain born of "the heart and good-will toward men." The report of the secretary, E. B. Sanford, gave a detailed account of the work of the year, mentioning the establishment of federations in a considerable number of cities and towns, and of State federations in New York and Ohio. Different methods of work were taken up in different places according as circumstances might suggest. Among those mentioned in the present report were house-to-house visitation, the general canvass of neighborhoods, efforts to bring various churches into closer fellowship and cooperation, and measures for preventing overlapping and collision. A part of the duty of the general secretary had been to make what might be called missionary tours, in which he went to several cities and towns, met the pastors and laymen of the several churches, and explain to them the principles and methods of organization under the plan of federation. Speaking of the Possible and Impossible in Church Federation, the Rev. L. C. Barnes, of Pittsburg, characterized as the impossible, and indeed, undesirable thing, ecclesiastical union, saying that it concentrated attention on the principle of difference, and that this was sure to result in wider ecclesiastical divergence. The possible and desirable thing was Christian cooperation, which drew mind and heart away from the things in which Christians differ, to those in which they could join heartily as workers together with Christ. In an address on the way in which churches can unite for social work, the Rev. Walpole Warren, of New York, maintained that the denominations were desirable, in that each had its own particular work to do. Other subjects of discussion concerned Home Visitation, the Church Federation of Great Britain, and the work of the National Council, and the Anglican Church. In the last paper the suggestion was made by Mr. Benjamin G. Welch that members of the church who move away from home be given local addresses and be corresponded with as formal associates, while they still retain their connection with the home church.

At the meeting of the Executive Board of the National Federation held in New York City Nov. 5, the secretary made report of two trips he had made to the Middle West—one in the spring and one just completed—covering together about 10,000 miles of travel. The way had been prepared by correspondence for meetings which brought together many of the men who had in charge the home mission and church extension interests of denominations representing nine-tenths of the English-speaking church membership in the States of Michigan, Illinois, Wisconsin, Minnesota, South Dakota, Iowa, Kansas, and Nebraska. With entire and earnest unanimity of action steps were taken in all those States to secure the appointment of representatives from the denominational bodies, to meet in conference and deliberate on the business of the latter.

A meeting of delegates appointed by the leading denominations, held in Lincoln, Neb., Oct. 29, by unanimous vote, organized the Nebraska Federation of Churches, with a constitution similar to those of the New York and Ohio federations. Similar conventions were to be held at Baraboo, Wis., Nov. 11; Lansing, Mich., Dec. 10; and Chicago, Ill., Dec. 18. In Chicago, Milwaukee, Minneapolis, St. Louis, St. Paul, Kansas City, Topeka, and Omaha the interests of local federated action and organization had been placed under the care of committees. The General Conference of the Methodist Episcopal Church, South, had provided for the appointment of representatives to attend the meeting of the National Federation in 1903. The General Missionary Convention of the Disciples of Christ had, by resolution, approved the spirit and purpose of the work of the Federation. In a summary of the work of the Federation and what it has done during the term of its operations, published by the national secretary, its work is defined to be to promote the formation of federations in every State and community for the purpose of securing cooperation between churches and Christian workers of all denominations and of making more effective the prosecution of their common interests. During its career it had brought about the organization of State federations in New York, Ohio, Nebraska, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, and Kansas; and had aided the work of State organizations in Maine, Rhode Island, and Pennsylvania. Local federations had been organized in 24 cities, having an aggregate population of nearly 6,000,000. Of these 24 federations nearly all sprang from the direct initiative of the National Federation. Several federations had taken effective action for civic, social, and moral righteousness, and by putting a stop to sources of corruption had accomplished results that were possible only by united action. In some cases federations had made their work the elimination of needless and competitive churches and the establishment of churches in destitute places; and it was believed that through mutual understanding and wise counsel a better and more economical use might be made of funds contributed for the Interest of Social and Civic Righteousness, Why a New England City needs Federation, Federation from a Laymen's Point of View, Cooperation in Home and City Work, and the National Affiliation. In the last paper the suggestion was made by Mr. Benjamin G. Welch that members of the church who move away from home be given local addresses and be corresponded with as formal associates, while they still retain their connection with the home church.

At the meeting of the Executive Board of the National Federation held in New York City Nov. 5, the secretary made report of two trips he had made to the Middle West—one in the spring and one just completed—covering together about 10,000 miles of travel. The way had been prepared by correspondence for meetings which brought together many of the men who had in charge the home mission and church extension interests of denominations representing nine-tenths of the English-speaking church membership in the States of Michigan, Illinois, Wisconsin, Minnesota, South Dakota, Iowa, Kansas, and Nebraska. Several federations had taken effective action for civic, social, and moral righteousness, and by putting a stop to sources of corruption had accomplished results that were possible only by united action. In some cases federations had made their work the elimination of needless and competitive churches and the establishment of churches in destitute places; and it was believed that through mutual understanding and wise counsel a better and more economical use might be made of funds contributed for the Interest of Social and Civic Righteousness, Why a New England City needs Federation, Federation from a Laymen's Point of View, Cooperation in Home and City Work, and the National Affiliation. In the last paper the suggestion was made by Mr. Benjamin G. Welch that members of the church who move away from home be given local addresses and be corresponded with as formal associates, while they still retain their connection with the home church.
ing with the distribution of population, of church settlements, and charitable institutions; the influence of the national and frequent changes of nationality which some neighborhood undergo. For effective work, the city is divided into assembly-district or ward sub-federations, and a parish system is instituted, under which each block is assigned to a church or cooperative organization. These cooperative agencies report yearly through the central federation all families with definite religious preference to congregations of their creed, while families without such preferences are given into the charge of the church supervising the blocks in which they live. Through the same agencies watch is kept upon all vicious institutions in the several districts and blocks in order that the power of the federation may be brought to bear against them through the officers of the law. Through them also interest is fostered in the improvements of schools and the maintenance of playgrounds, parks, and libraries.

Federation in Great Britain.—The Free Church Year-Book for 1902 represents that, according to the latest returns, the Free Churches of England and Wales have an aggregate of 1,940,000 members. The Bull of the Anglican Church is 1,974,629. The figures for the entire English-speaking world indicate that the Free Church membership is more than 18,000,000, and the Anglican membership a little more than 3,000,000.

National Council of Evangelical Free Churches.—The seventh annual meeting of the Evangelical Free Churches was held in Bradford, beginning March 11. The Rev. Dr. W. J. Townsend, of the Methodist New Connexion, presided and delivered an opening address on the subject of the Free Church of England: Its Divine Call. In it he suggested the thought as a gladdening and a sobering one that this, the youngest of the great organizations of the land, was yet the greatest, and covered at least 8,000,000 of adherents. The annual report showed that since the meetings of the previous year at Cardiff the number of councils had increased from 220 to this time, and had diminished proportion of new councils, owing to the fact that the entire area of England and Wales was nearly covered already. A few councils since the last annual meeting had changed their name and other had been merged in larger councils. The fears formerly entertained that the movement would become political had not been realized, and not more than a dozen councils "had struck on this rock." The councils were increasingly doing solid spiritual work. The district federations were perfecting their organizations and readjusting their areas. The three missioners of the National Council had each held missions in all parts of the country, with crowded services, many conversions, and quickening of the spiritual life of the churches.

Cycling mission bands had been very active in the villages during the summer. The Social Purity Crusade carried on by the Central South London Council had led to the closing of 300 disorderly houses. The National Council had taken an active part in defense of progressive and unsectarian education against the attacks of a "clericalizing government. A feature of the year had been the launching of the Free Church Girls' Guild, which had been taken up by 80 councils, while about 40 workers in addition were engaged in the villages. About 3,000 girls had been brought within the sphere of the movement. The proposed federation of non-conformist churches should be enabled to acquire land compulsorily for the erection of places of worship when they can not get land by purchase, and to enfranchise on equitable terms held land acquired by them for a special religious purpose, and to have the right of holding tenancy, urging local councils to take action against gambling, and calling for rigorous enforcement of the existing law, with increased municipal and administrative powers for the suppression of betting; welcoming the Government's bill to amend the law relating to the sale of intoxicating liquors and to drunkenness and to provide for the registration of clubs, and appealing to the Government to introduce at the next session a bill dealing radically with the licensing system on the line of the recommendations of the minority report; and reaffirming the resolutions of the previous year respecting secondary education.

These resolutions protested against the application of local rates to the establishment or maintenance of denominational schools privately managed, and expressed the opinion that the only solution of the education question was the creation of one local and directly representative authority, in areas of sufficient size, responsible for all grades of education. Among the subjects treated in the addresses and papers delivered and read to the meeting were Housing (Rev. Dr. Clifford); The Attitude of Free Church Councils to the Problems of the Use of Wealth; Free Church Twentieth-Century Funds: the Opportunities they Give Us; How Successfully to Work a Free Church Council; Twentieth-Century Evangelism; The Federation Movement: a Link between the Nations; and the Free Church Boys' Camp Movement.

A national conference of Free Church Councils to consider the education bill was held in London April 15. The Rev. Dr. W. J. Townsend, president of the National Council of Free Churches, presided. In his opening address the chairman declared that what was said to be concessions to non-conformists in the education bill were found to be "aggravations of the injustice under which they had lived. The bill aimed to destroy the only education authority which had worked well for thirty-two years, and it changed the face of education in the country immeasurably for the worse. The proposals involved a new en-dowment of what was likely to be a diminishing proportion of new councils, owing to the fact that the entire area of England and Wales was nearly covered already. A few councils since the last annual meeting had changed their name and others had been merged in larger councils. The fears formerly entertained that the movement would become political had not been realized, and not more than a dozen councils "had struck on this rock." The councils were increasingly doing solid spiritual work. The district federations were perfecting their organizations and readjusting their areas. The three missioners of the National Council had each held missions in all parts of the country, with crowded services, many conversions, and quickening of the spiritual life of the churches.

Cycling mission bands had been very active in the villages during the summer. The Social Purity Crusade carried on by the Central South London Council had led to the closing of 300 disorderly houses. The National Council had taken an active part in defense of progressive and unsectarian education against the attacks of a "clericalizing government. A feature of the year had been the launching of the Free Church Girls' Guild, which had been taken up by 80 councils, while about 40 workers in addition were engaged in the villages. About 3,000 girls had been brought within the sphere of the movement. The proposed federation of non-conformist churches should be enabled to acquire land compulsorily for the erection of places of worship when they can not get land by purchase, and to enfranchise on equitable terms held land acquired by them for a special religious purpose, and to have the right of holding tenancy, urging local councils to take action against gambling, and calling for rigorous enforcement of the existing law, with increased municipal and administrative powers for the suppression of betting; welcoming the Government's bill to amend the law relating to the sale of intoxicating liquors and to drunkenness and to provide for the registration of clubs, and appealing to the Government to introduce at the next session a bill dealing radically with the licensing system on the line of the recommendations of the minority report; and reaffirming the resolutions of the previous year respecting secondary education.

These resolutions protested against the application of local rates to the establishment or maintenance of denominational schools privately managed, and expressed the opinion that the only solution of the education question was the creation of one local and directly representative authority, in areas of sufficient size, responsible for all grades of education. Among the subjects treated in the addresses and papers delivered and read to the meeting were Housing (Rev. Dr. Clifford); The Attitude of Free Church Councils to the Problems of the Use of Wealth; Free Church Twentieth-Century Funds: the Opportunities they Give Us; How Successfully to Work a Free Church Council; Twentieth-Century Evangelism; The Federation Movement: a Link between the Nations; and the Free Church Boys' Camp Movement.
down in the Government bill, which was calculated still further to hinder education, greatly decrease the rates, inflict injustice, and create religious bitterness.

At a meeting of the General Committee of the National Council, June 2, reports were made of activity in all parts of the country in opposing the Education bill by the circulation of documents, the signing of petitions, and written letters to the editors of newspapers and addresses by representatives of the Free Churches.

FINANCIAL REVIEW OF 1902. The most important event of the year was the ending of the Boer War in South Africa through the acceptance, on May 31, by the Boer delegates to the peace conference at Pretoria of the terms of surrender imposed by the British Government, through Gen. Kitchener. These terms were, as briefly stated, that the burghers should lay down their arms and recognize the sovereignty of King Edward; the return to South Africa of all Boer prisoners, Great Britain undertaking that they shall not suffer the loss of liberty or of property, and that no action shall be taken against them where they have been guilty of a breach of the laws of war; that the Dutch language will be taught in the schools of the new colonies where the parents desire that this language shall be used in the courts of law where necessary; that the burghers will be allowed to retain rifles for self-protection and that military occupation of the colonies will cease as soon as possible and self-government will be substituted.

The total British losses in South Africa, as officially stated, from the beginning of the war, Oct. 10, 1899, to the ending of hostilities, which practically terminated with the capture of Lord Methuen's force by Gen. Delaere March 10, were 1,069 officers and 29,807 men who were either killed in battle or died from wounds or disease, 884 officers and 9,181 men missing and prisoners, and 2,937 officers and 68,311 men sent home as invalids. The British took 37,000 Boer prisoners; of the killed and wounded no statistics were given. The cost of the war to the British, as officially reported by the Chancellor of the Exchequer in presenting the budget on April 1, was $135,694,752. The direct and indirect borrowings on account of the war were estimated by the London Statist at $225,000,000 ($1,250,000,000). The last loan issued was for $26,000,000 on April 18, and another loan of about $10,000,000 for the restocking of the Boer farms and for other improvements in the Transvaal will soon be emitted. The British forces in the field during the war were about 290,000 men; the Boer force at the beginning was estimated at 50,000.

The effect of the war upon the gold production of South Africa is shown by the fact that from a maximum of 459,709 ounces in August, 1899, it fell to 19,906 in October, and the total for that year was 4,069,166 ounces. In 1900 no record of production appears after March, and the output for that year is stated at 251,891 ounces. In 1901 mining was resumed in May, and the production in that year was 238,901 ounces. For nine months of 1902 the output was estimated at 1,229,573 ounces, and it increased from 81,465 in February to about 190,000 ounces in October.

Another event of the year was the postponement of the coronation of King Edward and of Queen Alexandra, which were to have taken place on June 24, because of the illness of the King, which necessitated an operation for appendicitis. The ceremonies were finally held on Aug. 9, after the King's recovery, though they were of a much less imposing character than originally contemplated.

Prince Henry of Germany visited the United States in February, when he was enthusiastically received and entertained by the Federal, State, and municipal governments and by commercial and other bodies. In October the Crown Prince of Siam was a visitor to this country.

When the time arrived for the payment of the interest and of the first instalment of the Chinese indemnity, which were due July 1, the Chinese Government insisted upon such an interpretation of the terms as would permit payment to be made on a silver, instead of a gold basis. The United States Government assented to the change, but other powers refused; later, however, the terms were partially modified by these powers. Largely as a result of the payments of the indemnity, the market price of silver declined, and on Nov. 22 it fell to the lowest price on record, 22½ pence per ounce.

During the first half of the year there was more or less depression in the European markets, and particularly in the London Cotton Market. In France the Bourse was unfavorably affected in December, 1901, by a decline in copper shares, which fell was also reflected in the London market. Later copper loans were more to be obtained in the London market, which extended to Germany, and the situation in Russia was at times regarded as critical. Consequently French and German capital was largely diverted to London for employment, resulting in an enormous increase in the investments, especially by French bankers, in consols and in other securities and also in sterling bills in the British capital. As estimated late in October that the investments of France in foreign countries amounted to about $1,200,000,000, and that these investments in England alone were not far from $400,000,000. The plethora of French capital seeking employment greatly facilitated borrowings, through sterling bills, by American bankers, and it was estimated at the end of October that such loans were upward of $200,000,000. This large indebtedness of Americans will account for the sensitiveness of our markets to the changes in the transatlantic monetary conditions abroad which resulted from the efforts in September of the Bank of England to divert to Paris the drain of gold to New York, which was then threatened by the acute monetary tension and another loan of $25,000,000. When this market grew easier and gold exports hence to Paris became possible, the London discount and the bullion markets promptly responded to the changed conditions here and to those in Paris as indicated by the rate for exchange at the French capital on London.

The following is a tabular survey of the economic conditions and results of the twelve months ending Nov. 29, 1902, contrasted with those of the corresponding period ending Nov. 30, 1901:

Money.—As was the case in the previous year, the feature of the monetary situation in 1902 was the continuous and increasing absorption by the Treasury of money from the banks through the fiscal operations of the Government. In December, 1901, the excess of receipts over expenditures was $97,426,966.53, and in January, 1902, this excess was $8,033,856.29. In the following month there was a reduction in the surplus revenues to $2,000,448.37, followed in March by a recovery to $8,395,976.67. In April the surplus fell off to $4,410,127.24, recovering in May to $10,762,881.58, and in June the excess of receipts over expenditures was $15,839,000.45, though provision had been made by Congress for the abolition of the war-revenue taxes imposed by the act of 1896, the repeal to take effect July 1. After the beginning of the new fiscal year the effect of the repeal of internal-revenue taxes was observable in the excess of expenditures over receipts in July by $7,507,876.48, for the first time since August, 1900, when the deficiency in the revenues was $820,244.12. In August, 1902, however, the above-noted deficiency was reduced to $2,015,674.14, the excess of receipts over expenditures for the first time since July, 1901. The items for customs payments were quite large, reflecting increasing imports, and internal-revenue collections were heavy, due to prosperous conditions of such industries as were taxable under those internal imposts which were in effect, and at the end of November the surplus revenues for five months of the fiscal year were $14,149,179, against $24,200,505 in the same period in 1901, when the major portion of the internal taxes were in force. This absorption of money through the fiscal operations of the Treasury had a direct influence upon the New York banks because of the fact that about 70 per cent. of the Government business is conducted at this center. In addition to the drain upon the banks in New York through fiscal operations there was in December, 1901, a notable movement into the Treasury caused by the action of banks in the interior remitting, through their correspondents in this city, large drafts for deposits at Washington for the purpose of substituting such lawful money for United States bonds held as security for circulating notes, the bonds so withdrawn from circulation being sold at high prices for them then ruling. This movement continued with but little interruption until about the middle of March, when Secretary Shaw, who succeeded the late Governor Beardsley as Secretary, suspended the purchases of United States bonds, which had been inaugurated by his predecessor, such suspension being mainly for the purpose of checking the withdrawal for sale of those of these securities which were pledged for circulating notes. With a view to relieve the monetary situation, which had become somewhat tense by reason of withdrawals of gold for export, and the above-noted absorption of money by the Treasury, Secretary Shaw sought to increase deposits of public funds in the depository banks throughout the country, but he was only partially successful, because of the fact that the bonds required as pledge for these deposits commanded such high prices that few of the banks would procure them for the purpose of qualifying for the receipt of public funds. Moreover, the tense monetary conditions were, for the reasons above assigned, chiefly confined to this central city and area, being much less intense in the interior; consequently there was little inducement for country banks to apply for Government deposits. In the early summer months the monetary tension relaxed, but by the middle of August stringent conditions again developed, owing to the concurrent absorption of money from the banks into the Treasury through fiscal operations and a movement of funds to the interior for crop and for business purposes, and also an enormous expansion of bank credits. In the following month the situation became so acute because of the low bank reserves that the Secretary of the Treasury was impelled to resort to expedients for relief. On Sept. 13 he announced a policy of designating as temporary depositories of public funds such banks as had free United States bonds, or those which were not pledged for deposits or for circulation. The Secretary also anticipated the payment of interest upon the public debt due Oct. 1, and on Sept. 20 he announced that he would divert to depository banks the full amount of internal-revenue and miscellaneous receipts, amounting to more than $500,000 per day for thirty or sixty days, or longer, should such a course be necessary. On Sept. 25 the Secretary directed the prepayment, with a rebate of 1/8 of 1 per cent. per month, of all interest on the public debt from Oct. 1 to Dec. 31, 1902, and in addition to this sum, to buy at 105 any of the United States 5-per-cent. bonds of 1904 which might be offered on or before Oct. 15; the price offered for these bonds was, however, so low that only $24,600 out of the $10,410,350 outstanding were presented for redemption. The above-noted measures of relief having proved entirely ineffectual in relieving the monetary tension, on or shortly after Sept. 29th at New York, the Secretary on Sept. 30 announced that he would accept as pledge for public deposits in the banks municipal or such other bonds as were permissible as investments by savings-banks of the various States, these bonds to be substituted for those of the Government on condition that the United States bonds so released be immediately deposited as security for new circulation; the object which the Secretary had in view was an increase in the volume of bank-notes. At the same time Secretary Shaw, as part of his general program at the Washington for the purpose of substituting such lawful money for United States bonds held as security for circulating notes, the bonds so withdrawn from circulation being sold at high prices for them then ruling. This movement continued with but little interruption until about the middle of March, when Secretary Shaw, who succeeded the late Governor Beardsley as Secretary, suspended the purchases of United States bonds, which had been inaugurated by his predecessor, such suspension being mainly for the purpose of checking the withdrawal for sale of those of these securities which were pledged for circulating notes. With a view to relieve the monetary situation, which had become somewhat tense by reason of withdrawals of gold for export, and the above-noted absorption of money by the Treasury, Secretary Shaw sought to increase deposits of public funds in the depository banks throughout the country, but he was only partially successful, because of the fact that the bonds required as pledge for these deposits commanded such high prices that few of the banks would procure them for the purpose of qualifying for the receipt of public funds. Moreover, the tense monetary conditions were, for the reasons above assigned, chiefly confined to this central city and area, being much less intense in the interior; consequently there was little inducement for country banks to apply for Government deposits. In the early summer months the mone-
000 more was in transit, but the condition of the foreign-exchange market was such as to make entirely improbable the importation of further sums. On Oct. 7 Secretary Shaw was offered a block of $5,000,000 United States 4-per-cent. bonds of 1925 at 138. He declined to accept them, though he expressed a willingness to consider the proposal and take an option upon the bonds, provided the bankers making the tender would offer a larger amount at a concession in the price. These bankers thereupon negotiated with holders of United States 4-per-cent. of 1925 for their exchange for municipal bonds, which had been accumulated in the course of the business of these bankers, and having succeeded in effecting such exchange for about $10,000,000 of the above-mentioned United States bonds, they offered them to the Secretary. On Oct. 17 Mr. Shaw announced that he had accepted the option on the $5,000,000 offered on the 7th, and that he would buy at 1371/2 and interest any United States 4-per-cent. bonds of 1925 that might be offered on that day and until the close of business on Oct. 20. The offerings on the 17th were $9,253,407, and on Oct. 18, $9,085,864; the total amount paid for the bonds on the completion of deliveries was $21,850,864. The Secretary also directed the payment of the November interest on the public debt of the United States amounting to about $2,300,000, without rebate. Early in November the Secretary suspended the substitution of State and municipal for United States bonds as security for deposits of public funds; the amount of substitutions then was $20,488,600. Secretary Shaw also announced that no further increase would be made in deposits of public funds in the banks.

Average cash holdings of the New York associated banks at the beginning of December, 1901, were $245,465,700. The maximum for the twelve months ending Nov. 29, 1902, was $370,622,600 Feb. 1. By May 17 the cash had been reduced to $242,387,000, largely by reason of the suspension, March 15, by Secretary Shaw of bond purchases. There was a recovery by July 26 to $253,226,700, due, in part, to the return movement of money to this center from the West. This was followed by a gradual reduction in the cash until the 17th, when the Treasury, later by the movement of currency to the interior, and by Oct. 11 the cash was reduced to $210,612,500, the minimum of the year. The highest cash balances in the banks on the 17th caused a recovery in the cash to $338,452,800 by Oct. 25, and at the end of November it was $256,745,500. At the beginning of December, 1901, the average loans of the associated banks were $857,169,200. After Dec. 21, when the minimum of the twelve months, $855,003,400, was recorded, loans rapidly expanded to $938,191,200 by March 1; this was not only the maximum of the year, but the highest on record. Then came contraction, influenced by a reduction in bank reserves, and by April 26 the loans had been reduced to $803,394,100. After a recovery to $904,162,500 in the following week, loans were again reduced, reaching $881,070,400 by June 14. They were thereafter more or less rapidly expanded to $929,142,000 by Aug. 16 in anticipation of the effects of the abolition of the war-taxes, and then followed gradual reduction, owing to calling of loans and liquidations, to $865,450,400 by Oct. 18, the end of October, the lowest of the year. Average deposits of the associated banks at the beginning of December, 1901, were $940,668,500. They fell to $904,996,300 by Dec. 21, and thereafter there was a rapid rise to $1,010,474,200, the highest of the year and on record, by Feb. 21. After irregularly declining to $891,751,000 by May 24 there was an advance to $906,245,000 by Aug. 16, followed by a decline to $863,125,800, the lowest of the year, Oct. 18; at the end of November the deposits were $883,836,800. It should be noted that, beginning with Oct. 4, the amount of public deposits in the banks was separately reported; these, on that date, were $40,736,300, and by the close of November they were $40,189,900. The surplus reserve of the banks at the beginning of December, 1901, was $13,414,575. This was reduced to $3,455,025 by Dec. 14, recovering to $25,623,350, the maximum of the year, by Feb. 1, 1902. There was a fall to $3,112,900 by March 15, a recovery to $6,965,575 on the 29th, a decline to $2,649,525 April 5, and then came an irregular recovery to $15,709,275 by July 19. The effects of the drain of cash into the Treasury and to the interior and also of the expansion of loans and the consequent increase of deposits were observable in the decrease in the reserve to $1,842,050 deficiency by Sept. 20, for the first time since Nov. 18, 1899. There was a recovery to a surplus in the following week and an improvement in bank conditions thereafter; the reserve surplus at the end of November was $15,766,300. Computations of reserve based on the bonds of the National Park Company, owned by the Government, showed a surplus at the close of November of $25,828,775. One feature of the totals of the weekly bank statements, observable security market, in October until the first of the month, of the excess of loans over deposits beginning with the 4th. This was due to the practical transfer of cash to the capital and net-profit account, and this occurred for the first time since 1896; on and after Oct. 25 deposits were in excess of loans. Previous to October this year individual banks having large capital loaned in excess of their deposits, but in the above-named month from 20 to 22 banks pursued this course.

The extreme rates for money on call at the New York Stock Exchange during the twelve months under review were 35 per cent. and 2 per cent. The tone of the money market was firm in December, 1901, the rate gradually advancing after the middle of the month to 15 per cent. on the 31st, in anticipation of a large flow of money from the interior, predominantly from Chicago. In January, 1902, the market grew easier as the result of the return flow of money from the interior, the purchases of bonds for the sinking fund, and the liquidation of hi. In the following month, 2 per cent., the minimum of the year, was recorded. The tone became firmer in March, influenced by gold exports and by the suspension of bond purchases by the Treasury, and in April low bank reserves and continued gold exports kept rates comparatively high until the close of the month, when the tone became easier, influenced by increased deposits of public funds in depository banks. In May, during the derangement incident to failures of Stock-Exchange houses, money on call advanced to 25 per cent. After the excitement subsided, however, the markets returned to normal conditions, and the market was easy in June and until the middle of August, when the rate on call rose to 6 per cent., subsequently declining to 3 per cent. In September monetary tension developed as the result of a concurrent drain of money to the interior, abstractions by the Treasury through fiscal operations, and they were $879,828,000. Average deposits of the associated banks at the beginning of December, 1901, were $940,668,500. They fell to $904,996,300 by Dec. 21, and thereafter there was a rapid rise to $1,010,
FINANCIAL REVIEW OF 1902.

4-per-cent. bonds by the Treasury, when rates declined, and thereafter to the close of November the range for money on call was from 6 to 7 per cent. Time loans were 6 per cent. for thirty to sixty days, and 4½ to 5 per cent. for four to six months on stock collateral in December, 1901, and until after the middle of January, 1902, when the rates fell to 4 per cent. for all periods, and from February to April, inclusive, quotations were 3½ to 4½ per cent. for short and long dates respectively. In May there was an advance to 6 per cent. for short, followed in June by a decline to 4½ to 5 per cent. for all periods, and these rates remained practically unchanged until September. Then they rose to 6 per cent., pass a commission of from ½ to 1 per cent., equal to 7 and 8 per cent. per annum, in consequence of the monetary détente which then prevailed. In the latter part of this month and in October banks refrained from offering time loans, having so little money to lend that they preferred to employ it on loans secured for the greater part of the time that they were made with trust companies at the above-named rates. After the monetary tension was relieved, through bond purchases, rates declined to 6 per cent., without a commission. The market for time money was, however, firm in November, when the demand was greatest for short periods at 6 to 7 per cent.

Commercial paper of first class was 4½ to 5½ per cent. in December, 1901, so remaining until February, 1902, when it fell to 4 to 4½ per cent., recovering to the above-quoted rates in April, and declining to 4 to 4½ per cent. in June. In the following month there was a rise to 4½ to 5 per cent., in August to 4½ to 5½ per cent., and in September and October rates were nominal at 4½ per cent. for all periods. No local business was then transacted in paper, the banks being out of the market as buyers, and merchants desiring accommodation resorted to their banks for discounts. Derangement of requirements, however, small, collections being generally good and sufficient to meet current needs. It is noteworthy that at no time during the monetary détente did the market remain closed by the high rates, these being confined to the Stock Exchange.

The clearing of the New York associated banks during the clearing-house year ending Sept. 30, 1902, was $74,733,189,436, against $71,620,675,494 in the previous year. For twelve months ending Nov. 29, 1902, the clearings were $76,471,924,342, against $79,085,128,078 for the same time in 1901-02.

The condition of the New York Clearing-House banks, the rates of interest, exchange, and silver, and the prices of United States bonds on Nov. 30, 1902, compared with the same items for the previous two years, are as follow:

Stocks.—The stock-market was more or less unsettled during the greater part of December, 1901, by active money, and also by important declines in the price of some of the industrial properties, notably the United States Steel and American Sugar Refining common, an fact that was verified when compared with the prices of six months previously, and the latter to 103½ from 120 in the beginning of the month and 153 early in June. Toward the last week there was a decided recovery in the market, led by the anthracite-coal shares, the rise in which was influenced by the very satisfactory condition of the trade as indicated by the unprecedented large production for the year and by the maintenance of firm prices. Central New Jersey sold at 106½ as against 145½ Jan. 4, and Lackawanna was 238 Dec. 31 compared with 338 Jan. 3. The Heading stocks, Manhattan, St. Louis and San Francisco, and Chicago, Indianapolis and Louisville common also recorded notable advances. Among the exceptionally large transactions during the month were those in Amalgamated Copper of 2,555,000, and in American Sugar Refining of 1,050,000 shares. In January, 1902, the dealings in stocks were smaller, and though there was apparent inherent strength in the market, prices fell off on light offerings. There seemed to be a disposition on the part of speculators to await developments, an encouraging change between venture in the market. The movement by the State of Minnesota for the institution of a suit in the United

Vol. XX.—16 A
States Supreme Court against the Northern Securities Company attracted attention, and one depressing influence was the embarrassment of a Western syndicate which had undertaken to consolidate a group of trolley and telephone lines, with a further event, somewhat discouraging in character, was the failure of the Crude Rubber Company. The floating of $30,000,000 debenture bonds by the Atchison, Topeka and Santa Fé Railroad Company was announced, and there were rumors of a large bond issue by the Erie. The deplorable Park Avenue Tunnel accident had an adverse influence upon the stock of the New York Central Company. This was followed by the announcement of an issue of $35,000,000 of new stock, through which shareholders would have valuable rights, and the market price of the stock thereupon recovered. The dividend on the Central New Jersey was increased during the month from 5 per cent. to 8 per cent. per annum, and that of the New York, Chicago and St. Louis second preferred from 2 per cent. to 3 per cent. Amalgamated Copper stock recovered because of the improvement in the situation. The annual report of the United States Steel Corporation was so favorable that it stimulated active buying of the shares. The London security markets were subject to rumors of pending negotiations, indicating a speedy ending of the war in South Africa, and this news had some influence on the speculation in American securities at the British capital, more or less contributing to a better tone here toward the close of the month. Among the important advances were: Lackawanna to 287¼, in Rock Island to 165, Chicago and Northwestern to 10, and Metropolitan Street Railway to 173. In February the depressing influences on the market were the phenomenally bad weather conditions between the 17th and the 28th, and also the effect of the Commissioner of Internal Revenue to enforce a ruling taxing collateral deposited as security for loans. The United States Supreme Court adjourned on the 3d, having failed to announce a decision in the matter of the application of the State of Minnesota for leave to file a bill of complaint against the Northern Securities Company, and therefore it did not appear that the suit would not be pressed. Interest in the matter was revived, however, by the action of President Roosevelt, who, on the 19th, directed the Attorney-General to file suit against the company on the ground that it existed in defiance of the antitrust law of 1890. Though the Supreme Court on the 24th rendered a decision denying the application of the State of Minnesota, the above-noted action by the President had an unsettling effect, because it was seen that if the Northern Securities Company had violated the provisions of the act of 1890 there were other concerns which were similarly situated. There was a severe fall in prices of stocks on the exchange on the 29th, but this was followed by an irregular recovery, and the market was generally strong thereafter, though the trading was comparatively small. Labor troubles were the prominent features in March, and the most serious was the strike of freight-handlers at New York. A lock-out was threatened by the cotton manufacturers in New Bedford, Mass., but the differences with the employees were compromised. The United Mine Workers had the major coal regions of Pennsylvania demanded an eight-hour working day, but through the mediation of the National Civic Federation a strike was averted. The bill of complaint in the action brought by the United States Government against the Northern Securities Company was filed in the circuit court for the District of Minnesota on the 10th, but this attracted little attention. There was some anxiety respecting the prospects for winter wheat, owing to the smothered growth in the Southwest, until copious rains tended to relieve apprehensions. Notwithstanding the above-noted unsettling features the tendency of the stock market was generally constructive, and showed improvements compared with the lowest of the month; one of the notable events was an increase in the dividend on Southern Railway preferred to the basis of 5 per cent. per annum. A prominent feature in April was a partial corner in Louisville and Nashville. This was brought about through the sale by the company of 50,000 shares of new stock, the issue of which had been authorized in 1893. The sale was made, however, before the new stock had been listed on the Stock Exchange, and, taking advantage of this fact, John W. Gates bought largely of the stock, intending to squeeze the short interest, but, in order to effect this purpose, he had to take an interest more than he could conveniently carry. He had secured control of the property, and if he forced a corner he would place himself in the embarrassing position of being technologically short of his own stock. He extricated himself from this position by turning over his control to J. P. Morgan & Co. When it was seen that a corner was threatened the whole market became unsettled, but after the impending danger had been averted there was a decided recovery in the entire list influenced by speculative manipulation on a large scale. Among the notable advances were Chicago and Northwestern common from 232 to 271, Illinois Central 141¼ to 153¼, Nashville, Chattanooga and St. Louis 89¼ to 122, and Michigan Central 137 to 192; Louisville and Nashville rose during Mr. Gates' operations from 105¼ to 133. The quarterly dividend on Amalgamated Copper was reduced this month to ¼ of 1 per cent., and that on Calumet and Hecla was also lowered. The United States Steel Corporation announced its intention to issue $250,000,000 of new bonds for the purpose of retiring with $200,000,000 of the issue a corresponding amount of preferred stock and converting the remainder of the bond emission into cash. The Rock Island obtained control of the Choctaw, Oklahoma and Gulf Railroad, and the St. Louis and San Francisco obtained control of the Savannah, Florida and Western, or the Plant system of roads. One event early in May was the collapse of what were known as the Webb-Meyer securities, involving the failure of three Stock-Exchange firms. There had been wild speculation in these properties, the result of manipulation, and the collapse was brought about through a sharp break on the curb market on the last day in April in International Power stock from 198 to 120. This attracted attention to Dominion Securities, Hackensack Meadows Storage Power, and North American Lumber and Pulp because of the successful connection of the Webb-Meyer syndicate with International Power. The market was again unsettled, after it. A lock-out was threatened by the cotton manufacturers at New Bedford, Mass., but the differences with the employees were compromised. The United Mine Workers had the major coal regions of Pennsylvania demanded an eight-hour working day, but through the mediation of the National Civic Federation a strike was averted. The bill of complaint in the action brought by the United
FINANCIAL REVIEW OF 1903.

The remainder of the month, though prices were generally lower at the end than at the beginning; one important exception was Canadian Pacific, which rose from 123 1/4 to 141 1/4. The anthracite-coal miners' strike continued throughout June, and an attempt at the beginning of the month by the leaders of the organization to induce the engineers, drivers, and men along the lines to join in the strike was partially successful. On the 18th a call was issued by John Mitchell, the president of the United Mine Workers' Association, for a convention to be held July 17 of all the coal-miners in the country, both bituminous and anthracite, to determine whether the former should also strike. Mining of anthracite coal was suspended throughout the month, the operators fearing that those who were willing to work would not be protected, but the washeries at the mines were operated and some coal was supplied to the market. The stock speculation was not greatly influenced by the coal strike, because it was felt that some way would be found for settling the troubles. The tone of the market was generally strong, though the volume of business was not large. One feature was a sharp rise in Chicago and Eastern Illinois from 139 1/2 to 195, and there was also an advance in Illinois Central from 150 1/8 to 156 1/2. These were accompanied by increases in the capital from $70,200,000 to $805,000,000, stockholders being given the privilege of taking the additional shares at par. Other noteworthy advances were sharp increases in Missouri Pacific, Wabash common and preferred, and St. Paul. The granting of a permanent injunction restraining the conversion of $200,000,000 of the United States Steel preferred stock into bonds caused a fall in the shares of the corporation. Though the Pennsylvania Railroad Company made a contract with the Postal Telegraph Company for the use of the lines of the Pennsylvania system to displace the service of the Western Union, the stock of the latter was not materially affected.

In July the stock-market was generally strong and at intervals buoyant. The efforts of the anthracite miners' organization to induce the bituminous miners to join in a sympathetic strike were largely unavailing; the latter considered themselves bound by existing contracts with their employers; this action of the bituminous miners removed a threatening feature in the anthracite market, and there were no serious disturbances caused by the anthracite miners at Shenandoah, Pa., leading to the calling out, by Gov. Stone, of the Pennsylvania militia. Strikes among the freight-handlers at Chicago resulted in a partial suspension of freight traffic until the 10th, when the strikers surrendered, there being labor disturbances in the bituminous-coal regions of Virginia and West Virginia, but these were unimportant. Among the decided advances in stocks during the month were those in Atchison, Missouri Pacific, and other Southwestern properties. St. Paul, Illinois Central, New York Central, Pennsylvania, Rock Island, Chicago and Eastern Illinois, St. Louis and San Francisco, and Colorado Fuel and Iron. Toward the end of the month the stocks which had been most rapidly advanced sharply declined, influenced by liquidation and by realizations. One feature was a contest for the control of the Colorado Fuel and Iron stock, which began in June and continued throughout the month. Another feature was the taking over by the St. Louis and San Francisco of the Chicago and Eastern Illinois. Though money rates were firm the anthracite was not unfavorably affected thereby in August, nor was it influenced by the continuance of the coal strike. The crop conditions were good, railroad earnings large, and the industrial situation was encouraging, and these favorable factors contributed to a confident feeling among stock speculators. The trading on the exchange was large and well distributed, and leading stocks, including low-priced properties, recorded material gains.

The dividend payment of the month was the reduction of the dividend on Reading first preferred stock, the effect of which was to continue the voting trust. The declaration of the dividend on Southern Railway preferred was postponed pending the action of the stockholders as to the extension of the voting trust. The Central of Georgia dividend on first preference incomes was reduced from 5 per cent. to 3 per cent. per annum. The Colorado Southern semiannual dividend was increased from 14 per cent. to 2 per cent. Severe monetary tension led to quite general liquidation in the stock-market in September, and the tone was weak during the greater part of the month, and on the 28th there was a demoralizing fall in prices, which was only partially checked by the announcement by the Secretary of the Treasury of plans for the relief of the monetary situation. The coal strike was a deranging element, and the market was also affected by the news of an operation upon President Roosevelt, necessitated by the injury which was inflicted at the time of the collision with a trolley-car at Pittsfield, Mass., in August. One of the most important declines was in Louisville and Nashville, which broke heavily on the announcement of the merger with the Atlantic Coast Line, owing to the fear of minority holders that they would not be included in the arrangements for the majority stock. There was quite liberal selling of American stocks in London during the greater part of the month, caused by apprehensions of large gold shipments to New York as the result of the high money rates.

The stock-market was irregular and lower in October, influenced early in the month by the activity in money, and later by bearish demonstrations. The ending on the 16th of the anthracite-coal strike, which resulted from the appointment by President Roosevelt of the coal operators, of a commission to investigate the causes of the trouble, had only a temporary influence upon the market, and the market during the first part of the month, though there were occasional rallies due to rebuying to cover short contracts. The market was heavy early in November, and on the 14th there was an unsettling fall due to disquieting rumors, which carried prices of some of the leading stocks to about the lowest of the year. This was followed in the third week by an exceptional rise in Manhattan by reports of a practical merger with the Metropolis and the Interborough companies. The market was active and generally strong to the end of the month. The announcement on Nov. 22 that the anthracite strike commission had adjourned to Dec. 3 for the purpose of affording opportunity for a compromise of the differences between the operators and the miners had a stimulating effect upon the coal stocks.

Total sales of stocks on the New York Stock Exchange during the twelve months ending Nov. 29 were 801,035,715 shares. Another feature was the taking over by the St. Louis and San Francisco of the Chicago and Eastern Illinois. Though money rates were firm the anthracite was not unfavorably affected thereby in August, nor was it influenced by the

The following shows the highest prices of a few of the leading speculative stocks in 1901, and the highest and lowest prices to Nov. 30, 1902:
The Crops.—Crop conditions were unfavorable early in the year, owing to drought in the winter-wheat States, and reports of serious damage from this cause were numerous. The general average of this grain reported on April 1 by the Bureau of Agriculture was only 78.7 per cent., against 91.7 per cent. at the corresponding date in the previous year. Midsummer heat was experienced in some sections on the 18th and the 20th, and much injury resulted. The States in which the heat was, however, not prolonged, and it was followed by rains and cooler weather, and in the succeeding month conditions were more favorable. The report of the Bureau of Agriculture showing the state of the crops on June 1 was generally satisfactory, though not so good as had been expected, the average of winter wheat being equal to that on May 1; and at the same time there was a decrease of about 5,000,000 in the acreage planted. The condition of spring wheat was, however, very high, it being 93.4 per cent. on June 1 against 92 at the same date in 1901. There were general rains during the month, and at the close these rains were excessive in some sections, causing much damage. The crop situation in July was in marked contrast with that of the year before; instead of drought and continued impairment there were abundant rains. The percentage of condition shown by the official report was 92. The increase of about 3,500,000 in the acreage was shown in corn. At the end of the month estimates were made that the yield of this cereal would be about 170,000,000 bushels. One feature in the following month was a corner in July deliveries of corn, the speculators taking advantage of the short crop of the previous year and of the small stocks in the market to advance the price. This was sharply moved upward to 85 cents in Chicago and 90 cents in New York by July 8. Attracted by these high prices, large supplies of corn were sent to Chicago from those sections where reserves were fairly abundant, and some of the cereal was reshipped from Eastern ports, where it was awaiting export to Europe. The price sharply broke, under the pressure of these unexpected offerings, to 63½ cents at Chicago, and by the close of the month it fell to 55 cents. The speculators in corn, after the above-mentioned blow, manipulated an advance in oats, forcing the price to 72 cents by the 25th, against 53 at the beginning of the month. Wheat values were not greatly affected by these corners, and the crop was in demand at Continental centers, where reserves were sufficiently large and favorable prospects at home. The condition of all grains was very satisfactory in August. The general average of corn was reported at 92 last year, and the indications then pointed to a yield of fully 2,600,000,000 bushels. In Kansas the condition was 103 against 19 in 1901, in Missouri 100 against 29, and in Nebraska 101 against 36. The harvest began under favorable conditions, and as it progressed the reports of actual yield seemed generally to confirm previous estimates. Not only was the corn-crop almost unprecedented in volume, but the yield of wheat was enormous, far exceeding the most sanguine expectations, and in some States it was the largest ever recorded. When the crops began to move freely a serious shortage of railroad transportation facilities was experienced, but this difficulty was soon remedied. As was the case in the previous year, ocean freight rates were low, chiefly because the steamers which brought coal from Europe in the fall were in active competition with the regular lines for return cargoes, thus forcing rates downward to almost unprecedentedly low figures.

Estimates in November of the probable yield of cereals indicated a crop of 2,542,516,000 bushels of corn, of 629,385,000 of wheat, of 898,522,000 of oats, of 39,920,000 of rye, and of 132,100,000 of barley.

While the grain-crops were abundant the yield of cotton was irregular, and considerable damage was caused by this in term of heat was, however, not prolonged, and it was followed by rains and cooler weather, and in the succeeding month conditions were more favorable. The report of the Bureau of Agriculture showing the state of the crops on June 1 was generally satisfactory, though not so good as had been expected, the average of winter wheat being equal to that on May 1; and at the same time there was a decrease of about 5,000,000 in the acreage planted. The condition of spring wheat was, however, very high, it being 93.4 per cent. on June 1 against 92 at the same date in 1901. rates for money in New York, especially for fixed periods, to be higher than those ruling abroad. In consequence of these conditions those of our bankers who were largely interested in railroad and other enterprises which required considerable sums of money for financing became even greater borrowers of foreign capital than they were in the previous year. These loans were negotiated through the medium of sixty- to ninety-day bankers' bills on London which were borrowed on stock or bond collateral. As these bills approached the period when they would become sight drafts they were covered with demand bills, thus repaying the loan, or the loan was extended through further borrowings for a sixty- or ninety-day period. These operations resulted in continuous offerings of long sterling, called loan bills, which were drawn either against the foreign credits of the bankers through whom they were negotiated or against capital abroad which was seeking employment. The credits and the capital so drawn against were reimbursed by the sight drafts which were procured for the purpose of the settlement of the loan or for its extension. These sight drafts were discounted at the discounting banks, or the discounting of the maturing of commercial bills of exchange made against exports hence of commodities, thus causing a steady absorption of such commercial bills at prices of which were maintained at figures quite close to those of bankers' long sterling. The almost uninterrupted demand for sight bills to remit in settlement of maturing drafts caused these drafts to rule at firm rates, and whenever the inquiry for them was in excess of the supply and they were not procurable at prices less than the gold export point this metal became the cheapest form of remittance and it was shipped abroad. There were occasions during the year, as was the case in November, 1901, when through remittances from London to Paris for settlements, the rate of exchange at Paris on the British capital fell to such low figures as to draw gold from London. Then bankers here having remittances to make of the metal were, drawing on exchange on London and shipping gold to Paris with which to procure French exchange for the reimbursement of the credit against which the drafts were sold, was caused for the movement of gold hence when the rate for exchange at New York on London was fractionally below the gold-exporting point. The import of gold in this manner was occasioned by the urgent demand in the market for money at this center, the high rates for loans on call and on time practically lowering the gold-importing point to such a figure as to make such imports profitable. After the monetary tension was relieved exchange advanced more or less sharply in response to a demand for remittance, and also because of dearer discounts abroad, a higher price in London for gold, and low rates for exchange at Paris on the British capital, and toward the end of October gold exports as an arbitration operation seemed probable.

So great were the above-mentioned borrowings by our bankers from those in Europe, not only in London, but at Continental centers through London, that it was estimated early in the current year that the merchandise balance in favor of this country had been so largely offset by the indebtedness of American borrowers to those abroad that the total amount of debt so large that it would require for its cancellation nearly, if not quite, all of the credits resulting from the exports during the current season of our commodities. Not only was our indebtedness to remain at a high level, but foreign borrowings of foreign capital, but it was augmented by subscriptions to European loans, notably the British consol loan of £5,000,000 emitted in April, quite large amounts of which were taken by prominent New York bankers; remittances for installments on this loan, as they fell due, added to the demand for exchange. Other important requirements for remittance of an unusual character were those for the shipping deal, for American industrial enterprises in London and elsewhere in England, and for importations of steel, and during October of coal from Great Britain; the expenditures of tourists in Europe incident to King Edward's coronation ceremonies were also large.

Imports of merchandise in March were $84,227,082, or greater by $8,340,248 than in the same month in 1901, and though there was a decline to $73,115,064 in June, there was an increase to $79,147,874 in July. August imports were $73,923,281, September $67,736,348, October $87,419,138, and November $85,478,705. Merchandise exports fell from $135,941,539 in December, 1901, to $69,790,077 in July. From the discounting or the maturing of commercial bills of exchange made against exports hence of commodities, thus causing a steady absorption of such commercial bills at prices of which were maintained at figures quite close to those of bankers' long sterling.

The market for foreign exchange was strong in December, 1901, and though rates declined when money on call was firm, they advanced in response to easier monetary conditions. During the early part of the month gold was exported to Europe in comparatively large amounts, $2,417,273 going forward on the 3d and $1,115,869 on the 11th. Then, however, higher rates for money caused a decline in exchange below the gold-exporting point, but with the relaxation in monetary tension exchange advanced. Rates for bankers' long sterling fell from $4.847 to $4.834, and bankers' sight bills were $4.862 on the 31st against $4.89 on the 1st; while the gold exports were in progress sight exchange was above $4.87. The market kept so close to the gold-exporting point in January, 1902, that moderate amounts of the metal were, drawing on exchange on London and shipping gold to Paris with which to procure French exchange for the reimbursement of the credit against which the drafts were sold, was caused for the movement of gold hence when the rate for exchange at New York on London was fractionally below the gold-exporting point. The import of gold in this manner was occasioned by the urgent demand in the market for money at this center, the high rates for loans on call and on time practically lowering the gold-importing point to such a figure as to make such imports profitable. After the monetary tension was relieved exchange advanced more or less sharply in response to a demand for remittance, and also because of dearer discounts abroad, a higher price in London for gold, and low rates for exchange at Paris on the British capital, and toward the end of October gold exports as an arbitration operation seemed probable.

In February the market was strong and $4.265.283 gold was exported on the 6th and $3,513,833 on the 27th. Then, however, the market made on arbitration operations, while sight exchange was no higher than $4.87; long bills ranged from $4.847 to $4.854. The market closed firm, with sight bills at $4.871; and it was strong early in March, when sight exchange was $4.88, and then moderate amounts of gold were exported; long bills were $4.854. After the 8th rates declined fractionally, and gold shipments were checked, but by the close of the month there was a recovery in sight bills to the opening figures of $4.871. In April the tone of the market was strong throughout the month, and on the 7th $3,251,689 gold was shipped to Paris. Then came a decline in rates for sight bills below the gold-export point, caused by dearer money, but later in the month there was a recovery due to a demand to remit for Louisville and Nashville stock, and also in settlement for American subscriptions to the new British loan, and the market closed firm at an amount of debt so large that it would require for its cancellation nearly, if not quite, all of the credits resulting from the exports during the current season of our commodities. Not only was our indebtedness to remain at a high level, but foreign borrowings of foreign capital, but it was augmented by subscriptions to European loans, notably the British consol loan of £5,000,000 emitted in April, quite large amounts of which were taken by prominent New York bankers; remittances for installments on this loan, as they fell due, added to the demand for exchange. Other important requirements for remittance of an unusual character were those for the shipping deal, for American industrial enterprises in London and elsewhere in England, and for importations of steel, and during October of coal from Great Britain; the expenditures of tourists in Europe incident to King Edward's coronation ceremonies were also large.

Imports of merchandise in March were $84,227,082, or greater by $8,340,248 than in the same month in 1901, and though there was a decline to $73,115,064 in June, there was an increase to $79,147,874 in July. August imports were $73,923,281, September $67,736,348, October $87,419,138, and November $85,478,705. Merchandise exports fell from $135,941,539 in December, 1901, to $69,790,077 in July. From the discounting or the maturing of commercial bills of exchange made against exports hence of commodities, thus causing a steady absorption of such commercial bills at prices of which were maintained at figures quite close to those of bankers' long sterling. The almost uninterrupted demand for sight bills to remit in settlement of maturing drafts caused these drafts to rule at firm rates, and whenever the inquiry for them was in excess of the supply and they were not procurable at prices less than the gold export point this metal became the cheapest form of remittance and it was shipped abroad. There were occasions during the year, as was the case in November, 1901, when through remittances from London to Paris for settlements, the rate of exchange at Paris on the British capital fell to such low figures as to draw gold from London. FINANCIAL REVIEW OF 1904.

cline in exchange, and the tone was weak during the first half of the month at a decline of 1½ cent per pound sterling for sight to $4.964. There was a partial recovery by the close, due to easier money; long bills sold during the month at $4.71 and $4.84. In June the tone was strong and rates steadily advanced, though they were not sufficiently high to justify exports of gold, and sight exchange did not rise above $4.82; sixty-day bills were $4.853. The market continued strong in July, and gold began to be shipped through arbitration operations on the 22d, $7,450,500, the largest single shipment on record, going forward by the end of the month. While the movement was in progress sight exchange ranged from $4.873 to $4.88, while long bills moved between $4.813 and $4.853. The tone was firm early in August, and $519,445 gold was shipped to Germany on the 7th. Then, however, dearer rates for money and a pressure of commercial drafts caused a decline in exchange, and by the close of the month sight bills were $4.963, or about 1½ cent per pound below those at the opening; sixty-day drafts fell from $4.854 to $4.82. In September the market was weak, influenced by dear money and the expected relief of the stringent monetary conditions, gold to the amount of $4,250,000 was engaged in Europe for import hither, and included in this sum was $2,000,000, which was procured in South Africa. At the same time about $4,000,000 was imported from Australia. The movement of gold either from Europe was checked after the early engagement by dear money and the foreign discount rates, and also by a rise in the price of gold in the London market. Sight bills declined from $4.86 to 4.854, and sixty-days drafts fell from $4.84 to 4.82; the weak tone for these bills was caused by dear money, which induced their sale, and there were also large offerings of loan drafts against stock collateral. The market was firm throughout October, influenced by a demand for remittance and also by a scarcity of bankers' bills, and though commercial drafts were freely offered, they were promptly absorbed. Toward the last week in October rates on sight bills at $4.861, and in the second week in November they advanced to $4.874. Then a concurrent fall in exchange at Paris on London to 25 francs 11 cents, took place, and gold at $4.87 as an arbitration operation; none was sent at that time, however, because of the prevailing firm tone for money, which caused a decline in sight bills to $4.84 and the tone of the market to $4.854 in response to a demand to remit for December settlements, and the tone was strong to the close.

Railroads.—Combinations of prominent railroad lines, as was the case in the previous year, made considerable progress, though some important consolidations were held in check by the litigious proceedings instituted to prevent the consummation of the Northern Securities scheme. In December, 1901, the Lake Shore acquired control of the Indiana, Illinois and Iowa road and the Norfolk and Western obtained control of the Pocahontas Coal and Coke Company, issuing thereon $30,000,000 of 4-per-cent. bonds. The gross and net earnings of the 157 roads reporting for the calendar year 1901 made the most remarkable showing of increases of $138,073,821 in gross and $64,800,530 in net income compared with the previous year, following successive increases in both items at each of the last 5 years. Early in March the Pennsylvania Railroad Company announced an issue of $50,000,000 of bonds, $24,-
000,000 of which were to provide new equipment and $20,000,000 to cover expenditures for the tunnel extension of the system into New York city. The bonds had the right of conversion into stock of the road at 140 on and after May 1, 1904. Late in March it was announced that interests identified with the St. Louis Railroad Company had acquired control of the Colorado and Southern. A short time previously these interests obtained possession of the Iowa Central, which enabled them to control the Fort Worth and Denver City. In April the Plant system of roads was acquired by the Atlantic Coast Line system and the Choctaw, Oklahoma and Gulf Railroad was bought by a syndicate of bankers in the interest of the Chicago, Rock Island and Pacific. In May the last-named company acquired the St. Louis, Kansas City and Colorado, enabling an extension to be made to an important section in the Southwest. In June the directors of the Illinois Central recommended an increase of $15,846,000 in its stock to be offered to its shareholders at par. About the middle of July there was a sharp rise in the market price of the stock of the Chicago, Rock Island and Pacific company to 206, against about 152 in January; the announcement on July 25 that the property would be reorganized and its securities rearranged. The plan provided for the absorption of the companies in the Rock Island system by a holding company, the stockholders of the Rock Island receiving for each 100 shares of their stock $10,000 in new bonds, 75 shares of new preferred and 100 shares of common stock; the majority of the stockholders of the Rock Island promptly gave their assent to the plan. At the end of July it was announced that arrangements had been perfected for the taking over by the St. Louis and San Francisco of the Chicago and Eastern Illinois, thus giving the former a terminal at Chicago. With the completion of the extension of the St. Louis, Memphis and Southeastern to Memphis, in the interest of the St. Louis and San Francisco, this would make an entirely new route between Chicago and Memphis by way of the San Francisco line. With the previous acquisition of the Kansas City, Fort Scott and Memphis and of the Kansas City, Memphis and Birmingham, the line of which this would have a line into the center of the South at Birmingham and, with other combinations, extensions to the Gulf of Mexico in one direction and to El Paso a route into the Southwest, has gross and net earning of 154 roads for the six months ending June 30 showed a gain, compared with the same time in the previous year, or $38,904,639 in gross and $7,722,900 in net revenue. The decrease of $19,000,000 in the latter, compared with the first six months of 1901, was largely due to the unfavorable weather in February and to the coal strike, which began in May. It was announced in October that the shareholders of the Atlantic Coast Line would be asked in the following month to vote upon a proposition for the increase in the capital by $15,000,000 and in the bonded debt by $35,000,000, the proceeds to be applied toward the payment for 300,000 shares of the capital stock of the Louisville and Nashville Railroad Company, which were purchased by J. P. Morgan & Co. from the parties who earlier in the year obtained control of the road through speculative manipulation, as elsewhere in 1897. Early in January the New York Stock Exchange authorized the listing of $42,310,000 additional stock of the Baltimore and Ohio Railroad Company, making the total of the
The honorary awards for 1902 are as follows:

Section of Sculpture: Medal of honor to Hippo- lyte Lefèvre for his marble group Jeunes Aveu- gles. First-class medals: Jean Baptiste Antoine Champeil, Le Printemps de la Vie (marble group); Auguste Henri Carl, Le Christ et Sainte Véronique (marble group) and Lutte de Jacob avec l’Ange (marble group); Prosper Lecourtier, científia Danneux allaitant ses Petits (bought by the state) and Face & l’Ennemi—Lion (plaster group); Michel Léonard Bégine, La Première Parure (plaster group). Second-class medals: Louis Baralis, Nafragés (group); Gabriel Zimmer- man, Appel Suprême (plaster); Alphonse Terroir, Seul dans son apaiser (bronze); Je- lien Lorieux, La Chute des Feuilles (plaster group); Raymond Suder (plaster portrait and statue); Paul Darbeuffele, Danseuse (marble) and Le Berger Jouant with es artes; Jean Riapal, Nymphe de Diane (marble); Constant Roux, L’Automne and L’Hiver (bas-reliefs for Chamber of Deputies). Third-class medals: Charles Paillet, Alpinisme Muscat, Raphael Charles Peyre, Charles Louis Malric, Georges Colin, Carl Johan Edh, Philippe Perrotte, Jean Cézau-Bru, Léon Ernest Drivier, Arthur George Walker.

Paris: Section of the Artists Français. The officers of the Société des Artistes Français for the year were: Honorary Presidents, Léon Bonnat, Édouard Detaille, Jean Paul Laurens; President, William Bouguereau; Vice-Presidents, A. Bar- tholdi, Louis Scellier de Gisors; Secretaries, A. de Richemont, G. Lemaire, J. L. Pascal, A. Mongin; Corresponding Secretary, Albert Maignan; Sec- retary-Treasurer, E. A. Boisseau.

The annual exhibition comprised 4,268 num- bers, classified as follows: Paintings, 1,680; car- toons, water-colors, pastels, miniatures, enamels, porcelains etc., 596; engrav- ing on medals and precious stones, 93; deco- rative art, 463; architecture, 278; engraving and lithography, 464.
Louis Jean Muller, The Squire's Song (etching after Dandy Salier). Second-class medals: Émile Ferdinand Crosbie, Portrait d'une Princesse Bonaparte (wood, after Ingres); Arthur Jules Mayeur, L'Amateur de Peinture (burlin, after Meissonier); Léon Salies, L'Abreuvoir (etching, after Detaillle); Louis Huvey, Les Bébés (original lithograph); Jules Lenerdu, Portrait de Vieillard (lithograph). Third-class medals: Marius Bernard Labat, Victor Mathieu, Rose Maireau, Edmond Jules Pennequin, Théodore Auguste Truchême, Georges Fouquet-Dorval, Georges Garen, Pierre Frédéric Barré, Louis Trinquéer.

Among the noteworthy exhibits was Jean Léon Gérôme's La Rentrée des Félins dans le Cirque, representing the return to their dens, after a human feast in the amphitheater, of the lions and tigers. A few spectators still linger in the seats above, though most of the ranges are empty. In the arena are scattered human corpses, and attendants armed with whips driving the gorilla with its beasts into their den, the mouth of which opens in the background. In the foreground one maned lion seems disposed to dispute the keeper, who has his whip raised in the attitude of strict authority.

Edmond Detaillle's two contributions, large decorative canvases for the Hotel de Ville, Paris, represent, the one Les Enrôlements Volontaires sur le Chemin de fer du Pont-Neuf, en Septembre, 1792, and the other Reception, par la Municipalité de Paris, des Troupes retenue de Pologne—1806-07.

Edmond Richter's Salambô represents the sister of Hannibal standing before a mirror, with Taanach kneeling with clasped hands beside her, a scene from the famous romance of Gustave Flaubert.

Alphonse Lalauze's Marengo—14 June, 1800, represents the cavalry of the Consular Guard, under Gen. Bessières, charging impetuously the Austrian dragoons. Bessières, in the foreground, with saber uplifted and shouting, is leading the grenadiers upon the enemy, seen at left. Châporté à Tarse, the principal contribution of Edmond Lalire, is a scene from Plutarch, where the author describes the arrival of the Egyptian queen at Tarsus, on the Cydnus, in her magnificent galley with silken sails and silver oars, surrounded by her women clad as Nereids and Graces.

Pandre, by Charles Amable Lenoir, represents the mischief-maker at full length in flowing robes, standing the fatal box in her hand. This picture belongs in New York.

Maurice Henri Orange's Boulogne—1804 represents Napoleon, mounted, talking with another mounted officer and looking out upon the arm of the sea that separates him from "perdite Albion." Behind the two are other mounted men, soldiers, artisans, etc., and a long row of vessels ready to be launched for the conquest of England.

Gustave Wertheimer's Le Rival represents a desert country with a stream winding through it. On the bank, in the foreground, are a lion and two lionsesses looking across the water, on the other side of which is another lion, the rival, looking jealously across at the favored one.

Le Colonel Roosevelt à Cuba: Prise des Hau- teurs de San Juan is the long title of a picture by Ernest Jean Delahaye, which tells its own story. The future President is standing calmly on the heights, gazing at the paintings, 557 in sharpshooters, pointing with his right arm at the entrencheds of the enemy. He is almost isolated, being nearer the Spanish line than are his men to him.

Bouquets's chief exhibit, Les Oreades, illustrates a passage from F. Humbert. The shadows are dissipating and Aurora tints the mountain tops the troop of joyous wood-nymphs who have spent the night on earth return in long procession to the ethereal regions where dwell the gods. A confused mass of nude and wingless Oreads are passing upward out of the shadows of a wood, while fauna and satyrs, gathered in the foreground, gaze in astonishment at the spectacle.

Louis Beroud's Le Martyr de Saint-Antoine represents the good saint, bearded and in monastic robes, with a cross in his hand, pulled biter and thither on a flowery hillside by a laughing bevy of shameless nude nymphs, who appear to enjoy the martyrdom more than the martyr does.

American exhibitions in the Salon of 1902 were: Inez Abernethy (Arkansas), George C. Aid (St. Louis), Carroll Beckwith (New York), Henry S. Blishing (Philadelphia), Lu Blackstone-Freeman (New York), Frank M. Boggs (New York), Benjamin J. Bowen (Boston), Theodore A. Brewer (Cincinnati), Frederick Arthur Bridgman (Tuskegee), Edwin D. Connell (New York), Cacharme Critcher (Virginia), M. E. Dickens (St. Louis), William Dodge (Virginia), Gaines Ruger Donoho (Mississippi), Mattie Dubé, Edward Dunfer (Buffalo), Frederick M. Du Mond (Rochester), Ferdinand Earle (New York), David Ericson, Mary Franklin, Edward Fulde, Della Garretson (Ohio), Sidney Gorham, Frank Russell Green (Chicago), Mary Shepard Greene (New York), Peter Alfred Gross (Allentown, Pa.), Mary Gullity (North, Conn.), Eliza Voorhees Haigh (New York), Howard Morton Harts hole (New York), Nina Rose Hartwell, Herman Hartwich (New York), Elizabeth Case Harwood, Chester C. Hayes, Laura Healy (Chicago), Louis C. Herreshoff (Providence), Felix Hidalgo (Manila), George Hitchcock (Providence), William S. Horton, Henry S. Hubbell, Margaret Kemiston (Boston), Anna Elizabeth Klumpke (San Francisco), Daniel Ridgway Knight (Philadelphia), Elia Koenig (Philadelphia), Elizabeth Krusman Van Elten (New York), Charles Lawson (Pennsylvania), Ossip L. Linde (Chicago), William Cushing Loring (Massachusetts), Walter McEwen (Chicago), Frederick Macmonnies (New York), Ruth Moore (New York), Gustave Henri Mosler, Mme. Willy Betty Newman (Nashville), Adeline Oppenheim (New York), Mabel Packard, Jules Pagès (San Francisco), Lawton Parker, Charles Sprague Pearce (Boston), Mary May (Boston), William Sherman Potts, Isabel Ross (Buffalo), Albert H. Seymour, Freeman W. Simmons (Cleveland), Henry O. Tanner, David A. Tanzy (Cincinnati), S. Seymour Thomas, Mme. Harry Ellen K. B. Thompson (New York), Lionel Walden, Bertha Mary Waters (Connecticut), Susan Watkins (California), Edwin Weeks (New York), Coggeshall Wilson (New York).

Paris: Salon of the Société Nationale. The officers of the Sociétte Nationale des Beaux-Arts for the year are: President, Carolus-Duran; Vice-Presidents—Section of Painting, Alfred Philippe Roll; Section of Sculpture, Auguste Rodin; Section of Engraving, Charles Albert Wainting, President of Section of Objects of Art, Mme. Charlotte Besnard, Secretaries, René Biliothe, Jean Béraud, Treasurer, G. Dubufe.

The thirteenth annual exhibition, opened April 20, comprised 2,443 numbers, of which 1,203 were paintings, 425 drawings, 39 engravings, 235 sculptures, 224 art objects, and 89 architecture.

The president of the society, Carolus- Dura-
had but one exhibit, entitled En Famille, a picture containing 15 or 16 human figures and a hound. The happy father in this At Home stands at the right, smiling and looking toward the mother, a matronly woman seated at the left with her children gathered around her.

Roll, the Vice-President, exhibited 6 canvases, of which 4 were in the memory of Balzac, whose fame, he is said, is now fully established, after a hundred years' perspective, as that of one of the foremost figures in literature.

José Frappa contributed 5 portraits, among them a full-length of Cardinal Gibbons, of Baltimore, in his episcopal robes, holding a book in his left hand.

Jean Webber had a half-dozen exhibits, among them two, entitled respectively La Machine and Le Monstre, which prove him to be the possessor of a very fervid Gallic imagination. The first represents a nude woman seated astride of what may be intended to be the boiler of the machine, from which apparently proceeds the power that turns an immense wheel, whose revolutions grind to death many dimunitive human beings. The second picture, The Monster, represents a nude woman asleep on a bank, with wild men and animals gazing on her from a little distance with great manifestations of astonishment.

Auguste Hagborg's Daecaleirienne represents a Swedish lady, seen at three-quarters length, leaning on a table, on which are scissors, a work-basket, and sewing materials, and bending forward to look out of a small window.

Paris: Miscellaneous.—The Humbert collection, which attracted more attention, perhaps, than any other, caused an account of the connection of the name with the most gigantic swindle of modern times, was sold in Paris, June 20 and 21, and produced a total of 1,167,000 francs. Some of the best prizes obtained were: Paul Baudry, L'Amour et Psyche, 25,000 francs, and La Fortune et L'Amour, 26,000; Boudin, L'Avant-port, 16,200; Jules Breton, Le Journal des Moissonneuses, 25,200; Corot, Le Pêcheur, 49,000, and La Ferté-sous-Jouronne, 26,100; Daubigny, Les Laveuses, 50,500; Eugène Fromentin, Le Passage du Gué, 30,000; Isabey, La Bénédiction, 47,000, and Le Marchand d'Étoffes, 23,000; Charles Jacque, L'Abreuvoir, 34,000; Gustave Moreau, Le ROI David, 51,000, and St. Sebastian, 39,500; J. F. Millet, La Porte de Barbizon, 26,500; Roybet, La Main Chaude, 36,100, and Les Comédiani au Château, 34,500; Van Marcke, Rentrée à la Ferme, 36,500. Angelo Asti's portrait of Mme. Humbert herself brought only 450 francs, and that of M. Humbert by the same artist, only 145 francs.

A statue of Balzac was unveiled in Paris, Nov. 22, in the presence of many persons prominent in the literary and artistic world. Balzac, standing in the background, is in striking con-
The Victors of Paardeberg, by James P. Beadle, is one of a few pictures dealing with the Boer War. It illustrates the first noteworthy triumph of the British arms, on the anniversary of Gen. Cronje's surrender of his Boer forces at Paardeberg, in the spring of 1900. The trench dug during the night by the Canadians and a company of royal engineers has rendered unto the Boers' position, and they have succumbed to the inevitable. They are seen at the left straggling forward, unarmed, and many carrying their portable possessions, while the victors in front, emerging from their trench, are greeting them, some shooting with caps in air, some standing in silence.

A portrait of Major-General Baden-Powell, a bust picture in khaki and slouched hat, is the sole contribution of George F. Watts. A full-length of Lord Milner, standing, with a bust of the King in the background, by P. Tennyson Cole, represents another figure prominent in South African affairs.

A Tanagrean Pastoral, by George H. Boughton, aims to revitalize some of the beautiful figurines exhumed in the neighborhood of Tanagra, whose figures have been known for their beauty, anterior to the Christian era. At the left Pan presides over a fountain, at the base of which are three musicians crowned with bay and playing on pipe, lyre, and tambourine. At the right, in the foreground, several dancers, in swirling draperies, keep measure to the music on the grass, against a background of poplars and of purple hills.

Mr. Sargent was represented by 8 life-size portraits and groups. One of the latter, The Ladies Alexandra, Mary, and Theo Acheson, Daughters of Lord Gosford, an essay in the grand style, has been compared, though not very justly, with Sir Joshua Reynolds's Three Irish Graces, in the National Gallery. It is a picture full of grace and sentiment, but the grace is of the present and not of the eighteenth century. The most masterly portrait of the exhibition was Mr. Sargent's Lord Ribblesdale's standing, in a long riding-coat and top hat, against a fluted marble pillar. La Belle Dame sans Merci, by Frank Dicksee, represents the lady of the "wild sad eyes" who holds the knight of the dreamer of Keats's poem. The mailed knight has dismounted and placed her on his charger, beside which he walks, blind to all else but her faerie song as she looks down on him unpityingly as they move onward through a blossoming country to her "elfin grove."

Opposite it hung the Aphrodite of Brion Riviere, which illustrates the potency of love, a canvas suggested by lines in the Homeric hymn telling how the laughing-goddess, gloriously clad, hastened down many-ribbed Ida, attended by the gray wolf, the bear, the lion, and the pard, each under her potent spell.

London: New Gallery. The winter exhibition was devoted to royal portraits, a collection, says one of its critics, that does not give a very high ideal of the artistic patronage of English royalty. One of the best entries was the portrait of Richard II from Wilton House, a diptych representing the monarch in company with St. John the Baptist. A pure tempera painting on a patterned gold ground was credited to the finest technicians of Italy, Fra Angelico, or the Siennese. It is probably of French origin. There is also a portrait of Richard III and one of Henry VII, but Henry VIII secured the services of Holbein that royalty was worthily depicted. Among other exhibits were the portrait of Queen Mary, by Lucas de Heere, many of Elizabeth, mostly attributed to Zuccherio, and a number of Stuart portraits attributed to Van Dyck.

The fifteenth summer exhibition contained only 400 numbers, a far cry from the 480 of last year. If this diminution meant a higher standard there would be cause for congratulation, but it seems to indicate rather that the New Gallery has reached a critical point in its career, for ever since the death of Sir Edward Burne-Jones its exhibitions have decreased both in number and importance. Among the best of the exhibits were:

Love steering the Boat of Humanity, by G. F. Watts, which, like many of that painter's works, is an allegory. On relentless waters, under a stormy sky, lies the boat, in the hands which is Humanity, apparently in the teeth of a strong wind, the sail having collapsed. The picture is a marvel for a man of Mr. Watts's years, but it will scarcely rank as one of his great works.

Of Mr. Sargent's three contributions, The Children of Asher Wertheimer is a decorative triumph. It contains three figures, two girls on a draped couch with a time long anterior to the Christian era. At the left Pan presides over a fountain, at the base of which are three musicians crowned with bay and playing on pipe, lyre, and tambourine. At the right, in the foreground, several dancers, in swirling draperies, keep measure to the music on the grass, against a background of poplars and of purple hills.

Places of honor were given to three recent works, by C. E. Hallé: In Infancy, the Mother's Care, shows a child on the daisied bank of a river giving to the kneeling mother a daffodil; In Manhood, the Help and Playmate, a young man and a girl, lovers probably, are beneath an apple-tree; and In Old Age, the Daughter's Song, the patriarch, with gray locks and swolled cheeks, is solaced by his daughter, who sings to the accompaniment of a harp.

London: Picture Sales. While the art-sale season of 1895 was not a very remarkable one, a few pictures brought good prices. The number of paintings which have reached a limit of 1,400 guineas during the past eight years is as follows: 1894, 20; 1895, 45; 1896, 32; 1897, 22; 1898, 15; 1899, 30; 1900, 23; 1901, 21. Taking this as a standard, the sales of the present year have been small, for only 10 have reached the limit of 1,400 guineas, as is shown in the following table:

The Gainsborough, the sixth in the above list, a portrait of the artist's own daughters, Mrs. Lane and Miss Gainsborough, was once in the collection of J. W. Brett, and was bought from him in 1864 for £117. In 1887 it was sold
from the collection of Henry Wilkinson for £221. The name of the purchaser, who in 1902
had sold it to J.T. White, was discovered and the best
landscape by an American artist under forty
years of age, was awarded to H. Bolton Jones,
for his picture Early Spring. The Julia A. Shaw
memorial prize ($300), founded by Samuel T.
Shaw in place of the fund instituted by him in
1992, for the best figure composition painted in
oil by an American woman, was awarded to Miss
Mary F. Macmonnie, for her Blossom Time in
Normandy. The Carnegie prize ($500), founded
by Andrew Carnegie for the most meritorious
oil-painting in the exhibition by an American
artist, was awarded to J. Frances Murphy, for his
October Fog.

The exhibition consisted of 318 numbers, of
which 206 were paintings. Among the exhibit-
ors were J. McNeill Whistler, L'Andaloussienne;
William M. Chase, Portrait of Louis Windmü-
ler; Cecilia Beaux, Portrait; John W. Alexander,
A Mother; Winslow Homer, Northeaster; Ken-
yon Cox, Portrait; Thomas Eakins, Cypriote
Martinielli; Augustus S. Gautens, Medallion
Portraits; and Rhoda Holmes Nicholls, My
Daughter.

New York: Metropolitan Museum.—The
annual rearrangement of collections in May
was attended with the usual loan exhibitions,
the most important of which was the collection
of George W. Vanderbilt, consisting of most of
the foreign pictures acquired by the late Will-
hall H. Vanderbilt. Among these are some of the
best works of the modern French school, includ-
ing Monet, L'Impression, Soleil Levant; Degas,
Dupré, Díaz, Cabanel, Fromentin, Gérôme, Bon-
nat, and others. Among the gifts to the museum
is the famous Holy Family by Rubens, portions
of which are attributed to his celebrated pupil Van
Dyck, presented by James Henry Smith, and a
portrait of the artist Valentine, bequeathed by
C. V. Sideli. The Rubens was bought at the
Matthiessen sale for $50,000.

On Dec. 22 was formally opened the new wing
of the museum, which includes the splendid
façade on Fifth Avenue, the work of the late
Richard M. Hunt. A monument of the har-
bor at low tide. The Norman W. Dodge prize
($300) for the best picture painted by a woman
was not awarded, and is said to have been dis-
cavored.

Among the most noteworthy pictures in
the exhibition were Irving R. Wiles' portrait of
Julia Marlowe, representing the actress seated
on a sofa looking straight out of the canvas, and
J. W. Alexander's The Piano, an interior with a
young matron seated at the instrument and in
the background the husband with his head rest-
ing upon his hand, a picture with a story-tell-
ing quality which appeals to every one. Other
pictures deserving of mention are J. G. Brown's
An Old Vermont, W. C. Fitter's Meadows in
June, Bruce Crane's November Morn, Charles
Schreyvogel's Going for Reenforcements, Henry
Moulder's Sans Souci, F. A. Bridgman's The Se-
closed Wood, Charles C. Curran's A Mountain
Vista, Edward Gay's Black Creek, Will H. Low's
The Elsian Lawn, Gustave H. Moulder's Fidelity,
Dwight F. Boyd's Moonrise — Holland, and
Carleton Wiggins' Crossing the Moors.

F. Francis, Madonna and Child

New York: National Academy of Design.—
The officers-elect for the year are: President,
Frederick Dielman; Vice-President, J. G. Brown;
Corresponding Secretary, Harry W. Watrous;
Recording Secretary, Will H. Low; Treasurer,
Lockwood De Forest. The Council consists of
Francis C. Jones, Irving R. Wiles, A. C. Howland,
George H. Yewell, Herbert Adams, and R. Swain
Gifford.

The following new academicians and associa-
tes were chosen: Academicians: Edwin A. Abbey,
Cecilia Beaux, Henry O. Walker, and Thomas
Eakins. Associates: Birge Harrison, Wilton Lockwood,
George Grey Barnard, Joseph De Camp, Charles Niehaus,
Elliott Daingerfield, Henry B. Snell, Albert Ryder,
and William Gedney Bunce. This brings the list
of academicians up to 100 and of associates to 91.

The seventy-seventh annual exhibition (Jan.
3—March 21) was held, in like fine examples of last year, in
the galleries of the Fine Arts Society. The an-
nual prizes awarded were: The Thomas B. Clarke
prize of $300, for the best American figure com-
position, to Elliott Daingerfield, for his Story
of the Madonna; the first Julii Hallgarten prize
($300) to E. Irving Couse's Indian picture The
Pipe Pece; the second Hallgarten prize ($200)
to Louis Loeb, for his picture The Mother; and
the third Hallgarten prize ($100) to Will Howe
Fotte, for The Blue Vase. The Inness gold
medal was awarded to Walter Clarke, for his
Garden in November; a silver medal to Richard
Hunnewell of the harbor at low tide. The Norman W. Dodge prize
($300) for the best picture painted by a woman
was not awarded, and is said to have been dis-
cavored.

The Board of Control for the year consists of:
President, John La Farge; Vice-President, Ken-
yon Cox; Secretary, Bruce Crane; Treasurer,
Walter Camp; and Asst. Treasurer, J. Frances
Jones. The society consists of 112 members.

The twenty-fourth annual exhibition was held
in the Fine Arts Society Building from March 28

251

252
$200. Other fair prices were realized, as for Millet's Landscape, $6,250; Manet's Sortie du Port de Boulogne, $7,000; The sale of the collection of oil-paintings, water-colors, bronzes, etc., of the Paris firm of Boussod, Valadon & Co., who have discontinued their branch shop in New York, occupied the last three evenings in February. The amount realized on the first evening was $36,542, on the second $76,475, and on the third $156,093, or a total of about $269,000. The picture that brought the highest price was Regnault's well-known Automedon and the Horses of Achilles, which was sold for $12,500. This large work (10.4 high by 10.9), painted in Rome in 1867, was bought by L. P. Morton, of New York, and sold in 1882 to S. A. Cosle, Jr., of St. Louis, for $5,500. Two years later it was placed on exhibition in the Boston Museum of Fine Arts, where it was supposed it would remain permanently. The only other picture that sold for more than $10,000 was Corot's La Ferle, which brought $11,500. Another Corot, Twilight, brought $7,100. A Rousseau, La Rivière, brought $6,500, and a daumier, Shepherd and Flock, $8,100. Diaz's Sand's Road sold for $7,900, and Dupré's Frog Pool for $6,850. Sir Joshua Reynolds's Portrait of Sacchini brought only $150.

The sale of the F. O. Matthiessen collection, on April 1 and 2, realized $348,780, of which $112,505 was obtained for 81 pictures, and the remainder for 162 pictures at auction. The highest price was obtained for Rubens's The Holy Family, which was bought in by George P. Blow for $50,000. The picture that brought the next highest price was Jules Breton's Harvesting the Poppies, which sold for $36,500. Other good prices were: Landscape and Cattle, Troyon, $16,500; Portrait of an Old Man, Rembrandt, $16,000; Portrait of Antonio Grimani, Doge of Venice, Titian, $13,500; Mary Magdalene at Prayer, Murillo, $13,200; Arabs Crossing a Stream, Schreyer, $15,000; The Awakening of Love, Diaz, $10,000; Young Moris, $7,200; Normandy Horse, Rosa Bonheur, $7,200; The Philosopher, Meissonier, $8,300; Summer, Daubigny, $6,600; Avenue of Trees, Corot, $6,500; Summer, Fontainebleau Forest, Diaz, $4,500; and Officer ordering an Advance, Davelle, $7,100.

The Blakeslee collection of early English, Dutch, and Flemish masters, sold on the evenings of April 10 and 11, 163 paintings in all, realized $166,940, of which $85,220 was obtained at the first sale for 82 pictures. The highest price received was for Sir Thomas Lawrence's famous portrait of Mrs. Siddons, which sold for $17,000. Van Dyck's Portrait of the Duke of Portland, a full-length, life-size canvas, brought $16,000. Constable's Opening the Lock was sold for $13,000. Other good prices obtained were: Les Deux Sœurs, Bouguereau, $4,400; Allant au Pâturage, Corot, $3,500; The Butcher Boy, Knaus, $8,500; Portrait of Fanny Kemble, Sir Thomas Lawrence. $2,850; and Nell Gwynne, Sir Peter Lely, $2,000.

Philadelphia: Pennsylvania Academy of Fine Arts. The annual exhibition, which opened with the usual reception on Jan. 18, was the most notable art show held in Philadelphia in the past five years, even exceeding the 1887 centennial exhibition, which included many of the prize pictures from the Buffalo Exposition, comprised 745 numbers, of which 439 were paintings in oil, 60 pieces of sculpture, and 312 water-colors, black and whites, etc., including 96 etchings by Coutin. The place of honor was given to George De Forest Brush's portrait group of Mrs. Goodwin and her Sister. To the right of it was Edwin A. Abbey's Penance of Eleanor, Duchess of Gloucester, from the Carnegie Institute, Pittsburgh, and to the left a fine landscape, with twilight effect, by Charles H. Davis. Dugnan-Bouveret's large figure piece Consolatrix Afflictorum was loaned by Henry C. Frick. An attractive figure study, entitled Une Parisienne, was contributed by Albert Lynch, the Parisian artist, his first appearance here as an exhibitor. Among notable portraits were Whistler's L'Andalousienne, Sargent's G. M. Williamson, Eastman Johnson's John D. Rockefeller, Cecilia Beaux's Mrs. Phelps Stokes, Alexander's Newbold Morris, and Anna E. Klumpke's Rosa Bonheur. Milton Lockwood contributed five portraits and Horace Walker five pastoral scenes. Winslow Homer was represented by an interesting study of Wild Geese, and Edward Sabin's study of a fine marine, The High Sea. The sculpture exhibition was confined principally to portraits, but St. Gaudens was represented by his Stevenson memorial bronze, Karl Haer's boy, entitled Pastoral, and Herman A. MacNeill by an Indian group, The Sun Vow.

The honors and prizes connected with the exhibition were awarded as follows: Walter Scott prize of $300, to Walter McEwen, for his picture An Ancestor; Temple gold medal, Winslow Homer, for his picture Northstead; Mary Smith prize of $100, to Ednor Earle, for her picture entitled Fire Light.

Miscellaneous.—Memorial Day was observed in New York by the dedication in the Riverside Park, at the foot of Eighty-ninth Street, of the Soldiers' and Sailors' Memorial Monument, one of the most beautiful structures of the city. Before the unveiling of the monument there was an imposing parade by Government troops, sailors from the battleships, regiments of the National Guard, Grand Army posts, and other organizations, reviewed by Acting-Gov. Nixon, Mayor Low, Gen. Knaus, Gen. Horace Porter, and Gen. O. O. Howard. The oration was delivered by Gen. Howard. The battle-shie Alabama took part in the celebration by firing salutes. The monument, a circular Corinthian temple whose design suggests the Choragic Monument of Agrippa at Athens, but which is much larger and is embellished with symbolic ornaments belonging to its national character, is of pure white marble on a circular basement surrounded by terraces and approached by grand staircases on each side.

The unveiling of the Rochambeau statue, in Washington, on May 24, was an event of almost international importance, and was marked by the presence of a large special French embassy, including the present Count and Countess de Rochambeau, descendants of the marshals of other, Gen. Brugère, commander-in-chief of the French army, the Count de Lafayette, the Marquis de Chambrun, great-grandson of Lafayette, and other prominent representatives of the French Government. The occasion was made notable also by a military parade, a speech by Ambassador Horace Porter, and a song by Stearns Podge. The statue, the work of Ferdinand Harrier of Paris, stands in the southwest corner of Lafayette Square, a short distance from the White House. Rochambeau, in bronze, in a niche of his rank, stands on an ornate pedestal, with a scroll in the left hand and pointing with the
right to some object in the distance. At the base of the pedestal is Victory bearing an unfurled flag in her left hand and a naked sword in the other, with an eagle at her feet.

Indiana has just dedicated at Indianapolis an enormous monument to her dead soldiers and sailors. The shaft, including a bronze figure of Victory, is 284 feet high, and has a balcony 228 feet above ground, to which ascent is made by elevator. The design is by Bruno Schmitz, of Berlin.

A Holy Family, attributed to Palma Vecchio, has been discovered in a very dirty and dilapidated condition by Prof. Cantalamessa, the director of the gallery of the Venice Academy, and now, in its restored condition, occupies a place in one of the principal rooms of the Academy. The picture is a Sacra Conversazione, representing the Virgin seated holding the Child, who looks toward St. Joseph, seated at the right. At the left is St. Catherine pointing with her right hand to St. John, kneeling on one knee. The picture is a remarkable one, exceedingly beautiful in color and composition, and challenges comparison with some of the finest easel pictures produced in Venice during the later Renaissance. It is considered to Palm Vecchio on the internal evidence, and is placed by Prof. Cantalamessa among the very latest of his pictures.

A memorial to Lord Leighton, late president of the Royal Academy, was unveiled on Feb. 10, in St. Paul's Cathedral, London, by his successor, Sir E. Poynter. The monument, the work of Thomas Brock, R. A., consists of a recumbent figure of the artist upon a pedestal on which are inscriptions on bronze tablets. At the head and feet respectively are bronze figures symbolical of painting and sculpture.

A portrait of John Bunyan, painted in 1685 by Thomas Sadler, has been added to the National Portrait Gallery, London. Its authenticity is said to be established by an unimpeachable record. It is interesting to note, in this connection, that a copy of the first edition of The Pilgrim's Progress was lately sold at Sotheby's for £1,475.

An irreparable loss to Venice and a distinct loss to the world is the fall of the Campanile of St. Mark's, which collapsed and sank into a ruined mass on July 14. Even if the building be reconstructed on the ancient site, it will be only a shadow of the original, and the interest of art lovers as did the original.

The age to which Titian lived is the subject of an article in the Nineteenth Century by H. F. Cooper. He accepts the inquiry being made of him that Titian was not born until 1489-90, twelve years later than the date usually assigned for his birth, that he was only eighty-eight years old instead of ninety-nine at the time of his death. The only source of the idea that he was born in 1477 is a begging letter written by him to Philip II of Spain in 1571, in which he says he is ninety-five years old. The explanation is that this was an exaggeration to heighten the appeal to the royal pity.

One of the best works of Perugino, a triptych, has lately been found concealed behind an indifferent canvas of the seventeenth century in the Church of Santa Maria Assunta, in the village of Castelnovo di Porto, Italy. The principal figure, that of the Saviour, with the right hand raised in the act of blessing and the left holding the book of the Gospels, a work of extraordinary beauty, is by the hand of Perugino himself. The central figures, St. Peter, St. Jovi, and a fourth unknown saint, painted on the shutters, are the work of one of his pupils, probably of Berto di Giovanni. The triptych was executed in 1501 as a commission from the four brothers Degli Eeffi, a distinguished local family. The tradition concerning this picture had never died out, but its whereabouts was unknown previous to this discovery.

Sir Thomas Lawrence's portrait of John Philpot Curran, which Williams, in his Life of Lawrence, calls "the most extraordinary likeness of the most extraordinary face within the memory of man," has been presented by Lord Iveagh to the National Gallery of Ireland. It was in the Royal Academy in 1890, and was bought for 850 guineas at the sale of the Peel heirlooms in 1900.

A recent "find" in Egypt seems to throw new light on The Dance of Death in art, hitherto regarded as a peculiarity of the Renaissance period. A richly painted earthen drinking-cup exhumed near Alexandria is ornamented with seven dancing and grinning skeletons, each of whom is whirling with drunken joviality a bacchic thyrsus. The figures seem to be saying to the drinkers who used the cup: "Eat, drink, and be merry, for to-morrow you will be one of us." This, the true Alexandrian philosophy of life, is of great interest from the point of art. The cup has been added to the Louvre.

**FLORIDA.** (See under United States.)

**FRANCE.** A republic in western Europe, proclaimed Sept. 4, 1870, after the surrender of the Emperor Napoleon III to the Germans at Sedan. The legislative power is vested in the Senate and the Chamber of Deputies, the executive power in the President of the republic and the Council of Ministers. The Chamber of Deputies is elected for four years, one member for each arrondissement when the population is below, and two members when it is above 100,000. Any Frenchman of the age of twenty-one years or over, not a soldier in active service, is entitled to vote, if a resident of his district for six months, and any Frenchman who has fulfilled his military duty may come a candidate for either House unless he holds an office under the state. The ministers are responsible severally and collectively to the Chamber, and either residing or absent, and they can be defeated on a Cabinet question. When a Cabinet resigns the President of the republic selects a new Prime Minister who is able to command a majority, and the latter, in consultation with the President, selects his colleagues. The President of the republic for the term ending Feb. 18, 1906, is Emile Loubet, born Dec. 31, 1838, who was elected to succeed Felix Faure in 1899. The ministry, constituted on June 22, 1899, was composed in the beginning of 1902 as follows: President of the Council and Minister of the Interior and of Public Worship, M. Waldeck-Rousseau; Minister of Finance, M. Caillaux; Minister of Justice, M. Monis; Minister of Foreign Affairs, M. Delcassé; Minister of War, Gen. Andrè; Minister of Marine, M. de Lannan; Minister of Public Instruction, Georges Leygues; Minister of Public Works, Pierre Baudin; Minister of Agriculture, Jean Dupuy; Minister of Commerce, Industry, Posts, and Telegraphs, M. St. Mirand; Minister of the Colonies, Albert Decrais.

**Area and Population.** The area and the population of the 87 departments of France at the
The French soldiers in China and French sailors abroad being added to the population present in France raises the total to 38,641,335, which shows an increase of 412,364 since 1896. Although the death-rate is generally low in France, the increase in population is slower than in neighboring countries. This is because of the exceedingly low birth-rate. The number of births per marriage declined in ten years from 3 in 1881 to 2.1 in 1901, and has not since increased.

The legal population of France in 1891 was 38,961,945, compared with 38,517,332 in 1896. The increase was 441,613, compared with 757,027; in the previous five years. The number of foreigners residing in France in 1901 was 1,037,778, compared with 1,027,491 in 1896. The number of marriages in 1900 was 299,084; of births, 827,297; of deaths, 853,285; excess of deaths, 25,998. It was the fifth year in which there was an excess of deaths, births having declined and deaths increased since the previous year, with births diminished by 31,934. The number of divorces in 1900 was 17,157, making a total of 94,426 since divorce was made legal in 1884. The annual rate of increase in the population of France has declined in seventy-five years from 0.1 per thousand to less than 0.1, although the death-rate has been lowered from 25.3 to 21.1 per thousand.

Total: 38,641,335
900 francs; from the bourse tax, 6,809,000 francs; from the personality income tax, 79,493,000 francs; from customs, 470,266,000 francs, 25,000,000 francs having been added by the new duty on grain; from indirect taxes, 612,000,000 francs; from sugar, 7,085,000 francs; from tobacco, 414,958,000 francs; from matches and gunpowder, 44,066,000 francs; from post and telegraphs, 269,438,000 francs; from railroads and mint, 18,108,000 francs; from domains and forests, 25,212,000 francs; from various sources, 56,784,000 francs; recettes d'ordre, 71,499,550 francs; revenue of Algeria, 1,946,990 francs; raised on short bonds, 40,000,000 francs. The increase in estimated expenditure was caused by the payment of 18,000,000 francs additional interest to guaranteed railroads and an addition of 2,575,722 francs to the army budget, offset by reductions in various departments, so that the net increase in the estimated was 7,342,993 francs. The capital of the French national debt on Jan. 1, 1901, amounted to 30,906,632,022 francs, consisting of 22,001,446,642 francs of 3- and 3% per-cent rentes, 3,811,918,500 francs of 3 per-cent rentes repayable by annuities, 179,435,768 francs of the Morgan annuity, 6,670,843 francs of 4% rentes for roads and school-buildings, 515,020,000 francs of short-date treasury bonds, 184,900,215 francs of miscellaneous debt, and the floating debt of 1,145,666,600 francs. The budget for 1902 gives the sum to be paid on the perpetual debt as 675,045,039 francs; interest and amortization of redeemable debt, 24,747,177 francs; total interest and amortization of floating debt, 243,395,310 francs; total debt charge, 1,243,425,746 francs. To meet the cost of the China expedition and pay indemnities to French victims of the Boxer outbreak the Government, in December, 1901, raised 255,000,000 francs on 3% per-cent bonds.

The revenues of the departments in 1897 amounted to 285,879,082 francs, and expenditures to 288,703,080 francs; the ordinary revenues of communities for 1900 to 794,120,672 francs, and expenditures to 761,184,105 francs; the debts of the ordinary revenue and expenditure of the city of Paris for 1891 to 348,338,216 francs, 166,000,000 francs being obtained from octrois and 113,000,000 francs of the indemnity of the debt, which amounted to 238,395,120 francs.

The Army.—All young men who are not exempt are liable to serve in the active army for two years at the age of twenty, but after one year with the colors those who have learned their duties and are able to read and write may go on unlimited leave of absence. The peace strength of the army in 1902, including soldiers on furlough, was 510,305, including 26,272 officers, in France; 38,879, including 2,335 officers, in Algeria; and 20,168, including 745 officers, in Tunis; total, 569,444 men, of whom 29,482 were officers, with 142,847 horses. There were 4,421 in France, of whom 3,719 were officers, on the general staff; 385, of whom 291 were officers, in Algeria; and 15,9, of whom 90 were officers, in Tunis. In military schools there were 3,673, of whom 391 were officers. Unclassed among the troops were 1,985, of whom 1,728, of whom 141 were officers, in France; 682, of whom 55 were officers, in Algeria; and 152, of whom 117 were officers, in Tunis. The army corps comprised 316,047 infantry, including 12,149 officers, in France; 12,697 cavalry, including 1,015 officers, in Algeria; 14,428 infantry, including 377 officers, in Tunis; 10,027 administrative troops in France, 3,337 in Algeria, and 616 in Tunis; 50,988 cavalry, including 3,461 officers, in France; 7,677 cavalry, including 367 officers, in Algeria; and 1,649 cavalry, including 80 officers, in Tunisia; 49,497 artillery, including 3,725 officers in France; 2,529, including 61 officers, in Algeria; 1,710 artillery, including 50 officers, in Tunisia; 11,083 engineers, including 504 officers, in France; 1,072 engineers, including 22 officers, in Algeria; 435 engineers, including 8 officers, in Tunisia; 7,499 train, including 360 officers, in France; 2,101 train, including 39 officers, in Algeria; 10,510 train, including 33 officers, in Tunis. The strength of the army corps was 475,621 men, of whom 20,199 were officers, in France; 55,064, of whom 1,504 were officers, in Algeria; and 19,740, of whom 534 were officers, in Tunisia; total, 553,237 men, of whom 22,237 were officers. The total strength of the active army was 504,706 men, of whom 29,130 were officers; 437,710, including 29,064 officers, in France; 58,979, including 2,335 officers, in Algeria; and 20,017, including 741 officers, in Tunisia. The gendarmerie in France numbered 21,602 men, of whom 625 were officers; and 143, of whom 4 were officers, in Tunisia; total, 21,745, of whom 629 were officers, the Algerian gendarmerie being provided for in the Algerian budget. The Garde Républicaine numbered 2,903, of whom 146 were officers, and the effective strength of the active army, deducting sick and absent, was 620,280; that of the gendarmerie and Garde Républicaine was 24,487. The total number of men between twenty and thirty-three years of age who are liable for service in the active army and its reserve is estimated at 2,950,000; the number between the ages of thirty-three and thirty-nine who are in the territorial army is about 900,000; and in the territorial army reserve, composed of those between thirty-nine and forty-five years of age, 1,100,000 are enrolled, making a total war strength of 4,350,000 men, of whom about 2,500,000 are counted upon as efficient.

The Navy.—The French navy, including vessels not yet ready for service, consisted in the beginning of 1902 of 5 first-class, 7 second-class, and 13 third-class battle-ships, 17 armored cruisers, 18 coast-defense ironclads, 1 old battle-ship, 40 protected cruisers, 15 protected cruisers, 15 destroyers, 40 first-class and 122 smaller torpedo-boats, and 14 submarine boats. There were in process of construction 2 first-class battle-ships, 15 destroyers, 8 first-class and 10 smaller torpedo-boats, and 20 submarine boats. Nearly every vessel on the list is efficient, as it is the practice to classify all that become obsolete and are not worth rebuilding and fitting out with modern equipment. In 1900 the Chambers voted for the construction of 6 battle-ships of an aggregate displacement of 148,650 tons, 5 armored cruisers of 12,000 tons each, 28 destroyers of 350 tons each, and a number, not determined, of submarine torpedo-boats. Submarine boats have been made the special feature of the French navy, both the type which navigates freely below water and the subservible boat which steams on the surface except when it dives for an attack. In 1902 the Chambers voted to begin the building of 1 battle-ship and 2 ironclad cruisers, and 3 battle-ships in 1903. The Patrie, begun in 1901, will be ready in 1903. The République was laid down in 1900 and the Cuirassé Le Lion Gambetta and Jules Ferry were begun in 1900 and the Victor Hugo in 1901. The navy estimates for 1902 also provided for the construction of 13 submarines of 1,015 officers. In the newest development of the French battle-ships, exemplified in the République and Patrie, the gun emplacements and all parts below them are fully protected. This type was adopted in the
Suffren, of 12,052 tons, launched in 1809, which has 134-inch armed armor over the vital parts, a speed of 18 knots with engines of 15,500 horse-power, and an armament of 4 12-inch guns coupled in barbette turrets fore and aft and a quick-firing battery, placed high, of 8 6.4-inch, 8 4.5-inch, and 34 small guns. The Jena, launched in 1898, is identical in design and armament, but the quick-firing battery is unprotected underneath, as is the case with the Charlemagne, Saint Louis, and Gaulois, of 11,097 tons, launched in 1895 and 1896. In the Charles Martel, Jaureguiberry, Car- not, Maseena, and Bouvet, built between 1893 and 1896, there are 2 12-inch and 2 10.8-inch guns placed singly in lozenge disposition, while 8 5.5inch quick-firing guns are mounted in small turrets and they have from 20 to 34 smaller quick-firers. The Broumas, launched in 1891, of 11,215 tons, has 3 13.4-inch guns in fore and aft turrets, and a heavy quick-firing battery of 10 6.5-inch and 81 smaller guns well protected amidships. The Boivines, Valmy, Jemmapes, and Trohounat, third-class battle-ships of about 6,500 tons, carry 12-inch guns singly in barbette turrets and have 4-inch and smaller quick-firers amidships without protective armor. The type of French battle- ship, of which the Mareuax and Magenta, of 10,890 tons, are the latest examples, has a high freeboard, a complete belt of armor at the waterline, and 4 large 13-inch guns disposed in a lozenge ar- rangement, with a very strong quick-firing armament. These two vessels, launched in 1887 and 1890, carry 4 13.4-inch guns in their barbette, and the quick-firing batteries consisting of 17 5.5-inch and 25 smaller guns in the Mareuax and 16 5.5-inch and 34 others in the Magenta. The Ré- pubblique and Patrie, having a displacement of 15,- 000 tons, are designed to steam 144 knots, and their armament will consist of 4 12-inch breech-loaders and 18 6.4-inch and numerous smaller quick-firing guns. The French armored cruisers are long and narrow, with 7.6-inch guns mounted singly in turrets so as to obtain a free command and quick adjustment, with less regard to protection. The Montcalm, launched in 1899, and Duc de Magenta and Coët-Carmel, launched in 1900, of 5,517 tons, and the Gloire and Conde, launched in 1901, of 10,000 tons, and the newer Sully carry besides the 7.6-inch guns 6 6.4-inch, 4 4-inch, and 24 6.4-inch quick-firing guns. The Meteor, of 10,014 tons, has 6 4-inch quick-firers. The Desaix, Kléber, and Dupleix, of 7,700 tons, are armed with quick-firers only, 10 6.4-inch and 16 small ones. The Léon Gambetta, launched in 1900, has a 13-inch deck protection only, a displacement of 5,500 tons, and an armament of 8 6.4-inch and 12 1.8-inch quick-firers. The latest type of armored cruiser, represented by the Léon Gambetta, Jules Ferry, and Victor Hugo, of 12,416 tons, have 4 7.6-inch quick-firing couples in turrets, with better protection for their bases, and a secondary armament of 10 6.4-inch quick-firers. These vessels, with engines of 24,000 horse-power, are intended to make 21 knots—the speed of the 10,000-ton and 9,517ton cruisers, with engines of 20,000 horse-power. The Jurien de la Gravière, with engines of 17,000 horse-power, has a nominal speed of 23 knots, and have the Guichen, of 8,277 tons, and the Cha- teauroux, of 8,016 tons, launched in 1897 and 1898, with engines of 24,000 horse-power and 23,000 horse-power, carrying 2 6.4-inch, 6 5.5-inch, and 10 small quick-firing guns; and also the armored cruiser Jeanne d'Arc, launched in 1899, which, with engines of 8 6.4-inch and 2 7.6-inch guns in turrets and a quick-firing armament of 12 5.5-inch and 26 small guns.

The French navy is under the direction of the Minister of Marine, but since 1898 naval matters proper, the technical and military responsibilities pertaining to construction, maintenance, commissioning, mobilization, and every preparation for war, are confided to the chief of staff, an officer of the highest rank, Vice-Admiral Bienaimé in 1902. The navy is manned partly by conscription and partly by voluntary enlistment. The entire seafaring population between the ages of eighteen and fifty have been since the time of Colbert registered in the Inscriptio Maritime, and such serve in the navy instead of the army. Since 1872 it has been open to a limited number of conscripts called for service in the active army to choose the naval service instead, if they are fit for its duties. Of about 114,000 men in the Inscriptio Maritime, 25,500 are in active service in the navy, and the rest form a reserve which would provide a surplus of 50,000 men or more over the number required to man the whole fleet in case of mobilization. The personnel of the navy in 1901 consisted of 15 vice-admirals, 20 rear-admirals, 125 captains, 215 commandants, 754 lieutenants, 502 ensigns, 146 aspirants of the first and 78 of the second class, 1,420 mechanics, engineers, carpenters, gunners, blacksmiths, model instructors, etc., 50,496 petty officers and seamen, and in the reserve 15 vice-admirals, 15 rear-admirals, 202 other officers, 345 commissaries, surgeons, and other superior employees, and 5,473 petty officers and seamen; total effective, 59,835 officers and men.

Commerce and Production.—The yield of wheat in 1900 was 114,710,880 hectoliters, from 6,864,070 hectares; of barley, 14,394,320 hectoliters, from 757,193 hectares; of oats, 88,900,920 hectoliters, from 5,941,420 hectares; of rye, 20,689,000 hectoliters, from 1,418,780 hectares; of buckwheat, 8,163,827 hectoliters, from 692,531 hectares; of corn, 7,834,600 hectoliters, from 541,191 hectares; of mixed grain, 5,212,150 hectoliters, from 520,560 hectares; of potatoes, 122,541,290 hectoliters, from 1,500,898 hectares; of sugar-beets, 85,881,510 quintals, from 320,817 hectares; of beets, 110,288,100 quintals, from 492,013 hectares; of colza, 433,507 quintals, from 38,727 hectares; of flax, 88,988 quintals of fiber and 194,155 quintals of seed, from 21,260 hectares; of hemp, 185,125 quintals, from 26,730 hectares; of wine, 85,314,900 hectoliters, from 5,000 hectares; of olives, 227,508 quintals, from 17,673 hectares; of clover, 35,010,275 quintals, from 1,022,422 hectares; of hay and grass, 150,743,450 quintals, from 5,506,525 hectares. The trade in 1900, however, has increased, and the yield of wine is 1,733,345hectoliters, producing 57,994,000 hectoliters of wine. The exportation of wine was 1,554,690,000 hectoliters, and the importation 3,149,000 hectoliters. The production of cider in 1901 was 12,734,000 hectoliters. The crops of walnuts, chestnuts, olives, cider-apples, prunes, and mulberry-leaves in 1900 was valued at 229,475,309 francs; the orange and lemon crops, at 1,092,435 francs. The numbers of domestic animals in France on Dec. 31, 1900, were 2,903,003 horses, 203,002 mules, 356,239 asses, 14,620,832 cattle, 20,172,561 sheep, 6,740,455 hogs, and 1,537,325 goats. The production of alcohol in 1900 was 2,050,208 hectoliters. The silk-growing industry, which is encouraged by premiums from the Gov- ernment, amounting for the year to 5,569,187 francs, employed 136,214 persons in 1900, who raised 9,180,404 kilograms of cocoons, from which 4,098,680 kilograms of raw silk, valued at 135,525,251 francs, were obtained, with 209,618,260 francs, valued at 1,167,357 francs, being ex- ported. The number of mines in operation in 1899 was 529, employing 150,504 persons. The product
of minerals was 39,884,702 tons, valued at 460,366,671 francs. The production of coal and lignite was 32,982,712 tons; of iron ore, 4,985,705 tons; of potash, 3,573,579 tons; of manufactured iron, 534,000 tons; of steel, 1,240,000 tons; of steel rails, 1,237,700 tons; of gold, 270 kilogrammes; of silver, 210,105 kilogrammes; of lead, 15,981 tons; of zinc, 39,274 tons; of copper, 1,115,523 tons; of building-stone, slate, cement, phosphates, and other quarry products, the value of 243,425,956 francs. There were 354 sugar factories in 1901, employing 19,497 persons regularly and 8,370 occasionally. The production in 1901 was 1,040,294 tons of refined sugar. The value of codfish landed in 1899 was 15,073,368 francs; of the catch of the entire fishery, 31,113,464 francs. The catch of herring in 1900 was 376,316 quintals; of coel, 639,010 quintals; exports of dried codfish, 223,714 quintals. The Government gave 5,538,920 francs in premiums for the catch and exportation of fish.

The foreign commerce of France has been gradually increasing for several years. The total value of the special commerce was 7,882,000,000 francs in 1899, 8,507,000,000 francs in 1900, and 8,880,000,000 francs in 1901. The increase in imports in this period has been 245,000,000 francs; in exports, 786,000,000 francs. The total value of the general imports in 1900 was 5,989,800,000 francs, and of the general exports 5,521,800,000 francs; that of the special imports was 4,256,000,000 francs, and of the special exports 4,108,700,000 francs. In 1901 the special imports amounted to 4,714,500,000 francs and the special exports to 4,166,200,000 francs. The imports of food substances in 1901 were 902,000,000 francs; the imports of raw materials were 3,124,000,000 francs, and the exports 1,091,000,000 francs; the imports of manufactured goods were 2,789,000,000 francs, and the exports 1,897,000,000 francs. The total value of the goods imported in 1900 was 2,977,000,000 francs, and the exports 2,098,000,000 francs.

The value of merchandise imports and exports that passed through Marseilles in the general commerce of 1900 was 2,072,000,000 francs; while Havre had a trade of 1,978,000,000 francs; Paris, 876,000,000 francs; Dunkirk, 773,000,000 francs; Bordeaux, 672,000,000 francs; Bouloune, 430,000,000 francs; Dieppe, 371,000,000 francs; Toulon, 293,000,000 francs; Calais, 247,000,000 francs; Belfort, 221,000,000 francs; Leuumont, 219,000,000 francs; Toulon, 204,000,000 francs.

**Railroads, Posts, and Telegraphs.**—The railroads in 1900 had a total length of 23,760 miles, exclusive of 2,970 miles of local railroads. The Government owned 1,700 miles and has the revenue of the main lines operated by the 6 guaranteed companies. The guarantees of 4 of these expire in 1914, and those of the others in 1934 and 1935. The cost of construction of 23,453 miles completed in 1899 was 16,214,000,000 francs. The gross earnings in 1899 were 14,213,750 francs, and in 1900 they were 15,925,500 francs. The length of street-railroads on Jan. 1, 1901, was 2,319 miles.

The number of letters that passed through the post-office in France and Algeria in 1899 was 946,801,000 in the internal and 167,199,000 in international and transit traffic; registered letters 48,518,000 international and 2,808,000 international and transit; postal cards, 55,149,000 international and 7,545,000 international and transit; newspapers, 48,000,000,000; circles, 1,218,893,000 international and 183,213,000 international; receipts in 1899 were 236,843,270 francs in France and 4,988,426 francs in Algeria.

The length of telegraph-lines on Jan. 1, 1900, was 90,170 miles, with 330,100 miles of wire. The number of despatches in 1899 was 48,144,151, of which 30,071,518 were internal, 5,378,182 international, 1,122,180 in transit, and 1,571,271 official. There were 959 telephone systems in 1899, with 10,410 miles of line and 150,510 miles of wire. The number of conversations in 1899 was 164,912,542, and on long-distance lines, having a length of 15,384 miles, with 44,034 miles of wire, the number was 4,774,824 in 1899 and 5,633,543 in 1900.

**Last Session before Elections.**—The ministry that triumphed over the Nationalist sedition in 1899, obliterated the Dreyfus scandal, suppressed political intrigues in the army, and restored confidence in the republic, was strong.
enough to carry through the Chambers important measures, such as the new succession duties, the revised spirit duties, the bill establishing a colonial army, and, as the logical chastisement for the reactionary parties, the associations bill, The army and navy, the colonial empire, and the international position of France waxed under the care of the democratic ministry in a way to rebuke and humiliate Cesarism. The defenses of the French coasts, the gradual transformation of the navy, the development of submarine torpedo-boats, the construction of the naval port of Brest, the fortification of Diego Suarez, the occupation of new territories in the Sahara and central Africa, were accompanied by a more energetic defense of French interests in the East and elsewhere. The Russian alliance was not weakened, while a rapprochement with Italy removed a source of weakness and danger. When the Chamber met in January, 1902, the Government proved to working men the value to them of ministers like M. Millarand and M. Baudin, which the Guesdist Socialists denied, by adopting the bill of M. Basby, the representative of the miners, fixing eight hours as the maximum day's work in French mines. To enable the companies to double the number of pits, broaden the galleries, and increase the output from other pits, nine hours will be a day for two years, then for two years eight hours and a half, and after that eight hours. A bill decreeing that workmen and workwomen, working in public service, including employees in shops, restaurants, and hotels, shall not be employed more than six complete days in the week, but must have one whole day or two half-days of rest, passed by only 10 Deputies. A Socialistic motion to amnesty strikers was carried on March 21, in spite of the opposition of the Government, by 368 votes to 62. The Guesdist Socialists and some anarchist agitators led a demonstration of the unemployed at the Labor Exchange and a conflict with the police on March 3. Even the Parliamentary Socialists who have defended M. Millarand considered it inexpedient for a Socialist again to enter a French Cabinet for some time. A new law on shipping bounties is intended to induce ship owners to purchase vessels abroad for the extra expenses entailed by the restrictions placed upon them by the French shipping laws, though its opponents described it as an attempt to give to M. Lemoine a year in premiums to British ship-builders. Its purpose is to enable the steam-mercante marine of France to keep pace with that of other countries. The act of 1881 allows half the navigation premium to vessels of foreign construction sailing under the French flag. The act of 1893 restricted bounties to French-built vessels. The present act grants an outfit indemnity equivalent to less than a third of the navigation premium to foreign-built steamers registered in France. The navigation bounties for French-built vessels are at the same time increased, except for large sailing vessels, which were so favored by the act of 1893 that they have been built in excess. Notwithstanding the protection given by the law of 1893, French owners have continued to buy over two-thirds of the new steam tonnage abroad. A part of the increased bounty is reserved as a superannuation and accident insurance fund for mariners and the remainder is the bounty remains 65 francs per ton and 15 francs per every 100 kilograms of engines and boilers. The French builder of a steam-vessel receives also 70 per cent. of the navigation bounty. French vessels in colonial waters may hereafter have foreign crews under French officers, it has been found that the law requiring three-quarters of all French crews to be Frenchmen was detrimental to the coasting-trade under the French flag in tropical seas. The act of 1893, under which bounties will continue to be paid out until 1913, will have cost the taxpayers 221,000,000 francs. The cost of the new statute, which was passed for ten years, with payment of bounties for twelve years longer, is limited to 200,000,000 francs. The Chamber sanctioned by a practically unanimous vote a vast project of canalization that has been long studied, involving the expenditure of 605,000,000 francs, of which 443,500,000 francs will be spent on new canals, 80,000,000 francs on widening and deepening existing canals, and 122,000,000 francs on improving Dunkirk, Havre, Nantes, St.-Nazaire, Bordeaux, and other harbors. Of the new canals, one to connect the Pas de Calais with Lorraine, giving a cheaper and more certain supply of coal and of iron ore to a great manufacturing district, will cost 130,000,000 francs. The projected northern canal will cost 80,000,000 francs. A canal from the Loire to the lower Rhone, estimated to cost 123,000,000 francs, will link the extensive canal system of which Paris is the center with the port of Marseilles. The Rhone cost 91,500,000 francs, and in connection with this the navigable channel of the Rhone will be improved, and also the Cete Canal. For works of minor importance and local value the districts interested are expected to pay half the cost; for works of national importance the local contribution will be less; for military works by only 10 Deputies. The national treasury. The question of shortening the term of military service was not decided. Under the present law about 50,000 of the annual recruits serve only one year, after which they are called out for four or two weeks annually; 15,000 serve two years; and 160,000 are compelled to serve three years. Young men of the wealthier classes, on the ground that they are needed for the support of their families or have a certain amount of instruction, are released, while the poor have to serve for the full term. The Government proposed to make period of obligatory service two years for all if a sufficient number of suitable men can be induced to remain with the colors voluntarily from one to five years longer than the present term, or to volunteer to those who would enlist for the additional terms not only higher pay, but future employment in certain Government and communal offices and in societies receiving aid to be reserved for soldiers who have served three years in the national or the colonial army. Sons who support widowed mothers or younger children would also have to serve two years, during which the Government would provide for the support of the bereft families. The Government favored this plan and was desirous of suppressing all exemptions and inequalities, but until the preliminary measures were taken to increase the efficiency of the military organization when the short term is introduced. As the matter could not be brought to a conclusion before the dissolution of the Chamber, the Deputies, by 552 votes to 2, declared their adhesion to the principle of two years' service to be effected by the suppression of all exemptions and by recruitments, with compensation for famines in their normal support. Military service has weighed very heavily in France because the annual number of available conscripts has declined since 1871 from 225,000 to 225,000, half the num-
ber there are now in Germany, where they have increased in that time 120,000 and reductions are made in the annual drawings, whereas in France there are not enough to fill the battalions. The bill proposed to enroll in the army all those who, physically incapable of marching and fighting, could perform administrative or clerical duties or assist at a charitable institution or the commissariat. For students postpone ment of service would be allowed. There are 6,000 men employed as orderlies and as shoemakers, tailors, etc., who would be incorporated in the army. At present 58 per cent. of the infantry and a part of the cavalry really serve only ten months. The available effective is reduced by exemptions and dispensations by a third. The abolition of these is expected to yield 489,000 conscrits serving two years. The reduction of the limit of stature and the reen listment of more non-commissioned officers and of 7,000 privates, with the addition of the Algerian contingent, would supply the deficiency of 30,000 men that the change from three to two years would entail, so that the army would be kept up to its required strength of 539,000 men.

The cost of the change in bounties for reenlistment and relief to families deprived of breadwinners during the four years is estimated at 70,000,000 francs a year. The total strain on the people would be greater, but it would be equal, and the classes now called upon to pay the main part of the blood tax would be relieved of a part of their burden. The military training of the army as a whole would be improved, since the three years' system does not secure two years' training for a great part of the troops. The system proposed gives the most intelligent classes. The duration of military service under the bill is two years in the active army, eleven years in its reserve, six years in the territorial army, and six years in its reserve, making twenty-five years altogether.

The final session of the Chamber elected in 1886 ended on March 30. The Senate refused to make the duration of the next Chamber six instead of four years, postponing the question foriper consideration in the new Parliament. The Government supported the measure, on the ground that the Senate, as is usual in France, is less of a chamber of reaction than of deliberation and less popular. The bill was rejected, amid the acclamations of the multitude. The Progressives, led by M. Méline and M. Ribot, would purge the republic of Socialists and Socialist Radicals, hoping to reconcile the Conservatives to a republican Government ruled by moderation and respect for property. The Radical Republicans, the aggressive and dominant section of the Ministry, are the men who since Gambetta led them have carried out the principal reforms that have marked French legislation for twenty years, and who of late have had a majority in the Senate as well as in the Chamber. The Socialist Radicals would proceed more precipitately in social legislation than the Radicals. The Parliamentary Socialists, represented by M. Millerand and M. Viviani in the Chamber, adhere theoretically to Collectivist ideals, but will cooperate with other parties in effecting social reforms and labor legislation. The old parliamentary Socialists, led by Jules Guesde, repudiate alliances with capitalistic parties. The Revolutionary Socialists, like the anarchists, generally refrain from voting and political activity and would sweep away the existing Government by revolution and terrorism. The Nationalists, who had already won the municipality of Paris from the Socialists, made a great struggle to gain the constituencies in the capital, and with a profuse use of money opposed Ministerialist candidates in all parts of France. The women of the aristocracy, angered by the anti-Suffrage law, took a public part in electioneering, as women in France had never done before. There were about 2,500 candidates, an average of more than 4 for every seat, in Paris. The Duke of Orleans instructed the remaining adherents of the Bourbon monarchy to set up Royalist candidates where they had a chance of success, and where not to vote for any other anti-Republic candidate, or, if there were none likely to win, to vote with any party opposed to the Government. In many departments the clergy did actively intervene in the elections, helping M. Morny and M. Rousseau when the elections were past a threat
to punish all who had abused their ecclesiastical functions.

The elections took place on April 27. The Nationalists, for all their violent campaign, gained but a few seats in Paris and polled only two-fifths of the total vote of the metropolis, whereas Gen. Bouillé in Angers received three-quarters of the Parisian suffrages. Out of 412 elected on the first ballot 88 were Ministerial Republicans, 95 Radicals, 41 Socialist Radicals, and 22 Socialists, making 246 supporters of the Government, against 32 Nationalists, 60 Conservatives, 66 Anti-Ministerial Republicans, and 2 Anti-Ministerial Socialists, a total of 106 Opposition Deputies.

Second ballots were necessary for 179 seats. The Government made a net gain of 11 seats in the elections decided in the first ballot. Of 8,885,000 votes polled out of 12,180,000 on the register, 8,188,000 were cast for the Government. Of 3,382,000 Anti-Ministerial votes, Guesdist Socialists cast 144,000, Progressive Republicans 1,183,000, Nationalists 1,180,000, and Reactionaries 2,433,000. Of the Ministerialist voters, 717,000 were Socialists, 715,000 Radical Socialists, 1,754,000 Radicals, and 2,029,000 Ministerial Republican.

Although the Progressists in many places combined with Radicals and Socialists to harass Ministerialists, the second ballots on May 11 were as favorable to the Government as the first. The new Chamber consisted of 111 Ministerial Republicans, 128 Radicals, 84 Socialists, 53 Socialists, 6 Guesdist Socialists, 113 Progressist Republicans, 43 Nationalists, and 41 Conservatives. This gave the ministry a majority of over 100 against its opponents. In accordance with the Republican a majority of 400 against the foes of the existing republic. The Socialists, having been 57 in the Chamber of 1888, were losers, though not to such an extent as the Conservatives, and the Progressists lost 35 seats, while the Radicals increased from 104 in the last Chamber and the Socialist Radicals from 74. Of the Conservatives elected only 10 were Legitimists, the rest Bonapartists. There were 20 Anti-Semites and 8 Plebeians.

Change of Ministry.—The ministry formed on June 22, 1894, for the defence of the republic and the reestablishment of order, having achieved its task, deserted it at the outset by stanch Republicans of the stamp of M. Ribot and M. Saincaré, and was dissolved on May 28 announced its resignation. The new Chamber met on June 1 and elected Léon Bourgeois provisional president over Paul Deschanel. After the credentials of members were confirmed, M. Bourgeois was definitely elected president. M. Loubet was at this time in St. Petersburg, returning the visit made by the Czar in September, 1901. The Emperor Nicholas invited the President of the French Republic to visit him so as to note the proofs of the warm and sincere sentiments uniting Russia and friendly and allied France. In asking a credit of 500,000 francs for the presidential journey the Government, in consequence of the recent Franco-Russian note, instead of speaking of a fresh consolidation of the alliance according to the old formula, described the visit as a demonstration of the growing strength of the bonds uniting France and Russia for the development of their prosperity and the maintenance of peace in the world. M. Loubet, on his return to France, received a letter in which M. Waldeck-Rousseau offered the resignation of the Cabinet. The President sent for Hervé, and after a private conference with this declined, commissioned M. Combes to form a ministry. Whether a progressive income tax should be placed before exclusive state education, two years' service, superannuation allowances to workmen, or judicial whether scrutins de liste should be reintroduced, were questions that divided Radicals who were asked to join the Cabinet, which was finally constituted on June 5 as follows: Prime Minister, Minister of the Interior, and Minister of Public Worship, M. Combes; Minister of Justice, M. Valé; Minister of Foreign Affairs, M. Delcassé; Minister of Finance, Maurice Rouvier; Minister of War, Gen. Andrè; Minister of Marine, Camille Pelletan; Minister of Education, M. Chaumigé; Minister of Commerce, M. Trouillot; Minister of Public Works, M. Maréjouls; Minister of Agriculture, M. Mogeot; Minister of the Colonies, M. Doumergue; Minister of Posts and Telegraphs, M. Bérand. The selection of M. Combes, reporter of the associations bill in the Senate and Minister of Education in the Bourgeois Cabinet of 1895, to be the head of the new Radical ministry indicated a purpose to apply that law with vigor. The first legislative proposal in the ministerial program was the abrogation of the Falloux education law of 1850, which placed an equal footing secular education given by Church institutions and the public schools in the budget of the state. Rigid economy and an intelligible and sincere budget were the financial principles set forth, and the extraction of the Government from graver financial difficulties. Fifteen years before was recalled to prove that similar efforts would restore the balance between normal receipts and expenditures. A general income tax, which by taxing wealth according to its powers would introduce greater equity and a fuller democratic spirit into the fiscal system, was given a foremost place in the promised legislation, and next the reduction of military service to two years without compromising the solidarity of the army, a consummation to be effected by the bill already before the Senate. The disciplinary corps and penal establishments of the army were to be brought into harmony with the principles of modern justice, as the proceedings before military tribunals already had been. The tax on the reply to 1894 was to be studied and a beginning made in their acquisition and management by the Government, as was again the Chamber. The liberal and the moderate Cabinet had left, was to be pushed forward. All details of the administration would be governed by secular liberty and Republican principles, and the associations law would be enforced in its letter and its spirit. The Chamber, after hearing the ministerial declaration, passed by 329 votes to 124 an ordre of the day expressing confidence in the Government and its purpose to apply a vigorous policy of unsectarianism, of fiscal reform, and of social solidarity. The deficit for the year was estimated at 170,000,000 francs. The Progressist Jules Roche proposed to debar private Deputies from proposing any measure entailing expenditure of money, as is the English constitutional practice. M. Rouvier carried a bill for the conversion of 34 per-cent. French rentes into 3 per cents, affecting nearly one-third of the funded debt and saving the treasury 32,000,000 francs a year, the period during which the conversion would be carried out having expired. The holders of the old and the new 3 per cents, amounting to 21,450,000,000 francs, are guaranteed against any further conversion for a term of years. An order for 5 per cents, which exchange their bonds receive 1 per cent. bonus in the shape of new bonds of 101
per cent. of the face value of the old ones or in cash. The conversion was expected by the hold- ers since the price of 100 francs has re-
ceded from nearly 100 almost down to par, and the
impending operation depressed the price of the
perpetual 3 per cents. The bonus represents an
interest of 24 per cent. for the first four years.
After 1910 a conversion of French rentes into 24-
or 24.5 per-cent. stock at par may be possible, but
at present these rates are not sufficiently accli-
matized in France. The conversion bill contains
a clause allowing treasury bonds to reach a
limit of 500,000,000 francs, 100,000,000 francs
above the existing legal maximum. The session
ended on July 12.

Enforcement of the Associations Law.—
Before the close of the session M. Combes first
ordered 135 Roman Catholic schools closed, some
of them conducted by 130 newly constituted re-
ligious associations which un soundly contended
that the associations law did not require new
schools or societies to apply for authorization,
others by members of unauthorized communities
who claimed exemption as salaried teachers em-
ployed by lay school proprietors. Since the asso-
ciations law of July 1, 1901, went into force
August 14, 1901, it had applied for authorization.
Authorization has been re-
quired by law since 1823, but before the new act
was passed many establishments were found
neglecting to conform to the law. The Pre-
cerer's a speech defending the forcible closing of
schools and declaring that the first act would be
followed by others, since Republican France had
elected a President, and a National Assembly and
titling the victory of lay society over monastic
doctrine, was by 309 votes to 218 ordered to be
placarded throughout the country. There were 3000
schools, mostly for girls and conducted
by nuns, which still defied the law. Three days
before the close of the session a decree was issued
directing them to close on a week's notice,
otherwise they would be closed by the police.
If they obeyed they could apply for authoriza-
tion, and be reopened as new establishments.

Asylums and hospitals were left undisturbed
until accomodation could be found for their
inmates. M. Combes denounced in the
Chamber as a proscriber, and Deputies of the
Right threatened the President and nearly
came to blows with friends of the Government. After
the adjournment of the session, 450 religious commu-
nities applied for authorization. On July 16 noti-
ces were served on 76 schools in Paris, and
some of the schools in the provinces received
their warning. The schools were those of the
unauthorized religious communities, taught by
the same teachers and occupying the same build-

The Government, however,
was resolved to treat the pretext that these
latter schools were opened by the teachers
who had opened new schools, when they were in all
respects the same conventual schools as before,
as a quibble not worthy of consideration. The
Council of State decided on Jan. 23, 1902, that
the law did apply to the conventual schools,
old and new. There were two months in which
the schools could be either converted into secu-
lar schools or closed. The government, in virtue of
authorized orders before the compulsory educa-
tion law would require the parents to send their
children to school; but they could not be legal-
ized in the same manner as the Catholic legisla-
ture, which would not meet before Oct. 15, and in case these
schools were not reopened before the new school
year there would not be room for so many children
in the public schools. The new law, however,
would endure penalties rather than let their
children attend the secular schools. After secu-
lar education was enacted in 1882 and monastic
teachers were excluded from the common schools,
Catholics throughout the country contributed
and sent their children to the schools founded
by the monastic orders in which religious in-
struction was continued. There were 100,000
children in these Church schools in Paris; in the
provinces they were more numerously attended.
Thousands of teachers were trained in the con-
vents. To provide education for the pupils of
these schools would add greatly to the public
expenses. The bishops declared that they would
defend the liberty of Christian families to deter-
mine how their children should be educated, and
nearly all of them sent protests against the de-
crees, although they had had constant difficul-
ties with these teaching orders in exercising their
right of control over the educational decision. The circular of M. Combes came as a surprise because it was now
too late for the orders to apply for authorization.
The law gave them only three months, which ex-
pired on Oct. 1, 1902. The Government re-
creed an extension till Jan. 15, 1902, and when
he said that elementary schools came under the
education law of 1886 it was assumed or argued
by some of the Catholics that his language ex-
empted the Church schools. It was contended,
moreover, that since he threatened to close them
after a final summons his successor was bound
to allow an opportunity to be heard in opposition.
The Progressives and Moderate Republicans con-
demned the policy of suppressing the sisters'
schools, and Protestants as well as Clericals
and Reactionaries called it an attack on liberty
and a manifestation of hatred and intolerance.
Even Radicals, like ex-Premi er Goblet, deplored
violence in combating clericalism, though others
called for the total suppression of the recalcitrant
orders or advocated the denunciation of the con-
cordat. When the police began to carry out the
decree, first in the departments of the Seine and
the Rhône, the Clericals staged demonstrations.
In Paris the Nationalists sought conflicts with the police, and some of the
agitators were arrested. In provincial towns
and villages, and in the provinces where this
policy produced real hardship and profoundly exasper-
ated the people, serious conflicts occurred, not-
withstanding the endeavors of the authorities to
avoid encounters. Many of the officials carried
out the expulsions with extreme roughness;
some would not enforce the decree; none treated
the sisters with harshness. Departmental and mu-
icipal councils in Catholic sections passed resolu-
tions condemning the Government, and the
municipal councils of the industrial cities re-
torted with resolutions of commendation. Cler-
ical leaders appealed to M. Loubet, who forwar-
ded their communications to the ministers. Ladies
of society sought the intervention of Mme. Loubet,
but propriety forbade her to receive them. Leav-
ing a message that women's blood would be shed
in the streets if the women of the poor were de-
nied the privilege of giving a Christian education
to their children, some days later, at the head of a
demonstration of mothers of France they
attempted to present a petition to the Prime
Minister, but found the avenues leading to the
ministry blocked by the police. Some of the noti-
fications in the provinces were for the reason that the establishments affected were
virtually authorized by having been allowed to
buy lands and buildings or to receive legacies. It was decided to leave orphanages and charity schools undisturbed. In many of the departments the schools that received notices closed voluntarily; in 5 there were no religious schools; in 44 decrees were enforced. In many cases when the heads of the departments of resistance in the districts were arrested, priests and nuns were exposed to the same danger and the heads of the order commanded the nuns to leave, and the nuns desired to leave, but were restrained by the lay managers and by Clerical paritians. There were 6,000 monastic educational establishments that had not applied for authorization. About half of these the ministers decided to leave unmolested because they had acted in good faith, believing that no application was necessary. The number of schools thus exempted was about 1,100. Of the others, over 1,500 closed voluntarily. Decrees were enforced against 20 schools in Paris and 61 in the Rhône department, and on Aug. 1 decrees of closure were issued against 237 establishments in 32 other departments. There were 12,000 applications for authorization, which the Council of State would pass upon as expeditiously as possible. The 324 recusant schools must secure lay teachers if they desired to reopen in October. When the nuns went to the gendarmes to find the doors locked, and some of them surrounded by defenders—peasants who stood guard with pitchforks or youths who stoned them as they approached. In many places the inhabitants mounted guard or the mayors summoned them by sounding the tocsin, and in some the gendarmes were compelled to retire. In various towns hundreds of the citizens fought in the streets. The political leaders of the demonstrations counseled only legal resistance, not violence. Some of them suggested and inaugurated a general refusal to pay taxes. The boycotting of Republicans was begun in many places, and in some a run on the savings-banks was started. The agitation was more intense and general in Brittany than in any other part of France, and there the decrees were carried out last. The doors of the schools had to be opened by locksmiths or breachers had to be made in the walls. With more or less energy, the entrances to the schools were used to prevent the passage of the police. Prominent Clericals braved a criminal charge by breaking the official seals placed on the buildings. Priests accompanied the armed forces in the provinces. In one instance the nuns armed themselves with scythes to fight the police. Wherever the people were so excited that the schools could not be closed without a serious conflict the execution of the decrees was delayed, while the ecclesiastical authorities counseled submission. The superior of the largest order twice directed the Breton nuns to submit, but the lay owners of the schools and the inhabitants prevented their departure. Royalism as well as Catholic sentiment inspired a revolt which only the military could deal with in this old province, now almost the only part of France that elects royalist Deputies. Court proceedings against the legality of the decrees were instituted in very many places, the case generally recommended by the Church dignitaries and their political friends. One of the bishops advocated the separation of Church and state, since the majority of Frenchmen preferred apparently an athiestical republic. In some of the more troubled districts detachments of soldiers were sent to protect the civil officials in their task. In the department of Morbihan LIEUT.-COL. GAUDIN DE SAINT-BRIAC was ordered to aid in closing a school at Lanouen, refused to obey his general’s orders, saying that as a Christian he would not share in an act contrary to his faith and religious feelings. He was immediately relieved of his command. The government had to consider the acts of resistance in the districts, it did not, however, issue a general order against attacks on the clergy. The superior of the convents of Bourg-la-Reine, however, was exiled. The government’s fear of religious questions, as public opinion, the Bourbon kings and feudal attachment to the nobility were still a part of their religion. Barricades, earthworks, and ditches closed the roads. When the soldiers broke through or turned the barriers and reached the school-buildings, where they had to batter down the doors, they were greeted with cheers for the army, but the commissaries were assaulted, and sometimes the priests had to rescue their lives. Intrenchments and obstacles protected the buildings, and these were filled with people who threw filth and burning oil-soaked sticks into the faces of the gendarmes who attempted to enter. When an entrance was at length effected, the nuns marched arm in arm with the aristocratic ladies of the neighborhood to the church, preceded by trumpets and flags and cheered by the populace, who strewed their path with flowers. Some of the local courts upheld the lay owners, or nominal owners, of the schools. When the nuns had left, they removed the seals from the doors and resumed possession. In the departments where the public sentiment sustained the Government, though many persons were arrested, priests and nuns among them, and ladies of the old aristocracy, the sentences inflicted were the lightest, and these were remitted under the law allowing first offenses. The Minutemen of the Clerical and Reactionary movement which made Paris Nationalist and revived royalism and imperialism in the provinces, contrary to the admonitions of the Pope, was not derived from the dwindling and impoverished ancient aristocracy, but from the commercial, manufacturing, and professional classes. The bourgeoisie that accomplished the French Revolution had become enamored of the ancien régime. The spirit was strong in the army and navy and among the official classes, and when officials refrained from insubordination, the women of their families flaunted their anti-Republican sentiments in the view of the public. The Government, representative of a new social stratum, of the new order, was accused by the women of the peasantry, attributed this to the monopoly of middle-class education by the clergy. Hence the ministers, who found themselves in the awkward position of waging war on women, persisted in enforcing the associations law, in appearance at least, to betoken their determination to introduce secular education and bring up the youth of France as Republicans. The Government was sustained by 65 departmental councils on its policy of closing the schools, and censured by 3, while 15 recommended authorization and restitution of the schools. The belated execution of the decrees in Brittany was finally carried out by Aug. 20, in Finistere last of all, where Abbé Gayraud, the Deputy, could not dissuade the peasants, who left their harvest fields to champion the nuns, from fighting the police and soldiers. The orders after the struggle was over applied for authorization. Since the act of 1868 the religious faction of the clergy, lay teachers, and pensioners, was excluded from the 4,500 religious schools and 6,000 were still taught by sisters. For most of the closed schools lay teachers, often volunteers, were found, although there was a squadron to aid in closing a school at Lanouen, refused to obey his general’s orders, saying that as a Christian he would not share in an act contrary to his faith and religious feelings. He was immediately relieved of his command. The government had to consider the acts of resistance in the districts, it did not, however, issue a general order against attacks on the clergy. The superior of the convents of Bourg-la-Reine, however, was exiled. The government’s fear of religious questions, as public opinion, the Bourbon kings and feudal attachment to the nobility were still a part of their religion. Barricades, earthworks, and ditches closed the roads. When the soldiers broke through or turned the barriers and reached the school-buildings, where they had to batter down the doors, they were greeted with cheers for the army, but the commissaries were assaulted, and sometimes the priests had to rescue their lives. Intrenchments and obstacles protected the buildings, and these were filled with people who threw filth and burning oil-soaked sticks into the faces of the gendarmes who attempted to enter. When an entrance was at length effected, the nuns marched arm in arm with the aristocratic ladies of the neighborhood to the church, preceded by trumpets and flags and cheered by the populace, who strewed their path with flowers. Some of the local courts upheld the lay owners, or nominal owners, of the schools. When the nuns had left, they removed the seals from the doors and resumed possession. In the departments where the public sentiment sustained the Government, though many persons were arrested, priests and nuns among them, and ladies of the old aristocracy, the sentences inflicted were the lightest, and these were remitted under the law allowing first offenses. The Minutemen of the Clerical and Reactionary movement which made Paris Nationalist and revived royalism and imperialism in the provinces, contrary to the admonitions of the Pope, was not derived from the dwindling and impoverished ancient aristocracy, but from the commercial, manufacturing, and professional classes. The bourgeoisie that accomplished the French Revolution had become enamored of the ancien régime. The spirit was strong in the army and navy and among the official classes, and when officials refrained from insubordination, the women of their families flaunted their anti-Republican sentiments in the view of the public. The Government, representative of a new social stratum, of the new order, was accused by the women of the peasantry, attributed this to the monopoly of middle-class education by the clergy. Hence the ministers, who found themselves in the awkward position of waging war on women, persisted in enforcing the associations law, in appearance at least, to betoken their determination to introduce secular education and bring up the youth of France as Republicans. The Government was sustained by 65 departmental councils on its policy of closing the schools, and censured by 3, while 15 recommended authorization and restitution of the schools. The belated execution of the decrees in Brittany was finally carried out by Aug. 20, in Finistere last of all, where Abbé Gayraud, the Deputy, could not dissuade the peasants, who left their harvest fields to champion the nuns, from fighting the police and soldiers. The orders after the struggle was over applied for authorization. Since the act of 1868 the religious faction of the clergy, lay teachers, and pensioners, was excluded from the 4,500 religious schools and 6,000 were still taught by sisters. For most of the closed schools lay teachers, often volunteers, were found, although there was a squadron to aid in closing a school at Lanouen, refused to obey his general’s orders, saying that as a Christian
and was carried out wherever they were still taught by nuns. When Col. de Saint-Rémy was tried the military court virtually upheld his con-
duct, disavowing the previous imprisonment. Gen. André, the first Minister of War chosen by the army who had made political speeches tinted with Radicalism, in accord-
ance with a demand of the Cabinet, placed Col.
de Saint-Rémy, whose previous military career was
unimpeachable, on the retired list. The Social-
ists and Radicals called for the abolition of
courts-martial, although in this case the offend-
ing officer had clearly acted from conscientious
motives after a mental struggle and with no po-
litical or self-seeking object, and was technically
not insubordinate toward his superior officer, but
had only failed to act on the requisition of the
Prefect transmitted irregularly by the general,
whose subsequent personal order was legally
void. The soldier had merely disobeyed the civil
power, a minor military offense, and the civil
power asserted its authority over the army by
retiring him from active service. The Pope sent
a message of condolence with French Catholics
in a brief to the Archbishop of Paris, which con-
tained no suggestion of a controversy. When
the Chambers reassembled in October a Socialist
Deputy proposed the abolition of the concordat,
the pact made by Napoleon I with the Vatican
which makes the hierarchy and secular clergy of
the Roman Catholic Church officials of the state,
recipients at present of annual stipends and
subventions amounting to 40,000,000 francs.
The question was indefinitely postponed by being
referred, with the approval of the Government, to
a commission to report in 20 days.

Dependences.—The colonies and dependencies of France have an aggregate area of over 5,000,000 square miles and over 50,000,000 inhabitants. The Minister of the Colonies directs the adminis-
tration of the colonies, all of which enjoy a large
measure of self-government. Algeria is not treated
as a colony, but its departments are assimil-
ated to the departments of France and the Gov-
ernor-General receives instructions from the min-
isters of the French Cabinet, except the Minister
of the Colonies and the Ministers of Finance, Jus-
tice, Agriculture, and Commerce. The President
and Council of Ministers. Tunis is under the
control of the Minister of Foreign Affairs. The
Minister of the Colonies is advised by the Su-
premier Colonial Council, composed of the Senators
and Deputies of the colonies which have repres-
entation in the French Chambers, delegates from
the others, and individuals appointed by the Gov-
ernment on account of their official relations or
special knowledge of colonial affairs. The Cham-
bers vote large sums every year to supplement
the revenues collected in the colonies. The total
amount of colonial expenditure for 1902 was set
down in the budget as 120,598,455 francs, while
15,212,947 francs were returned to the French
Treasury, 10,941,794 francs of this sum being a
reimbursement of military expenses from Indo-
China. Of the estimated expenditure 3,169,750
francs were the expenses of the Ministry of the
Colonies, 8,956,000 francs were subventions to
cover deficiencies of the public expenditure for
military expenses, and 8,960,800 francs were for
the maintenance of penal settlements. The serv-
ses of the French army and navy in the colonies
are entirely self-supporting, but from the budgets
of the Ministries of War and Marine. In 1901 free passages were given to 361
men, 154 women, and 114 children, who emi-
gated to the colonies, taking out a combined
capital of 720,000 francs.
The republic of Andorra in the Pyrenees, hav-
ing an area of only 175 square miles and 6,000
inhabitants, bears a feudal relation to France
and to the Bishop of Urgel in Spain, each nomi-
Nating the judicial magistrates in turn. Other-
wise it is self-governing.

Algeria is divided into the departments of Alg-
iers, Oran, and Constantine, each of which sends
a Senator and two Deputies to the French Cham-
bers. Paul Revoil was appointed Governor-Gen-
eral in 1901. The colonial budget is voted by
a Superior Council consisting of delegates of the
general councils of the departments. The mili-
tary territory consists of a part of the Algerian Sahara, which is governed by the military author-
ities, but they are controlled by the Governor-
General. The area and population of the depart-
ments, according to the census of March 24, 1901,
are given in the following table:

The total population in 1899 was 4,429,421, in-
cluding 318,137 French and 448,343 foreigners.
Of the native population, about 75 per cent. are
Kabyles, or Berbers, 15 per cent. Arabs, and 10
per cent. Moors, Jews, Turks, negroes, etc. The
number of marriages registered in 1899 was 42-
816; of births, 132,076; of deaths, 90,537. These
figures are very imperfect, as the native Moham-
medans generally avoid making reports.

The estimated revenue for 1902 was 36,470,947
francs, of which 13,066,907 francs came from di-
rect taxation, 8,306,200 francs from registration
and stamps, 14,027,180 francs from customs,
5,178,300 francs from monopolies, 3,723,820 francs
from domains and postal, and 6,276,365 francs from
various sources, and 3,203,035 francs were recettes
d'ordre. The total estimated expenditure was
54,384,666 francs, of which 7,200,134 francs were
for administrative expenditure, 2,274,850 francs
for education, 2,728,850 francs for justice, 8,451,918
francs for instruction and worship, 8,450,750
francs for public works, 4,813,744 francs for agric-
ulture and forests, 6,520,035 francs for commerce
and the post-office, and 7,920,552 francs for colon-
ization and charities. The appropriations for
religious worship in 1900 were 829,700 francs for
Catholics, 307,430 francs for Musulmans, 97,500
for Jews, and 28,970 francs for Protestants, and
2,100 francs for Muslims. The combined reve-
es of Algerian communities, of which there are
355, were 28,567,297 francs, their expenditures
23,210,977 francs, their debts 96,911,978 francs.
The military force in Algeria, the Nineteenth
Corps of the French army, numbered 57,292 men,
of whom 2,255 were officers, in 1901, with 13,434
horses.

The agricultural population in 1897 numbered
3,644,014, of whom 207,310 were Europeans, to
whom the greater part was for the public expec-
tations of which 310,900 acres had been sold or
granted. The native tribes hold a large propor-
tion of the soil in common. The agricul-
tural area is about 20,000,000 hectares.

The production of foodstuffs, but
from the budgets of the Ministries of War and
from 525,920 acres, 163,777 tons; of barley, from 3,635,995 acres, 1,189,567 tons; of beans, from 80,180 acres, 16,534 tons; of oats, from 231,800 acres, 97,536 tons; of dairi, from 70,333 acres, 229,875 tons. The acreage of vineyards in France was 51,830,000, of which 17,000 are of which are Europeans. Wine-growing is the largest industry, but the abnormally yield of France in 1900 and 1901 depressed prices so that the value for the export of wine and cider from the 1,000,000 gallons in 1896 to 500,000 gallons in 1900. The vineyards, covering 151,877 hectares, produced 3,583,932 hectoliters of wine in 1901. The crop of tobacco, covering about 1,000 hectares, was 40,207 quintals. There were 6,500,000 olive-trees. Ramee, colza, and other oil-seeds, alfalfa, dates, flax, and vegetables are grown. Alfalfa covers 12,000,000 acres, producing 4 quintals of hay per acre of dried hay. The quantity of cocoons produced in 1896 was 116,500 quintals. There was 90,000 hundredweight of cork cut in 1900 from the state cork forests, which have an area of 281,900 hectares. The total forest area is 3,247,692 hectares, of which about 75 per cent. is utilized, 1,359,485 hectares belonging to the Government, 79,919 hectares to communes, and 468,562 hectares to individuals, 25,000 acres of vines were 200,000 in operation in 1899, producing 173,749 metric tons of iron ore, valued at 1,287,000 francs, besides 377,192 tons not included in concessions, valued 3,374,259 francs; 380 tons of silver-lead ore, valued at 52,412 francs; 42,970 tons of zinc ore, valued at 2,125,805 francs; 200 tons of antimony ore, valued at 52,000 francs. The production of copper salt was 17,578 quintals, valued 7,950 francs. The production of phosphate of lime was 281,816 tons, mainly from Tebessa. Many other beds have been found in various parts of the country. The total value of the general imports in 1900 was 323,318,000 francs, of which 250,355,000 francs came from France and 64,463,000 francs from foreign countries and French colonies; general exports were valued at 262,317,000 francs, of which 173,447,000 francs went to France and 68,650,000 francs to foreign countries and French colonies. The value of the special imports was 313,330,000 francs, of which 307,000,000 francs came from foreign countries and French colonies; the value of special exports was 229,500,000 francs, of which 35,806,000 francs went to foreign countries and French colonies. The chief imports and exports among the chief countries are as follows, values being given in francs.

There were imported from foreign countries cattle for 10,988,551 francs, coal for 6,169,497 francs, coffee for 5,417,573 francs, lumber for 4,792,390 francs, tobacco for 2,029,329 francs, machinery for 1,753,533 francs, and boats for 1,709,500 francs, and hides for 1,022,540 francs, and exported to foreign countries alfalfa for 7,049,536 francs, tobacco for 6,823,031 francs, iron ore for 4,702,042 francs, hides for 4,929,920 francs, cork for 3,786,227 francs, vegetable fibers for 2,360,092 francs, and cereals for 1,780,367 francs. The value of wine imported from Algeria into France was 50,340,100 francs, of which 37,184,000 francs of sheep, 19,194,900 francs of wool, 11,480,000 francs. France exported to Algeria textile fabrics of the value of 33,457,000 francs, fruits, skins and furs of the value of 17,231,000 francs, clothing of the value of 16,600,000 francs, and machinery of the value of 9,663,000 francs.

There were entered at Algerian ports during 1900 from French and foreign ports 2,350,000 vessels, of 2,244,240 tons, of which 2,095, of 1,579,433 tons, were French; cleared, 3,485, of 2,553,130 tons, of which 2,056, of 1,542,420 tons, were French. There were entered at Algerian ports during 1900 from 2,493,935, of which 1,782,831 tons, in 1899. The length of railroads in operation in 1901 was 1,818 miles, not including an extension of 325 miles in Tunis. The telegraphs had a length of 6,845 miles, with 16,840 miles of wire; number of messages, 2,145,990.

A new railroad is being built into the recently annexed parts of the Sahara along the frontier of Morocco west of the town of Sudda. Though the inhabitants of Figgig still commit hostile acts against the French on their border, since the boundary has been defined no political question arises from such occasional incidents. The Tuaregs of the desert render the caravan routes unsafe, and troops are constantly employed in punishing the freebooting tribes, which send out parties of 200 or 300 well-armed robbers mounted on dromedaries.

The regency of Tunis, though nominally under the suzerainty of Turkey and under the rule of a Mohammedan dynasty, has, since about 1822, governed practically by a French Minister Resident General under instructions from the French Minister of Foreign Affairs. The Bey of Tunis, whose authority is now confined to religious matters, at the beginning of 1902 was Sidi Ali, born Oct. 5, 1817. The heir apparent was his son Mohammed, born June 24, 1835. The Resident General in the beginning of 1902 was S. Pichon. The army of occupation numbered 19,000 men, of whom 601 were officers, the cost of which is paid by France. The Bey has a guard of honor chosen from the officers from among the chief countries as follows, values being given in francs.
into a perpetual 3-per-cent. rente of 6,307,520 francs a year, representing a capital of 157,000,000 francs. The economy of France is thus engaged in agriculture. In 1900 there were 424,238 hectares under wheat, 430,171 under barley, 15,252 under oats, 15,252 under corn, and 11,622 under beans. There were about 300,000 quintals of wheat, 450,000 quintals of barley, 80,000 quintals of oats, 30,000 quintals of beans, and 25,000 quintals of corn sent to Marseilles in 1901. There are 200,000 hectares of olive-groves in central Tunisia, yielding 339,963 hectoliters of oil in 1901. In the south are 1,350,000 date-palm trees, and the annual export of dried dates is valued at 800,000 francs. The area planted to vines in 1900 was 11,374 hectares, 9,708 hectares belonging to Europeans, and the production of wine was 225,000 hectoliters. There were 9,830 quintals of cork bark cut in 1900 and 11,682 quintals in 1901. Oranges, lemons, pistachio-nuts, almonds, and henna are other products of the country, and alfalfa is exported. The mines in 1890 produced lead and zinc ores of the value of 2,141,000 francs, and the product of quarries was valued at 1,700,000 francs. The phosphate-mines at Gafsa yielded 150,000 tons in 1900. The fisheries, which were almost undisputedly in the hands of the English, in 1900 produced 134,350 kilograms of sardines, 28,450 kilograms of anchovies and 1,435,990 kilograms of other fish, the whole valued at 759,692 francs, and 45,824 kilograms of sponges, valued at 58,809 francs. The total value of imports in 1900, including precious metals was 61,514,243 francs; exports, 42,560,101 francs. The imports in 1899 were 63,777,803 francs, of which the principal ones were grain and pulse for 11,972,482 francs, textile fabrics for 8,222,587 francs, colonial produce for 4,564,028 francs, metal manufactures for 4,454,023 francs, animal products for 2,776,211 francs, pottery and stone for 2,621,087 francs, leather and paper manufactures for 2,197,37 francs, lumber for 1,013,220 francs, and beverages for 1,883,584 francs. The total value of exports in 1899 was 49,433,460 francs, the leading ones being olive and other vegetable oils for 14,098,887 francs, grain and pulse for 11,307,024 francs, ores and metals for 4,553,896 francs, and fruits and seeds for 1,223,078 francs. The imports of precious metals were 9,223,500 francs; exports, 8,018,000 francs. The values in francs of the trade in 1899 with various countries are given in the following table:

The number of vessels entered at Tunisian ports during 1900 was 11,751, of 2,520,435 tons, of which 1,955, of 1,230,377 tons, were French. The length of railways in 1901 was 586 miles, of which 417 miles belonged to the Government of France. The length of telegraph-lines was 2,390 miles, with 5,330 miles of wire. There were 9 telephone systems, with 130 miles of line and 143 miles of wire, and 448 miles of long-distance lines, with 528 miles of wire. The number of conversations in 1899 was 300,000. The number of telegraph messages in 1899 was 701,600; the number of letters handled in the post-office, 5,000,000 internal and 11,772,792 external, the construction of four railroads of the total amount of 40,000,000 francs were authorized on May 1, 1902, and the first one for 5,000,000 francs, bearing 3 per cent. interest, was issued at 95 on July 29. Ali Bey died on June 11, 1902, and Prince Mohammed was invested as Bey. He agreed that his civil list and private estates should be placed under a French manager, without whose consent no payments or debts can be made.

The boundaries of Algeria and Tunis are defined on the south, and beyond them are territories conceded in conventions made with Great Britain to be a French sphere of influence which extend to the French protectorates on the Niger and the Congo (see WEST AFRICA), and will give France the greatest colonial empire in Africa when they shall be under the dominion of the republic. On the other side of Africa France has a new colony with a fine port giving commercial access to the interior of Abyssinia (see EAST AFRICA). Some of the islands off the southeast coast of Africa have been French possessions for centuries. By the conquest of Madagascar the second largest island is almost entirely added to the colonial dominions of France (see MADAGASCAR). The island of Réunion, 420 miles east of Madagascar, has long been the home of French creole planters who with sugar and coolie labor raise sugar-cane, vanilla, cacao, coffee, and spices. The Governor, P. Samary in 1902, is assisted by a Privy Council having 3 official and 4 nominal places, of which the General Council. The colony sends a Senator and 2 Deputies to the French Chambers. The area of the island is 865 square miles, and its population in 1897 was 173,102, including 15,219 East Indians, 9,848 Africans, 4,496 natives of Madagascar, and 830 Chinese. The town of St. Denis has 32,850 inhabitants; St. Pierre, 27,900; St. Paul, 20,000; St. Louis, 13,300. There is a French garrison of about 800 soldiers. The export of sugar in 1900 was 33,609 tons. The total value of imports in 1900 was 22,095,000 francs, and of exports 17,450,000 francs. The export of sugar was 10,125,000 francs; of vanilla, 3,275,000 francs. The imports from France and French colonies were 10,400,000 francs in value, and of exports to France and French colonies 9,896,000 francs. There were 138 vessels, of 189,625 tons, entered in 1900. A railroad, 83 miles in length, runs from Pointe-de-Galets to St. Pierre. It became the property of the Government in 1897. The local revenue in 1901 was 5,033,700 francs, balancing the expenditure, but France in 1902 contributed 4,661,681 francs, of which 2,652,000 francs were for the railroad and harbor. The petty islands of St. Paul and Amsterdam in the Pacific and the uninhabited isle of Keruquen belong to France. Mayotte has an area of 140 square miles. The population in 1896 was 11,640. Sugar is grown for export and for the distillation of rum. Vanilla is being more extensively cultivated. The raising of coffee, cacao, tea, and rubber is in the experimental stage. The value of imports in 1900 was 501,020 francs, of which 292,907 francs came from France and French colonies. The value of exports was 1,306,232 francs. The value of sugar exported was 1,000,000 francs; of vanilla, 153,570 francs. The local revenue in 1900 was 293,507 francs. The expenditure of France in 1902 was 20,000 francs. The debt consists of an advance of 500,000 francs for the purpose of repairing the damages of the cyclone of 1898 and repayable in twenty years without interest. The
Glorioso Islands, which have only 14 inhabitants, are attached to Mayotte. The Comoro Islands, to the south of Madagascar, are a group of 620 square miles, with a population of about 47,000, mostly Mohammedans, who cultivate sugar and vanilla and have planted more recently coffee and cloves. The islands of the different islands amounted in 1900 to 259,711 francs. Grande Comore has a debt of 950,000 francs. There is a large French coal depot there. The resident at the head of the local administration of Grande Comore is appointed by the Governor of Réunion, who appoints another resident for Anjouan and Mohéli, the islands having been placed under his direction in 1896.

French India consists of the towns of Pondichéry, Shandernagar, Karikal, Mahé, and Yanam and adjacent districts on the Coromandel coast. The total area is 196 square miles, and the population in 1901 was estimated at 273,185. The Governor, residing at Pondichéry, is P. F. Rodier. There is an elective General Council, and the governor is represented in the French Chambers by a Senator and a Deputy. The local revenue in 1901 was estimated at 1,255,000 francs. The expenditure of France in 1902 was 473,000 francs. The French government repays 30 rupees a year. Cotton and jute are manufactured and oil is expressed from earthnuts at Pondichéry, which exports oil-seeds to France. The value of the imports at this port and Karikal in 1900 was 4,037,937 francs, and of the exports 10,732,294 francs. The number of vessels entered was 373, of 478,848 tons; cleared, 331, of 475,854 tons.

French Indochina consists of the colony of Cochinchina and the protectorates of Cambodia, Annam, Tonquin, with the Laos territory, and the territory of Kwang-Chi-Wan, leased from China in 1898. The Governor-General of Indochina at the beginning of 1902 was Paul Doumer, residing at Saigon. He returned to France, and was succeeded in October by J. B. P. Beau. French minister to China at the time of his appointment. The military forces consist of 8,860 French troops and 14,935 native soldiers under French officers and non-commissioned officers. The general budget of 1901 was 12,000,000 francs in silver, of which 5,940,000 were derived from customs, 3,700,000 from the spirit monopoly, 4,600,000 from the opium monopoly, 2,400,000 from the salt monopoly, 2,000,000 from registration, stamps, and domains, and 3,751,000 from various sources. The expenditures were estimated at 22,982,000, of which 4,677,000 were for military expenses, 4,572,000 for administration of the customs and monopolies, 1,475,000 for posts and telegraphs, 3,800,000 for public works, 3,462,823 for the public debt, and 4,900,177 for various expenses. There have been heavy deficits, which now are said to have ceased. The taxes which bear heavily on the natives are to be lightened. Obstacles to trade in the customs service will be removed. The completion of the railroad system and its extension into Kwangtung, Kwangsi, and Yunnan are important Government enterprises, and projected irrigation canals for the benefit of the native agricultural interests present another financial problem. The equilibrium of the budget was disturbed once more in 1902 by bad harvests. The revenue for 1902 was estimated at 27,142,000 in silver, and the expenditure at 28,125,000. The expenditure of France was 33,574,923 francs. Free passages were given to 238 French employees of the Government in 1901 and 237 in 1901. The railroad from Saigon to Mython, 51 miles, has been in operation many years. A line in Tonquin from Phu-lang-Tuong to Langson, 64 miles, was completed in 1894. Loans were authorized in 1895 by the French Chamber of Commerce for the construction of a system of railroads throughout Indo-China. Contracts were made in 1900 for lines from Hanoi to Vietry, to Haiphong, to Ninh-Binh, and to Vinh. The line was extended from Langson to the Chinese frontier in that year and southward to Gia Lam, on the opposite bank of the Red river, from Hanoi. The railroads from Hanoi to Vietry, 98 miles, and from Hanoi to Ninh-Binh, 73 miles, were completed in 1902. Lines from Vietry to Laokai, 140 miles, from Ninh-Binh to Vinh, 135 miles, and from Tourane to Hue, 65 miles, were projected; one from Saigon to Tanlinh, 82 miles, was building; and lines from Panlinh to Lang-Biang and Khanh, 280 miles, from Hue to Kwaungtri, 53 miles, and from Laokai to Yunnan, 255 miles were being studied. The imports and exports of Indo-China have grown from 218,000,000 francs in 1896 to 534,000,000 francs in 1902. Special imports have risen from 81,000,000 francs to 392,000,000 francs, and special exports from 88,000,000 francs to 180,000,000 francs. The largest share in this increased trade has gone to France, whose imports into Cochinchina rose from 2,600,000 francs in 1900 to 100,000,000 francs, while exports to France increased from 10,000,000 francs to 39,000,000 francs.

Cochin-China is represented by a Deputy in the French Chamber. The area is 23,100 square miles; the estimated population, 2,325,499, of whom 4,481 are Europeans; 73,254 of the natives are Roman Catholics and 2,470 are Protestants. The native military force numbered 2,405 in 1902. About one-fifth of the area of the country is cultivated, the principal crop being rice, which covered 2,910,033 acres in 1900. There were 153,000 acres acquired by 355 Europeans. The production of rice was 607,800 tons in 1900. The exports of rice were 607,800 tons, valued at 80,225,000 francs. Exports of fish were 8,975,000 francs in value; of colonial products, 5,700,000 francs. Other exports are cardamom seed, copra, silk, cotton, pepper, and hides. Coffee is being planted, mostly by Europeans. The total value of imports in 1900 was 121,675,000 francs; of exports, 107,350,000 francs, of which 25,450,000 francs went to France and French colonies. There were 11,167,727 tons of goods entered and cleared at the port of Saigon during 1900. The length of telegraph lines is 2,276 miles, with 3,840 miles of wire. The local revenue and expenditure in 1901 was estimated at 4,294,244 in silver.

Cambodia became a French protectorate in 1862. The area is 37,400 square miles. The population consists of about 1,200,000 natives of various races, 250,000 Chinese and Annamites, 40,000 Malays, and 350 Europeans. The native ruler is King Norodom. Phnom-Penh, the capital, has about 50,000 inhabitants. The production of cement in 1900 was 750,000 kilograms. Rice is also an important crop. Other products are cotton, salt fish, tobacco, betel, indigo, cinnamon, and coffee. The local revenue in 1901 was estimated at $1,531,487 in silver, out of which the King and royal family receive $252,000 for the maintenance of the court.

The French protectorate over Annam was established in 1886 and Than-Thai was made King in 1889. Hue, the capital, with 30,000 inhabitants, is garrisoned with French troops, and the Government is under French supervision. The area is 52,100 square miles, with a population estimated at
6,300,000 Annamites and Mois, 4,000 Chinese, and 250 Europeans. Of the natives, about 420,000 are Roman Catholics. The products are sugar, cinnamon, rice, silk, corn, and other cereals, areca-nuts, tobacco, sugar, betel, manioc, bamboo, canchouche, cardamom-seed, coffee, timber, dyes, and medicinal plants. Of about 300,000 kilograms of raw silk produced annually 200,000 kilograms are woven by the natives and the rest is exported. The natives work copper, iron, zinc, and gold, which are mined in the province of Quangnam. At Tourane coal-mines have been opened. Cotton yarn and cloth, tea, petroleum, paper manufactures, and tobacco are the principal imports. The local revenue and expenditure for 1901 was estimated at $2,081,416 in silver.

Tonquin was definitely annexed in 1884 after a protracted war and Laos was added in 1893. The area of Tonquin is 119,600 square miles. The population is estimated at 12,000,000. A French resident, M. Fourés, directs the administration, the Annam Governor being withdrawn in 1897. Hanoi, the capital, has about 150,000 inhabitants. Rice is raised in great quantities and shipped to Hong-Kong. The production of silk is about 50,000 kilograms; 300,000 kilograms are woven by the natives. Cotton is grown and cotton-mills have been established at Hai phong and Hanoi. Sugar, pepper, oils, cardamom, coffee, and tobacco are produced. The quantity of coal raised at the Hongay mines in 1896 was 168,600 tons. Copper and iron are mined. Textile yarns and tissues, tools, hardware, machinery, and turbines are the principal imports. The total value of imports in 1900 was 68,800,000 francs, of which 28,750,000 francs came from France and French colonies; value of exports, 40,225,000 francs, of which 4,223,500 francs went to France and French colonies. The estimated local revenue and expenditure in 1901 was $4,197,050.

The Laotian territories have an estimated area of 98,000 square miles, and their population is estimated at 1,500,000. Luang-Prabang, the capital, has about 40,000 inhabitants. The cultivated products are rice, cotton, indigo, tobacco, and fruits. There are large teak forests from which logs are floated down the Mekong to Saigon. Concessions have been obtained by French companies to mine for gold, lead, tin, and precious stones. Steamboats have been placed on the Mekong above the rapids. The budget of revenue and expenditure for 1901 was $758,600. Cochinchina pays six-thirtieths, the Tonquin and Annam five-thirtieths, and Cambodia two-thirtieths of the cost of government.

The most important of French possessions in the Pacific is New Caledonia. The Governor is P. Feillet. There is a General Council of 20 members. The area is 7,700 square miles. The population in 1898 consisted of 19,053 Europeans, 1,829 Asiatiques, and 31,874 natives; total, 52,756. In 1899, of the entire army, there were over 54,000 inhabitants. Imported European and Asiatic laborers have increased the population. French laborers get a free passage. There were in 1899 in the penal settlement 3,622 convicts undergoing sentences of hard labor, and the exiles numbered 2,670, the deported 10, the discharged convicts 4,565. In 1900 there were 236 French emigrants. New Caledonia is a French colony, the Government furnishing transportation. The local revenue and expenditure for 1901 was estimated at 4,414,727 francs. The expenditure of French tonnage on Oct. 29, 1901, was 3,003,870 francs for the penal settlement. There are about 1,600 square miles of cultivated lands, 1,600 square miles of grazing lands, and 500 square miles of forest. The rest of the surface is mountainous. The penal establishments have a domain of 400 square miles. The natives have their own reservations. Other tracts of available lands form the state domains, out of which free grants are offered to settlers. The deportation of convicts to New Caledonia has ceased and the convict population is decreasing. Japanese laborers are no longer imported on contract, but the Japanese continue to arrive for agricultural labor and domestic service. About 800 Tonquinese and Indians from Pondichéry have recently been imported. Dalmatians who went first to New Zealand to dig kauri-gum migrated to New Caledonia, where they found more profitable work in the mines, and many of their countrymen have gone over from Europe to join them. Fewer laborers are being recruited in the New Hebrides.

The principal agricultural products are coffee, corn, tobacco, sugar, and manioc. The only land laborers till recently were convicts, Kanakas, and natives of the New Hebrides. Grapes and pineapples are grown, and experiments are being made in the raising of silkworms and the cultivation of wheat. The principal exports are mineral. The nickel ore mined in 1889 amounted to 74,614 tons, valued at 3,950,000 francs; cobalt ore, 3,254 tons, valued at 355,000 francs; chrome ore, 12,934 tons, valued at 644,000 francs; copper ore, 6,349 tons, valued at 488,000 francs. In 1900 there were 100,000 tons of nickel ore exported, and in 1901 there were 133,000 tons but in 1902 labor was too expensive to treat the ore on the spot. The value of the nickel, cobalt, and chrome exported in 1901 reached 8,916,000 francs. The total value of imports in 1899 was 10,988,198 francs, of which 6,846,199 francs came from France and French colonies; exports, 8,913,197 francs, of which 3,481,140 francs went to France and French colonies. The importation of cereals and flour were in 1899 1,543,923 francs; of beverages, 2,223,114 francs. The most important exports were minerals for 7,081,003 francs and 801,719 francs worth of canned meat for 358,797 francs. The Government, which owns 172 vessels, of 177,657 tons, entered 120, of 154,483 tons, cleared at the port of Noumea in 1899. A railroad, 90 miles long, is being built from Noumea to the south, where the island of Noumea is being improved. A line of steamers from San Francisco will carry American flour, wheat, and provisions and other products to New Caledonia. The tariff regulations providing for French implements have been removed. The new Australian tariff has diminished trade with Australia. Trade with France is increasing.

The Isle of Pines, 38 square miles in extent, with a population of 600, close to New Caledonia, has an establishment for habitual criminals. The Wallis Archipelago, having an area of 40 square miles and 4,600 inhabitants, over which a French protectorate was established in 1887, is administered by a resident under the Governor of New Caledonia. Futuna and Ailaf, south of these islands, have 1,500 inhabitants. The Loyalty Islands, which have an area of 800 square miles and 14,800 inhabitants, are administered from Noumea. Sandalwood is exported, and there are plantations of bananas. The Huon Islands have only a few inhabitants. The New Hebrides are the field of operation for French trading and mining companies, but by a convention concluded with Great Britain Oct. 29, 1867, they are under the protection of life and property under the authority of an Anglo-French commission composed of naval officers.
serving in the Pacific. The recruiting of women and traffic in firearms and intoxicants are forbidden by regulations adopted by the British and French naval commission.

The French Establishments in Oceania consist of scattered groups and islands in the western Pacific united under the authority of a Governor residing at Tahiti, G. P. T. Gallet in 1902. They have a total area of 1,520 square miles and about 20,000 inhabitants. The island of Tahiti, inhabited by a Polynesian race, has an area of 600 square miles and a population in 1900 of 10,750. Papeete, the capital, had 4,282 inhabitants, of whom 2,490 were French. The revenue of Tahiti for 1900 was 1,237,456 francs. The expenditure of France in 1902 was 796,332 francs. On the lowlands near the coast coconuts, bananas, oranges, sugar, and vanilla are grown. The imports in 1900 were valued at 3,521,286 francs; exports, 3,597,358 francs. Articles of food and cotton cloth are the principal imports. The largest exports in 1900 were copra for 1,291,490 francs, mother-of-pearl for 1,100,058 francs, and vanilla for 811,338 francs. Of the total value of imports 1,651,736 francs came from the United States, 644,482 francs from Australia, 721,810 from New Zealand, 577,074 from France and French colonies, and 317,080 francs from Great Britain. Of the total value of exports 1,525,667 francs went to the United States, 853,789 francs to Great Britain, 538,238 francs to France and French colonies, and 341,117 francs to New Zealand. There were entered at Papeete during 1900 only 40 vessels, of 29,343 tons; cleared, 42 vessels, of 29,436 tons. The island of Moorea has an area of 50 square miles with 1,596 inhabitants; Raiatea and Tahaa have 2,300 inhabitants; Huahine has 1,300; Bora Bora, 800. The Tubuai and Ravaite Islands have an area of 100 square miles and 1,700 inhabitants. Rapa has 15 square miles with 192 inhabitants. The Tuamotu Islands have about 5,000 population. The Gambier Islands, with an area of 8 square miles, have 580 inhabitants. The area of the Marquesas Islands is 480 square miles, with a population of 4,250; their products are oranges, copra, and mother-of-pearl. The total area of the islands belonging to the establishments in Oceania is 1,520 square miles, and their total population about 31,000.

In America France has the islands of Guadeloupe and Martinique and their dependencies (see West Indies), French Guiana, and the little groups of St. Pierre and Miquelon near the southern tip of Newfoundland. French Guiana has a General Council of 16 members and is represented by one Deputy in the French Chamber. The acting Governor in 1902 was Joseph P. Francois. His area is estimated at 30,500 square miles, and the population at 30,300, of whom 4,300 are convicts undergoing the punishment of hard labor, 80 are discharged convicts, and 2,650 are exiles. The number of Indians is about 1,500. The military force consists of 371 French soldiers. Only 8,800 acres are cultivated, though rice, corn, manioc, cacao, coffee, sugar, indigo, and tobacco are grown. The export of gold in 1899 was 81,715 ounces. The most valuable gold-fields were disputed by Brazil and have been awarded to France by the Swiss arbitrators to whom the question was referred. Phosphates, silver, and iron ore are expected to be discovered and produce cacao, coffee, and rum. There is a trade, too, in woods, of which valuable kinds abound, and in other forest products. In 1890 the value of gold exported was 68,266 francs; marble and stone, 185,000 francs; of rosewood essence, 50,000 francs; of gum, 15,000 francs. The total value of imports was 9,725,000 francs, and of exports 6,350,000 francs. Of the imports 7,000,000 francs came from, and of the exports 6,100,000 francs went to France and French colonies. The number of vessels entered and cleared at the port of Cayenne during 1899 was 150, of 39,872 tons. A railroad from Cayenne to the Atalante creek, 90 miles, has been authorized, which will later be carried 190 miles farther to where the boundaries of Brazil and Dutch Guiana meet. The local revenue and expenditure in 1901 was estimated at 2,892,818 francs. The expenditure of France for 1902 was 7,086,000 francs, of which 5,837,930 francs were for the penal establishment.

St. Pierre and Miquelon have an area respectively of 10 and 83 square miles, with 5,700 inhabitants in the former, which is the rendezvous of the French cod-fishing fleet, and 550 in the latter. There is a General Council elected by the people. The Governor in 1902 was E. Julien. There were 196 fishing-boats, of 9,692 tons, belonging to the islands in 1900. The value of imports in 1900 was 9,326,037 francs, of which 4,381,469 francs came from France; exports, 13,467,453 francs, of which 8,096,247 francs went to New York. New York is consisiting of dried and fresh codfish, cod-liver oil, etc. The revenue collected in the colony in 1901 was estimated at 691,011 francs. The expenditure of France in 1902 was 231,988 francs.

FRIENDS. The following are the comparative statistics of the Society of Friends (Orthodox) in America, by yearly meetings, for 1900 and before:

The New England, New York, Philadelphia, Baltimore, and North Carolina Yearly Meetings were organized before the beginning of the nineteenth century. The New England Yearly Meeting was set off from the Baltimore Yearly Meeting in 1812. Indiana Yearly Meeting was established in 1812, and though 4 large yearly meetings—Western, Iowa, Kansas, and Wilmington (Ohio)—have been set off from it, it is still the largest yearly meeting in the world. Western Yearly Meeting, Indiana, which was set off from Indiana Yearly Meeting in 1857, is the second largest yearly meeting in the United States. Iowa Yearly Meeting was set off in 1863, and represents in its membership emigrations from nearly all the yearly meetings. Canada Yearly Meeting was set off from the New York Meeting in 1867. Kansas Yearly Meeting was set off from Indiana Meeting in 1872, and has members in Kansas, western Missouri, northwestern Arkansas, and the Indian Territory. The 14 yearly meetings in the United States and Canada represent about 130 quarterly meetings and 350 monthly meetings.

The Five Years' War of 1845 was a national organization of the Friends of the Orthodox branch in the United States was effected at Indianapolis,
FRIENDS.

Ind., Oct. 22-27, at the first regular meeting of the Five Years' Meeting as a permanent body to represent the year's work and to control the new constitution and uniform discipline (see Annual Cyclopedia, 1899, p. 307, and 1900, p. 246). Eleven of the 13 yearly meetings in the United States had adopted the new constitution and uniform discipline and were duly represented in the meeting, leaving only those of Philadelphia and Ohio without accredited delegates. The opening of the Five Years' Meeting was preceded, Oct. 21, by the final meeting of the Quinquennial Conference, out of which the Five Years' Meeting has been developed, which after hearing the report of the committee appointed to prepare the uniform discipline and the report of the treasurer adjourned sine die.

At the opening of the Five Years' Meeting, Oct. 22, fraternal delegates attended from Ohio and Canada Yearly Meetings, and members of London and Philadelphia Yearly Meetings were received as fraternal delegates. Nearly 290 delegates were present. Edmund Stanley, of Kansas, was chosen clerk, or presiding officer. The earlier sessions were occupied with the discussion of subjects connected with the prospective functions, enterprises, and policies of the church, the prosecution of which action was taken later. These subjects included The Scope and Work of the Evangelistic and Church Extension Board of the Five Years' Meeting; The Scope and Work of the Committee on Legislation; The Present Condition of the Indians and the Work to be done for them; The Present Condition of the Foreign Missionary Work of American Friends; The Scope and Work of the Board of Foreign Missions of the Five Years' Meeting; The Scope and Work of the Committee on Education; The Finances of the Five Years' Meeting; Plan for United Action for the Suppression of the Liquor Traffic; Methods of Practical Work among Rural and Urban Communities; Practical Aspects of the Present Trend of Religious Thought; How can an Efficient Ministry be Developed? Our Present Duty in the Cause of Peace and Arbitration; Our Church and the World; The Scope and Work of the Five Years' Meeting in our Church Organization; and The Theory and Practice of Public Worship. A paper was read on the place of women in the Church, that her full place should be given her. The matter of incorporating the Five Years' Meeting was referred to the Committee on Legislation, with authority to act and sign an application for incorporation. It was decided that the business of the meeting be transacted according to the rules of parliamentary usage. Of propositions for amendment of the constitution and discipline, besides a provision for the correction of casual errors, the only one adopted was a rule making new provisions submitted by one yearly meeting and approved by the Five Years' Meeting operative when adopted by four-fifths of the yearly meetings constituting the Five Years' Meeting. An Evangelistic and Church Extension Board was organized. A board on the condition and welfare of the negroes was appointed to take into consideration the best means of elevating them, with power to carry the same into effect. Resolutions were passed against lynching and lynch law. The work done by several of the yearly meetings in behalf of the negro. The work of the associated Executive Committee of Friends on Indian Affairs was continued, and the report of the same was accepted, and it was appointed the official representative of the meeting in that field. The Board of Education, having completed its organization, made a report, which was adopted, recommending the work on the basis of the new constitution and uniform discipline and uniform education to provide greater endowments for them; authorizing the establishment and conduct of a lecturership on the history and interpretation of Christian truth and as held by Friends; advising cooperation of Friends in the support of the existing course of Bible study in the colleges; commanding efforts by means of Biblical institutes to furnish a high character of Biblical instruction to members and suggesting the establishment of a course in one of the existing colleges; and constituting a financial educational board to receive and hold gifts and bequests for educational purposes. The work of the Peace Association, it being a well-organized and incorporated body, was approved, and the association was invited to represent the meeting and report to it regularly, while the yearly meetings were asked to support it. The American Friends' Board of Foreign Missions presented a review of its work, and the meeting, defining its functions and its relations to the other boards and the yearly meetings, declared its duty to be to represent American Friends in matters pertaining to the interdenominational aspects of foreign relations and the yearly meeting represented in the board, while continuing its own separate work, as heretofore, is expected to realize that this work forms a constituent part of the foreign mission work of Friends in America, of which the American Friends' Board has a general advisory oversight; "but it must not be interpreted that such advice carries with it any control of the Board." The yearly meeting adopted a call to a proper observance of the Christian Sabbath, and declaring "true, living, and reverent prayer" essential for the spiritual power of the meetings, and for the entire Church work in the world. A call was adopted to be sent to the governing bodies of the various denominations of Christians in the United States, inviting them to send delegates to a Temperance Congress to be held in the city of Washington on the second Wednesday of March, 1906, to consider in what way Christians can exert a united influence in the cause of temperance and by means they may work together. Five delegates at large and one additional delegate from each of the 11 annual meetings were appointed the committee of the present meeting for the Foreign Missionary Association of Friends entered the mission field at Tokyo, Japan, in 1885. Kansas Yearly Meeting began in 1883 to labor among the colored population and the coolies in Jamaica. The Woman's Foreign Missionary Association of Friends entered the mission field at Los Angeles, California, in 1887. New England Meeting was associated with English Friends in Palestine till 1885 when it took separate charge at Ramallah. Western Yearly Meeting took the work at Matahuala, Mexico, from Indiana Meeting in 1889, and has also a mission in South Africa. Ohio Yearly Meeting began a mission in China in 1880, and afterward in India. Oregon Yearly Meeting began in 1884, and California Meeting on Kotzebue Sound, Alaska, in 1897. The other yearly meetings have no special missions of their own, but cooperate with the yearly meetings, organizations and institutions they have undertaken. The American Friends' Board of Missions, which is incorporated in In-
Friends' Peace Conference.—A Peace Conference, known as the Friends' Peace Conference, was held in Philadelphia, Dec. 12 to 14, 1901, and was attended by about 300 delegates from all parts of the United States. All the yearly meetings and all the branches of the society were represented, either on the program by preachers or in attendance; and the fact was remarked that “for the only time since the days of the lamented separation, Friends of the three names united in a harmonious effort for a common cause.” The program of discussions comprised papers on the New Testament Grounds for Peace and the Elements of Peace Doctrine in the Old Testament; The Failure of the Christian Church in regard to Peace Principles; The Early Friends' Conception of Peace and War; The Growing Iniquity and the Inherent Immorality of War; Early Christianity and Peace; Peace, and the Christian Idea of War; Importance of teaching Peace Principles in Bible Schools; The Principal Influences making for Peace, and how they may be strengthened; The Duty of the Christian Church at the present time in the movement to abolish War; Internationalism; Peace Principles in Political Life and Institutions; To what Extent are they practised? The Present Position of the International Peace Movement; Present Encouragement for Friends of Peace; Misdeeds and Failures of Friends in their Peace Work; The Questions that constitute the True Peace Spirit; Remedies for Prevaling Militarism; Peace as involved in the Christian Method; War inconsistent with the Genius of Quakerism; The Influence of Quaker Peace Ideals on our National Life; Woman's Responsibility and Opportunity for promoting Peace Principles; and The Work of Quaker Women for Peace. A declaration was adopted, expressing the conviction that lapse of time has not made necessary any change in the position which Friends have always taken on the subject of war, but has rather strengthened it; and that war is irreconcilable with the precepts, example, and spirit of Christ, and is likewise out of harmony with the common principles of reason and morality, and is the antithesis of Christianity, and the negative, for the time being, of the moral order of the world. The progress that has been made toward peace in recent generations was gratefully recognized in the resolutions, and the establishment of the International Court of Arbitration was mentioned as one of the greatest events in the history of human society, and line with the policy always advocated by Friends. In 1901, the Southern Christian Endeavor Convention of Friends was held at Richmond, Ind., Aug. 8 to 10, and was attended by representatives from every yearly meeting in America, except those of North Carolina and Canada. An epistle was received from the Christian Endeavor Union of London Yearly Meeting. The Friends' Christian Endeavor movement was begun about 1892, in New York city. A general meeting was held in London in 1900. A special feature of the past year's work had been the institution of visiting meetings for the purpose of organizing new societies and encouraging those already organized. The results had been very satisfactory. Special remark was made concerning the interest taken by the societies in home and foreign missions. A number of classes in Church history had been organized, with special reference to the history of the Friends. The 489 societies represented in the convention returned 15,786 members, of whom 1,806 had joined during the year; 158 accessions to the Church from the societies; and total contributions of $9,476, including $1,105 for foreign and $5,710 for home missions. The total contributions were $1,228 more than in the previous year.

English Friends.—The statistical reports made to the London Yearly Meeting in May showed that while a few new organizations had been formed within its jurisdiction, others had lapsed, and the number that remained, 369, was 4 less than a year before. The number of recorded ministers was also 28 less, but were not evenly distributed so as to give each congregation a minister; for some congregations had no minister, while others had several. The number of members in Great Britain had increased by 128, and was now 17,470; while the number of "attenders and associates" had declined by 150 to 7,647.

In the London Meeting on Ministry and Oversight the sentiment was expressed that the meetings of that name ought to take definite measures for encouraging and helping ministers and those likely to take vocal part in meetings, by the loan of books and pamphlets, and in other ways, and there might be a standing committee to plan out courses of study. A recommendation in accordance with these views was drawn up to be submitted to the Yearly Meeting and oversight throughout the country, with the request that they report next year what they were doing to help the ministry. In a discussion on the subject of the Propagation of the Gospel it was pointed out that no adequate efforts were being made by the meetings on Ministry and Oversight to carry the Gospel in any practical way into the communities where Friends lived; and it was suggested that the local meetings should become pastoral committees and should initiate positive work for the propagation of the Gospel about them. A comprehensive minute was drawn up recommending this subject to the consideration of the subordinate meetings. The yearly meeting met May 21. The attention of the Woman's Meeting on the State of Society was given largely to the subject of maintaining a healthy home life and of a good understanding between parents and children. In the Men's Meeting on the subject of the difficulty of maintaining an active Church life in face of the modern pressure of business; the need of developing religious work among the growing population; deplored the present wars of nations making high profession of Christian civilization with less civilized and enlightened peoples, and called for the adjustment of matters at issue by Christian methods.
understanding by ministers of the intellectual dif-

culties and perplexities of their hearers; Chris-
tian service in grappling with the causes of phy-

cical and moral degradation; and the choice of

such newspapers for reading as took a high moral

standard and presented a Christian view of life.

It was decided to present the thoughts that had

been expressed in an epistle to the notice of the

society. In connection with the hearing of the

reports of members returned from the war dis-

tricts of South Africa, a committee was appoint-

ed to visit the quarterly meetings with a view of pre-

senting freshly to members their responsibility for

upholding the standard of the peaceful nature of

Christ's kingdom. The subject of the use of the

meeting-houses on Sunday evenings was consid-

ered in view of the question whether the Sunday

evening services should have the character of quiet

"meetings for worship" or should be of the

nature of mission meetings, with practical ad-

dresses of a teaching character. It was found that dif-

ferent methods succeeded in different places, ac-

cording to the character of the constituency. A

report on the subject was sent down to the con-

gregations, which were left to dispose of the mat-

ter for themselves. The district meetings were

advised, if the education bill should be pressed for-

ward, to urge amendments in the direction of

religious liberty and popular control. Measures

were considered having in view the greater ef-

ficiency of the Central Education Board. The

subject of the Reform of the Procedure of the

Yearly Meetings, which had been referred to a

committee in the previous year, was adjourned,

for further consideration by it. The formation of

a general meeting in Australia was approved of,

and a deputation was decided upon to attend its

opening.

GEOGRAPHICAL PROGRESS.

Arctic Regions.—No explorer has as yet reached the

pole, though some noteworthy results have been

achieved by expeditions that returned in 1902.

The most successful of these appears to have

been that of Captain Sverdrup, who went out in

June, 1898, in Dr. Nansen's ship, the Fram,

and returning, reached Stavanger, Norway,

Sept. 19, 1902. He discovered what is believed to

be the northeast latitude of the Arctic continen-
t and the north pole west of Greenland. A great island

was found north of the Parry Islands, extending to about 80° north

latitude; all north and west of this was an un-

broken sea of ice.

In an article on Arctic Problems, in the Geo-

graphical Journal, Sir Clements R. Markham

says: "After his [Nansen's] voyage there is no longer any geographical object in going to the

north pole, except for the sake of deep-sea sound-
gings, for it is merely a point in the polar ocean,

the economy of which has been made known by

Nansen. The really useful work that remained so as to connect the whole western side of the

arctic regions is (1) the discovery of the region

between the Asiatic coast and Prince Patrick

island; (2) the examination of the space from

Prince Patrick island to the farthest point

reached by Admiral Aldrich during the expedi-
tion of 1875; and (3) the completion of the trac-

ing of the north coast of Greenland.

"The first piece of work is the most difficult,

and it may well be that the region in question

contains no land and is merely part of the polar

ocean. The third would be a great and import-

ant achievement. Capt. Sverdrup intended to

attempt it by wintering in a hut on the north

coast of Greenland and sending the Fram round

to meet him at Cape Bismarck. This is the only

way it could be done; but two ships would be

safer. Prevented by the unfavorable season in

1899, Capt. Sverdrup fortunately turned his

attention to Jones Sound, which led to the

completion of the most important remaining

arctic work of all, namely, the discovery of

what was hitherto unknown in the wide gap

between Prince Patrick island and Aldrich's

farthest.

"The whole of the northern coasts of the

Parry Island were explored by the naval employ-

ees on the Franklin searches, from Jones

Sound to Prince Patrick island. But, except at the

western extreme of these discoveries, the ice

pressure was not very great, and it was supposed

that there must be land farther north. They

landed, at the eastern end Sir E. Belcher sighted land

to the north, which he named North Corn-

wall, and from Bathurst island land was sighted

to the north and named Findlay. Aldrich's far-

thest is some 250 miles to the north of Belcher's

discoveries. The great arctic work to be done,

by way of Jones Sound, was to decide these ques-

tions, to discover the western side of Ellesmere

Island, and to discover the land, if it existed,
to the north of the Parry Islands. In this way our

knowledge of the long line of coasts facing the

frozen ocean on the west side of the arctic regions

would be made complete.

"This great work has been done by Capt.

Sverdrup and his gallant companions during four

traveling seasons, entailing four arctic winters,

and it has been done thoroughly. They have

discovered the western side of Ellesmere island

and its intricate system of fiords, as well as 3

large islands west of Ellesmere island; they have

explored the northern coast of North Devon; they

have connected Belcher's work with the coasts

of Jones Sound; they have reached a point

within 10 miles of Prince Patrick island; and

they have discovered that land north of the Parry

Islands the existence of which was conjectured as far west as the longitude of the eastern coast

of Melville island. This includes the discovery

of the northern sides of North Cornwall and

Findlay island. In addition to the main arctic

problem which is thus solved, it is likely that

the region discovered will be of exceptional inter-

est, from the winds and currents, the varying

character of the ice, the existence of coal-beds,

and the abundance of animal life. A systematic

survey has been made of these important discov-

eries, checked by astronomical observations." 

Capt. Sverdrup's and Lieut. Isachsen's expedi-
tions together occupied three hundred and sev-
ecty-two days of actual travel, during which they

covered a distance of 3,000 miles and traversed

1,500 miles of newly discovered land. Besides

these expeditions, other important journeys were

undertaken. The expedition consisted of 16 men,

6 of whom were men of scientific training, geol-

ogy, botany, and zoology being all represented

by specialists. Astronomical, magnetic, and other

physical observations were also made. One of

the main objects of the expedition was to map

the Antarctic regions, and the work occupied

about six months of the time. The maps were

made on the scale of 1:2,000,000, and are among

the most accurate and complete that have ever

been drawn of the region.
Capt. Sverdrup, were Lieut. Isachsen, Mr. Bay, zoologist; Mr. Simmons, botanist; Mr. Schei, geologist; Mr. Svedsven, surgeon. All on board were prepared to put their hands to work of all kinds. A good supply of dogs was taken on board, and every preparation was made for sledge expeditions. The Greenland settlements were reached about the end of July, and an attempt was made to push the Fram northward through Robeson's channel, but she was caught in the ice at Cape Sabine, off Ellesmere Land, about 79° north latitude.

The following is taken from Capt. Sverdrup's account:

"On Aug. 17, 1898, we were stopped a little north of Cape Sabine by masses of ice, which we could not penetrate. The cold immediately set in and the new ice rapidly increased. We were therefore compelled to take up our winter quarters at Rice Strait. In the course of the autumn we made a sledge journey on the inland ice of Ellesmere Land. Exploring and mapping the innermost part of the flord at Hayes Sound was commenced. In addition thereto we made hunting expeditions, chiefly to procure food for the dogs. We shot about 226 musk-oxen. With such a large increase in the dogs' food I saw no objection to wintering at this place. Here was a good and large field of work. In the course of the winter a hut was built, which we intended to put up on Robeson's channel or farther north.

"In the spring of 1899 two sledge journeys were made across Ellesmere Land to the west coast, the one across the glacier district, the other farther north, across country free from ice. The mapping at Hayes Sound was completed. Scientific investigations were carried on until we left our winter quarters. The summer of 1899 turned out unfavorable. I therefore decided to go to Jones Sound, in consequence of which we left Smith's Sound Aug. 22, 1899. On the way we caught such a number of walruses that we had food for the dogs to last through the winter. We took up winter quarters on the south side of Jones Land, in latitude 76° 29' north, and longitude 84° 24' west. Shortly afterward I made a boating excursion with 3 men to explore and lay down a depot. We were, however, shut up in the hut and compelled to remain one month near the boat before we were able to go on board. On the ice on the return journey we met Baumann and 3 men, who had gone out in search of the boat. We had the sad news that Brakerud had died. He had caught cold while out hunting. After the arrival on board we made preparations for mapping and for laying down depots. Oct. 22 we were stopped by open water, 68 miles from the vessel; the fog was lying so heavy and thick westward that we could form no decided opinion as to the extent of the open water. The portion of the coast, which we had passed ran in a true westerly direction, which we could see was the case farther on. According to Inglisfield's map, the country ought to have curved northward. From our winter quarters we laid down the depot, and then entered a large flord east of the depot, where we shot 20 musk-oxen.

"On Feb. 23, 1900, Isachsen, Schei, Stoltz, and Bay proceeded with four, packs of dogs to the depot. They returned on March 3 with the information that there had been some heavy ice scattering on the land and that there was no advantage of the vessel. The depot was also destroyed by bears, and almost all the dogs' food eaten up. On March 7 Bay, Fosheim, and I again set out on fresh explorations. Bay was left behind at the depot on watch, while Fosheim and I proceeded westward. The same day we left Björneborg, which was the name we gave the depot, we met with open water, where large floes of ice were drifting backward and forward in the rapid current in the sound between North Kent and Ellesmere Land. The advance along the sound proved very difficult. We returned and came on board March 14. The main expedition started in two parties with 9 men and dogs on March 17 and 20. From Björneborg all proceeded on the 23d, reaching the sound the following day. The passage along the sound proved very difficult on the rugged ice. In many places there were pressure ridges right up to the side of the mountains. These pressure ridges at several places had to be worked through with pickaxes and spades. At other places the ice would be quite smooth, so that we, at steep inclines, ran the risk of losing both loads and dogs in the sea. After traveling three days, we passed the sound, which is 20 miles broad, without other mishap than losing a load in the sea. The rope connecting the dog with the sledge parted, so that the dog was saved. No lives were lost. We had now reached a smooth ice. The 31st of March, 175 miles from the vessel, the returning party, consisting of Baumann, Raanaa, Schei, Stoltz, and Henriksen, turned back to the Braborg. At that period we experienced a temperature of 42.5° of frost, and great difficulty in advancing. Two sledge parties proceeded farther northward for exploring the unknown west coast of Ellesmere Land with provisions for fifty days. The one party consisted of Isachsen and Hassel, and the other of Fosheim and me. North of the sound, between Ellesmere and North Kent, a large bay extends eastward about 100 miles broad. On the northern side of the same some large complicated floids are situated. The land extends about 50 miles westward from these, after which it runs in a north and northwesterly direction. In latitude 79° Isachsen and I parted, Isachsen receiving instructions to explore some new land which we sighted west of the Ice Barrier, and which I traveled through is very hilly and intersected by large flords, of which several are from 15 to 20 miles broad at the mouth. On May 4 we reached latitude 78° 30', which extends in a northerly direction. We returned to Björneborg on June 2.

"During the whole time we experienced uncommonly severe weather, the wind being so strong that the work was fog and thick weather. Bay, after our departure, had an encounter with a ferocious bear, which he at last killed. Fosheim and I came on board on June 4, after an absence of seventy-six days. During the whole journey we experienced almost daily snowstorms, accompanied with severe cold, when the snow and ice rendered it most difficult to proceed. Isachsen and Hassel came on board on June 19. After reaching the new land in longitude 98° west, they turned back, according to agreement, to the place where they separated, whereupon they traveled southward and afterward eastward to about longitude 89° west. Here they discovered a large system of flords, proceeding up some of them. The blubber of bear formed a substitute for fuel as the paraffin became exhausted.

"A third party, consisting of Schei and Henriksen, with provisions for forty days, chiefly on geological investigations, made an advance to the eastward. They had traversed two islands north of the sound and been some distance into that flord where Isachsen and Hassel were. On the return
journey they traveled across a large peninsula some weeks before. Baumann was in command of the returning party. After they left us they experienced very stormy and cold weather, and several were frostbitten in the face and on the hands on their arrival at Bjørnestad. From there they had accompanied Schei to the north point of North Kent, after which they went on board. In May Baumann with his party made some investigations to find a passage overland, whereby the sound might be avoided. We knew, of course, that it would be impossible to pass on our return. He deposited information at the search place north of the sound. On my return to the Fram I learned that the vessel was nearly destroyed by fire on one of the last days of May. The awning had been ignited by a spark from one of the water-tight compartments and spread in flames. The kayaks stored under it, as well as other inflammable things, burned violently. The main rigging and the mast caught fire. Fortunately, it burnt in the middle of the day, while there were plenty of people on the deck. Along the side of the vessel we had water enough for extinguishing the fire, and we succeeded in subduing it.

"The summer work began with scrapings, at first through cracks in the ice, afterward at various places. Gradually the ice broke up. Aug 9 we reached the ice edge, which was soon stopped in the sound. On the 10th we got fast in the ice north of Grinell Island. A heavy northerly breeze kept the ice tightly together. We got fast to it till Sept. 16, when the southern gales dispersed the ice. We then proceeded down through Cardigan strait and took up our winter quarters in the fjord next to the sound, latitude 76° 48' north, and longitude 89° 46' west of Greenwich. We shot this autumn 28 musk-oxen, and, as last autumn, a number of hares. The passage we now used to the coast northward went across a neck of land about 600 feet high. The place where we got down to the sea we called Nordstrand. After the autumn hunting was completed Olsen and I were to proceed up to the large fjords north. Olsen, on the west coast, had got his arm out of joint at the shoulder. As the wind was too strong for a traveling tent to be pitched, we had to go back to Nordstrand. I placed Olsen in a tent, but my attempts to set the arm right were in vain. The storm lasted three days. Two of my best dogs were choked by the snow, and one I lost on the hunting expedition last autumn. The fourth day we went on board and put Olsen's arm right. In the winter we were much visited by wolves, and we had enjoyable wolf hunts in the silent hours of the night. We captured a few alive. On March 12, 1901, two parties went out, each consisting of four men, to lay down depots. The mean temperature was minus 45° C.; some days it was even below minus 50°.

April 8 all parties set out. Baumann, Schei, and I, northward; Baumann and Henriksen accompanying us a little distance north of the depot. Therupon we proceeded farther northward, but found ourselves at the bottom of this system of fjords. When we could find no reasonable land passages we turned back and entered a fjord immediately north of this system. On April 29 we reached the bottom of this fjord. Here we found a fairly good passage northward, where we got down to the sea on April 29. This was that system of fjords which had been explored by two parties last year. On May 1 we saw from latitude 70° north, in very clear weather, that there was still some sea ice outside the sound. We continued northward.

On May 4 I despatched the Radaas across to follow the eastern land, whereas Schei and I continued along the western. At latitude 80° 30' the land turned westward; on the west side of the sound we followed the latter, but found ourselves very soon in rough polar ice. As the weather now became very stormy and foggy, we had to turn, sacrificing the rest of the season, to the piece traversed and southward, from where not a few fiords are running into the land. On May 17 we were roused at night by an awful howling of the dogs. When we came on deck we found 12 wolves, which were on the point of carrying away one dog of my pack. When we fired at them—and some of the wolves were killed—the rest ran away rapidly. The dogs were quite helpless, as they had muzzles.

On June 18 we arrived at the Fram. Isaachsen and Haaland found, in about latitude 78° north, a sound separating North Cornwall from the track of land to the north. We traveled through this sound, following the south coast of the land, north of North Cornwall westward and then northward. Then we continued along the land in a northwesterly direction, latitude 79° 30' north, and longitude 106° west, when the land turned eastward and southward. On the west coast no land could be seen, westward, and on the northern coast, quarter, steering westward along Jones Sound. We then proceeded southward and eastward. This islands were explored all round, after which Isaachsen traveled down on Graham Islands, and across to Ellesmerie Land; he came on board on June 7.

"Baumann and Stolz left the Fram on April 24 to investigate more closely the system of fiords, into which I first entered this spring. It was proved on this trip that the neighborhood of these fiords is probably the part of Ellesmerie Land most abounding in game. Musk-oxen, reindeer, and walrus are very plentiful. Nansen and Raanaas had explored a fjord about 70 miles long, which runs in from Greely fjord in a south-easterly direction.

"The whole of this summer appeared very unfavorable for getting out of the ice. We tried blasting, etc., but to no purpose. Then we tried to force a passage along the land at every highwater, as the ice there would always be somewhat slack. In this way we succeeded in advancing 9 miles southward, but after touching the ground several times we did not get out. We now had to procure food for the dogs during the winter. Two hunting parties in Jones Sound got about 20 walrus, which proved sufficient. Bay remained on guard at the meat until the ice became thick enough for it to be conveyed on board. On a very dark night in October he was surprised by a bear. He tried to get out, but his sweater caught something in the door, so he could not move. However, he fired his rifle. At dawn he crept out and found the bear lying dead not far away. After the walrus hunting, two parties were despatched northward to procure fresh meat for the winter. They shot about 18 musk-oxen, which were transported on board; then the walruses were brought on board, and the excursions were at an end—Nov. 4, 1901.

"Isaachsen and Bay explored the west coast of North Devon from April 23 to May 22, whereupon Isaachsen and Simmons made a twenty-four days' sled excursion in order to fetch
fossils from a ford in the north, where they had formerly discovered considerable beds of coal. We arrived at Godhavn, Greenland, on Aug. 18. We left there on Aug. 22, passed Cape Farewell on Aug. 28.

Lieut. Robert E. Peary returned from his four years' sojourn in arctic regions on the relief steamer Windward, reaching Sydney, Cape Breton Island, Sept. 18. He did not reach the pole; his highest point was 84° 17'. The party of the Duke of the Abruzzi reached 86° 33' in 1900. Lieut. Peary announced that important scientific discoveries had been made by the expedition. The following passages are from his report of the operations from August, 1901:

"Left Erik harbor, on the Ellesemer coast, Aug. 29. The party reached Payer harbor Sept. 16, crossing Roosy Bay partly by sledge and partly by boat, then walking across Bedford Pim Sound. About a week later my Eskimos began to fall sick, not one escaping. By Nov. 19 adults and one child were dead, nearly all the others very weak, but out of danger.

"Early in January Eskimos came across from Anvilik, bringing news of the ravages of a fatal epidemic throughout the tribes. 80 or 90 were sent back by the scouts for as many of the survivors as could come to the sea, and by the end of the month they arrived. In February a large depot of dog food was established near Cape Louis Napoleon, 60 miles north of Sabine. On March 3 my advance party of 6 sledges, in charge of Hensen, left for Conger. March 3 started with the main party on the return. Conger was reached in 12 marches, arriving within an hour or two of the advance party. My supporting party of Eskimos, returning from Conger, brought down the instruments, chronometers, and arctic library. Eight marches more took us to Cape Hecla.

"The north end of Robeson channel was all open across to the Greenland coast. Lakes of water, extending northward, could be seen from Black Cape and Cape Ransom. From Hecla another supporting party returned. April 1 started back with Hensen, 4 Eskimos, and 6 sledges. Old fowls, covered with snow and intersected with rubble ridges and lanes of young ice, were encountered from these, and a better back. 80° and 70°, and he believes not more difficult between 80° and 90° than between 70° and 80°. He thinks there is no open ocean in the extreme north, and he is constantly frozen sea, though the waters are practically covered always with ice. The shore of Greenland he believes the most northerly land on the earth.

"The expedition went out in 1901 under Dr. Ziegler under command of Evelyn B. Baldwin, returning, arrived at Honningsvaag, Norway, Aug. 1. A supply ship, the Frithjof, had left Tromsoe July 1 to carry coal and bring back news of the expedition. The result of the undertaking is regarded as a failure, in that the explorers did not reach the pole, which achievement was declared to be the specific purpose of the expedition—to plant the American flag at the north pole—for which it was more fully equipped than any previous expedition has been. In explanation of this Baldwin says: A large part of the course of nearly a year and a half's incessant work we have accomplished more than the unfavorable conditions which surrounded us really warranted, and we have, in addition, brought back a vast amount of data which ought materially to assist subsequent explorers. For the first time in the history of north polar exploration a photographic record of the land and sea formations of the arctic and of the animal life of those regions so complete as to be practically exhaustive. In this respect the cinematograph has played an important part in the first time it has ever been successfully employed in the far north—and we now have over 1,000 perfect photographic representations of our work. In addition, we have over 200 drawings and paintings."

The character of the ice in the Franz-Josef Land archipelago, all the channels of which were blocked in the autumn of 1901, prevented the America from going far enough north to allow of establishing headquarters favorable for sledge work in the winter and spring, so that winter quarters had to be made at Camp Ziegler, the station founded on the explorer's first arrival in 80° 23' north, instead of at the higher point they had hoped to reach. In addition to this disadvantage, more than half the dogs died of disease. Mr. Payer's scheme was to establish our-
any dash to the pole. After spending our first winter in this depot, I intended, before the return of the sun, to throw out advance parties northward from Rudolf Land to about the eighty-third parallel, so as to begin the real polar dash from that point. In evidence of our sincerity in carrying out the primary object of the expedition, we have now the distance of point fastening to the establishment of our depots, from which it will now be possible to despatch parties from Rudolf Land without its being necessary to endanger a ship at a higher latitude than Camp Ziegler. Altogether, we have formed four large stations, for the transport of which an ordinary arctic vessel would be required. In the establishment of these depots we were obliged to travel over the same ground at least ten times. This severe work naturally led to the wearing out of our sledges, many of which, in the intense cold, became exceedingly brittle and went in pieces like glass, especially when traversing the heavy screw ice. I despatched 15 balloons with 300 messages, and in June I obtained the first moving pictures of arctic life. I also discovered Nansen's hut, recovering original documents and securing paintings of the hut. Marine collections for the National Museum, including new charts, etc., were made. We also employed 13 ponies, 60 sledges, and 170 dogs were employed from Jan. 21 to May 21. To each of the balloons was attached a string of buoys, which by means of automatic contrivances were released as they touched ice, land, or water. As northeasterly winds prevailed, it is likely that these balloons were driven upon the great field of ice which this year covered the eastern coast of Spitzbergen; when they are released by the movement of the ice they will, it is expected, furnish data concerning air and sea currents."

A story was sent from Winnipeg in the summer regarding the fate of the explorer Andrée and his companions. It lacks verification, but seems to have some evidence in its favor. As Andrée set out in 1896, there must be an error about the time at least, since, according to the story, he would not have come down till three years later—that is, in 1900. Following is the description:

"Rev. Dr. Ferlies arrived from York, Northwest British Territory, brings authentic information of the fate of explorer Andrée and his companions. He states that York, a party of Eskimos, under the leadership of 'Old Huskie,' saw the Andrée balloon alight on a plane of snow in that vicinity, which is about 30 miles north of Port Churchill. Three men emerged from the balloon, and some of 'Huskie's' people approached them out of curiosity. As they did so, one of Andrée's companions fired a gun. This is a signal to uncivilized natives for battle. It was regarded as a challenge, and almost instantly the natives fell upon the three explorers and massacred them. Everything pertaining to their outfit was carried to the homes of the natives on the border of the arctic region. 'Old Huskie' himself gave this information to Ralph Alvise, agent for the Hudson Bay Company, and the story, after being investigated by Dr. Ferlies, was told by him. He says that there is little room for doubt, as frequent reports have since come of the strange implement which the northerners used in their possession, the telescope being particularly described."

**Antarctic Regions.**—The Scottish National Antarctic Expedition, which arrived in New Zealand in Nov. 3, with William S. Bruce as leader. The Norwegian whaler Hekla was bought, renamed the Scotia, and reconstructed for the expedition. The Scotia is a bark-rigged auxiliary screw steamer, of about 400 tons register, measuring 140 feet in length, 29 feet in breadth, and having a depth of 15½ feet. The ship is being especially fitted out to carry on oceanographical research. Two great drums, each containing 6,000 fathoms of cable for trawling and trapping in what is supposed to be the deepest part of the Antarctic Ocean, were taken, for Mr. Bruce intends to follow the track of Weddell, who sailed from Leith in 1823 and attained a latitude of 74° 15' south. Eastern of this track Ross obtained a sounding of 4,000 fathoms and no bottom.

A steam-yacht, the Morning, has been sent out by the Royal Geographical Society to the Discovery, which carried the National Antarctic Expedition (British) to antarctic waters in 1901. Besides carrying supplies and acting as tender to the Discovery, the Morning will supplement its work, being well supplied for taking observations.

In a letter from the steamship Antarctica in February, Dr. Otto Nordenskjöld, leader of the Swedish antarctic expedition, says: "Our expedition has its last contact with civilization at Station X, 30 miles north of Cape Horn, where the Argentine Government has erected a magnetic observatory to cooperate with the antarctic expeditions in 1902. Jan. 6 we left the island. On the morning of the 11th all on board could know that we were in a new world. The air was cold and the water at the freezing-point, but the land itself was hidden by fog. Suddenly at noon the fog lifted and unveiled to our view in its unsurpassed grandeur the first of the antarctic lands to be seen. It was King George island, in the chain of South Shetlands. The island is very mountainous, and some of its peaks attain a height of 2,000 or 3,000 feet. Between these peaks are broad valleys, and anywhere else in the world this island would show all the contrasts of a varying nature. But up to the highest summits everything is covered with snow and ice. The valleys are filled by immense glaciers, connecting over the ridges with their neighbors, climbing the mountains and far more luxuriant than the vegetation of tropical forests. To the east or to the west there seems nowhere to be an outcrop of bare rock, and only at a few miles north of the southern end of the island there are high promontories of steep cliffs. But all along the coast are rocky islets, often low but always of the boldest shape, and, in contrast with the main island, those islands are almost always completely free from snow. The whole scenery presents a type of a glaciated country such as our own was at a remote period, a good deal different from Greenland. Even in the farthest north there does not exist a land so overwhelmed by the snow as this island. Only at the extreme west of the island was there a strip of lowland. We did not stop there, but proceeded to another island, Nelson island, where the name on the chart, Harmony cove, seemed to intimate that we would find a favorable landing place. And it was, in fact, a nice little place, far more inviting than one could ever expect after the first view of the land. The bare space was not very large and the snow was creeping down on all sides. But we have in the neighborhood, in the moist possible ground in the poor vegetation of mosses, lichens, and algae of many different species. On the knolls of moss there was a rich life of small insects, and even a little bee (Cylindromerus) to prove that the antartic, rewarded the work of the entomologist.
But, with all this, no land in the arctic can be compared with this in poverty. On the other hand, suitable places there is life enough, so rich even that it would be much easier to live in than the Arctic, with volumes of 100 cubic feet at the junct. But this life almost all depends upon the sea. The deerge and the net have unveiled to us a fauna so rich in numbers, so wonderfully varied in its forms, that I do not believe it is paralleled in the arctic, and even the specialists often stand wondering before this new and unexpected life. Not only is the surface of the sea crowded by shrimps and other lower forms, but there also exists a richness of fish some of which would probably in other parts of the world give rise to a great industry. Nowhere else are the swarms of whales as some of them among the largest of their kind, nearly so numerous as here. Even the seals are crowded along every coast, and everywhere in the ice-pack. On the shore where we landed they were cocky, and they were so tame that they allowed themselves to be scratched on the neck and the back.

When approaching the shore you will be met by swarms of an animal that would hardly be recognized by any one who did not know it before. Necessarily you will think of the flying fish when you see a long line of black spool-shaped beings, with two flait appendices, throwing themselves high out of the water, only to come down again and continue their flight below its surface. Thousands of penguins breed on Nelson island, but that is not one of the best places to study their life.

After Jan. 11 followed a week of the most interesting discoveries. At the western end of the Louis Philippe Land Dumont d'Urville had seen in 1838 a deep cut into the land, which he named Orleans inlet, and here at first we steered our course. The land and the channel trended unceasingly to the west without interruption, and, after twenty hours on a virgin sea and amid the grandest scenery, we found ourselves in the regions examined by the Belgian expedition and in the channel called by them after their steamer, Belgica. Louis Philippe Land is only a part of the great continental mass called on the maps Graham Island. We then turn back to get into the Atlantic. Here we followed the coast, stopping a short time at Cape Seymour, one of the most interesting points in the whole antarctic by reason of its being the only place where fossils have been until now discovered.

America.—A hitherto unknown region between Great Slave lake and Hudson Bay was surveyed in 1800 by J. W. Tyrrell and C. C. Fairchild. It lies west of the Doobauta river. The route began from the lake, the most easterly bay of which was named Charlton harbor. It is about 16 miles long, and is connected with McLeod Bay by a deep channel less than a mile wide. Lockhart river, which flows into Charlton harbor, was surveyed. The Parry falls were found to be beautiful, but on a smaller scale than as described by Back, a former traveler. Artillery lake lies at an elevation of 1,188 feet, which is 608 feet higher than Great Slave lake. The height of land was found to be 7 miles away, and on its eastern horizon was a new lake, Lake Douglas, with outlet toward the north or east. The main route led north by the Kashina river and lake to Lake Clinton Colden. Thence the height of land was crossed, and a string of lakes was followed to Hanbury river. This river runs through a wild chaos, Dickson caison, beginning with a fall of 50 feet. Below, the country assumed a more verdant appearance, with trees and flowering plants more abundant, affording feeding-grounds for musk-oxen. The Hanbury flows into Theron river, a large stream with a volume of 300 cubic feet at the junction. It is navigable for river steamers 530 miles from Hudson Bay. The district seems not well adapted for farming, but the timber supply and the herds of musk-oxen should be of considerable value.

An account of an exploration on the eastern coast of Labrador by a party of 10 under the lead of Willen Glazier says they set out from the Moravian mission station of Nain in latitude about 50°5 north. Following up the bay on which the station stands, they discovered a fine river about 135 miles long. It flows through 7 lakes, the largest 40 miles long and surrounded by precipitous mountains rising 1,000 to 2,000 feet above it. From these many cascades fall into the lake. The lake is connected by rapid. Returning to Nain, the explorers went north to Okak Bay, the site of another mission station, and ascended North river. The interior of the country was found to be bleak and desolate and destitute of inhabitants. The only vegetation was a few spruce and larch trees and some alders and wild grasses. There are caribou in abundance, and in the bay are rivers seals and fish. The commonest metals are iron ore, copper, mica, and Labradorite.

An exploration in British Hindus was recently made by Mr. T. F. Bull, a region supposed never to have been visited by white men. Southwest of the Cockcomb mountains, was named King Edward's Land; and beyond this another range of mountains was reached. On the south, the explorers found still another range, extending west and south, which they named Queen Alexandra's mountains. The peaks of the Cockcomb mountains which the party ascended were named, one for Joseph Chamberlain and the other for lady Wilson, wife of the Governor.
ney cost me the lives of two men and of almost all my animals. The baggage animals were yaks, which were procured by command of the Dalai-Lama. The results of this last journey in Tibet are recorded on a map of 37 sheets.

"In April I broke up from Leh, and crossing the Karakorum pass, went down to Yarkand; thence traveling via Kashgar and the Caspian Sea, I returned to Stockholm, where I arrived on June 27, 1902. The successful issue of this journey, which lasted altogether three years and three days, was in great part owing to the circumstance that his Majesty the Emperor of Russia most graciously appointed an escort of four Cossacks to attend upon me throughout. Than these I have never had more honest, more capable, or braver men in my service."

"My first journey of 1893-97 has been regarded as marking an advance in the knowledge of the geography of central Asia. The last journey of 1898-1902 has yielded results three times as rich as those of the former journey, and in the course of it I have been enabled to lift the veil which for a thousand years had hidden vast stretches of the mountainous and desert regions of that part of Asia."

"My cartographical material extends to 1,140 sheets, and if these were arranged end to end in a long row they would stretch over a distance of 1,000 miles. A large geological journal was kept without interruption throughout, in part during my expeditions, in part also and simultaneously in my principal fixed camps, where a thermograph was in constant operation. The abundant materials thus gathered in are now being worked up by Dr. Nils Ekholm. I took also over 2,000 photographs, using for this purpose an English camera and English-made plates, and the results leave nothing to be desired. Anatomical collections of the higher animals were made, including aquatic animals in spirits, and a herbarium was brought together. The geological profiles of Tibet will be illustrated by some 700 rock specimens collected in that region. I have also brought home a number of zoological and ethnological objects of extraordinary interest, and I made further a great quantity of sketches, diagrams, and drawings from nature, so that the picture of Tibet becomes more complete than it has ever been known before."

"Dr. W. H. Workman and Mrs. Workman, on a third expedition among the higher Karakorum mountains, devoted their attention chiefly to the Chogo Lungma glacier; they examined also three large tributary terminal glaciers. The upper part of the Chogo Lungma glacier has not heretofore been explored, and the map found to be wholly incorrect. The glacier takes its rise in a steep snow wall, or wall, above 20,000 feet in altitude, which connects two lofty peaks, one of which is fixed by the Indian survey at 24,480 feet. The other seemed to be little lower. Several other peaks nearly as high send down large glaciers to help form the Chogo Lungma. One of the tributary glaciers brought the explorers under the northern flank of Mount Haramosh, which is 24,285 feet high, to a broad snow pass, at a height of 17,500 feet, from which another glacier plunges sharply down to the river into a deep valley, whence, by crossing a lower ridge at 15,000 feet, Gilgit can be reached. The surface of the great glacier is irregular, and it is in many places undermined by small watercourses. A group of tributary glaciers are nearly all broken at different places in their course by impassable ice-falls. At the entrance of the Haramosh arm a deep depression in the surface is occupied by a large lake."

In a paper on this subject in Chinese Turkestan, read before the Royal Geographical Society, Dr. M. A. Stein said that the idea of explorations about Khotan was suggested by the discoveries of M. de Rhodes, the French explorer who followed Hedin's march of 1895, which was first made known in 1898. With the help of the Indian Government Dr. Stein was enabled to set out in April 1900, and reached the capital of the Humza chief in June. In that city the carved woodwork exhibited the features of old Indian decoration, while in the Mir's residence the furniture and fittings were Chinese in type. Arriving at Taab-kurghan, Dr. Stein was enabled to prove the identity of the territory of Kir-p'an-to with the modern Sarikol. A fresh start was made from Kashgar in September, and Khotan was reached in October. From this point a survey was made of the Yurung-kash flowing between ranges of lofty peaks 23,000 feet high and connected with certain recognized peaks in the Indian triangulation. After beginning excavations in December the first find of importance was some leaves of manuscript in Sanskrit, which might be assigned to the sixth century. In addition there were documents in non-Indian characters which represented the indigenous tongue of Khotan. The discovery of Chinese writings dated 775-778, as well as coins of about 790, seem to show that Dandan Uiliq was abandoned at the end of the eighth century. The district was probably irrigated by canals bringing the hill water to the desert, and no advantage would be lost for its desertion. An older town was discovered in the desert north of Iman Jafar, where tablets were unearthed bearing the ancient Indian script Kharoshthi. The area over which ruins are scattered is about 11 miles by 4, and the buildings were constructed in a massive style of beams of wood and plaster, which has served to keep the tablets in a high state of preservation. There were also pieces of pottery of great antiquarian interest and notes in various writings. The clay seals with which the tablets were fastened show the influence of Western art and include figures of Pallas Athene, Eros, and portraits with classical modeling and barbarian features. The discoveries corroborate the evidence of early Chinese explorers to visit the district by immigrants from the Punjab about 200 n.c. This district must have been deserted before the fourth century, as there were no signs of writing on paper, which became common in Turkestan at that date."

In the autumn of 1899 Mr. Douglas W. Freshfield with several companions made a journey to the Himalayas to examine the glaciers of Kangchenjunga. The journey occupied in all seven weeks, during which the party ascended and descended 75,000 feet, or 14 miles up and 14 miles down. They covered twenty-four days between Lachen and Khunza without meeting inhabitants, twenty days without seeing trees, and they were wholly dependent on the provisions they carried with them, except for a few contributions from their sportsmen. Following is a report of his description of the glaciers: "He remarked his audience that Kangchengjen was a mountain, 28,156 feet high. It was therefore the third highest measured mountain on the face of the globe, and was nearly 400 miles north of Calcutta. It formed the culminating point of a group which rose on the confines of Tibet, Nepal, and Sikimm. The Kangchenjunga group was completely cut off by the Khosi valley on
the west from the mountains of Nepal, and by the Teesta valley on the east from the moun-
tains of Bhutan. The object of the mission, which
united it to the Tibetan highlands, it was just
possible to get round the mountain without
trenching on any territory which was officially
recognized as Tibetan. Mr. Freyfied said his
object was to make the high-level tour of Kang-
chenjunga, and to pass as near the great moun-
tain as possible. That had never been accom-
plished by Europeans.

"Taking into account secondary glaciers, the area
covered by snow and ice in the group, ac-
cepting the 24,000 peak north of the Jonsong La
as its northern limit, might be estimated at 380
square miles. As to the most notable peculiar-
ties of Sikkim glaciers, the transformation of
snow into something like glacier ice took place
within a few hundred feet of the final ridge of
Kangchenjunga. Such néré was found there as
in similar positions on the Jungfrau in the Swiss
Alps. In the upper ice-falls the ice was apt to
assimilate a strange character. He described it
by comparing it to the earth pillars found in
certain friable soils. The glacier was converted,
not into Alpine névéts, towers, and ridges sev-
eral feet thick, but into one set of lumps, found
clusters of ice-cones, repeating the same
form monotonously."

AFRICA—From an article by Rev. George
Grant, The People of the Congo as a Waterway
it is learned that there are more than 100 steamers
plying there. The river affords a whole available
waterway of more than 6,000 miles. Leopoldville
and Stanleyville are the two largest ports, though
smaller than Boma, the capital; twenty-five years
ago they were unknown native villages. They
are starting-points for the fleet of the more than
100 steamers that have been carried in plates and
sections beyond the cataracts and reconstructed
there. They are of all sizes, from small open
launches to crafts carrying 200 to 300 tons.

GERMAN EVANGELICAL CHURCH.

The German Evangelical Synod of North Amer-
ica was formed in Missouri in 1840 by 6 minis-
ters, who were performing missionary work
among the German settlers, and who had been
attached in their native land to the Evangelical,
the state Church of Prussia. Other religious
bodies which had originated under similar cir-
cumstances in Ohio, the East, and the Northwest
were united with it in 1850, 1860, and 1872. It
had in 1901, according to the reports made to
the General Synod which met in St. Louis, Mo.,
in that year, in 17 district synods, 922 ministers,
1,153 congregations, with 203,574 communicant
members, 10,144 teachers, and 100,177 children
in Sunday-schools, and 486 parochial schools;
and the aggregate of contributions for the propa-
gation of the Gospel was returned at $53,660.
The lists of pastors and congregations published in
the Evangelischer Kalender for 1893 give the
numbers of 27 pastors and 20 congregations addi-
tional to those given in the Kalender for the
previous year. Recognizing the Holy Scriptures
as the only authoritative standard of faith and
practice, this Church accepts the Lutheran stand-
ards and the Heidelberg Confession as interpre-
tations of them so far as those declarations agree,
and where they differ leaves the Bible passages
to be interpreted by the common sense of the be-
liever. The home mission work of the Church
was placed by the General Synod of 1901 under
the care of a separate board. During the three years
the General Synod 63 mission parishes had been ac-
sisted, 29 of which had become self-supporting.
Between $10,000 and $12,000 were contributed for
these missions in 1899. The board, which re-
ported to the meeting of the board in August,
amounted to $28,936. The foreign mission in
India, under the care of the foreign mission board,
returned 7 missionaries and 8 women, with na-
tive teachers, catechists, etc., making a total mis-
sionary force of 79 persons. The mission in-
cluded 4 principal stations, with 2,002 commu-
nicants and 5,251 members in all. The contribu-
tions of the last three years to this work had
been more liberal than those of any previous
term. The amount contributed for 1901 had
been $15,860, which, with a surplus of $12,296 at
the beginning of the year, had given $28,156 to
be at the disposal of the board; while the expendi-
ture had been $10,943. At the beginning of 1902
the surplus had been reduced to $8,202. An im-
migrant mission was maintained in Baltimore,
Md., and cooperated with the German emigrant
mission in Bremen. The principal educational in-
stitutions of the church were the German Union
University, at Elmhurst, Ill., and Eden College and Theological
Seminary, St. Louis, Mo. Other benevolent insti-
tutions are a deaconess house in St. Louis, 2
orphan houses, and a theological seminary. Eden
Publishing House, St. Louis, Mo., supplies
literature for the Church in the German and
English languages. Formerly the German lan-
guage was used in the synodical meetings of the
Church, but the membership has be-

GEORGIA. (See under UNITED STATES.)

GERMANY, an empire in central Europe,
composed of the federated German states, which,
in the terms of the Constitution of April 16,
1871, form an eternal union for the protection of
the realm and the care of the welfare of the
German people. The king of Prussia as German
Emperor has supreme direction of the military
and political affairs of the empire. There are
2 legislative bodies with concurrent powers—the
Bundestagh, composed of representatives of the
federated states, and the Reichstag, representing
the German people. Acts on which they agree be-
come law on receiving the assent of the Emperor,
countersigned by the Chancellor of the Empire.
The Bundestagh has 58 members, appointed by
the governments of the federated states. The
Reichstag has 397 members, 1 to 131,604 of popu-
lation, elected by universal manhood suffrage and
by vote of 2 and 3, the Grand Duchy of Baden by
7, the Grand Duchy of Mecklenburg-Schwerin by
2 and 3, the Grand Duchy of Saxony by 4 and 23,
the Kingdom of Wurttemberg by 4 and 17, the Grand
Duchy of Baden by 3 and 14, the Grand Duchy of
By 6 and 48 respectively, the Kingdom of
Saxony by 4 and 23, the Kingdom of Wurttemberg
by 4 and 17, the Grand Duchy of Baden by 3 and
14, the Grand Duchy of Mecklenburg-Schwerin by
2 and 6, the Grand Duchy of Saxony by 1 and 23,
the Grand Duchy of Mecklenburg-Strelitz by 1
that had passed in the previous meeting of the
General Synod 63 mission parishes had been ac-
s
of Saxæ-Meiningen by 1 and 2, the Duchy of Saxæ-Altenburg by 1 and 1, the Duchy of Saxæ-Coburg-Gotha by 1 and 2, the Duchy of Anhalt by 1 and 2, the Principality of Schwarzburg-Sondershausen by 1 and 1, the Principality of Schwarzburg-Rudolstadt by 1 and 1, the Principality of Waldeck by 1 and 1, the Principality of Reuss-Greiz, or Reuss of the elder line, by 1 and 1, the Principality of Reuss-Schleiz, or Reuss of the younger line, by 1, the Principality of Schaumburg-Lippe by 1 and 1, the Principality of Lippe by 1 and 1, the free city of Lippe by 1, and the free city of Bremen by 1 and 1, the free city of Hamburg by 1 and 3, the Reichsland of Alasse-Lorraine by 4 commissioners of the Statthalter in the Bundesrath who have no votes and 15 Deputies in the Reichstag. The Bundesrath and the Reichstag are elected together annually by the Emperor, who with the concurrence of the Bundesrat can prorogue the Reichstag, but not without its consent for longer than thirty days or dissolve it, in cases in which new elections must take place within sixty days and a new session must begin within ninety days. The imperial ministers act independently of each other, but the Imperial Chancellor is the chief of the imperial civil administration.

The reigning Emperor is Wilhelm II, born Jan. 27, 1859, eldest son of Friedrich III of Prussia and Friedrich I of Germany, eldest son and successor of the first German Emperor. Wilhelm II succeeded his father on March 9, 1888. The heir apparent is Prince Friedrich Wilhelm, Crown Prince of the German Empire and of Prussia, born June 6, 1882, eldest son of the Emperor and the Queen-Empress Victoria, who was a princess of Schleswig-Holstein-Sonderburg-Augustenburg. The Chancellor of the Empire was Graf von Bülow in the beginning of 1902, who succeeded Prince Hohenlohe-Schillingsfürst on Oct. 17, 1900. The following were the secretaries of state at the head of the several departments: Minister of Foreign Affairs, von Riechhofen; Minister of the Interior and Representative of the Chancellor, Graf von Posadowsky-Wehner; Secretary of State for the Imperial Marine, Vice-Admiral von Tüptz; Minister of Justice, Dr. A. Niesing; President of the Imperial Railroad Office, Dr. Schulz; President of the Court of Accounts, Herr Magdeburg; President of the Invalid Fund Administration, Dr. Rössing; Secretary of State for the Post-Office, Herr Krütke; Secretary of State for the Imperial Treasury, Baron von Thielmann; President of the Imperial Bank, Dr. Koch. The Emperor can not veto laws passed by both the Bundesrath and the Reichstag. By the Prussian Constitution no bill can become law unless approved by the King. The King nomimates the ministers, and they hold office during his pleasure. The legislative bodies in Prussia are the Herrenhaus, or House of Lords, and the Abgeordnetenhaus, or House of Deputies. To the Herrenhaus belong the princes of the House of Hohenzollern, 12 lords of medi- sexualized princely houses, 50 territorial nobles, life peers chosen by the King from great landowners and manufacturers and men appointed for their national nobility, 88 representatives elected by landowners of the old Prussian provinces, representatives of universities, heads of chapters, burgomasters of towns of over 50,000 inhabitants, and an appointed number of peer nominated by the King for life or for a term of years. The Abgeordnetenhaus contains 433 members, elected for five years by electors, one-third of them chosen by the wealthiest third by the intermediary, and one-third by the poorest class of direct taxpayers, each of which contributes one-third of the total amount of direct taxes. The ministry of state at the beginning of 1902 is composed as follows: President of the Council of Ministers, the Imperial Chancellor, Graf von Bülow; Minister of Finance, Baron von Rhein- haben; Minister of War, Herr Thienen; Minister of Worship, Instruction, and Medical Affairs, Dr. Studt; Minister of Agriculture, Domains, and Forests, Herr von Podbielski; Minister of Justice, Dr. Schönbred; Minister of the Interior, Baron von Hammerstein; Minister of Commerce, Herr Möller; Minister of War, Gen. von Goslar.

Area and Population.—The area of the German Empire is 208,830, and the population, according to the census of Dec. 1, 1900, was 56,367,- 178, compared with 52,279,901 on Dec. 2, 1895. The area and population of the provinces of Prussia are given in the following table:

The Prussian population was divided into 16,971,456 males and 17,501,084 females, 103,12 female to every 100 males. The town population, 14,444,221, showed an increase of 2.29 per cent. in five years; the country population, 19,924,806, showed an increase of 1.08 per cent. The number of marriages in Prussia during 1899 was 287,408; of births, 1,265,923; of deaths, 761, 050; excess of births, 504,873. During 1899 the emigration over sea from Prussia was 12,471. In 1899 the total was 13,747, of whom 1,548 emigrated from Brandenburg and Berlin, 2,293 from Posen, 1,744 from Hannover, 1,449 from West Prussia, 900 from Schleswig-Holstein, 853 from the Rhine Province, 830 from Pomerania, 605 from Hesse-Nassau, 557 from Westphalia, 585 from Silesia, 494 from East Prussia, 465 from Saxony, and 14 from Hohenzollern. Berlin had 1,901,567 inhabitants on Dec. 31, 1901.

Bavaria, with an area of 29,286 square miles, had a population in 1900 of 6,175,155, compared with 6,180,444 in 1895. The population in 1900 comprised 3,027,903 males and 3,148,096 females. The number of marriages in 1899 was 50,783; of births, 230,809; of deaths, 164,165; excess of births, 76,644. The emigration over sea in 1900 was 2,074, compared with 2,140 in 1899.

The Kingdom of Saxony, with an area of 5,787 square miles, had 4,198,788 inhabitants on Dec. 1, 1900, compared with 4,274,790 in 1899. There were 2,042,457 males and 2,157,321 females in 1900, a ratio of 105.6 females to 100 males. Of the population in 1900, the proportion living in towns was 50.6 per cent. The number of marriages in 1899 was 50,706; of births, 50,706; of deaths, 164,165; excess of births, 76,644. The emigration over sea in 1900 was 2,074, compared with 2,140 in 1899.

Württemberg has an area of 7,503 square miles, and had on Dec. 1, 1900, a population of 2,169,
434, it having increased from 2,081,151 in 1895, an average of 0.81 per cent. per annum. The number of marriages in 1900 was 17,102; of births, 76,637; of deaths, 49,119; excess of births, 26,518. The emigration in 1900 was 1,160, compared with 1,250 in 1895. The area of Baden is 5,823 square miles. The population in 1900 was 1,866,584, against 1,725,464 in 1895, which shows an increase of 1.585 per cent. per annum. There were 925,070 males and 940,514 females in 1900, being 101.65 females to 100 males. The number of marriages in 1900 was 15,491; of births, 65,261; of deaths, 43,277; excess of births, 21,984.

The Grand Duchy of Hesse in 1900, with an area of 2,906 square miles, had 1,119,893 inhabitants, 558,240 males and 561,653 females, the increase over 1,039,020 in 1898 being at the rate of 1.56 per cent. per annum. There were 19,671 marriages, 36,848 births, and 22,100 deaths in 1900; excess of births, 14,748.

The Grand Duchy of Mecklenburg-Schwerin has an area of 8,135 square miles. The population in 1900 was 607,883, against 597,436 in 1895. There were 300,419 males and 307,416 females, 102.3 females to 100 males. The number of emigrants to the ocean in 1900 was 185, against 231 in 1899.

The Grand Duchy of Saxe-Wiezmar has an area of 1,388 square miles. The population in 1900 was 382,018, composed of 174,590 males and 157,368 females. In 1895 the total population was 330,217. The number of marriages in 1900 was 3,051; of births, 12,322; of deaths, 3,969; excess of births, 5,323; emigration, 86, against 20 in 1899.

The Grand Duchy of Mecklenburg-Strelitz, having an area of 1,131 square miles, had in 1900 a population of 102,628, composed of 50,080 males and 51,638 females. The population in 1890 was 101,540. The number of marriages in 1890 was 799; of births, 3,103; of deaths, 2,324; excess of births, 779; emigration, 12 in 1900, against 21 in 1899.

Oldenburg, including the principalities of Lübeck and Birkenfeld, with an area of 2,478 square miles, had in 1900 a population of 433,189, composed of 219,307 males and 209,862 females, against a total of 373,739 in 1895. The number of marriages in 1900 was 3,422; of births, 14,312; of deaths, 9,031; excess of births, 5,281; emigration, 209 in 1899 and 255 in 1900.

Brunswick, which has an area of 1,424 square miles, increased in population at a rate per annum of 1.39 per cent. from 434,213 in 1895 to 464,333 in 1900, divided into 230,288 males and 234,045 females. There were 4,066 marriages, 15,042 births, and 9,235 deaths in 1900; excess of births, 5,807; emigration over sea, 112 in 1899 and 68 in 1900.

The Duchy of Saxe-Meiningen, with an area of 953 square miles, had 234,005 inhabitants in 1895 and 250,093 in 1900, divided into 123,227 males and 127,656 females. The number of marriages in 1899 was 2,185; of births, 8,772; of deaths, 4,309; excess of births, 3,653; emigration, 56 in 1899 and 49 in 1900.

The Duchy of Saxe-Altenburg, having an area of 511 square miles, had 180,313 inhabitants in 1895 and 194,914 in 1900, the latter number composed of 95,796 males and 98,118 females. There were 1,744 marriages, 7,720 births, and 4,831 deaths in 1899; excess of births, 2,889; emigration, 31 in 1899 and 17 in 1900.

The number of the population of 703,736 in the city and 62,611 in the country; total, 766,349, consisting of 375,311 males and 391,228 females, compared with 681,032

Geneva.
in 1805. The population in 1900 included 14,509
foreigners, of whom 3,585 were Austrians, 2,009
Swedes and Norwegians, 1,250 Brit-
ish, 3,240 from other countries of Europe, 1,631
from other parts of the world, and 288 unknown.
There were 6,442 marriages, 22,980 births, and
12,880 deaths in 1900; excess of births, 8,991.
The Reichsland Alsace-Lorraine has an area
of 14,513 square miles. The population in 1900
was 1,719,470, compared with 1,640,986 in 1899. It
consisted of 860,437 males and 830,033 females.
The number of marriages in 1900 was 13,034; of
births, 53,338; of deaths, 38,184; excess of births,
15,154. The number of emigrants over the ocean
was 255 in 1899 and 171 in 1899.
The increase of population for the whole em-
pire between 1895 and 1900 was 4,087,277. The
total number of marriages in 1899 was 471,519;
of births, 2,250,172; of deaths, 795,107. The total emigration in 1900
was 22,309, of whom 1,388 were bound for Eng-
lund, 19,703 for the United States, 364 for Brazil,
474 for Argentina, 146 for Africa, 1 for Asia, and 196 for Australia. Of the German
emigrants who embarked at German, Belgian,
and Dutch ports, 11,114 were males and 9,227
females, making a total of 20,341, comprising 8,367 individua-
tals. The total number of emigrants who embarked at German ports during
1900 was 176,810, of whom 16,990 were Germans and
3,297 were of other nationalities.
The number of Protestants in the empire in 1900
was 35,231,104, having increased from 31,028,810 in
1890, or 13.6 per cent.; the number of Roman Catholic
and other Christians decreased from 17,674,921
to 20,237,913, or 15 per cent.; the Jews in-
creased from 567,884 to 586,948, only 3.4 per cent.
The number of Protestants per 1,000 is 265; of
Catholics, 361; of Jews, 10; of members of other
creedsc, unreported.

Finances.—The ordinary revenue for the year
ending March 31, 1902, was estimated at 2,105,
226,000 marks, and extraordinary revenue at 206,
634,000 marks; total revenue, 2,311,923,000 marks.
The ordinary expenditure was estimated in the budget at 1,914,923,000 marks, and
extraordinary expenditure at 429,069,000 marks; total, 2,344,064,000 marks. Of the ordinary revenue
excise customs and excise receipts were estimated at 810,331,000 marks and stamp-duties at
114,929,000 marks, together 925,359,000 marks; re-
cieives from telegraphs and telephones were estimated at 420,163,000 marks; from the print-
office, 7,777,000 marks; from railroads, 93,575,
000 marks; from the Bank of the Empire, 14,714,
000 marks; receipts of various departments, 26,465,000 marks; interest of the invalid fund, 30,
440,000 marks; various receipts, 390,000 marks;
matriculal contributions of the states, 570,935,000 marks; other contributions, 16,409,000 marks. Of the matriculal contributions, Prussia was required
to pay 349,735,000 marks; Bavaria, 61,933,000 marks; Saxony, 42,672,000 marks; Württemberg, 21,513,000 marks; Hessen, 18,944,000 marks; Saxony, 11,368,000 marks; Mecklenburg-Schwerin, 6,146,
000 marks; Saxe-Weimar, 3,071,000 marks; Mecklenburg-Strelitz, 1,037,000 marks; Olden-
burg, 6,941,000 marks; Brunswick, 4,708,000 marks; Saxe-Meiningen, 2,543,000 marks; Saxe-
Altenburg, 1,071,000 marks; Saxe-Coburg-Gotha, 2,327,000 marks; Anhalt, 3,298,000 marks; Schwarzburg-Sondershausen, 1,810,800 marks; Schwarzburg-Rudolstadt, 928,000 marks; Wal-
deck, 585,000 marks; Reuss of the senior line, 690,000 marks; Reuss of the junior line, 1,408,000
marks; Schleswig-Holstein, 4,708,000 marks; Lippe, 1,409,000 marks; Lübeck, 986,000 marks; Bremen,
2,287,000 marks; Hamburg, 7,515,000 marks; Alsace-Lorraine, 17,407,000 marks. The matriculal
contributions of the states in proportion to their population; the rate per capita is fixed in each annual budget. Of the ordinary, or recurring, expenditure, 176,000 marks
were for the Reichstag, 22,000 marks for the
Imperial Chancellery, 13,211,000 marks for the
Ministry of Foreign Affairs, 54,575,000 marks for
the Ministry of the Interior, 559,028,000 marks for
the army, 79,896,000 marks for the navy, 2,133,000 marks for the Ministry of Justice, 575,
196,000 marks for the imperial treasury, 394,000
marks for railroads, 88,543,000 marks for the
debt of the empire, 910,000 marks for the audit-
ing office, 70,995,000 marks for the pension fund,
30,456,000 marks for the invalid fund, 364,269,000
marks for posts and telegraphs, 5,014,000 marks
for the printing-office, and 45,015,000 marks for
railroads. The surplus of the customs, tobacco,
stamp, and spirit duties returned to the states was
570,933,000 marks. The total expenditure on the army, ordinary and extraordinary, amounted to 673,566,000 marks; on the navy, 207,484,000 marks. For the year ending March
31, 1903, the matriculal contributions were in-
creased 24,000,000 marks and a loan of 25,000,000
marks was proposed to balance the estimated
total expenditure, recurring and non-recurring, of
2,349,742,456 marks.
The funded debt of the empire on March
31, 1900, amounted to 2,298,606,000 marks, of which
1,240,000,000 marks consisted of 31-per-cent.
loans, and 1,038,500,000 marks were later loans
paying 5 per cent, which had increased 1,162,000,000
marks since March 31, 1898. There were 120,
000,000 marks of treasury bills outstanding and
120,000,000 marks of paper money. The invalid
fund on March 31, 1896, amounted to 300,067,854
marks, and the Government held a war fund of
120,000,000 marks, hoarded in gold.
The amount of gold coin minted since the begin-
ing of the empire was 3,701,171,400 marks,
of which 39,198,800 marks had been withdrawn
before the end of 1900, leaving 3,661,973,000
marks in circulation. The amount of silver
coined up to the close of 1902 was 2,757,000
marks, of which 28,747,100 marks had been with-
drawn, leaving 530,429,800 marks in circulation.
The amount of nickel coins issued and not re-
called was 63,477,000 marks, and silver coins was
15,403,000 marks, making a total coinage
of 4,282,357,700 marks outstanding. The amount
of bank-notes in circulation was 1,313,
855,000 marks, protected by 889,630,000 marks of
coin and bullion.
The budgets include the contributions of the
states to the common expenditure of the empire. In Alsace-Lorraine there was also an extraordin-
ary revenue of 4,452,454 marks, and an expendi-
ture of 4,909,360 marks. More than half the
revenue comes from customs and excise, and there is
a large expenditure for education. The
expenditure of Anhalt for the empire was
300 marks. The state property was valued at
9,211,830 francs. The whole debt of Baden was
incurred for railroads, and three-quarters of the
Bavarian debt. The debt of Bremen was incurred
for railroads and 400 marks. The budget of
Brunswick does not include the civil list of the
duke, which is 1,125,000 marks, nor the fund
for schools, arts, and sciences, out of which there
was an expenditure of 117,000 marks. The state-
ment of the debt, which was raised for railroads,
does not include an annual payment of 1,219,740 marks, for public works, which will be extinguished in 1924. The property of the state in domains and forests and in funds is valued at 40,000,000 marks, not including an annuity of 2,580,000 marks to be paid till 1932 for the railroads, which were turned over to the German Government. The debt of Hamburg, contracted for public works, required the payment of 15,485,600 marks in 1901, and for education 10,361,944 marks were spent. To meet these heavy charges an income tax is levied that amounts to 30 marks per capita.

The debt of Hesse, contracted for railroads which return a profit, is no burden, and taxation is light in this grand duchy, which possesses valuable domains. In Lübeck half the revenue is derived from direct taxation, and the rest mainly from interest, domains, and railroads. In Mecklenburg-Schwerin, apart from the budget of common expenses of the Grand Duke and the states, the Grand Duke has a separate income of 22,825,000 marks, which is largely devoted to public purposes. The state railroads and interest on invested funds more than defray the debt charge. The accounts of Mecklenburg-Schwerin are not published. The estimates of the Prussian revenue for the year ending March 31, 1902, were 99,135,424 marks from domains, 213,166,300 marks from direct taxes, 87,304,000 marks from indirect taxes, 88,262,500 marks from the lottery, 1,743,900 marks from the Marine Bank, 554,500 marks from the mint, 192,316,080 marks from mines, furnaces, and salt-works, 1,442,925,339 marks from railroads, 391,039,565 marks from the finance administration, and 134,166,578 marks from the state administration. The expenditures were estimated at 45,633,470 marks for agriculture, domains, and forests, 131,800,200 marks for finance, 158,522,050 marks for the administration of mines, furnaces, and salt-works, 875,678,380 marks for the administration of railroads, 8,000,000 marks for the Crown domain, 2,174,018,978 marks for the sinking-fund of the debt, 1,403,230 marks for annual interest on 250,815 marks, 1,675,515 marks for the Chamber of Deputies, 348,368,083 marks for matriculation contribution to imperial expenditure, 93,822,136 marks for appearance, 93,758,000 marks for the Ministry of State, 553,800 marks for the Ministry of Foreign Affairs, 104,794,908 marks for the Ministry of Finance, 31,822,938 marks for the Ministry of Public Works, 12,584,541 marks for the Ministry of Commerce and Industry, 115,000,358 marks for the Ministry of Justice, 72,960,586 marks for the Ministry of the Interior, 24,220,282 marks for the Ministry of Agriculture, Domains, and Forests, 145,152,437 marks for the Ministry of Public Worship and Instruction, 139,058 marks for the Ministry of War, and 217,533,904 marks for extraordinary expenditure. The public debt of Prussia consists of 5,600,400,000 marks of consolidated debt paying 3½ per cent. interest, 977,367,400 marks paying 3 per cent., 119,945,230 marks of railroad debt, and 5,128,907 marks of debts assumed on the annexation of provinces. Saxe-Altenburg had in 1901 funds amounting to 5,002,058 marks, and two-thirds of its revenue was derived from domains. Saxe-Coburg and Gotha have separate legislative chambers and separate budgets. The domain revenue of Coburg in 1902 was 444,575 marks, and expenditure 290,800 marks; the domain revenue of Gotha was 1,044,100 marks, and expenditure the same; the domain revenue of Gotha was 1,533,500 marks, and expenditure 1,179,100 marks; the state revenue of Gotha was 2,329,880 marks; the common revenue of the two duchies was 3,097,430 marks, and expenditure 3,757,630 marks. The debt of Coburg was 2,269,000 marks, and expenditure 498,000 marks. A third of the revenue of Saxe-Meiningen is derived from domains, and most of the debt has been incurred for profitable public works. Domains and investments of Meiningen and Weimar. The revenue and expenditure of Saxony as stated does not include an extraordinary revenue of 115,783,186 marks, which was expended on public works. The whole debt of this kingdom was incurred for railroads, telegraphs, and other public works, the Government having invested 967,206,084 marks in railroads alone. From the railroads and from domains and forests is derived more than half of the state revenue. In Württemberg a third of the revenue is derived from forests, farms, mines, furnaces, and salt-works, and the railroads, posts, and telegraphs. The state revenue of Württemberg is 75,500,000 marks, and expenditure 68,000,000 marks. A third of the revenue was incurred mainly from railroads, the net income from which amounts to 92 per cent. of the interest of the whole debt.

The sum of annual revenues of all the German states is estimated at 4,292,000,000 marks, including 138,000,000 marks of extraordinary revenue. Their combined expenditure is estimated at 4,316,000,000 marks, including 105,000,000 marks of extraordinary expenditure. The empire and the federated states together raise an annual revenue of 6,720,000,000 marks, including 344,000,000 marks from extraordinary sources, and their combined expenditure amounts to 6,366,000,000 marks, including 381,000,000 marks for extraordinary purposes. The indebtedness of the federated states amounts to 10,987,000,000 marks. Including the debt of the federal finance, the annual cost of interest, amortization, and administration is 9.57 marks per capita.

### The Army

The peace strength of the German army in 1901 was as follows: 216 regiments of infantry, numbering 1,976,425 officers and men; 18 battalions of rifles, numbering 388 officers and men; 5 machine-gun divisions, numbering 15 officers and 335 men; 215 horsemen; 293 dismounted officers and men, 6,782 men; 2,556 surgeons and pay-
masters; 93 regiments of cavalry, numbering 2,433 officers and 66,849 men, with 65,789 horses; 825 cavalrymen in special service; 94 regiments in field-artillery, numbering 3,060 officers and 65,260 men, with 33,383 horses, forming 494 field-batteries, of which 47 are mounted, each of 4 guns, except the batteries attached to infantry divisions, which have the war complement of 6 guns; 996 artillery in special services; 18 regiments of foot-artillery, numbering 555 officers and 22,977 men, with 46,150 horses; 137 foot-artillery in special services; 26 battalions of pioneers, numbering 595 officers and 15,419 men; 103 pioneers in special services; 3 railroad regiments, 1 railroad battalion, 2 balloon detachments, and 2 railroad companies, numbering altogether 251 officers and 6,417 men; 49 railroad troops in special services; 23 battalions of train, numbering 351 officers and 6,450 men, with 665 horses in special train services; 558 officers and 4,957 men in special formations; and 2,629 non-regimental officers, with 360 men, total, 24,415 officers and 10,023 men with 10,485 horses. There are besides about 8,000 volunteers for one year, who serve at their own expense. The infantry battalion, which contains 544 men in time of peace, is increased to 1,002 in war time by calling out the reserves. The Prussian guards and the regiments garrisoned in Alsace-Lorraine have 686 men in each battalion on the peace footing. In time of peace 3 regiments of rifles, 2 regiments a brigade, 2 brigades a division, to which are attached 4 squadrons of cavalry, 4 batteries, and 1 battalion of rifles or of pioneers; and 2 infantry regiments, with 1 gun, 14 regiments of cavalry, to which 2 batteries of horse-artillery are attached, and 6 field-batteries and 1 mounted battery of artillery form an army corps. There are 23 army corps, each of which is organized and equipped so as to be able to take the field as an independent army.

The Navy.—The German navy in the beginning of 1902 comprised 10 first-class battle-ships, 5 of the second class, 2 armored cruisers, 8 old battle-ships, 10 coast-defense ironclads, 16 protected cruisers, 7 torpedo-gunboats, 27 destroyers, and 47 first-class and 96 second-class torpedo-boats. There were building 2 battle-ships as armored cruiser, 1 coast-defense vessel, 2 armored cruisers, and 16 destroyers. The Wittelsbach, Mecklenburg, Zahringen, Wettin, and Schwaben, of 14,000 tons, were now under the construction for the reserve service, and 2 battle-ships; yet they have no large guns, but only quick-firers, 4 9.4-inch, 18 6-inch, 12 3.4-inch, and numerous smaller ones. Their engines of 13,000 horse-power can make 18 knots. Their hulls are protected with 10-inch Krupp armor, and most of their guns are placed in armored batteries amidships. Two new ships that have been ordered will carry 4 11-inch and 18 6.7-inch guns. The armored cruiser Prinz Heinrich, launched in 1900, has a displacement of 8,868 tons, is protected on the sides with 6-inch armors, carries 2 9.4-inch guns and 4 5.9-inch quick-firers, has engines of 14,000 horse-power and can make 19 knots. The Kaiser Wilhelm der Grosse, Kaiser Barbarossa, and Kaiser Karl der Grosse, launched in 1899 and 1900, of 11,180 tons, have 11.4-inch armor, 8 4.8-inch quick-firers, and have engines of 13,000 horse-power capable of making 18 knots. The new battle-ships of 1903, 10,000 tons, with 4-inch deck armor, a speed of 18½ knots with engines of 10,000 horse-power, and an armament of 2 12-inch, 8 6.7-inch, and 10 3.4-inch quick-firers. The first three, with engines of 6,000 horse-power, can steam 19½ knots; the others, with engines of 7,000 horse-power, are able to make 21 knots. Others of this class are to be built strong enough, with 2,715 tons displacement, to hold engines that can make 24 knots. In German vessels guns are mounted in every available spot, and the aim is to concentrate the heaviest possible fire on the enemy. In the later vessels more attention is paid to gun protection, which is secured by armored casemates. The newer ships carry in their secondary batteries 6.7-inch quick-firing guns of the model adopted in 1901. A converted section of the torpedo fleet has been studied more than in any other navy and very difficult maneuvers are practised. The Government subsidizes 7 fast liners of the Hamburg and Americana. German Lloyd companies in order that they shall be held in readiness to act as auxiliary cruisers in case of war. The maritime population of the German empire amounts to 15,000,000, and the navy owes service in the navy. Inducements are held out to capable and experienced sailors to volunteer; and the navy does not lack recruits of such material. Besides, the German sailors employed in the merchant fleet and 6,000 in the merchant service of other countries, there are 26,000 fishermen and others available for the navy. The naval proposal made in 1902 contemplated a fleet of 2 double squadrons, each composed of 16 battle-ships, 8 large cruisers, and 24 small cruisers, for service in home waters, in addition to which there should be 8 large and 15 small cruisers for service in foreign waters, and a reserve of 4 battle-ships and 4 large and 6 small cruisers; but owing to the opposition of the Center the number of vessels for foreign service was reduced to 3 large and 10 small cruisers, and the reserve to 4 battle-ships and 3 large and 4 small cruisers. The bill provided that 2 battle-ships and 1 large and 3 small cruisers should be begun every year till 1905. In 1902 an addition to the law of 1900 was announced, to be laid before the Reichstag in 1904, which will allow for the construction of a greater number of vessels for large and small battle-ships, and for recurrent expenditure in order to put the new ships into commission.

Commerce and Production.—The production of wheat in 1901 from 2,049,160 hectares was 3,841,105 metric tons; of rye from 5,054,973 hectares, 8,550,659 tons; of barley from 1,670,033 hectares, 3,002,182 tons; of oats from 4,122,818 hectares, 7,081,350 tons; of potatoes from 3,218,777 hectares, 40,585,317 tons; of hay from 5,912,122 hectares, 23,116,276 tons. Vineyards covered 119,240 hectares. The area under hops was 57,191 hectares. The number of agricultural holdings in 1895 was 5,558,317, covering 43,284,742 hectares, supporting 18,088,603 persons, the number of workers being 8,156,045. The number of horses in Germany on Dec. 1, 1900, was 4,134,099; of cattle, 10,001,106; of sheep, 9,672,143; of hogs, 16,758,436. In Prussia there were 2,915,003 horses, 10,865,260 cattle, 6,989,430 sheep, and 10,054,092 hogs; of potatoes 4,114,099,097, of 3,550,089 cattle, 748,470 sheep, and 1,736,761 hogs; in Saxony 166,713 horses, 687,887 cattle, 74,518 sheep, and 576,825 hogs; in Alaco-Lorraine, 142,878 horses, 901,840 cattle, and 340,936 hogs; in Württemberg, 112,159
horses, 1,017,683 cattle, 315,965 sheep, and 512,485 goats. The crops included 43,268,000 bushels of export corn, 222,157,000 marks, and exports 286,218,000 marks; imports of fats and oils were 359,358,000 marks, and exports 30,630,000 marks; imports of chemicals, drugs, and colors were valued at 76,500,000 marks, and exports 397,017,000 marks; imports of stone, clay, and glass were 90,715,000 marks, and exports 201,635,000 marks; imports of metals and metal goods were 768,216,000 marks, and exports 783,282,000 marks; imports of wood and wood manufactures were 337,275,000 marks, and exports 169,582,000 marks; imports of paper and paper manufactures were 115,000,000 marks, and exports 131,350,000 marks; imports of textile materials and manufactures were 1,273,311,000 marks, and exports 1,068,750,000 marks; imports of leather and leather manufactures were valued at 281,400,000 marks, and exports 266,593,000 marks; imports of rubber and rubber goods were 86,368,000 marks, and exports 64,775,000 marks; imports of railroad materials and rolling stock were valued at 4,015,000 marks, exports 3,885,000 marks; imports of hardware, etc., were 27,713,000 marks, and exports 103,603,000 marks; imports of books and works of art were 44,292,000 marks, and exports 57,975,000,000 marks; exports of coal were 10,746,000 marks in value. The total value of dutiable imports was 2,961,207,000 marks, paying in duties 521,115,000 marks, an average rate of 17.9 per cent.; value of imports free of duty, 3,061,785,000 marks. The imports of horses, pigs, and mutton and vitriol and chemical manufactures were 37,900,000 marks, valued at 13,215,000 marks. The total value of cotton goods and products became 701,043,000 marks. The production of manufactured iron in 1899 was 9,309,402 tons, value 1,353,985,000 marks. There were 268,571 men employed in the iron and steel manufactures, and 452,350 in the coal-mines. The imports of iron and iron manufactures in 1901 were 382,455 tons less, and those of machinery, tools, and vehicles 37,901 tons less than in 1900, whereas exports increased respectively 798,683 and 6,188 tons. The number of boats engaged in the North Sea fisheries in 1900 was 641, of 35,651 tons, with 3,547 men in them. In the year 3,050,000 marks in value, while 25,867,000 marks' worth of fresh fish, 38,016,000 tons' worth of salt herrings, and 8,476,000 tons' worth of other salt and dried fish, were imported. There were 390 sugar factories in 1899, which consumed 12,439,301 metric tons of beet-roots, producing 1,601,258 tons of raw sugar and 307,133 tons of molasses. The production of refined sugar in 1900 was 1,215,205 tons. In 28 starch factories were produced 8,681 tons of dry sugar, 35,905 tons of rice, and 4,976 tons of color. The production of beer in 1899 was 69,290,000 hectoliters, of which 49,290,000 hectoliters were brewed in the imperial excise district, 17,739,000 hectoliters in Bavaria, 4,125,000 hectoliters in Württemberg, 3,050,000 hectoliters in Baden, and 1,125,000 hectoliters in Alsace-Lorraine. There were 59,024 distilleries in 1900, which produced 3,607,820 hectoliters of alcohol. The total value of special imports in 1901 was 5,967,017,000 marks, and of special exports 4,750,407,000 marks. In 1900 the value of imports in the special trade was 6,042,592,000 marks, and the value of exports 4,750,407,000 marks. The imports of live animals in 1900 were 178,443,000 marks in value, and exports 21,114,000 marks; imports of animal products were 211,065,000 marks in value, and exports 41,547,000 marks; imports of articles of consumption were 1,584,420,000 marks, and exports 496,467,000 marks; imports of seeds and plants were 66,925,000 marks, and exports 222,157,000 marks, and exports 286,218,000 marks; imports of fats and oils were 359,358,000 marks, and exports 30,630,000 marks; imports of chemicals, drugs, and colors were valued at 76,500,000 marks, and exports 397,017,000 marks; imports of stone, clay, and glass were 90,715,000 marks, and exports 201,635,000 marks; imports of metals and metal goods were 768,216,000 marks, and exports 783,282,000 marks; imports of wood and wood manufactures were 337,275,000 marks, and exports 169,582,000 marks; imports of paper and paper manufactures were 115,000,000 marks, and exports 131,350,000 marks; imports of textile materials and manufactures were 1,273,311,000 marks, and exports 1,068,750,000 marks; imports of leather and leather manufactures were valued at 281,400,000 marks, and exports 266,593,000 marks; imports of rubber and rubber goods were 86,368,000 marks, and exports 64,775,000 marks; imports of railroad materials and rolling stock were valued at 4,015,000 marks, exports 3,885,000 marks; imports of hardware, etc., were 27,713,000 marks, and exports 103,603,000 marks; imports of books and works of art were 44,292,000 marks, and exports 57,975,000,000 marks; exports of coal were 10,746,000 marks in value. The total value of dutiable imports was 2,961,207,000 marks, paying in duties 521,115,000 marks, an average rate of 17.9 per cent.; value of imports free of duty, 3,061,785,000 marks. The imports of horses, pigs, and mutton and vitriol and chemical manufactures were 37,900,000 marks, valued at 13,215,000 marks. The total value of cotton goods and products became 701,043,000 marks. The production of manufactured iron in 1899 was 9,309,402 tons, value 1,353,985,000 marks. There were 268,571 men employed in the iron and steel manufactures, and 452,350 in the coal-mines. The imports of iron and iron manufactures in 1901 were 382,455 tons less, and those of machinery, tools, and vehicles 37,901 tons less than in 1900, whereas exports increased respectively 798,683 and 6,188 tons. The number of boats engaged in the North Sea fisheries in 1900 was 641, of 35,651 tons, with 3,547 men in them. In the year 3,050,000 marks in value, while 25,867,000 marks' worth of fresh fish, 38,016,000 tons' worth of salt herrings, and 8,476,000 tons' worth of other salt and dried fish, were imported. There were 390 sugar factories in 1899, which consumed 12,439,301 metric tons of beet-roots, producing 1,601,258 tons of raw sugar and 307,133 tons of molasses. The production of refined sugar in 1900 was 1,215,205 tons. In 28 starch factories were produced 8,681 tons of dry sugar, 35,905 tons of rice, and 4,976 tons of color. The production of beer in 1899 was 69,290,000 hectoliters, of which 49,290,000 hectoliters were brewed in the imperial excise district, 17,739,000 hectoliters in Bavaria, 4,125,000 hectoliters in Württemberg, 3,050,000 hectoliters in Baden, and 1,125,000 hectoliters in Alsace-Lorraine. There were 59,024 distilleries in 1900, which produced 3,607,820 hectoliters of alcohol. The total value of special imports in 1901 was 5,967,017,000 marks, and of special exports 4,750,407,000 marks. In 1900 the value of imports in the special trade was 6,042,592,000 marks, and the value of exports 4,750,407,000 marks. The imports of live animals in 1900 were 178,443,000 marks in value, and exports 21,114,000 marks; imports of animal products were 211,065,000 marks in value, and exports 41,547,000 marks; imports of articles of consumption were 1,584,420,000 marks, and exports 496,467,000 marks; imports
The imperial post-office in 1900 carried 1,008,666,802 letters, 920,544,518 postal cards, 855,972,346 pieces of printed matter, 4,778,681 newspapers, papers, 56,295,366 samples, and 1,161,782,015 newspapers, and the amount of money remittances was 25,633,687,953 marks; receipts, 384,542,906 marks; expenses, 392,790,152 marks. The Bavarian post-office traffic was 173,754,930 letters, 59,969,440 postal cards, 72,827,286 printed enclosures, 198,320 business papers, 4,360,840 samples, 215,400,659 newspapers, and 2,655,235,945 marks of money sent; receipts, 30,277,340 marks; expenses, 32,181,410 marks. The Württemberg post-office handled 64,022,108 letters, 33,823,402 postal cards, 40,694,886 printed enclosures, 118,245 business papers, 1,524,234 samples, 56,443,415 newspapers, and 1,177,623,008 marks of money remittances; receipts amounted to 16,221,888 marks and expenses to 14,215,148 marks.

The total postal traffic of Germany was 1,847,043,900 letters, 1,020,339,360 postal cards, 969,494,520 printed enclosures, 5,983,430 business papers, 62,623,070 samples, 1,431,706,098 newspapers, and 376,466,576 marks of money sent; the combined receipts of the three postal services were 447,041,824 marks, and expenses 430,013,073 marks.

The length of the telegraph lines in Germany in 1900 was 106,723 kilometers, with 414,992 kilometers of wires, over which 29,801,309 internal and 11,460,473 foreign telegraphs were sent in the same year; the length of the telegraph lines in 1899 was 16,624 kilometers, with 45,923 kilometers of wires, over which 2,580,877 internal and 688,804 foreign messages were transmitted; the lines of Württemberg had a length of 3,294 kilometers with 11,506 kilometers of wires, over which 1,237,333 internal and 230,039 foreign messages were sent; total length of telegraph lines in the empire, 128,315 kilometers, with 472,867 kilometers of wire; total number of despatches, 33,628,510 internal and 12,380,276 foreign. There were in the empire 15,533 towns with telephone communications, having 299,847 exchanges, with 49,295 miles of line and 517,350 miles of wire; the number of conversations in 1900 was 597,423,041. There were 2,797 long-distance circuits, having 10,920 miles of line and 137,665 miles of wire; number of conversations, 39,533,314.

Politics and Legislation.—The principal task of the Reichstag in the section of the continued session which began on Nov. 28, 1901, was to frame a new tariff as a basis for new commercial treaties. The session of the Reichstag began in 1900 and was continued by adjournment. The legislative business was left in such an unfinished state in May, 1901, that the expedient of adjourning instead of closing the session had to be adopted, and on June 11, 1902, the session was again adjourned till Oct. 14. The bills and motions that accumulated retained their precedence, so that there was no opportunity to raise fresh questions, while in some cases the circumstances in which the bills were drafted were altered. The bill to guarantee interest on the cost of a railroad in East Africa from Dar-es-Salam to Mrogoro would be ineffective because the project of raising the money through a financial syndicate had been abandoned owing to the state of the money market. There were 49 motions of private members not yet disposed of. The prolonged session must come to an end within the legislative period of five years, which expires in June, 1903, when a general election takes place. The German spirits bill, a measure favorable to the Agrarians, introduced in 1901, was passed by the chamber. The saccharin bill was another legacy from the previous year and another concess-
sion to the Agrarians, intended as a slight compensation for the abolition of sugar bounties. A more important measure was the lowering of the internal duty on sugar, designed to extend the domestic consumption of sugar by materially lowering its price, and therefore acceptable to Socialists and Radicals as well as to Agrarian Conservatives, who would find in the home market opened to them an outlet for their sugar if the competition of cane-sugar drove it out of the English market. The Government in signing the Brussels convention had no fear that Germany, the greatest sugar-producing country in the world and the most advanced in its methods of production, could not still compete successfully in the world's market; but it did fear that, if it refused to accept the terms that Great Britain offered at Brussels, German sugar would be shut out of England by countervailing duties. Nevertheless, the extreme section of the Agrarians struggled to prevent the ratification of the Brussels convention by the Reichstag. Nearly all the sugar manufacturers were opposed to the treaty. The convention was finally approved on June 11 by 209 votes to 103. The minority consisted of the greater part of the Conservatives and a large section of the Liberal and Social Democrats, while the Radicals gave 110 votes for the convention, which the ordinary supporters of the Government would otherwise have rejected. The sugar cartel was to pay a export tax on sugar from 20 marks per 100 kilograms to 16 marks and abolishes the bounties on exports. The sugar cartel has raised the price about 14 marks to consumers in order to secure an extra profit of 3 to 4 marks for its members. The domestic demand has declined in consequence, but the abolition of bounties will curtail the power of the trust.

The saccharin bill prohibits the production or importation of saccharin except by permission of the Federal Council, which is empowered to license one or more manufacturers or importers subject to constant official inspection and the revocation at any time of their licenses; and the product cannot be sold except by specially licensed persons for medical or scientific purposes only. The existing factories receive compensation at the rate of 6 times their average annual profit, reckoned at 4 marks per kilogram. The German Chancellor is empowered to fix the maximum quantity of saccharin that each licensed factory may produce. The use of saccharin as a cheap substitute for sugar is stopped altogether by this law, but not its use on the prescription of a physician by persons suffering from a disease that is aggravated by the use of sugar. The bill appropriating money for the construction of a railroad in German East Africa was postponed on account of the unfavorable condition of the imperial estimates. A bill to secure liberty of worship to all subjects of the empire was rendered effective by legislative acts in the states where Catholic disabilities and restrictions on worship still existed, as in Mecklenburg and Brunswick.

The Government tariff bill was introduced in the Reichstag on Dec. 2, 1901, referred to a committee of 28 members on Dec. 12, and read in the house on Feb. 28, 1902, after which the committee worked out the measures. High protection has been the fiscal policy of the German Government since 1879, and under it the country has made a wonderful advance in industry, though the amount of immigration is smallest in the period of hard times on rye, barley, and oats. The period concluded by Count von Caprivi. Agriculture has not been generally prosperous, and those who have suffered most are the influential territorial aristocracy of Prussia, who have been receiving favors from the beginning, but not enough to counteract the special disadvantages under which they labor. While the world's competition has lowered the prices of agricultural products the newly developed mines and industries of western Germany have drained away the population of the east and made agricultural labor scarce and dear. The objection of the Agrarians to the canal system, which they defeated three times in the Prussian Chamber, was that it would not only afford cheaper transport for competing foreign products, but would further stimulate the migration of the laboring population. When the new tariff had to be made landowners and farmers in most of the agricultural districts joined in the cry for higher protective duties on imports, so that they could have a share of the prosperity that had come to the industrialists. The Conservative and Clerical parties, which normally support the Government, and the barleymakers, who number and compact organization can also defeat Government measures, were controlled by Agrarian opinion. The National Liberal party contained many Social Democrats, and the Radicals and the Social Democracy were determined to resist the last every schedule in the tariff that would make food still dearer than it already was. The will to the princes and expediency of the Government had adopted during a series of years. Austria-Hungary, Italy, Russia, and other countries that have supplied Germany with food in the past, are deeply concerned in the outcome of the struggle. The people of the United States were interested in the prospects of their food exports to Germany, and also in the question whether dear food would not weaken Germany's industrial competition and start a new emigration of enterprising and skilled Germans to America and drive German capital abroad. Duties on grain, which had not existed for fifteen years, were introduced in the protective tariff of 1879, and were tripled in 1886, but lowered again in 1892, when new commercial treaties were made with Austria, Belgium, Italy, and Switzerland, followed by similar reciprocal agreements with Roumania and Russia. Other countries, excepting Portugal, have favored-nation treaties, the one with the United States having been made by Prussia in 1829. This old treaty has given rise to various disputes with the United States regarding bounties and other evasions, and under it Germany has claimed that the United States can make no reciprocity treaty with any country without extending the same advantages to Germany. When Canada discriminated in favor of Great Britain the German Government applied the autonomous tariff to Canada. The German autonomous tariffs of 1879 and 1887 made the duty on wheat and rye 5 marks per 100 kilos, but the duty since 1892 under the favored-nation clause has been 3.50 marks, and on barley 2 marks. If new reciprocity treaties are not concluded before Dec. 31, 1903, the duties of 1887 would come into force on Jan. 1, 1905, unless the Reichstag adopts a new tariff. The Government proposed as minimum duties, not to be lowered for any country by a reciprocity agreement, 5.50 marks on wheat, rye, 5 marks on rye and oats, and 3 marks on barley. The British tariffs called for 7.50 marks per 100 kilograms on all kinds of grain. The Tariff Committee, by a majority of 17 to 11, adopted the rates of 6 marks on wheat and 5.50 on rye and oats. From Bavaria came a protest against a barley
duty that would destroy the export trade in beer in Germany. The rates on wheat were 6.50 marks on wheat, 6 marks on rye, and 4 marks on barley and oats. The committee adopted the rates of 7.50 marks on wheat and 7 marks on rye, barley, and oats. The tariff scheme did not include maximum and minimum rates for any of the 946 articles excepting cereals. When the scale of duties on grain had been altered against the protests of the ministers by the Tariff Committee, the Government proposed that all the other items should be passed in a lump as a basis of negotiation in making commercial treaties with individual countries. The committee declared that article and that article had placed obstacles in the way of all foreign commerce by requiring a certificate of origin to accompany every invoice, would not yield its consent so long as it went on to impose protective duties on all kinds of vegetables, 2 to 4 marks per 100 kilograms, with the object of killing a large trade with Italy and France for the goods of Germany, and similar duties on flowers, fruits, trees, and plants. While the tariff was under discussion the Prussian Minister of Commerce instituted an inquiry into the number of cartels, their organization, their industrial trusts, and their economic effects in lowering the cost of production, preventing overproduction, and raising or fixing prices. The proposal to erect the coal and iron cartels and then to export iron and steel manufactures was rejected. The coal and iron trades have made an agreement to pay exporters of iron and steel manufactures the whole difference between the price they realize abroad and the current prices in Germany. The cost of production, however, is not to be reduced until the market was glutted with merchandise; yet in the economical use of fuel and material and scientific methods of production, as well as in the cheaperness of goods, German iron manufacturers have an advantage over their competitors. When the Socialists on the Tariff Committee proposed to admit free of duty all kinds of goods not used for rural purposes, in Germany Count Posadowsky promised a thorough investigation into the operations of rings. It is estimated that 300 cartels, syndicates, and combinations are in operation in Germany. To this end, the Reichstag voted to give the Socialists 500,000 marks to pay for the investigations. The proposal to spend within a few years, of which 80 are concerned with trade and 220 with production, including 80 in the metal, 40 in glass and pottery, 30 in the chemical, 20 in the textile, 10 in the coal, 10 in the paper, and 10 in the provision industries. By the rules of the United States Treasury Department import duties on German goods on which a syndicate of manufacturers has paid export duties are assessed on the prices current in the open market in Germany, not on the reduced export prices. Against this method of valuation Ger- many has protested. The Tariff Committee not only raised the proposed duties on live animals from 10 or 12 to 15 marks per 100 kilograms, but insisted that this rate should not be lowered more than 20 per cent. in commercial treaties. The Government duties on horses were 30 to 300 marks; those of the committee vary between 90 and 360 marks. The duty on tea was lowered from 100 to 25 marks. A protective duty was even imposed on milk. The duty on butter and cheese was raised from 20 to 30 marks. The duty on eggs the Agrarians particularly desired. The Parlia- ment showed a deficit of 48,000,000 marks, the income of the Imperial Government having decreased.
a presumption of fault from the point of view of the pecuniary responsibility for the accident. These provisions are also in accordance with Continental laws and contrary to existing British rules. The French distinction between salvage of a derelict and assistance of a crippled ship is abolished in the proposed treaty, with all rules fixing an arbitrary proportion of value due to the salver, such as 33% per cent. of the value of an abandoned vessel which the French code allows. The limitation of ship owners' liability was referred to a new commission. On the motion of Everett P. Wheeler, representing the United States, the proposal that damage and expense sustained by the salver should as of right be made good in case of successful salvage or assistance was stricken from the draft treaty. It was agreed that tribunals of either the home port of the defendant vessel or of the personal domicile of the defendant party should have jurisdiction in cases of collision; in case of a collision in territorial waters the representatives of Austria, Hungary, Japan, Sweden and Norway, and two other nations voted to give jurisdiction to the courts of the country where it takes place, although the vessel may not be arrested there nor either plaintiff or defendant have their domicile there; 5 countries, including England, France, Germany, and the United States, voted in the negative, and the question was reserved for further discussion at a future conference. The registration of compulsion insurance by the courts of the port of where a ship is registered was agreed to by a vote of 9 nations against 4. The question whether the courts of a place where the defendant's vessel was built could have final jurisdiction was decided affirmatively, but the United States representatives were alone in supporting the present American and English practice, which confers jurisdiction on the courts of a country in which a defendant can be served, although he has neither domicile nor residence there. Whether mere residence should suffice was left for further consideration.

Labor Congresses.—The thirteenth International Congress of Miners met at Düsseldorf on May 19, 1902. For the first time the British miners were represented by five persons out of those of the Continental countries. From the Continent there were 72 delegates voting for 748,000 miners. From Great Britain 39 delegates represented 693,000 miners. The British Miners' Federation and 3 represented 80,000 miners of Durham, who still held out against the legal eight-hour day demanded by all other miners. British as well as Continental. The objects of the congresses were defined to be to limit the hours of underground labor from bank to bank; to obtain proper supervision and inspection of mines, including the election of additional inspectors by the workers, such inspectors to be paid by the state; to organize powers to enforce legal enactments; and to devise means to secure just contracts and fair treatment for all persons in or about mines. The Welsh miners desired an eight-hour day, among other reasons, because it would allow short-firing to take place between shifts after an interval sufficient to allow dust to settle after the men had left the mines. German delegates declared that accidents most frequently occurred in Germany when the men were exposed by law to a 10-hour day, but a British delegate described the bill passed by the French Chamber gradually reducing the work-day to eight hours from bank to bank. A Belgian delegate declared that in his country the few legal enactments that existed for the purpose of preventing accidents were not strictly applied. An Austrian delegate was interrupted by a Welsh delegate, who thought that if the rule previously in force allowing but a single German speech to a German and Austrian delegates together were to be disregarded the Welsh and English might speak for the miners of their separate nationalities. The rule which was made because in former congresses the German and Austrian representation combined was comparatively small, was rescinded on the motion of an English delegate. The Austrian then described the new Austrian law which reduces the hours of labor in coal-mines to nine hours a day. The congress voted in favor of a legal eight-hour day, which on the motion of the French delegation applies also to surface workers. In regard to compensation for accidents and old-age pensions, it appeared that miners are worst off in Belgium, where there is no law on the subject and the benefit associations pay only a quarter of the wages in cases of accident and an old-age pension of a quarter of a franc a day. In England the doctors frequently deprive the victim of an accident of the full amount of his insurance on the ground of complication with diseases. German doctors cut down allowances in the same way, and the law has intervened to forbid the practice. The law provided for a daily rate of wages when the man has paid subscriptions to benefit societies to secure that amount of insurance or more. The German law of compulsory insurance restricts miners capacity for earning capacity as the result of an accident. In Austria the miners have only their benefit funds to rely upon, and these are in an insolvent condition. Weagel miners receive from 30 kruizers to a guilder a day until they recover, and if totally incapacitated a pension varying from 80 to 120 guilders a year, for which benefits they have to subscribe from 2 to 5 per cent. of their wages. The French miners are the most favorably treated in case of accidents, since they contribute nothing to the fund, yet after the fourth day receive half-wages. The congress voted unanimously to have compensation laws amended so as to cover all accidents in or about mines, to begin from the day of the injury. It was numerous than those of the Continental countries. From the Congress the governments of all countries should provide pensions for the aged and the British Government extended its sympathy to the French miners in their effort to secure pensions of 2 francs a day after twenty-five years of service, irrespective of age. A resolution that miners in general should vote only for candidates pledged to support the proposals adopted by the International Congress and endeavor to enact them into laws; in default of such candidates the miners should nominate and elect representatives from among themselves. The congress adjourned on May 23.

An International Trade-Union Congress was held at Stuttgart in June. The English delegates agreed with their Continental colleagues in the opinion that, in addition to endeavoring to obtain better wages, it was necessary to direct their attention to politics, and that the amalgamation of the trade-unions with international socialism was only a question of time, although the old-fashioned unions were not yet ready to amalgamate all labor. The thirteenth German Socialist Congress was opened at Munich on Sept. 15. The Bernstein proposals for the revision of the Marxist dogmas on which Social-Democratic programs have been based and the adoption of more practical political
GERMANY.

Aims were once more advanced by their author. The trade-unionists in the congress differed with the advanced Socialists in regard to workmen's insurance and other legislation. The unions, which had their benefit associations before compulsory insurance was introduced, held the opinion that Government should aid workmen by organizing their own labor organizations, and that if unorganized workmen could obtain from the Government the same advantages as those who belonged to labor organizations and accept the interest of the workmen would suffer. Both parties agreed that existing legislation is inadequate. The congress adopted resolutions demanding the extension of insurance to all workmen and the amendment of its administration by the insured, and the contribution to its costs by all classes; the extension of the existing system of accident insurance, the establishment of a board of control composed of officials elected by the workmen and paid by the Government; the improvement of the means of preventing diseases incident to labor, full compensation to families of injured workmen, and the prohibition of the employment of women for four weeks before and after childbirth; and the establishment of insurance for the unemployed and for the widows and orphans of workmen. The Reichstag delegates of the party were instructed to consider the advisability of moving a resolution in the Reichstag in favor of an eight-hour day. The congress resolved to support only candidates for the Reichstag pledged to uphold universal suffrage, to vote against higher import duties on foodstuffs, or any indirect tax on articles destined for the people's consumption, and to support a large navy bill by increasing the burdens of the people. The exclusion of foreign meat was condemned. A resolution was passed recognizing the danger to working men from immediate indulgence in alcohol, but declining to make total abstinence a condition of party membership.

Dependencies. - The possessions and protectorates of Germany, the acquisition of which ceased since 1884, have a total area estimated at 1,027,820 square miles, of which 591,460 miles are in Africa (see East Africa, South Africa, and Volta Area), 200 square miles in Asia, and 96,160 square miles in the Pacific. The Asiatic territory consists of the town, harbor, and district of Kiorouak, occupied by a naval force in November, 1888, and the city of Nanking, leased to Germany by the Chinese Government for a term of ninety-nine years. A protectorate was proclaimed on April 27, 1898. The leased territory has an area of 295 square miles, not including the bay, which is of equal extent. Surrounding the German territory, which has 80,000 inhabitants, is a neutral zone having an area of 2,500 square miles and a population of about 1,200,000. The administration of Kiauchau is under the control of the naval authorities, and at its head is a naval officer, Capt. Trupper in 1902. The estimated expenditure for 1903 is 12,528,000 marks, of which only 300,000 marks are raised by local taxation, 12,168,000 marks being supplied from the imperial treasury. The garrison in 1902 consisted of 2,352 marine infantry and artillery. A harbor is being dredged out and a mole built, 2 miles in length. From Tain-tau, opposite Kiauchau, the Germans are building a railroad to Shantun, which will thence run south to Yenchau, and there meet another railroad to be built in a southwesterly direction from Kiauchau. The railroad will tap the coal-fields of Weihsen and Pashau, within 100 miles of Kiauchau, of which Germans by the treaty have the concession, as well as priority in all other concessions to be granted by Shantung. The railroad was completed to Weihsen in the spring of 1902.

In the Pacific Germany possesses Kaiser Wilhelmsland and the Bismarck Archipelago, proclaimed German protectorates in 1894; the Marshall Islands, occupied in 1885; the Caroline, Palau, and Marianne Islands, purchased from Spain for 16,750,000 marks and transferred on Oct. 1, 1899; part of the Solomon Islands, Choiseul, Isabel, and various smaller islands having been ceded to Great Britain by the convention of Nov. 14, 1899; and the largest islands of the Samoan group, the triple protectorate over the whole group having been renounced by Great Britain in the Anglo-German agreement of Nov. 14, 1899, and by the United States, which received Tutuila. Kaiser Wilhelmsland is the northern part of the northeastern half of New Guinea. The protectorate, which includes Long island, Dampier island, and other islands, has an area estimated at 70,000 square miles and about 110,000 inhabitants. The population on Jan. 1, 1899, was 58, of whom 53 were Germans. The German New Guinea Company, which formerly conducted the administration, transferred it to the Imperial Government on April 1, 1899. The local revenue for 1903 was estimated at 100,000 marks, which was supplemented by an imperial subvention of 72,000 marks. The natural products include precious woods, bamboo, and coconuts. The coco-palms are carefully preserved. Tobacco, cotton, and coffee are cultivated. Copra, mother-of-pearl, and trepang are bartered by the natives for European goods. Gold is found in the Bismarck mountains. The value of imports in 1900 was 377,882 marks, of which 109,824 marks represent food substances. The value of exports was 212,117 marks, of which 119,300 marks represent tobacco and 65,000 marks copra.

The Caroline, Palau, and Marianne Islands were first attached to the New Guinea protectorate. The Caroline and Palau Islands, having an area of 560 square miles, with 40,000 inhabi-
GIFTS AND BEQUESTS.

The following list comprises the most notable gifts and bequests for public purposes, of $5,000 and upward in amount and value, that were made, becauseoperative, or were completed in the United States in 1902. It excludes the ordinary denominational contributions for education and benevolent purposes, all State and municipal appropriations to public and sectarian institutions, and the grants of Congress for various purposes of relief. As in the previous year, large individual philanthropy was a striking feature of the gifts and bequests. Besides the instances noted, there were several of exceptional amounts that are excluded from the list because they were propositions yet to be fulfilled or were still in an indefinite shape. Among these, which deserve notice as parts of the benevolent record of the year, are the following:

- John D. Rockefeller proposed to endow a corporation, known as the General Education Board and created by an act of Congress in 1902, with a sum understood to be $10,000,000. The object of the corporation, as set forth in the act, is "the promotion of education within the United States of America, without distinction of race, sex, or creed," and the corporation is authorized "to establish, maintain, or endow, or aid others to establish or maintain, public, elementary or primary schools, industrial schools, technical schools, normal schools, training-schools for teachers, or schools of any grade, or higher institutions of learning, and also to emaploy or otherwise employ teachers and lecturers; to aid, cooperate with or endeavor associations or other corporations engaged in educational work within the United States of America." The corporators' names in the bill are William H. Baldwin, Jr., Jabez L. M. Curry, Frederick T. Gates, Daniel C. Gilman, Morris K. Jesup, Robert C. Ogden, Walter H. Page, George Foster Peabody, and Albert Shaw.

- President William R. Harper, of the University of Chicago, on Nov. 19 confirmed a report that $8,000,000 had been secured for the consolidation of Rush Medical College with the university, but declined to make public the name of the donor.

- Henry C. Frick, of Pittsburgh, was credited with the intention of founding a university in that city which would be a larger institution than the Polytechnic School for which Andrew Carnegie had set aside $5,000,000. Mr. Frick's plan comprised the furnishing of ground, buildings, and an endowment of $3,000,000, the institution to be under the charge of Dr. Frederick Mueller, Prof. Lorenz's assistant.

- Toward the close of the year Mrs. Jane Lathrop Stanford, of San Francisco, ordered the separation of plans for a new library building for Leland Stanford Junior University, to be "the handsomest and most costly structure of its kind on this continent."

- Excluded also from the list are the contributions from various sources for the American Board of Commissioners for Foreign Missions, aggregating $18,309,183; and also the contributions of the year to the Methodist Episcopal Thank-offering Fund for the promotion of education, which in the specified three years ending Dec. 31, 1902, overtopped the $20,000,000 asked for by more than $1,000,000.

The known value of the gifts and bequests here enumerated exceeds $94,000,000.

- Abraham, Abraham, Brooklyn, N. Y., gift to Cornell University, the great Egyptologican and Assyriological library of the late Prof. August Eisenlohr, of Heidelberg University.

- Adams, Charles Kendall, Madison, Wis., bequest to Wisconsin University, a sum variously reported as $4,000,000 on the death of his widow, which occurred also in 1902, 15 fellowships of $10,000 each. See Obituaries, American.

- Adams, Prof. Herbert Baxter, Johns Hopkins University (died in 1902), bequest to the university, his residuary estate; paid in 1902, amounting to $43,000.

- Adelphi College, Brooklyn, N. Y., gift from friends to secure gift of $125,000 from John D. Rockefeller, $125,000.

- Albinger, Joseph, Mount Vernon, N. Y., bequest to the Church of Our Lady of Victory there, $25,000.

- Allegheny College, gift from friend, for endowment fund, $300,000.

- American Unitarian Association, New York, gift from a friend, for missionary work, $10,000.

- Ames, Mrs. Anna C., North Easton, Mass., gift to the public high school there, a fully equipped gymnasium, cost $10,000.

- Amherst College, friends for a new observatory to contain the largest object-glass in New England, $50,000.

- Anderson, Mrs. A. A., New York city, gift to the Society for the Relief of Crippled and Conditioned of the Poor, for public baths, $100,000.

- Andrews, Wallace C., New York city (died April 7, 1898), bequest for the establishment of a Glee's Industrial School at Willoughby, Ohio, a part of his estate, which in 1902 amounted to about $1,000,000, and was made available by an act of the Ohio Legislature incorporating a trust to manage the bequest.

- Anonymous resident of New York city, gift for the establishment in Philadelphia of a free clinic for the treatment of poor consumptives, to be under the charge of Dr. Lawrence F. Flick, $600,000, and a pledge of a further sum for a maintenance.

- Archbold, John D., New York city, gift to Syracuse University toward endowment, $400,000; the New York Kindergarten Association, for endowment of new kindergarten, $40,000; and with his wife, gift to St. Christopher's Home, for a new school building, $15,000.

- Arter, F. A., Cleveland, Ohio, gift to Allegheny College, Meadville, Pa., $50,000.

- Atwill, Mrs. Cornelia A., New York, bequests to St. Paul's Prt. in Chicago of a Lolita Armour Institute of Bloodless Surgery, providing ground, buildings, and an endowment of $10,000,000, the institution to be under the charge of Dr. Frederick Mueller, Prof. Lorenz's assistant.

- Toward the close of the year Mrs. Jane Lathrop Stanford, of San Francisco, ordered the separation of plans for a new library building for Leland Stanford Junior University, to be "the handsomest and most costly structure of its kind on this continent."

- Excluded also from the list are the contributions from various sources for the American Board of Commissioners for Foreign Missions, aggregating $18,309,183; and also the contributions of the year to the Methodist Episcopal Thank-offering Fund for the promotion of education, which in the specified three years ending Dec. 31, 1902, overtopped the $20,000,000 asked for by more than $1,000,000.

The known value of the gifts and bequests here enumerated exceeds $94,000,000.

- Abraham, Abraham, Brooklyn, N. Y., gift to Cornell University, the great Egyptologican and Assyriological library of the late Prof. August Eisenlohr, of Heidelberg University.

- Adams, Charles Kendall, Madison, Wis., bequest to Wisconsin University, a sum variously reported as $4,000,000 on the death of his widow, which occurred also in 1902, 15 fellowships of $10,000 each. See Obituaries, American.

- Adams, Prof. Herbert Baxter, Johns Hopkins University (died in 1902), bequest to the university, his residuary estate; paid in 1902, amounting to $43,000.

- Adelphi College, Brooklyn, N. Y., gift from friends to secure gift of $125,000 from John D. Rockefeller, $125,000.

- Albinger, Joseph, Mount Vernon, N. Y., bequest to the Church of Our Lady of Victory there, $25,000.

- Allegheny College, gift from friend, for endowment fund, $300,000.

- American Unitarian Association, New York, gift from a friend, for missionary work, $10,000.

- Ames, Mrs. Anna C., North Easton, Mass., gift to the public high school there, a fully equipped gymnasium, cost $10,000.

- Amherst College, friends for a new observatory to contain the largest object-glass in New England, $50,000.

- Anderson, Mrs. A. A., New York city, gift to the Society for the Relief of Crippled and Conditioned of the Poor, for public baths, $100,000.

- Andrews, Wallace C., New York city (died April 7, 1898), bequest for the establishment of a Glee's Industrial School at Willoughby, Ohio, a part of his estate, which in 1902 amounted to about $1,000,000, and was made available by an act of the Ohio Legislature incorporating a trust to manage the bequest.

- Anonymous resident of New York city, gift for the establishment in Philadelphia of a free clinic for the treatment of poor consumptives, to be under the charge of Dr. Lawrence F. Flick, $600,000, and a pledge of a further sum for a maintenance.

- Archbold, John D., New York city, gift to Syracuse University toward endowment, $400,000; the New York Kindergarten Association, for endowment of new kindergarten, $40,000; and with his wife, gift to St. Christopher's Home, for a new school building, $15,000.

- Arter, F. A., Cleveland, Ohio, gift to Allegheny College, Meadville, Pa., $50,000.

- Atwill, Mrs. Cornelia A., New York, bequests to St. Paul's Prt. in Chicago of a Lolita Armour Institute of Bloodless Surgery, providing ground, buildings, and an endowment of $10,000,000, the institution to be under the charge of Dr. Frederick Mueller, Prof. Lorenz's assistant.

- Toward the close of the year Mrs. Jane Lathrop Stanford, of San Francisco, ordered the separation of plans for a new library building for Leland Stanford Junior University, to be "the handsomest and most costly structure of its kind on this continent."

- Excluded also from the list are the contributions from various sources for the American Board of Commissioners for Foreign Missions, aggregating $18,309,183; and also the contributions of the year to the Methodist Episcopal Thank-offering Fund for the promotion of education, which in the specified three years ending Dec. 31, 1902, overtopped the $20,000,000 asked for by more than $1,000,000.

The known value of the gifts and bequests here enumerated exceeds $94,000,000.
GIFTS AND BEQUESTS.

Auchard, David, Helena, Mont., bequest for the building and maintenance of a Masonic Home, at a cost of $30,000, acres stocked with choice cattle and thoroughbred horses.

Aultman, Mrs. Katherine Barron, Canton, Ohio, bequest to that city for a library, $25,000.

Spence, W. W., Baltimore, Md., gift to Johns Hopkins University, toward endowment fund, $50,000.

Spreckels, Claus, San Francisco, gift to the University of California, for special books, $11,075.

Spreckels, Rudolph, San Francisco, gift to the University of California, for a physiology hall, $25,000.

Steele, Mrs. Esther Baker, Syracuse, N. Y., gift to Syracuse University, $10,000.

Stetson, Francis Lynde, New York, gift to Williams College, $60,000.

Stillman, James, New York, gift to Harvard University, to found a Chair of Anatomy, $100,000.

Stratton, Winfield Scott, Colorado Springs, Col., bequest for a Home for the Poor, the bulk of his estate, valued at $14,000,000.

Stuart, William A., Brooklyn, N. Y., bequest for a Masonic building in that borough, $125,000.

Studebaker, Clem, family of the late, South Bend, Ind., gift to the Epworth Hospital there, to pay for a new building, $75,000.

Swift, Gustaveus F., Chicago, gift to debt-raising fund of local Methodist Episcopal churches, $10,000.

Swope, Thomas H., Kansas City, Mo., gift to Central University, Danville, Ky., $25,000.

Teachers College, New York, gift from a friend, for a new gymnasium, $250,000.

Temple Emanuel, Congregation of, New York, gift to Columbia University, for endowment of a fellowship in honor of the Rev. Dr. Gustav Gottheil, $15,000.

Thomas, George C., Philadelphia, gift for building for parish work in connection with the projected Protestant cathedral in Manila, $25,000.

Thompson, Mrs. Mary, New York, gifts to Williams College, a chapel; and to Vassar College, a library building.

Thompson, Mrs. Mary Shaw. See Pratt, Mrs. Mary Morris.

Tompkins, Mrs. Cornelia C., New York, bequests to Tuskegee (Ala.) Normal School, $20,000; Children's Aid Society, $10,000; and Woman's National Sabbath Alliance, Woman's Executive Committee of Home Missions of the Presbyterian Church, and American Seaman's Friend Society, each $5,000.

Toussaint, Orson V., Washington, bequest to Williams College, available on the death of his widow, his estate, estimated at $70,000.

Tower, Charlemagne, gift to the Philadelphia Library, 2,500 Russian books.
Tuck, Edward, an American citizen resident in Paris, France, gift for the benefit of the American colony in Paris and American visitors to that city, the American Hospital erected on the most approved American models and managed by American physicians and nurses.

Tully, Miss Cecilia, Boston, Mass., bequests to Watertown College, $30,000; St. John's Seminary, $10,000; Apostolic College, County Limerick, Ireland, $5,000; Boston College, for scholarships, $4,000; Working Boys' Home, $2,000; Religious Society of the Sisters of Mount Carmel, and the Oblate Fathers Novitiate at Dublin, each $1,000; and Little Sisters of the Poor, Home for Destitute Catholic Children, House of the Good Shepherd, and Carney Hospital, each $500.

Turkey, Sultan of, gift to the University of Pennsylvania, through Prof. Herman V. Hilprecht, a collection of Babylonian antiquities, said to be the richest in the world.

Tufts College (Abae) Institute, gift from a friend, for a girls' dormitory, $25,000.

University of California, gift from friends, $30,000; the Alumni Association, $9,000; and a friend for salary of the professor of physiology for three years, $15,000.

Upson, Dr. Anson Judd, Utica, N. Y., bequest to the University, $5,000.

Vanderbilt, Mrs. Cornelius, New York, gift to St. Bartholomew's Church, an entire new front, cost $200,000.

Vanderbilt, Frederick W., New York, gift to Sheffield Scientific School of Yale University, for a new dormitory, land and money, value about $500,000.

Vere Rennselear, Mrs. Mary Thorn, New York city, bequest to her husband and sister, the interest to be used in aiding the poor and sick, $25,000.

Vassar College, Poughkeepsie, N. Y., gifts from friends, a library building and a chapel; from Alumni Endowment Committee, $9,000; for the Abbot and Beach Scholarships, each $8,000; and for a scholarship founded by the Association of Students of Miss Hersey's School, Boston, Mass., $5,000.

Vickery, Percy O., Augusta, Me., bequest to the Maine Teachers' Library, $5,000.

Von Paps, Ernest, New York, bequest to the German Hospital, $5,000.

Voorhees, Ralph, Clinton, N. J., gifts to Rutgers College, Library, $10,000; New York, $1,000; to John Hopkins University, $2,000; St. John's Guild Floating Hospital, Hebrew Orphan Asylum, Montefiore Home for Incurables, Home of the Good Shepherd, Emanuel Sisterhood Day Nursery, College for Catholic Travelers, and Skin and Cancer Hospital, each $500; Society for Prevention of Cruelty to Children, and Society for Prevention of Cruelty to Animals, each $50; and Actors' Fund, $200.

Wellstock, H., San Francisco, gift to the University of California, for its College of Commerce, $5,000.

Wellesley College, gift from Classical Society of a society house in the style of a Roman villa.

Wells College, Aurora, N. Y., gifts from 8 of the Alumni, for a recreation hall, an honor to Dean Helen Fairchild Smith, $15,000; from the class of 1902, a memorial window, and other gifts, aggregating $2,000.

Wells, Daniel, Chicago, Ill., bequests to 6 local charities, each $1,000.

Wetherill, Henry P., New York, gift to the University Settlement, a new building.

Wesleyan University, Middletown, and the Children's Aid Society, Orphans' Home and Asylum of the Protestant Episcopal Church, Colored Home and Hospital, Home for Old Men and Aged Couples, New Haven, $50,000; New York, $50,000; and to St. Luke's Home for Indigent Christian Females, all of New York city, each $25,000; New York Society for Relief of the Ruptured and Crippled, $15,000; and Samaritan Home for the Aged, $10,000.

Welsh, Mrs. Anna, N. Y., gift to Henry McCauley, Jr., fund for education of candidates for the Catholic priesthood, $450,000.

Wanamaker, John, Philadelphia, Pa., gift to Bethany College, Philadelphia, Pa., a new building, cost $300,000.

Waters, Mrs. Sarah Ann, New York city, bequests to the American Female Guardian Society and Home for the Friendless, improved real estate valued at $15,000, and to the Women's Auxiliary of the Guild for Crippled Children of the Poor, $1,000.

Webb, Mrs. Henrietta A., widow of William H. Webb, founder of Webb Academy and Home for Shipbuilders, New York, bequests to the academy, about $1,000,000; Hospital for Ruptured and Crippled, and Daisy Fields Home for Crippled Children, at Edgewater, N. J., each $1,000; and Night Refuge, Children's Aid Society, and Little Mothers of New York, each $500.

Webb, William Seward, M. D., New York city, gift to the University of Vermont, for purchase of the herbarium of Cyrus G. Pringle, $6,000.

Webber, Mrs. A. S., Nashville, Tenn., gift for a polytechnic institute there, $15,000.

Weeks, Mrs. Augusta J. S., Patchogue, L. I., bequest to that village, ground for a public park.

Weeks, George W., Clinton, Mass., bequests to Clinton Hospital, $30,000; the First Unitarian Church of Clinton, $22,000; the city of Clinton, for the site of a Carnegie Library, $15,000, for shade trees, $3,000, and to provide a course of lectures, $10,000; the Carnegie Library fund for the purchase of scientific books, $10,000 (the interest only to be used), and for books and pictures for the Children's Room, $3,000; and Woodland Cemetery, $10,000.

Well, Theodore G., New York, bequests to Mount Sinai Hospital, $2,000; Five Points House of Industry, St. Francis Hospital, Children's Aid Society, and A. C. Church, $1,000; St. John's Guild Floating Hospital, Hebrew Orphan Asylum, Montefiore Home for Incurables, Home of the Good Shepherd, Emanuel Sisterhood Day Nursery, College for Catholic Travelers, and Skin and Cancer Hospital, each $500; Society for Prevention of Cruelty to Children, and Society for Prevention of Cruelty to Animals, each $50; and Actors' Fund, $200.

Wellstock, H., San Francisco, gift to the University of California, for its College of Commerce, $5,000.

Wellesley College, gift from Classical Society of a society house in the style of a Roman villa.

Wells College, Aurora, N. Y., gifts from 8 of the Alumni, for a recreation hall, an honor to Dean Helen Fairchild Smith, $15,000; from the class of 1902, a memorial window, and other gifts, aggregating $2,000.

Wells, Daniel, Chicago, Ill., bequests to 6 local charities, each $1,000.

Wertheim, Henry P., New York, gift to the University Settlement, a new building.

Wesleyan University, Middletown, and the Children's Aid Society, Orphans' Home and Asylum of the Protestant Episcopal Church, Colored Home and Hospital, Home for Old Men and Aged Couples, New Haven, $50,000; New York, $50,000; and to St. Luke's Home for Indigent Christian Females, all of New York city, each $25,000; New York Society for Relief of the Ruptured and Crippled, $15,000; and Samaritan Home for the Aged, $10,000.
University of Pennsylvania, an increase of his 
endowment, $300,000, making it $500,000.

Wayne, Robert C., Louisville, Ky., bequests 
to local charities, $40,000.

Wheelock, Jerome, Worcester, Mass., bequests 
to the town of Grafton, Mass., for a town hall, 
$100,000; the city of Worcester for a bronze 
statue of himself, $100,000; Harvard University 
and Yale University, each $100,000; and to local 
charities, $50,000.

Whipple, Mrs. Evangeline M., Faribault, 
Minn., gift to the Episcopal Cathedral of Our 
Merciful Saviour, as a memorial to Bishop Henry 
B. Whipple, a set of chimes, cost $10,000.

White, Francis T., New York, gift to Earlham 
College, Richmond, Ind., conditional on the raising 
of $20,000 more to free the college from debt, 
$25,000.

White, Henry, gift to Johns Hopkins Uni-
versity, toward endowment fund, $5,000.

Wildener, Peter A. B., Philadelphia, Pa., gift 
for building, equipment, and endowment of 
Wildener Memorial Training School for Crippled 
Children, $2,000,000.

Young, A., Fountain Hill, Pa., gift to 
Lehigh University, toward equipment of its 
mechanical laboratory, $5,000.

Willis Avenue Methodist Church, Bronx 
branch, New York, gifts from friends to extin-
guish debt, $43,000.

Winthrop, Mrs. Mary J., New York city, be-
quest to Princeton (N. J.) Theological Seminary, 
his entire residuary estate, estimated at $1,500,-
000.

Woman's Christian Temperance Union, 
Passaic, N. J., gifts from friends for a hall, 
$15,000.

Woman's College, Baltimore, gift from trust-
ees of the great Methodist thank-offering fund, 
all the contributions paid in the limits of the 
Baltimore Conference, exceeding $44,000.

Wood, H. Holton, and wife, Boston, gift to 
the city of Derby, Conn., a public library, cost 
$50,000.

Woodward, Col. Robert B., Brooklyn, N. Y., 
gift to Brooklyn Institute, for 2 funds, each 
$25,000.

Wooster (Ohio), University of, gifts from 
friends toward rebuilding the university, $400,000.

Wright, J. Hood, Memorial Hospital, New 
York city, gift from friends, $10,929.25.

Wyman, William, Baltimore, Md., and 
other persons, a joint gift to Johns Hopkins University, 
for a new site for the university, 175 acres in the 
northern suburbs of Baltimore, valued at $1,000,-
000.

Yale University, gift from the class of 1876, 
to establish an Arthur Twining Hadley scholar-
ship, $5,000.

Young Men's Christian Association, Brook-
lyn, N. Y., gift from friends, for a new building, 
$150,000.

Young Men's Christian Association, Doug-
las island, Alaska, gift from three mining com-
panies there, a furnished building, cost $6,000; 
opened on Christmas.

Zabriskie, H. Lanston, gift to Wells College, 
for equipment of building given by Henry A. Mor-
gran, $25,000.

Ziegler, William, New York, gift to Barnard 
College, $10,000.

GRANGE, NATIONAL. Numerically the 
Grange reached its highest point about 1875, when 
it had a paid-up membership of 750,000. Im-
mEDIATEly after this a serious decline set in, and 
by 1886 the membership had been reduced to 100-
000. Moreover, by the date last named the Grange 
had almost ceased to exist in the South and in the 
Middle West. Iowa, Missouri, and Indiana, each 
of which had about 2,000 granges in 1875, had 
only a few score in 1888. Other organizations 
came upon the field and took the public eye. 
These things gave an impression that the Grange 
was extinct. But its membership never has gone 
much below the hundred-thousand mark; it never 
has missed an annual meeting; there has always 
been a reserve fund in the treasury; and since 
1888 there has been a steady, and even a remark-
able growth. The present membership is at least 
230,000. During the last fiscal year about 16,000 
members have been added, and about 350 new 
subordinate granges organized. In Michigan the 
order has increased since 1894 from 220 granges, 
with about 8,000 members, to 250 granges, with 32-
000 members. At present New York is the largest 
grange State, with about 80,000 members; Maine 
has about 35,000, and New Hampshire ranks fourth 
with about 28,000. The Grange is still strongest 
in New England, where it has about 100,000-
members; and, considering agricultural resources 
and population, it is weakest in the Middle West. 
The Grange was originally intended to minister 
to the social and educational needs of the farming 
class. Its founders never planned that it should 
be a business agency or a political party. But 
the so-called " Granger movement " did not get 
right off with the real Grange move-
ment—in the '70s swept the Grange off its feet. 
Or perhaps it would be more correct to say that 
the intensity of feeling on the part of the farmers 
toward the railroads and the middlemen caused 
the financial and legislative purposes of the 
Grange to be vastly overemphasized. And the 
decline of the Grange was largely because of dis-
appointment that it did not yield as prompt re-
turns along these lines as many of its members 
had looked for. In New England, however, this 
" Granger movement " did not take place. There 
the Grange grew more slowly, but it grew on its 
merits. Its social and educational purposes were 
constant emphasized, and it gradually took its 
place as a recognized social institution. The same 
kind of growth has more recently taken place in 
New York, Pennsylvania, Ohio, and Michigan.

The social work of the Grange is maintained 
throughout, through its frequent meetings, so-
cial programs, picnics, etc. The subordinate or 
local grange meets semimonthly, and sometimes weekly. The 
county or "Pomona," grange meets monthly or 
quarterly. The State grange meets biennially, 
meeting with a large number of delegates and visitors 
from all parts of the State. The National Grange, 
although a small body officially, draws a large 
number of visiting members. All these meetings 
give ample scope for social entertainment and 
culture. The more truly educational work of 
the order is encouraged through the presentation of 
library programs at each meeting of the county 
and subordinate granges. The lecturer is virtually 
the program committee, and through the efforts 
of the national and State lecturers this form of work 
is being rapidly systematized and extended. The 
Grange also takes an active part in legislative af-
fairs, but always in a non-partisan way. Public 
questions are constantly discussed at the meet-
ings, and committees present the views and wishes 
of the order before Legislatures and Congress. 
Not a little legislation, both State and national, 
has been secured through the assistance, and often 
by the initiation of the Grange. The Grange also 
renders financial assistance to the farmer, largely 
through cooperative purchases and fire insurance. 
The State grange makes contracts for goods at 
reduced rates with wholesale or jobbing houses.
The orders come through the subordinate grange, the goods being paid for on delivery. Binding-twine, fertilizers, farm machinery, are perhaps the leading articles purchased, although trade contracts exist for almost everything the farmer needs. Grange fire-insurance exists in a number of the States, the best example being in New York, where about $100,000,000 worth of risks is carried by Grange companies, at an average annual rate of about $1 a thousand.

The annual meeting of the National Grange in 1902 was held in Lansing, Mich., Nov. 12-21. Delegates from 28 States were present. As a whole, the meeting was of interest chiefly because of the showing made in the growth of the order. So far as any reports or resolutions are concerned, there was no unusual or radical action. The nearest approach to this was a resolution favoring Government ownership of railways. This resolution was not pressed, however, and did not come up for debate. The report of the Committee on Transportation was a vigorous arraignment of railway discrimination, and Attorney-General Knox, Commissioner Prouty, and Prof. Ely were quoted to illustrate the prevalence and results of this discrimination. The Grange had a good deal to do with securing the Interstate Commerce Commission, and is still in favor of giving that commission ample powers. It is undoubtedly the sentiment of the Grange that all possible resources along this line should be exhausted before Government ownership is seriously discussed.

So far as trusts are concerned, the Grange three years ago approved the following recommendations unanimously, and this statement may be said to represent the present Grange sentiment as to trust legislation:

"It must be made impossible for so-called trusts to accumulate millions by selling watered stock without adding to the wealth of the country. Therefore, we recommend:

"First, official inspection of all corporations, as in case of national banks. No corporation should be tolerated whose books can not bear such inspection.

"Second, prohibition of all rebates or discriminations by public carriers.

"Third, taxation of all capital stock.

"Fourth, all capital stock should be paid in full.

"Fifth, severe penalties for violation of law—first, by forfeiture of charter, fine, and imprisonment; second, by impeachment, fine, and imprisonment of all public officials whose duty it may be to enforce the law and who fail to perform that duty."

The National Grange does not prepare a general platform expressing its stand on public questions. The nearest approach to this is contained in the following quotation from the address of National Master Jones at the last session of the National Grange, which may be considered the official statement of the position of the National Grange on the subjects named:

"I again call attention to the legislation demanded by the agricultural interests of the country, considered, approved, and urged at the thirty-third, thirty-fourth, and thirty-fifth annual sessions of the National Grange. For the arguments in support of the legislation demanded I respectfully refer to the Journal of Proceedings of the thirty-third, thirty-fourth, and thirty-fifth annual sessions, and the action of the various committees and the addresses of the Legislative Committee to the Congress of the United States.

"1. Free delivery of mail in the rural districts, and that the service be placed on the same permanent footing as the delivery of mail in the cities, and that appropriations be commensurate with the demands and the benefits of the service.

"2. Provide for postal savings-banks.

"3. Submit an amendment to the Constitution providing for the election of United States Senators by direct vote of the people.

"4. Submit an amendment to the Constitution granting the power to Congress to regulate and control all corporations and combinations, preventing monopoly and using the corporate power to restrain trade or arbitrarily establish prices.

"5. Enlarge the powers and duties of the Interstate Commerce Commission as provided in Senate bill No. 1450 [the Cullom bill].

"6. Regulate the use of shoddy.

"7. Enact pure food laws.

"8. Provide for the extension of the markets for farm-products equally with manufactured articles.

"9. The enactment of the antitrust law, clearly defining what acts on the part of any corporation would be detrimental to public welfare.

"10. Speedy construction of the Nicaragua Canal by the United States [secured by the passage of the Isthmian Canal bill].

"11. The speedy construction of a ship-canal connecting the Mississippi river with the Great Lakes and the Great Lakes with the Atlantic Ocean.

"12. Revising the fees and salaries of all Federal officers, and placing them on a basis of similar service in private business.

"13. Protect the dairy interests by the passage of House bill No. 3717 [secured by the enactment into law of the Great Grange, which may be considered the official state-
The reigning sovereign is Edward VII, King of the United Kingdom and Ireland and of the British dominions beyond the seas and Emperor of India, eldest son of Victoria I and Prince Albert of Saxe-Coburg-Gotha, born Nov. 9, 1841, who succeeded to the throne on the death of his mother, Jan. 22, 1901. The heir apparent is George, Prince of Wales, son of King Edward and Alexandra, daughter of King Christian IX of Denmark, born Jan. 3, 1885, married on July 6, 1893, to Victoria, daughter of the Duke of Teck.

The power to legislate for the United Kingdom and, except in so far as the power has been delegated to local legislative authorities, for all the members of the British Empire is vested in the British Parliament, consisting of a House of Lords and a House of Commons. Members of the House of Lords are the princes of the royal blood; spiritual lords, who are the metropolitan bishops of ancient English sees; hereditary peers of Ireland, of Great Britain, and of the United Kingdom; representative peers of Scotland, elected by their fellow peers for the duration of Parliament; representative peers of Ireland, elected for life; and life peers and law lords. The number of peers on the roll of Parliament in 1901 was 592. The House of Commons contains 670 members, elected in boroughs, counties, and universities by the votes of all male householders and lodgers, by secret ballot. England, with 5,389,865 electors in 1901, is represented by 498 members, of whom 253 are elected by 3,046,900 county electors, 237 by 2,325,293 borough electors, and 5 by 17,702 university electors; Scotland, with 669,890 electors, by 72 members, of whom 39 are elected by 382,929 county electors, 31 by 294,653 borough electors, and 2 by 19,597 university electors; Ireland, having a total of 735,851 electors, by 103 members, of whom 85 are elected by 622,465 county electors, 16 by 109,087 borough electors, and 2 by 4,713 university electors.

The Committee of Ministers, called the Cabinet, representing the majority for the time being in the House of Commons, exercises in reality the authority that is nominally vested in the Crown. The Prime Minister chooses his colleagues and dispenses the patronage of the Crown; he initiates the policy of the Government in several departments by the measures suggested in their several departments by the other ministers, and when his policy or acts encounter the displeasure of Parliament, manifested by an adverse vote on a Cabinet question, the want of confidence, he either resigns with the rest of the Cabinet forthwith or he appeals to the country by dissolving Parliament and ordering new elections. When a Cabinet resigns the retiring Prime Minister advises the sovereign as to the selection of the statesman most competent to form a new Government, usually the leader of the Opposition in the House of Commons. The Cabinet formed on Nov. 1, 1900, and continued in office on the accession of Edward VII, was composed in the beginning of 1902 as follows: Prime Minister and Lord Privy Seal, the Marquis of Salisbury; Lord President of the Council, the Duke of Devonshire; Lord High Chancellor, the Earl of Halsbury; Secretary of State for Foreign Affairs, the Marquis of Lansdowne; Chancellor of the Duchy of Lancaster, Lord James of Hereford; First Lord of the Treasury, Arthur J. Balfour; Secretary of State for Home Department, C. T. Ritchie; Attorney General, Sir Michael E. Hicks-Benck; Secretary of State for the Colonies, Joseph Chamberlain; Secretary of State for War, W. St. John F. Brodrick; Secretary of State for India, Lord George Hamilton; First Lord of the Admiralty, Lord Burgh; President of the Local Government Board, W. H. Long; President of the Board of Trade, Gerald Balfour; Lord Lieutenant of Ireland, Earl Cadogan; Lord Chancellor of Ireland, Lord Ashbourne; Secretary for Scotland, Lord Balfour, of Burleigh; First Commissioner of Works, A. Akers-Douglas; Lord President of the Board of Agriculture, A. J. Balfour; Postmaster-General, the Marquis of Londonderry.

Area and Population.—The area of the divisions of the United Kingdom and their population at the census of April 1, 1901, are given in the following tabular:

<table>
<thead>
<tr>
<th>Division</th>
<th>Square Miles</th>
<th>Population</th>
</tr>
</thead>
<tbody>
<tr>
<td>England and Wales</td>
<td>58,809</td>
<td>22,990,070</td>

</tbody>
</table>

The annual rate of increase between 1891 and 1901 was 1.21 per cent. in England, 1.33 per cent. in Wales, 1.11 per cent. in Scotland, and 0.19 per cent. in the Channel Islands, while the population of Ireland decreased at the average rate of 0.53 per cent. per annum. The population in England and Wales consisted of 15,721,728 males and 16,804,347 females; in Scotland, 2,173,753 males and 2,296,348 females; in Ireland, 2,197,739 males and 2,258,807 females; in the Isle of Man, 22,486 males and 29,272 females; in the Channel Islands, 45,205 males and 50,636 females. The total population of the United Kingdom in 1900 England contained 74.1 per cent., Wales 4.1 per cent., Scotland 10.8 per cent., Ireland 10.7 per cent., the Isle of Man 0.1 per cent., the Channel Islands 0.2 per cent. In 1851 England contained 61 per cent. of the total population, Wales 3.6 per cent., Scotland 10.4 per cent., Ireland 23.7 per cent., the Isle of Man 0.2 per cent., the Channel Islands 0.3 per cent. Of the total population of England and Wales 24 per cent. in 1901 lived in 9 towns which had 250,000 inhabitants, and upward of 4,586,541 inhabitants within the registration area, 5,580,618 including the outer ring. The population of the metropolis has increased nearly fivefold in a century, but for the last half century the rate of increase has declined, except in the suburban districts of greater London, which have grown rapidly. The population of the other towns was: Birmingham, 684,947; Manchester, 543,909; Birmingham, 622,182; Leeds, 429,053; Sheffield, 380,717; Bristol, 328,842; Bradford, 279,809; West Ham, 267,308. Towns having from 100,000 to 250,000 contained 10 per cent. of the population. Kingston-upon-Hull had 240,018 inhabitants; Nottingham, 239,753; Salford, 220,936; Newcastle, 214,803; Leicester, 211,574; Portsmouth, 189,160; Bolton, 168,256; Cardiff, 164,420; Sunderland, 146,598; Oldham, 137,238; Croydon, 133,885; Blackburn, 127,527; Brighton, 125,418; Preston, 112,982; Norwich, 111,729; Birkenhead, 110,920; Gateshead, 109,926; Plymouth, 107,509; Derby, 105,785; Halifax, 104,933; Southampton, 104,911. The urban population of England and Wales was 77 per cent. of the total population, the rural population 23 per cent. in 1891. In Scotland, 65.3 per cent. of the population lived in town districts, 22 per cent. in rural districts on the mainland, and 2.7 per cent. on the islands. The town districts increased 15.12 per cent. in ten years,
and the rural districts of the mainland increased in population 0.87 per cent., but on the islands the population decreased 3.4 per cent., the average increase for the whole of Scotland being 11.09 per cent. Glasgow in 1901 had 735,908 inhabitants; Edinburgh, 316,478; Dundee, 148,341; Aberdeen, 143,722. In Ireland 23.2 per cent. of the people lived in towns of 10,000 inhabitants and over. Dublin had 298,328 inhabitants, but in the metropolitan police district there were 379,861; Belfast had 348,876.

The number of marriages in England and Wales in 1900 was 557,139; of births, 926,304; of deaths, 597,459; excess of births, 328,845. In Scotland the number of marriages was 32,449; of births, 131,355; of deaths, 82,267; excess of births, 49,088. In Ireland the number of marriages was 21,330; of births, 101,459; of deaths, 87,806; excess of births, 13,653. The emigration from the United Kingdom in 1901 was 302,484, against 296,561 in 1900. Of the emigrants 111,922 were English, 20,924 Scotch, 39,184 Irish, and the rest foreigners. The immigration of British and Irish was 172,140, against 168,825 in 1900. Of these 104,257 were bound for the United States, 15,908 for Canada, 10,716 for Australia, 4,334 for New Zealand, 2,094 for South Africa, 1,310 for France, 257 for the Argentine, 1,034 for Argentina, 2,875 for Brazil, 2,546 for Cape Colony and Natal, and 13,383 for other places. Of the emigrants who sailed in 1900 from British ports, 177,441 were males and 121,514 females. Of those of British and Irish origin, 96,102 were males and 72,723 females. There were 97,637 immigrants of British and Irish origin in 1900, so that the net decrease of the British population by immigration was only 71,185. The total number of immigrants was 175,747, leaving the net emigration 129,814.

FINANCES.—The budget estimate of revenue for the year ending March 31, 1901, was £217,250,000, and the estimated expenditure, including supplementary estimates, was £184,509,027. The actual receipts for the year were £230,384,084, and the actual expenditure was £233,952,294. The year ended with a deficit of £5,587,820, to be added to one of £13,882,502 for 1899. The revenue collected by the Government in 1901 was £219,000,000, and of this sum £90,000,000 were paid to local taxation accounts, leaving for the exchequer £130,384,084. Taxation produced 84 per cent. of the whole. The net receipts from customs duties were £230,270,887, of which £239,909,768 were collected from tobacco, £6,264,515 from tees, £2,344,907 from rum, £1,417,464 from brandy, £1,007,599 from other spirits, £1,488,483 from wines, £6,244,336 from China tea, £1,159,526 from tea, £7,514,181 from coffee, £194,101 from raisins, £175,984 from cocoa, and £285,877 from other articles. The yield of excise duties was £23,268,588, of which £19,506,000 were obtained from spirits, £13,490,620 from beer, £331,214 from railroads, £250,256 from license duties, and £7,808 from other sources. The estate duty produced £8,488,872, the temporary estate duty £29,035, the probate duty £42,529, legacy duty £3,092,380, succession duty £293,018, corporation duty, £14,840; total from death duties, etc., £12,483,202. The yield from stamps, etc., was £7,880,537, of which deeds produced £3,018,437, receipts £1,447,447, bills of exchange £920,000, patent medicines £297,480, licenses £170,302, the duty on the capital of companies £270,001, bonds to bearer £191,190, insurance £260,372, other sources £447,005. The yield of the land tax was £265,809; of the house duty, £1,701,083; of the property tax, £2,377,741; of the income tax receipts, £20,889,155 in all. £13,776,884 came from the post-office. £23,380,589 from the telegraph service £494,444 from Crown lands, £630,075 from interest on Suez Canal shares, and £2,237,161 from miscellaneous sources, including £947,553 from fee stamps, £923,907 from the mint, £178,188 from the Bank of England, and £187,423 from various sources. The expenditure in 1901 under the head of consolidated fund charges was £2,557,264, of which £15,106,532 were for interest on the funded debt, £2,756,612 for terminable annuities, £415,254 for interest of unfunded debt, and £174,310 for management of the debt, making the national debt service £18,462,708, not including £1,382,780 of interest on the war debt outside of the fixed charge. Other consolidated fund charges were £409,452 for the civil list, £259,305 for annuities and pensions, £78,872 for salaries, etc., £515,548 for courts of justice, and £265,500 of miscellaneous payments. The expenditure for the supply services was £161,035,000, of which £91,505,000 went for the army, £204,100 for ordnance factories, £25,920,000 for the navy, £25,500,000 for civil services, £25,824,000 for customs and internal revenue, £2,903,000 for the post-office, £2,737,000 for the telegraph service, and £771,000 for packet service. In addition to the ordinary expenditures, an equal amount of £2,931,443 was paid in subsidies to the colonies, £2,293,567 were expenditures under the barracks act of £50,687, under the telegraph acts, £1,060,000; under the naval works act, £2,135,000; under the military works act, £1,000,000; under the land registry act, £25,000; total, £4,914,587. The money raised by creating additional debt under the war loan acts of 1900 amounted to £32,163,300; and bills issued by the exchequer for £24,133,000. The balance in the exchequer on April 1, 1900, was £3,517,047. The gross receipts during 1901 were £241,176,086, and the gross disbursements were £239,086,618 leaving a balance of £5,999,418 on March 31, 1901. The cost of the British army for the year ending March 31, 1902, was estimated at £287,153,000, not including £23,886,939 for appropriations in aid. The expenditure on effective services was £283,970,500, including £15,677,000 for transport and remounts, £18,782,000 for provisions and forage, £12,400,000 for the militia, £1,230,000 for the auxiliary volunteer corps, £275,000 for the yeomanry, £650,000 for the colonial contingents, £650,000 for the foreign service, £1,230,000 for the admiralty and volunteers in the reserves, £200,000 for the regular army reserve, £1,088,000 for medical establishments, £24,900 for the chaplains' department, £119,200 for miscellaneous services, and £218,200 for miscellaneous services, and £305,000 for the War Office. For pensions, retired pay, and other non-effective services the disbursements amounted to £3,944,500. The estimated cost of the navy, not including £1,089,473 of appropriations in aid, was £30,575,500 in 1902, of which £14,676,000 went for ship-building and repairs, £5,760,000 for wages of officers, seamen, and marines, £5,919,700 for naval armaments, £1,802,000 for victualing and clothing, £79,000 for the Admiralty Office, £1,023,100 for works and buildings, £210,000 for medical establishments, £292,100 for the naval reserves, £1,060,000 for educational services, £65,800 for scientific services, £18,200 for militia, and £239,500 for the annual bonus for making a total of £28,603,000 for effective services, while for pensions, half-pay, etc., the expenditures were £2,271,000. The estimates for civil
GREAT BRITAIN AND IRELAND. 307.

services in 1902 amounted to £23,630,150, of which £2,074,015 were for public works and buildings and £332,579 for salaries and expenses in the colonial departments, £12,790,743 for education, £1,651,967 for foreign and colonial services (including £480,032 for the diplomatic and consular service), £486,093 for the colonial service, £546,049 for Cyprus, Uganda, etc., and £75,860 for subsidies to telegraphs, £608,866 for non-effective and charitable services, and £29,444 for miscellaneous expenses. The income tax in 1902 was 14d. in the pound, estimated to produce £33,800,000. The gross amount of the annual value of property and profits assessed to income tax in 1900 was £788,023,003, having grown from £465,594,369 in 1871. The share of England in 1900 was £675,287,799 in Scotland, £75,935,542; of Ireland, £23,447,572. The annual value of lands assessed to income tax in 1900 was £37,110,545 in England, £593,250 in Scotland, and £27,477,216 in Ireland; total, £5,153,191,414. The annual value of houses was £153,193,144 in England, £26,063,967 in Scotland, and £4,573,120 in Ireland; total, £174,430,501. The annual value of railroads assessed to income tax was £20,357,717; of mines and quarries £4,107,082; of gasworks, £6,503,433; of water-work, £4,614,317; of canals, etc., £3,476,016; of iron-works and other public concerns, £129,398,488. Additional beer and spirit duties and excise licenses, and a share in the probate and estate duty are collected by the Government and paid over to the local authorities. The net receipts for the year ended 31, 1901, amounted to £2,201,893, of which £1,985,898 were the additional beer and spirit duty, £3,886,269 licenses, and £4,237,867 the share of probate and estate duties. The payments made to local taxation accounts in the same year amounted to £7,373,820, of which £8,310,789 were in England, £1,527,412 in Scotland, and £401,475 in Ireland. Out of a total revenue of £140,353,500 in 1901, including the local taxation revenue, £113,244,000 were contributed by England, £14,919,000 by Scotland, and £2,556,500 by Ireland, while £2,556,500 came from the public services, £4,505,400 from the local taxation accounts, and £193,331,000 the sum of £1,456,296,000 went for imperial services and £34,769,000 were expended on English, £2,651,000 on Scottish, and £7,306,062,000 on Irish railways.

The gross liabilities of the state on March 31, 1901, amounted to £765,723,878, of which £351,192,153 were funded debt, £61,077,469 the estimated capital value of terminable annuities, and £78,133,000 unfunded debt, making the total capital of the national debt £200,592,622. Other capital liabilities were £431,118 under the Russian Dutch loan act of 1891, £2,657,801 under the Russian Dutch loan act of 1891, and £35,779 under the public offices act of 1895 and 1897, £487,942 under the Royal Niger Company act of 1897, £2,216,077 under military works acts, and £23,600 under the land registry act of 1900; total, £14,731,256. The assets of the Government were Suez Canal shares of the market value of £25,800,000 and £21,720,000 of other assets, besides, 14,731,256. The assets of the Government were Suez Canal shares of the market value of £25,800,000 and £21,720,000 of other assets, besides, £5,596,918.

The revenue for 1902 exceeded the budget estimate of £142,455,000 by £43,450,000. The budget estimate of £23,600,000 for the new postal and telegraph services, to which £12,631,000 of supplementary estimates were added in consequence of the war, but savings reduced the total expenditure to £216,522,000, leaving a deficit of £52,524,000, which was provided for out of the surplus of £30,000,000 for 1901 which produced the net sum of £25,553,000, leaving a balance of £4,029,000. Out of the total expenditure for the year £23,187,000 went for war charges in South Africa, £3,367,000 of interest on the war debt. Deducting this, the expenditure for the war during the year was £29,830,000, of which £25,320,000 were military and £4,000,000 civil expenditure. Toward this £17,306,000 were contributed from the revenue, including £4,681,000 of revenue saved by the suspension of the sinking-fund. The total cost of the war up to March 31, 1902, was £215,034,000, made up of £4,967,000 of interest on the war debt, £164,407,000 of supply grants for South Africa, and £26,060,000 of supply grants for China. It was defrayed by £119,814,000 of loans and £45,420,000 paid out of revenue. The British share of the Chinese indemnity amounts to £5,000,000. Of the South African War debt, £30,000,000 are expected to be repaid from the wealth of the Transvaal. The receipts from tobacco and spirits in 1902 showed a large falling off owing to forestallments of duty in the previous year. The consumption has been, on account of the dearth of beer, which was counterbalanced by a large increase in the consumption of tea and cocoa. The sugar duty produced £2,300,000, exceeding the estimate by £1,930,000, mainly because of forestallments in anticipation of an increased duty; yet in spite of the duty of 4s. 2d. a hundredweight the additional price of 4d. a hundredweight would amount to the consumption of beer, which was counterbalanced by a large increase in the consumption of tea and cocoa. The sugar duty produced £2,300,000, exceeding the estimate by £1,930,000, mainly because of forestallments in anticipation of an increased duty; yet in spite of the duty of 4s. 2d. a hundredweight the additional price of 4d. a hundredweight would amount to a half as much. The coal duty produced £1,314,000 on a total export of 44,004,000 tons, compared with 46,135,000 tons in the previous year and 43,094,000 tons in 1900. The imports of British coal into Hamburg fell off no more than those from other countries and the competition of American coal in Mediterranean ports, which began with the high prices of 1900, declined with the fall in price. The duties fell off £380,000; the tobacco revenue, from £12,330,000 to £10,585,000; excise duties, from £23,400,000 to £21,300,000, being a decrease in two consecutive years being attributed to the dilution of beer by the brewers on account of the tax. The death duties amounted to £18,398,000, including £4,198,000 paid over to the local taxation fund. The excise receipts from this source were £1,220,000 more than in the previous year and £290,000 more than the estimate. Stamps produced £7,800,000, a falling off of £25,000. The yield of the income tax was £348,000,000, which was £1,000,000 more than the estimate. The excise receipts on March 31, 1902, amounted to £38,007,000, including surplus receipts from the consols loan of £600,000.

The national debt was increased by this loan to £706,408,000, including £20,532,000 expended on reproductive works and repaid by annual votes. Deducting this, the dead weight of the debt was £747,876,000, which was £59,844,000 more than in the previous year. Including the amounts paid into the local taxation account and expenditure for military and naval works, the Uganda Railroad, the Pacific cable, and other purposes, the total expenditure for 1902 was £215,783,000. The expenditure for the year ending March 31, 1903, was estimated at £29,450,000 for charges on the consolidated fund, £38,605,000 for army services, £31,253,000 for civil service, £5,000,000 for customs and inland revenue, £14,752,000 for the postal and telegraph services; total, £174,609,000. On the
exisitng basis of taxation customs duties were expected to yield £32,900,000, excise £32,700,000, death duties £2,500,000, land tax £740,000, the house duty £1,760,000, the income tax £36,000,000; total, £128,000,000, besides £21,755,000 of non-tax revenue, which raises the total income to £149,755,000. This left a deficiency of £26,824,000 to provide for, but if the South African War continued this might be swelled by over £16,000,000, and expenses of the South African constabulary and grants to the West Indian colonies pending the abolition of sugar bounties, with interest on new debts to be incurred, would add to the deficit, which was estimated at a total of £45,500,000 on the contingency of the continuance of hostilities, whereas if they ceased gratuities and bounties to soldiers, transportation of reservists home, the maintenance of a considerable force in Africa, and means to be provided for restocking and rebuilding the devastated farms and resettling the two colonies would require large sums, though the new colonies may later reap a great advantage. Of the estimated deficit £4,500,000 would be obtained by suspending the sinking-fund for another year. Another increase of 1d. in the income tax, making it 4½d. in the pound, was expected to yield £2,500,000. Doubling the stamp tax of 1d. on checks would produce £500,000. Besides these increased taxes a tax on imported grain, a registration duty such as was abolished in 1899, was introduced and fixed at 3d. a hundredweight on all kinds of cereals, dried peas and beans, uncleaned rice, etc., and 5d. on flour, meal, starch, cleaned rice, etc., and of this the yield was £2,650,000, making the total receipts from new taxation £15,100,000, reducing the estimated deficit to £35,500,000, of which £32,000,000 was to be borrowed and the remainder paid out of the unexpended exchequer balances. The total estimated expenditure is £18,469,000. The estimates of revenue, including the new taxes, were £35,450,000 from customs, £25,700,000 from excise, £13,200,000 from death duties, £27,000,000 from stamps, £2,500,000 from land tax and house duty, £35,900,000 from income tax, £21,750,000 of non-tax revenue, and £1,245,000 of old stock.

The Army.—The army estimates for the year ending March 31, 1902, fixed the strength of the regular army of the United Kingdom at 9,745 commissioned officers, 19,604 sergeants, 5,633 drummers and musicians, and 184,433 rank and file, making a total of 224,680 men of all ranks, an increase of 7,351 over the authorized strength for 1901. The general and departmental staff consisted of 307 officers, with 130 non-commissioned officers and 6 soldiers, on the general staff, 236 army accountants, 86 officers in the chaplains' department, 96 in the medical department, and 110, with 6 non-commissioned officers and 1 man, in the veterinary department; total, 805 officers, with 136 non-commissioned officers and 7 men. The regimental establishments comprised 555 officers, 1,330 non-commissioned officers, and 12,376 rank and file in the cavalry; 1,541 officers, 3,360 non-commissioned officers, and 34,735 rank and file in the royal artillery; 702 officers, 1,588 non-commissioned officers, and 7,843 rank and file in the royal engineers; 3,501 officers, 8,479 non-commissioned officers, and 91,963 rank and file in the infantry; 419 officers, 934 non-commissioned officers, and 13,982 rank and file in colonial and native Indian corps; 248 officers, 1,172 non-commissioned officers, and 21,742 rank and file in the light infantry; 309 officers, 2,252 non-commissioned officers, and 49,253 rank and file in the army service corps; and 551 officers, 485 non-commissioned officers, and 2,586 rank and file in the medical service corps; total, 8,727,200, 1,860 non-commissioned officers, and 184,244 rank and file, with 25,402 horses. The army voted further for 236,200 imperial, colonial, Indian, and irregular force during the war in South Africa and for the expeditionary force in China, increasing the total number to 450,000, exclusive of the army in India. The numbers of troops of all ranks maintained for service in the United Kingdom on Jan. 1, 1900, were: 11,676 cavalry, 17,572 artillery, 5,531 engineers and 72,097 infantry and special corps; total, 106,688, with 13,892 horses and mules. Of these, 79,057, with 10,649 horses, were stationed in England and Wales; 3,942, with 345 horses, in Scotland; and 23,687, with 2,905 horses, in Ireland. The numbers serving abroad at that date were 4,257, with 769 horses, in Egypt; 44,605, with 2,317 horses, in the colonies; 74,406, with 12,303 horses, in India; and 1,837 in Crete; total, 125,165, with 15,898 horses and mules. The total effective strength of the British regular Army on Jan. 1, 1899, was therefore 231,851 officers and men, with 29,281 horses. The reserves and auxiliary forces consist of the army reserve, the militia, the yeomanry, and the home volunteers. The authorized strength of the military forces of the empire, according to the estimates for the year ending March 31, 1902, was as follows: Regular forces, including native Indian regiments, 2,899; army reserve, first class, 90,000; militia, 131,593; new militia reserve, 50,000; militia of the Channel Islands, 3,271; militia of Malta and Bermuda, 2,098; yeomanry, 8,657; volunteers, 277,000; regular forces on the Indian establishment, 73,518; total, 717,670. The effective strength of the various classes of troops as reported on Jan. 1, 1901, was as follows: Regular forces, home and colonial, 335,937, including 9,354 yeomanry and 7,000 enlisted volunteers; native Indian regiments, 22,313, including 19,128 men serving in the China expedition; army reserve, first class, 5,251, including 2,163 enlisted volunteers; militia of the United Kingdom, 100,068; militia of the Channel Islands, 3,429; militia of Malta and Bermuda, 2,098; yeomanry, 8,657; volunteers, 277,000; regular forces on the Indian establishment, 63,023; total effective, 519,065. This includes the British, but not the colonial forces, serving in South Africa. The strength of the army in South Africa on Feb. 1, 1901, was 141,490 regulars; 28,330 colonial, not including the latest levies not yet reported; 7,995 imperial yeomanry; 7,700 volunteers; and 19,425 militia; total, 204,945. The regular forces consisted of 4,305 officers and 137,085 rank and file, the latter comprising 12,000 cavalry, 12,000 artillery, 29,700 infantry, and 12,885 other troops. Under the old system there were 12 militia districts in the United Kingdom, subdivided into 67 regimental districts, each of which was the recruiting ground for a regiment, with which were linked the district militia and according to the resolution of the House of Commons adopted on May 16, 1901, the army is to be organized in 6 army corps, with staff, buildings, and stores for each; a military reserve of 50,000 men will be formed, and the yeomanry will be increased from 12,000 to 35,000; and 8 regiments outside of the army corps are to be recruited for garrison service. The first of these army corps, quartered respectively at Aldershot, on Salisbury Plain, and in Ireland, will be available for either home defence or foreign service. The other three quartered at Colchester, at York, and in Scotland, will have distributed among
them 60 battalions of militia and volunteers. The force to be maintained when the new organization is perfected will comprise 155,000 regulars in the United Kingdom, an army reserve of 90,000 men, 150,000 militia, 35,000 yeomanry, and 250,000 volunteers. Under the short-service system men enlist in the regular army for twelve years, serving in the active army from three to seven years, and for the remainder of the term belonging to the reserve. The number of recruits enlisted in the army during the year ending Nov. 30, 1899, was 36,636, of whom 34.8 per cent. were below standard height; militia recruits, 37,370. The regular army on Jan. 1, 1899, was composed of 165,038 Englishmen, 17,256 Scotchmen, 2,938 Irishmen, 10,015 born in the colonies and India, 97 foreigners, and 1,580 not reported. The strength of the British army has been increased from 70,000 men in 1872 to 212,000 in 1897, 229,000 in 1899, and 238,000 in 1902, with a reserve of 90,000. The effective strength in 1902 was not over 210,000. The number of recruits in 1896 was 27,800; in 1897, 33,700; in 1898, when the standard was lowered, 33,400; in 1899, 40,200; and in 1900, when the standard was lowered a second time and the war stimulated enlistment, 46,700; in 1901, with the war still continuing, 45,100. The waste in desertions has been considerable. In 1901 was carried out, and to 1900 it rose to 5,484 and in 1901 to 8,822. The available reserves were decreased by the war from 81,000 at the beginning of the war to 20,000 or 30,000 men, and it was hoped to induce them to remain with the colors instead of going into the reserve. To fill the ranks, which at the existing rate of recruiting would be reduced to a fraction of the 50,000 to 100,000 Government in 1902 raised the pay, which was nominally 1s. a day, but actually from 3/- to 8d., to 10d., to a clear shilling. According to the plan adopted soldiers are enlisted for three years. At the end of two years a soldier, if efficient and of good character, is allowed to choose whether at the end of his term of three years he will pass into the reserve for nine years or whether he will serve with the colors for six years longer, making eight years in all, and then go into the reserve for four years. These reenlisted soldiers receive 1s. 6d. a day, except such as are not up to the standards in shooting, who when they are reengaged only get 4d. a day extra until they become efficient shots, and after that the full 6d. The extra pay is expected to cost $1,500,000 a year. The soldiers are to be reenlisted and furnish 50,000 recruits a year, which will keep the army full and give a reserve of 150,000 or 175,000 men. The additional cost is estimated at $1,048,000 to the British and $7,966,000 to the Indian Government per annum. When the South African War broke out the effective in the British army, exclusive of India, but including the reserve, were 240,000 men. The total troops in South Africa, exclusive of colonial troops, militia, volunteers, and yeomanry, have been about 150,000. The total number landed in thirty months was 220,000, of whom 220,000 came for the British. At the close of the war the number drawing rations in South Africa, including army attendants, was over 300,000 men, with 245,000 horses and mules. The estimates were made by the Board of War in 1903 amounting to $299,310,000, provided for 420,000 men all told. The program for 1903 included reforms in the volunteer corps in Great Britain, which would be in a good position in the first line of defense in case of invasion if the United Kingdom is to escape the necessity of conscription. Men who have been trained in the volunteers for four years will be allowed to go into a volunteer reserve for six years on the condition that they practise shooting at the range once in two years. A yeomanry reserve will be created, of the maximum strength of 5,000 men, who will receive £5 a year each and must be willing to serve abroad in case the whole army reserve is mobilized. Another yeomanry reserve, consisting of men able to ride 25 miles in three hours, will be formed so that they can not go into camp for two weeks every year, will be available, like the volunteer reserve, for home defense. The militia, artillery, and engineers will be improved and increased, and a militia reserve is to be created. Militia officers will be allowed to serve temporarily with line regiments, and the conditions of service in the regular army for officers will be changed by lightening the incidental expenses that keep out men of small means, improving their military education, and rewarding professional work and efficiency. Drill will be changed on the principle that the company, not the battalion, is the practical unit, and companies will be drilled in rifle exercises, bayonet fighting, skirmishing, and signal exercises for eight months of the year, while unnecessary parade drill and manual and bayonet exercises will be abolished. The plan of increasing the yeomanry by 21 regiments adopted in 1899 was a great success, and two thirds of them having been raised at the end of the fiscal year 1902, increasing the number of men from 10,000 to 17,500. Of 8 garrison regiments to be reenlisted in 1903, 5,000 served their time 5 were already formed. The army-corps scheme remained in abeyance while the war was still going on. Buildings and training grounds were being got ready, and a system of decentralization and delegation of powers was being introduced in the organization of the army, but even the first army corps at Aldershot still remained on paper only. The concentration of camps in South Africa, scandals in the purchase of horses and supplies, and other matters connected with the war gave occasion for investigations. In the concentration camps the military authorities had to provide food, shelter, and clothing for 150,000 persons outside of the army. Provision had to be made, moreover, for prisoners of war in five or six places, hundreds and thousands. The remounts and transport animals shipped to South Africa consisted of 290,000 horses and 120,000 mules, besides 120,000 horses purchased locally. The navy.—The British navy on Jan. 1, 1901, comprised 14 first-class, 12 second-class, and 11 third-class battle-ships, 6 armored cruisers, 125 protected cruisers, 33 torpedo-gunboats and others, 26 destroyers, 2 torpedo-ships, and 11 first-class and 71 second-class torpedo-boats. There were 13 obsolete battle-ships, 10 coast-defense vessels, and 95 third-class gunboats which were not counted in the effective navy, and also numerous river gunboats. Already launched, but not yet ready for sea, were 7 first-class battle-ships, 8 armored cruisers, and 1 destroyer. In process of building or authorized to be built there were 8 more first-class battle-ships, 6 armored cruisers, 2 protected cruisers, 12 destroyers, and 4 first-class torpedo-boats. The personnel of the navy, for which the estimates of the year ending March 31, 1902, provided, comprised 85,323 naval officers and seamen, including 3,700 boys serving on the ships, 2,800 on the gunboats and other auxiliaries, and 6,000 marines on sea service, 6,200 boys in training, 440 cadets and engineer students, 1,048 pensioners, and 1,824 others; total, 118,825, against 114,990 in 1901. The increase of 4,225 in the previous year included 287 officers, 1,150 seamen,
1,000 marines, 396 miscellaneous, 500 stokers, 100 electricians, 210 other artisans, and 100 apprenticed shipwrights and cooperers. The naval reserve numbered 25,000 seamen. Parliament authorized the gradual increase in five years of flag-officers from 88 to 80, of captains from 208 to 245, of commanders from 304 to 350, of lieutenants from 1,150 to 1,300, of engineers from the main to 1,050, of doctors from 450 to 490, of gunners and boatswains from 920 to 1,150, of chief carpenters from 18 to 20, of carpenters from 207 to 240. The canteen system is to be improved, the number of meals on boardhip increased from 3 to 5, and the standard of living for the sailors made to correspond in some degree with the higher standard on land. The system of subsidizing merchant steamers as auxiliary cruisers has been altered, so that 18 of the fastest liners will receive regular subsidies and be ready to be converted at any time into war-ships and 30 others will be held at the disposal of the Government.

The latest type of battle-ship, adopted for the King Edward, Dominion, and Commonwealth, of 16,500 tons, with armor of 12 inches thickness and engines of 18,000 horse-power, designed to give a speed of 19 knots, has an armament of 4 12-inch breech-loaders in turrets on the main deck, 4 9.2-inch quick-firers in smaller turrets above, and 10 6-inch and 28 3-inch quick-firers. The Queen and Prince of Wales, of 15,000 tons, with 12-inch armor at the water-line and engines of 18,000 horse-power, giving a speed of 19 knots, carry 4 12-inch guns in fore and aft turrets, 12 6-inch quick-firers in armored casemates, and 18 3-inch quick-firers. This arrangement was followed in all battle-ships from the Royal Sovereign, launched in 1801, and her predecessor, the Hood, and sisters, the Empress of India, Repulse, Royal Oak, Ramillies, Revolution, and Revenge, until it was changed in the King Edward class, which has a complete armored battery on the main deck. The Duncan, Cornwallis, Russell, Exmouth, Monmouth, and Albemarle, of 14,000 tons, have 11 inches of armor and, besides pairs of 12-inch guns, carry 12 6-inch and 12 3-inch quick-firers, their steam-power and nominal speed being the same as in the latest models. The London, Venerable, and Bulwark, of 14,700 tons, launched in 1899, having 12 12-inch guns and 12 6-inch and 18 3-inch quick-firers, and with engines of 15,000 horse-power can make 18 knots an hour. Of the same size and speed are the Formidable, Irresistible, and Implacable, launched in 1898 and 1899, which carry, besides pairs of 12-inch guns, 12 6-inch quick-firers, 16 3-inch quick-firers. These are of the same type as the Canopus, launched in 1897, of 12,950 tons, whose secondary armament consists of 12 6-inch and 10 3-inch quick-firers and whose speed, with engines of 13,500 horse-power, is 18 knots, with 12 inches of armor amidships and a 2-inch belt extending to the bow. Of the same class are the Ocean, Goliath, Albion, Glory, and Vengeance, the last of which was launched in 1896. This class was an improvement on the
of 21,000 horse-power, giving a speed of 21 knots. The Diadem, Andromeda, Niobe, Europa, Spartan, Argus, and Mercury, launched in 1896, 1897, and 1898, are the largest deck-protected cruisers, having a displacement of 11,000 tons, with a quick-firing armament of 16 6-inch, 14 3-inch, and 20 small guns well protected and disposed as in the Majestic, and capable of steaming 204 knots with engines of 16,500 horse-power. The new protected cruisers Encounter and Challenger, of 5,000 tons, the same size as the Hermes, Hyacinth, and Highflyer, launched in 1898, will carry 12 6-inch and 15 smaller quick-firers and with engines of 9,600 horse-power are designed to make 184 knots. The latest destroyers made 36 and 37 knots in their trials. In 1901 the Viper and Cobra went to pieces at sea and an official investigation was ordered for the purpose of determining what was the cause of their weakness. The British Government, while engaged in experiments on the best means of destroying submarine boats or warding off their attacks, began in 1900 to build minelayers of its own, adopting the Holland design, of which type 5 boats were ordered.

The navy estimates for 1903, amounting to £54,300,000, were £39,000,000 over 1902, while for new construction £9,000,000 were voted, compared with £9,000,000. The program of new construction includes 2 battle-ships, 3 armored cruisers; 269 class cruisers, 4 scouts, 9 destroyers, 4 torpedo-boats, and 4 submarines. The battle-ships of the Powerful and Terrible class will receive additional guns, and the Barfleur and Barfleur-class will have 4.7-inch replaced by 6-inch guns. The naval scouts or fleet messengers are a new type and class of vessels. The increase in the personnel for 1903 is 5,375, making a total of 125,550 officers and men. During the fiscal year ending March 31, 1902, the battleships Formidable, Implacable, Irresistible, Bulwark, and Vengeance and the armored cruisers Aboukir, Cressy, Hogue, and Sutlej were completed, together with the protected cruisers Spartan and Pandora, 2 royal yachts, 4 sloops, 2 river steamers, 22 destroyers, 44 auxiliary vessels, and 5 submarines.

There were under construction on April 1, 1902, 13 battle-ships, 22 armored cruisers, 4 protected cruisers, 4 sloops, 2 auxiliary vessels, 10 destroyers, and 3 submarines. The vessels to be completed during the year ending March 31, 1903, are 5 battle-ships, 7 armored cruisers, 2 sloops, 2 auxiliary vessels, and 2 destroyers. The future destroyers are to be stronger and to have sea-keeping power to enable them to accompany fleets. The scouts will be still stronger. The existing destroyers, the type of which has proved unsatisfactory, will be reconstructed. The Viper and the Cobra, the first destroyers that foundered, were driven by steam-turbines. Vessels of the ordinary type with ordinary engines afterward proved too weak, and the prejudice against turbines therefore passed away. This kind of propeller, however, operates most economically at high speed and can not be as easily regulated as the steam-engine. Hence a type of destroyer has been tried, the Velox, in which auxiliary triple-expansion steam-engines are used for moderate, the turbines alone for the maximum speed. The triple-expansion engines are now ordered also with thuribines coupled in the same way with steam-engines, driven at ordinary speed by their exhaust steam.

The Area: Great Britain and Ireland. The inhabited area of Great Britain and Ireland, without the fishing boats and islands claimed by Ireland, is 157,270 square miles. Thus the inhabited area of Ireland is 32,280 square miles. The fishing boats and islands claimed by Ireland are contained in the territory of 51,300 square miles. The areas of the separate countries are Great Britain, 115,000 square miles; Ireland, 22,000 square miles; the United Kingdom, 137,200 square miles; and the United Kingdom without Ireland, 115,000 square miles.

The Population: The population of the United Kingdom is estimated at 34,000,000, of which 29,000,000 are in Great Britain, 5,000,000 in Ireland, and 500,000 in the Channel Islands and dependencies.

The Agriculture: The area of the United Kingdom is 37,156,000 acres, of which 17,770,000 acres are in Great Britain, 14,000,000 acres in Ireland, and 5,386,000 acres in the Channel Islands and dependencies.

The Population: The population of the United Kingdom is estimated at 34,000,000, of which 29,000,000 are in Great Britain, 5,000,000 in Ireland, and 500,000 in the Channel Islands and dependencies.

The Agriculture: The area of the United Kingdom is 37,156,000 acres, of which 17,770,000 acres are in Great Britain, 14,000,000 acres in Ireland, and 5,386,000 acres in the Channel Islands and dependencies.
604, containing 4,288 tons of metal, valued at £587,869; copper ore, 9,108 tons, valued at £342,503; copper-coal from mines of valuable metal, valued at £55,905; copper, 730,304 tons, valued at £4,450; zinc ore, 24,675 tons, valued at £297,606, containing 9,006 tons of metal, valued at £218,873; bog-iron ore, 153,153 tons, valued at £1,038, containing 650 tons of metal, valued at £27,800; gold ore, 20,802 tons, valued at £42,929, containing 14,004 ounces of metal, valued at £222,485; total value of minerals, £5,282,922; total value of metals extracted from British ores, £21,030,719. The quantity of coal produced in 1900 was 225,181,300 tons, value £1,215,622; 963; clays, 14,040,694 tons, value £571,043; sandstone, 5,019,874 tons, value £1,680,580; slate, 585,859 tons, value £1,029,330; limestone, 11,905,477 tons, value £1,300,314; salt, 1,661,347 tons, value £611,920; oil shale, 2,282,221 tons, value £287,944; granite, 4,934,301 tons, value £1,236,747; chalk, 4,473,531 tons, value £129,092; gravel and sand, 1,387,205 tons, value £183,163; gypsum, 228,038 tons, value £360,542; arsenic and pyrites, 13,654 tons, value £75,736; barite, 29,456 tons, value £506,844; other ores of metallic value, £13,392; other value of other minerals £23,092; total non-metallic minerals, 130,674,754 tons, value £155,967.6. Of the total mineral produce the value of £337,192,160 was mined in England, £210,738,719 in Wales, £20,198,569 in Scotland, and £298,840 in Ireland. The total number of persons employed in mining was 914,517, of whom 780,932 worked in 3,884 mines and 78,596 in 784 metaliferous mines. In quarries 93,995 persons were employed. The export of coal in 1900 was 46,068,228 tons, value £36,819,856. The exports of coal and coke, 8,855,030 tons went to France, 5,336,157 tons to Italy, 5,965,161 tons to Germany, 3,229,294 tons to Russia, 3,048,458 tons to Sweden, 2,619,681 tons to Spain, 2,125,493 tons to Denmark, 1,971,121 tons to Egypt, 1,901,530 tons to the Netherlands, and 1,438,058 tons to Norway, 1,191,649 tons to Belgium, and smaller quantities to Brazil, the Argentine Republic, Portugal, the Spanish Possessions, and the Union of South Africa. The iron ore produced in 1900 was 6,997,983 tons, valued at £539,003; exportation, 3,414 tons, valued at £7,461. Of the iron ore imported, 5,551,599 tons came from Sweden, priced at £4,914,078. The total net supply available for smelting in 1900 was 20,873,670 tons. The quantity smelted in 403 furnaces was 22,100-774 tons. The quantity of pig iron made was 8,859,091 tons. Imports of pig and puddled iron were 181,151 tons, and exports 1,427,525 tons, exports of bar and angle iron, 157,164 tons; of railroad iron, 463,731 tons, of wire, 38,441 tons; for plates of tin, 66,278 tons, tin plates, 272,877 tons, of cast and wrought iron, 338,637 tons; of hoops and plates, 331,957 tons; of wrought iron, 93,937 tons; of unwrought steel, 308,448 tons; of steel and iron, 41,094 tons; total, 3,540,689 tons. The importation of copper ore and regulus was 188,492 tons; of unmanufactured copper, 78,693 tons; of lead, 195,380 tons; of tin, 31,115 tons; of zinc, 60,536 tons. The quantity of raw cotton imported into the United Kingdom in 1901 was 1,390,305,904 pounds; exports, 206,566,767 pounds; retained for consumption, 1,625,738,929 pounds. The wool trade in 1901 was 558,950,328 pounds; exports, 196,307,281 pounds; retained for consumption, 362,743,207 pounds. Of the wool imports 396,367,117 pounds came from Austria-Hungary. The wool imports in 1901 were 600,000 pounds, in addition to which 30,000 pounds were clipped from imported sheepskins, 20,000 pounds.
The value of merchandise transhipped in transit in 1900 was £11,016,516. The value of gold coin and bullion in 1901 were £2,075,715,628, and exports £13,905,265; imports of silver coin and bullion were £11,301,578 in value, and exports £12,040,837.

Navigation.—The total number of vessels entered at the ports of the United Kingdom during 1900 was 353,402, of 103,031,375 tons; the total number cleared was 348,179, of 103,720,553 tons. These numbers include 284,908, of 55,828,569 tons, entered and 280,037, of 54,429,606 tons, cleared coastwise. The tonnage of vessels engaged in foreign trade entered at British and Irish ports in 1900 was 49,223,000 tons, of which 31,445,000 tons were British and 17,777,000 tons were foreign; cleared in the foreign trade, 40,301,000 tons, of which 31,266,000 tons were British and 9,035,000 tons foreign. The tonnage of vessels entered at British foreign ports was 36,180,000 tons, of which 24,420,000 tons were British and 11,760,000 tons were foreign; cleared with cargoes, 43,672,000 tons, of which 2,006,000 tons were British and 15,760,000 tons foreign; total tonnage entered and cleared with cargoes, 70,358,000 tons, of which 53,322,000 tons were British and 27,626,000 tons foreign. With cargoes and in ballast the total tonnage entered was 35,812,887 tons, of which 7,881,571 tons were Norwegian, 6,927,219 tons German, 3,819,073 tons Russian, 3,494,797 tons Danish, 3,213,767 tons Dutch, 2,822,375 tons French, 2,709,247 tons Spanish, 1,691,800 tons Belgian, 1,410,078 tons Italian, 1,179,407 tons Russian, and 535,532 tons Swedish.

The imports of merchandise from various foreign countries in 1900 and the exports to them of British and Irish produce were valued as follows:

Total | £413,544,858 | £195,819,400 |

The value of exports of one page of a document, as well as some raw textual content that was previously extracted for it. Just return the plain text representation of this document as if you were reading it naturally. Do not hallucinate.
American, and 491,222 tons Austrian. The tonnage of the British and principal ports of the United Kingdom was as follows: London, 16,700,527; Cardiff, 12,760,240; Liverpool, 11,677,708; Tyne ports, 8,791,239; Hull, 4,940,735; Glasgow, 3,981,587; Southampton, 3,099,389; New-
port, 2,603,451; Blyth, 2,487,217; Swansea, 2,446,051; Kirkcaldy, 2,039,433; Leith, 2,037,000; Mid-
dlesbrough, 1,075,266; Sunderland, 1,059,922; Dover, 1,037,659; Grimsby, 1,891,474; Grangemouth, 1,729,641; Manchester, 1,383,254; Harwich, 1,306,021; Goole, 1,170,604; Bristol, 1,121,245; Hartle-
pool, 999,036; Folkestone, 777,813; Belfast, 685,750.

The British registered shipping at the beginning of 1901 comprised 10,773 sailing vessels, of 2,096,498 tons, and 9,209 steamers, of 7,207,610 tons. There were engaged in the home and foreign trade, 7,480 sailing vessels, of 1,986,731 tons, and 7,455 steamers, of 7,405,476 tons; total tonnage, 9,385-
207. The total number of men employed in the commercial navy was 247,445, including 39,893 foreign sailors and 36,023 lascaros. Of the total number of vessels engaged in trade, 6,203 sailing, of 378,957 tons, employing 22,734 men, were in the British and Irish re-
ed steamers of 1,153,595 tons, employing 719 men, were engaged both in the home trade, including ports between Brest and the Elbe, and in the foreign trade; and 1,143 sailing vessels, of 1,504,838 tons, employing 25,856 men, were engaged exclusively in the for-
eign trade; 3,545 steam vessels, of 506,359 tons, employing 40,288 men, were engaged in the home trade, including ports between Brest and the Elbe; and 20,012 vessels, employing 4,930 men, were engaged both in the home and foreign trade; and 3,848 steam vessels, of 6,065,575 tons, were engaged exclusively in the foreign trade. The numbers of vessels built and first registered during 1900 were 504 sailing ves-
sels, of 35,576 tons, and 667 steamers, of 698,330 tons. Besides these, 66 sailing vessels, of 7,546 tons, and 196 steam vessels, of 199,315 tons, were built for foreigners, including 20 war-vessels, of which 2, of 112 tons, were sailing vessels and 18, of 11,530 tons, were steamers. The total number of vessels registered in the United Kingdom was 19,982, of 9,304,108 tons. The total number be-
longing to the British Empire in 1900 was 34,875, of 10,751,302 tons, the sailing tonnage being 3,059,492 and steam tonnage, 7,791,810.

Shipping Trust.—In the spring of 1902 a trust of British and American lines of steam-
ships engaged in the north Atlantic shipping trade was organized in the United States, the capital amounting to $170,000,000. The com-
pany, which acquired a majority of the stock of the British lines and entered into an agree-
ment for the division of traffic and establishment of equal rates with the two great German lines, was domiciled in New York, but the British ships retained their nationality, and the obligation to serve England as auxiliary naval vessels in case of war that had been assumed for some of them was not canceled. For some years previous to the combination the steamships engaged in pas-
senger transportation between American and Eu-
ropean ports had in competition provided more and more luxurious accommodation, and freight rates had declined, owing to the extraordinary activity in ship-building which began in 1888 after a period of quiescence and continued till the close of 1901. Dividends and profits shrank or ceased in consequence of the competition, so that English lines already invested in shipping were willing to enter or sell out to the trust formed to keep up rates and reduce expenses by J. P. Morgan. British lines which did not enter the American combination formed an alliance among themselves and principal ports of the British Empire and several of the Canadian government to enable them to compete with the other syndicate and develop trade with Canada and with the East through the United States. The Australian government was asked also to assist an all-British combination that would promote commerce between the different parts of the British Empire. In the United States the American syndicate controlled rail-
roads and various facilities that gave it an advan-
tage over the rival combination.

Railroads, Posts, and Telegraphs.—The total length of railroads open to traffic in the United Kingdom on Jan. 1, 1901, was 21,885 miles, of which 15,187 miles were in England and Wales, 3,485 miles in Scotland, and 3,163 miles in Ireland. The total share and loan capital was £1,176,001,800. The number of passengers con-
veyed in 1900 was 1,142,276,086, paying £45,383-
985; freight receipts, £35,470,504; total gross earnings, £104,801,585. The earnings of English railroads were £97,034,581, and receipts were £89,392,501; the capital of Scottish railroads was £165,086,736, and receipts were £121,005,010; the capital of Irish railroads was £23,000,000, and receipts were £3,200,347. The total operating expenses were £64,743,520, being 62 per cent of the gross earnings. The length of street-railroads in the United Kingdom on July 1, 1900, was 1,777 miles; the capital expenditure was £20,282,692; receipts for the previous year, £25,445,620; expenses, £24,075,382; net earnings, £1,370,377; number of passengers, 37,242,000.
The post-office in 1901 delivered 1,070,000,000 letters in England and Wales, 202,400,000 in Scotland, and 144,200,000 in Ireland; total, 2,325-
600,000. The number of postal cards was 350-
400,000 in England and Wales, 41,600,000 in Scot-
land, and 18,000,000 in Ireland; total, 419,000,000. The number of book packets was 619,300,000 in England and Wales, 17,800,000 in Scotland, and 35,300,000 in Ireland; total, 732,400,000. The number of newspapers was 127,800,000 in Eng-
land and Wales, 19,300,000 in Scotland, and 5,000,000 in Ireland; total, 141,000,000. The number of parcels was 67,200,000 in England and Wales, 8,600,000 in Scotland, and 5,200,000 in Ireland; total, 81,000,000. The total number of inland delivery orders was 85,300,029; total amount £29,981,726. The British postal authorities, having in vain endeavored to establish a parcel post with the United States by agreement with the Post-
Office Department at Washington, although such a service has been in operation between Great Britain and British colonies since 1885, arranged with a private corporation, the American Express Company, to deliver anywhere in the United States and receive for delivery by the British post-
office in the United Kingdom parcels under 3 pounds for 2s. or 50 cents, from that to 7 pounds for 3s. or 75 cents, from 7 to 11 pounds for 4s. or $1. For New York and adjoining cities the rates are 1s. or 25 cents, 2s. or 50 cents, and 3s. or 75 cents, but for all parcels entering the United States an additional charge of 5 cents goes to the Government for clearance at the custom-
house besides import duties at regular rates, and an additional fee of 25 cents to the custom-house broker.

The British postal telegraphs on March 31, 1901, had a total length of 46,265 miles, with
Great Britain and Ireland.

347,680 miles of wire. The number of messages sent in the year ending March 31, 1901, was 89,422,961, of which 75,342,967 were despatched in England and Wales, 9,289,019 in Scotland, and 4,903,076 in Ireland.

There were 76,831 miles of telephone-lines belonging to the Government on March 31, 1901, and 7,700 miles were under construction. The number of conversations during the previous year was 17,950,296. The post-office had contracted for the construction of 34,346 miles more. The National Telephone Company had 1,019 exchanges, and the number of conversations over its wires was 723,246,365. The net receipts of the telegraph office a year ago in 1901 were £13,965,470, and expenses £10,064,903; telegraph receipts were £23,459,353, and expenses £3,812,569; net deficit, £5,552,116, not counting £296,868 of interest on the purchase price, net postal and telegraph revenue, £2,557,351.

The demand for all-British cable communications with colonies and naval stations in all parts of the world, which was based on strategic considerations, led to the Pacific cable which was laid between Canada and Australia in 1902. British lines connect Australia, Cape Colony, and Canada, and as the line passed through the South African con- table, £275,000 for interest on new debt, and £250,000 for a general Consolidated Fund loan, the total expenditure £175,250. The deficit of £19,600 would be paid out of the loan, and at the end of the year the remainder of the loan could be returned to pay off debt and the sinking-fund, suspended during the war, be re- stored.

New rules of procedure were introduced early in the session. The whole Liberal party opposed any delay. The motion for adjournment, the favorite weapon of a minority, if it is believed to hinder the advancement of a Government measure, can be debated until the hours reserved for the Government have been used; and the time reserved for the Government is limited to the first hour on Friday and the last half-hour of each other sitting, unless the midnight rule has been suspended, when printed answers must suffice, but no question need the notice begins; and if the notice is not alone entitled to ask the representation of the Government to explain its answer and must be satisfied with one explanation; the Government can continue debate after the appointed hour for the close of each afternoon and evening sitting by moving closure, but private members can not make diatribe motions to adjourn or report progress or that the chairman leave the chair; a minister may move to have any debate resumed after midnight, otherwise the evening sitting terminates one hour past midnight, on Fridays at six o’clock in the afternoon, but discussions of supply can be continued into the night by the Government without the concurrence of the House of Commons. In case of gross disorder to suspend any sitting for a time to be named by him; the first twenty-five minutes of Government days and the sitting of Friday, from two till six o’clock, are the only times allowed for private bills, petitions, and motions, except two evening sittings before and one only after the Easter recess, when motions of motion take precedence, but after Whitsuntide all the evenings and all the Fridays save two belong.
also to the Government; the estimates must be voted before Aug. 5, and their discussion must not extend more than two days. Another day, the closure of the debate being applied to in a lump without discussion all items not yet voted, unless a minister asks the house allows three days more, and any vote is proposed of in one day; when a member is named by the speaker or the chairman of committees for disregarding his authority or for abusing the rules for purposes of obstruction or for other reasons he can, on a simple motion put without debate, be suspended for twenty sitting days for the first, forty days for the second, and eighty days for the third or any subsequent offense, and the suspended member can not resume his seat for forty days more unless he apologizes in writing, but if a member or members acting jointly refuse to obey the speaker so that force must be used to compel obedience he or they are suspended for the remainder of the session or for eighty days on which the house sitters, whichever is the longer period, the house can not be adjourned for before ten o'clock in the evening, though a division when fewer than 40 members are present is not valid.

The licensing bill dealing with some of the evils arising from intemperance provides for the arrest of any person found helplessly intoxicated in a public place; makes it a punishable offense to be found drunk while in charge of a child; revokes the license of a man who has been repeatedly convicted of drunkenness to give security for his future behavior, otherwise he is confined in jail; makes it a punishable offense of a public house keeper to sell knowingly to a habitual drunkard or an intoxicated person, and when charged with permitting drunkenness on his premises it lies with him to prove that he or persons employed by him took reasonable precautions to prevent drunkenness; provides that convictions against a licensed place be recorded for the information of the magistrates when considering the renewal of the license, and if the justices do renew a license after 5 convictions within five years they must report their reasons; places grocers' licenses, which have been £10, under the control of the licensing justices; compels all clubs in which liquor is sold to register under stringent penalties and provides for the suppression of specified clubs and places with a sale of alcoholic beverage for other immoral purposes; enables the husband of a woman who is a habitual inebriate to apply to a court of summary jurisdiction for a judicial separation with an order for maintenance; a woman whose husband is a habitual drunkard is entitled to a protection order against him; any habitual drunkard who is convicted of a crime in which drunkenness is an element can not purchase liquor without being liable to arrest and punishment, and if a publican who has been notified of the facts sells it to him he also incurs a penalty. The most important clause was that for the supervision of clubs, which must furnish particulars every year of the objects, rules, and number of members. When the membership falls below 25, when the objects and rules are not carried out in good faith, when there is much drunkenness on the premises, when persons are admitted as members without any delay, when the supply of liquor is not under the control of an officer or committee of the club, and in other suspicious circumstances, the club can be struck from the register. If the Director is given to the courts to declare a club a sham, the penalty on the annual population of school age is £9,608,757, whereas in 1870 the school accommodation was sufficient.

The Board of Education, instituted on April 1, 1900, has control over elementary education in England and Wales, and authority to inspect secondary schools. The elementary education act of 1870 school accommodation must be provided in every district for all children between the ages of five and fourteen. In 1900 the local authorities were empowered to admit over twelve to leave school for a part of the whole of the year for industrial employment; in agricultural districts children over eleven were exempted during the busy season. Groups of boroughs and parishes form school districts to elect school boards, of which there are 2,545 in England and Wales, besides 788 school-attendance committees in places where there are no school boards. Parents are compelled to send their children to school by these local educational authorities. In the board schools unsectarian religious instruction is given. In the voluntary schools sectarian teaching is allowed. Voluntary schools were supported in the beginning by voluntary subscriptions. Fees were charged in the public schools until 1891, when Parliament made elementary schools free and voted an annual grant of 10s. for every child in average. In 1897 an annual grant of 5s. for each pupil was extended to voluntary schools under the standards set in the annual code of the Education Department, the central body which preceded the Board of Education. Of the associations which received this grant, 26 are Church of England, 11 Roman Catholic, 11 undenominational, 8 Wesleyan, and 1 Jewish. The cost of maintaining the board schools is raised by the school rates levied on all householders, while voluntary schools have to depend partly on subscriptions belonging to the religious denominations which support these schools in order to give their particular doctrinal cast to the education of their children and inculcate the children of others with their religion. There were 5,598 board schools with 2,991,049 pupils, 11,777 schools of the national society of the Church of England with 1,885,802 pupils, 458 Wesleyan with 125,727 pupils, 1,945 Roman Catholic with 255,036 pupils, and 1,079 British, undenominational, etc., with 220,032 pupils. In 1901 only 91 of the schools belonging to the denominational associations declined the parliamentary fee grant which was ostensibly voted for necessitous voluntary schools.

The elementary schools of England and Wales in 1901 had accommodation for 5,910,416 pupils, 29.27 per cent, of the school population. The rural population of school age being 9,608,757, whereas in 1870 the school accommodation was sufficient.
only for 8.75 per cent of the population. There were 5,787 board schools, with accommodation for 2,881,155, having 2,703,434 scholars on the rolls and 2,230,375 in average attendance. The number of voluntary schools was 14,319, with accommodation for 5,739,361, having 6,064,706 scholars registered and 2,230,375 in actual average attendance. The number in average attendance in all the schools was 70,574 more than in 1900 and reached 82.17 per cent. of the total number on the registers. Of the total number of scholars, 5,116,384 were free and 644,275 paid fees. The schools were taught by 60,149 certificated or provisionally certificated teachers, 28,600 pupil teachers, 34,716 assistant or provisional assistant, and 17,956 additional women teachers. The number of women teachers doubled in seven years. The cost of the schools in 1901 was £3 5s. 2d. per child in average attendance in the board schools and £2 6s. 84d. in the voluntary schools. The elementary schools have made progress under the dual system by which church schools, first independent rivals of the unsectarian public schools, have latterly been partly supported by the state and subject to inspection and examination. To this list of interests, the other hand, has remained unorganized and has made no progress. The defects in secondary education have engaged the attention of the public and of legislators because the greater industrial and commercial progress of the United States and Germany has been ascribed in a great measure to the scientific and practical character of their systems of free, popular education. An educational commission in 1897 ascertained that there were in England 6,200 secondary schools in which 68,785 boarders and 207,759 day pupils were taught, a total of 276,544, of whom 129,315 were in boys' 114,239 in girls', and 21,255 boys and 18,740 girls in mixed schools. Of the total number, 8,167 were proprietary or private schools, with 183,930 pupils; 197 were schools maintained by religious and other communities and city companies, with 18,666 pupils; 308 belonged to limited liability companies, with 16,734 pupils; 60 were board schools, with 10,429 pupils, and 76 were established by local authorities, with 9,543 pupils.

Wales and Monmouth have had since 1889 a public board to examine intermediate schools, of which 94, with 7,445 pupils, were inspected in 1900. The English Board of Education when exercising its friendly supervision over secondary schools desiring inspection, of which there were only 27 in 1901. The education act introduced in the House of Commons by Mr. Balfour was intended to coordinate the board and voluntary schools and elementary and secondary schools and lead up to a system of national education, which is universally desired, which the Liberal party in power sought to develop out of the board schools, and which has made no advance on secular lines on account of the religious temper prevailing in the Church of England and dominating Tory politics. The Protestants dissenters upheld the board schools as earnestly as the Anglicans opposed them. The education act of 1897 was the first step of the English clergy toward regaining control of popular education. By their efforts and the sacrifices of their lay supporters they had built up a rival system of schools as extensive if not as efficient as the public schools. The Anglicans are demanding an equal status and an equal share of the school rates, relieving them entirely of paying voluntary subscriptions to keep up their own schools while bearing their full share of the cost of the board schools. The non-conformists, having witnessed what the church schools had done as private institutions supported by charitable contributions, not only in competing with the board schools in education and arresting their growth as a national system of public schools, but in proselyting the people, in building up the state church while their own bodies were not increasing, regarded this proposal as a blow aimed at their religious doctrines and communities as well as at the principle of unsectarian national education. The voluntary schools were inferior in teaching staff, equipment, and buildings to the board schools, and the subscriptions that supported them were falling off, so that the task of teaching a larger number of people than in religious conflicts viewed with regret the inferior education that half the children received and with foreboding the prospect that this would detrientially.

Mr. Balfour's education bill places board and voluntary schools on an equal footing, to be maintained by rates assessed by the county and borough councils. The majority in England of the independent minority in the House of Commons is determined to make the board schools as efficient as the voluntary schools and to furnish an equal number of places. The education department is an integral part of the government and is to be responsible for education. Mr. Harmsworth, the present minister of education, has the power and the duty to see that education is free, that it is not directed by any religious body, and that it is not under the control of any religious body. The execution of the educational policy has been committed to him. An educational commission is to be appointed to inquire into the state of education in England, and to report whether it is sufficient or not. The proposals of the bill are to be carried into effect by the minister of education, and are to be submitted to the House of Commons for its vote. The bill is to be passed into law by the king and to be put into operation within three years. The bill is to be carried into effect by the government and is to be submitted to the House of Commons for its vote.
